## GERMANY AND THE INDEMNITY.

A FINAL report was not long since submitted to the Federal Council of the German Empire, shewing how the enormous indemnity wrung from France in the hour of her humiliation some ten years since had been disposed of. The total sum extorted by the conquerors as the price of peace amounted, it will be recollected, to considerably more than \$1,000,000,000 every cent of which had been spent, divided among the different German States, or sunk in newly created imperial institutions by the official administrators of the fund, before the expiration of the financial year 1877-78:

The report shews that nearly the whole of this vast sum of money—more than four times as great as the whole national debt of Prussia—has been expended either directly or indirectly in developing the military resources of the German Empire. The Imperial share of the indemnity is set down in the report at \$257,500,000; \$30,000,000 of which is deposited in the treasury at Spandau to provide a fund out of which the preliminary expenses of Germany's next war may be paid in coin. An Imperial Military Invalid fund has also been established which absorbs \$140,000,000, while the remaining \$87,500,000 were expended in constructing new fortifications in the ceded provinces, strengthening those that already existed there, and making good the injuries to property in those districts during the war. The balance of the indemnity was divided according to population among the different States which had taken part in the war:—namely, the North German Confederation, Bavaria, Wurtemberg, Baden, and Hesse. By an Act of the Legislature passed in July, 1873, before it was probably realized by the majority that the indemnity could ever be entirely

spent, the portion allotted to the North German Confederation was devoted to paying off the loans incurred during the war, the re-armament of the forces, and the augmentation of the number and fighting strength of the army. The minor States, prompted no doubt from Berlin, made a similar disposition of their share of the spoil. Prussia spent her surplus in the construction of strategical railways and in fortifying the eastern frontier. Thus, as we said, the colossal sum exacted from France has been absorbed in warlike preparations, and has tended to increase rather than alleviate the burdens so patiently borne by the suffering German people.

The indemnity, however, was all spent before many of the enterprises initiated when the money which poured into Germany appeared inexhaustible, were finished. Prince Bismarck had therefore to deal with the disagreeable alternative of either stopping further operations, and thus rendering valueless the vast sums already disbursed, or else providing by increased taxation the necessary funds to complete the various undertakings. He chose the latter course and, under the pretext of reviving domestic industry, imposed the protective tariff now in force in Germany.

We may remark that we do not altogether coincide with the strong opinions held by some very able statesmen and writers on the subject of Free Trade as opposed to protection, and *vice versa*. The advocates of these different policies appear, as a rule, unable to see any merit whatever in the system they oppose. At the same time there is a large and constantly increasing class who consider that the circumstances of the particular country should be considered in shaping its fiscal policy, and that, while some States—as for instance France—are benefited by a judicious blending of both systems, the position of others imperatively demands the adoption, as in England, of Free Trade in its original acceptation. A discussion on this well-worn subject is, however, foreign to our present purpose. We desire to point out some of the consequences to Germany of what was apparently the most successful war ever waged by one nation against another, but which has resulted in the expenditure of vast sums of money by the victors, and the imposition of a heavy tariff to provide further resources to utilize the previous extravagant outlay.

In imposing the new tariff Prince Bismarck appears to have overlooked some of the inevitable consequences, and we now learn that the rapid multiplication of office-holders is already adding to the almost intolerable burdens of the people. Observation of this tendency of a strict protective system to increase the class of non-producers and official stipendiaries at the public expense would, one might have supposed, admonished the great chancellor to be less precipitate in the adoption of that policy; but shrewd as may be his statesmanship in other respects, and great as he undoubtedly is as a diplomatist, we think it will have

to be admitted that in economics and finance Prince Bismarck is neither a close observer of events, nor is he gifted with the philosophic spirit which learns wisdom from a just appreciation of cause and effect. This failing of the Prince is strikingly apparent in the matter of the new tariff. It is evidently working out wholly unexpected results. The customs' expenditures are increasing in a ratio which must lead to serious embarrassments at no distant period. The expense of executing the multitudinous details of the new schedules threatens in fact to absorb the expected increase of revenue. The staff of officers found necessary to carry the law into operation are multiplying like the frogs of Egypt. The ordinary number of customs' officials has already increased by six hundred, of whom two hundred and nine are for the district of Schleswig-Holstein alone; all of them drawing large salaries. A credit of thirty thousand marks, in addition to this, was placed at the disposal of the Government in order that it might further increase the staff should it be found necessary; and that it has been found necessary no one can doubt as long as places are the rewards for political support. It would be some compensation for this large extra outlay if the efficiency of the service kept pace with the multiplication of employees but the reverse would, from complaints in the German papers, seem to be the case. The new army of officials thus appear to have no function save to sing the praises of Prince Bismarck as the greatest of living statesmen—and to draw their salaries. The trade from Hamburg to Berlin and Magdeburg is suffering seriously from the delay to which boats are subjected in waiting for the customs' examination and, as we mentioned recently, an attempt—which will probably prove successful—is being made to impose similar inconveniences upon the whole trade of Hamburg by removing the customs' barrier to Cuxhaven.

Bad, however, as all this has proved to be, it is by no means the worst; thus the Osnabruck *Zeitung*, a recognized exponent of protection principles states that "in every town in our province there are complaints as to the increased price of all articles of consumption. Our correspondent at Hildesheim writes that the rise of prices in that district has been very rapid and extensive. Bread has risen from 60 to 73 pf., petroleum from 10 to 14 pf., tobacco from 25 to 32 pf., &c. The price of bread is expected to rise yet considerably more. Meat has also become very dear, whilst the price of cattle is on the contrary falling. The want of foreign competition is being very severely felt." This, with the other difficulties which Germany has to contend against, implies a sad state of affairs in the Fatherland, and is a sorry end of the prosperity so confidently looked forward to when the millions were pouring into the country.

A comparison of the condition of Germany and France at the present time, furnishes serious matter for the consideration of that large section of every community who regard war as the best means of arranging international disputes. At the termination of the contest of 1870-71, France was crushed under the heel of Germany, her army was captive, her cities and strong places in the possession of the conqueror, and peace was only purchased at an enormous sacrifice of territory and treasure. Now, after the lapse of a few years, Germany is groaning under the weight of financial and military burdens, her people impoverished, and bending under the yoke of one of the most rigorous systems of government ever imposed upon a suffering nation. France, on the contrary, is free, buoyant, prosperous. Commerce has advanced, the revenue is increasing

"by leaps and bounds," taxation is being remitted, and the nation, both financially and in military strength, is now far more powerful than when enticed into the struggle which resulted so disastrously.

#### IMPENDING CHANGES.

WE have already, in two articles "Islam in China" and the "Ili Kuldja question," taken from the *Quarterly and Edinburgh Reviews* details of historical facts, upon which we have based the comments and developments that have, we trust, not been unacceptable to our readers at this time of impending political transitions. We have now before us the *Edinburgh Review*, No. 811, for July 1880. It contains an article of especial interest at this moment, entitled 'Naval powers in the Pacific.' We propose to lay before our readers a *résumé* with a commentary thereon.

The review is a disquisition on three works concerning the Pacific Sea board of Siberia and Russian Manchuria:—1st: the excellent book of Herr Ravenstein; 2nd: the disappointing and feeble narration of Captain Bax, of H. M. S. *Dirarf*; and 3rd: a memoir written by Captain Colomb, R.N., late of H. M. S. *Audacious*. It is a pity that the reviewer confined himself to such inadequate materials. For a proper consideration of the subject he should have increased his stores of knowledge, by laying under contribution many other papers, all accessible to an inquirer. For instance, Admiral Osborn's notes upon Tsushima, published by the Royal Geographical Society, can be referred to. The subject cannot be completely understood unless the admirable works of Mr. Atkinson are studied, and the memorials of Colonel Helmersen, containing as they do itineraries, geographical positions of boundaries, &c., &c., are also indispensable. There are, too, many papers published by the Geographical Society of Russia, containing excellent maps and reports, which prove that, so far from the Pacific shore of Eastern Siberia being, as many suppose, a "terra incognita," a continuous series of explorations have been made at the cost of the Russian Government during several past years. The reports of these official explorations are admirable works, and the contributions of Maximowitz and other specialists of equal rank on the fauna and flora: geological, ethnic and geographical divisions: the distribution of minerals: the fluvial system: on the diverse tribal cults, &c., &c., are of remarkable excellence and completeness. We should have expected the reviewer to have had some knowledge of the remarkable contributions to science to which we refer. We shall, however, hope soon to hear of the publication of Professor Nordenskjöld's explorations in another region, which, more than any other, still bears traces of the terrible and wide-spreading cataclysm that, at no remote epoch, overwhelmed the northern lands of the Asiatic continent.

The review begins by a reference to the first Russian exploration of the Amur, made in the years between 1643 and 1647 by Pojarkof, a man of Cossack descent, to whom belongs the honor of having first voyaged over the whole length of the Amur and part of the Sungari. Pojarkof made known the result of his adventurous voyage, and directed Russian enterprise to one of the finest rivers of the world. The Amur drains over 700,000 square miles of land, and its innumerable effluents, influents and tributaries give fertility to vast territories, now mostly silent, but which yet may be, in future times, the precious possession of the new Russian nation. It is generally supposed that much or most of Siberia is sterile, inclement, and inhospitable. On the contrary, the climate cannot be

excelled, the virgin soil is as rich as that of the Tambora, the forests abound with the finest trees, such as oak, elm, ash, hemlock, hackmatack, &c.; and on the shore of the mighty river are to be seen a succession of varied and beautiful panoramas.

Pojarkof was succeeded by many explorers and settlers, so that by the year 1682 a considerable number of Muscovites had encroached on the Chinese territory, so much so, that the Emperor Kang-Hsi gave orders to expel the intruders. In 1689, the treaty of Nerchinsk—the first of a long line of documents, always drawn out at the cost of China—was signed. From that time the Russian possessions were defined and recognized. In 1727, the illustrious Behring led an expedition to Kamschatka, and, on a subsequent cruise in 1640, he founded the arsenal and settlement of Petropavlovsk. From this period steady encroachment was made in all directions, and in 1847, Count Nicolas Mouraviev (Amursky) practically took possession of the whole stream of the Amur. In 1858 a new treaty was made, by which China ceded the left bank of the Amur as far as the confluence of the Sungari, and from this point to the sea, both right and left banks. At this epoch the new Government of Eastern Siberia, whose capital is Irkutsk, was extended and consolidated, so that when Count Mouraviev, full of years and honours, retired from the service of the Czar, the succeeding General-Governor Korsakow assumed the vice-royalty of a magnificent and immense kingdom, whose vast stores of gold, silver and precious stones, iron, copper and tin, whose inexhaustible forests, whose noble rivers, whose soil of Egyptian fertility, may yet be the support and consolation of the Orthodox Slavons, if worsted in the coming and inevitable struggle with the men of the Teutonic and Latin races.

In 1860, by General Ignatiev's adroit treaty, the Russian dominion was stretched southward by ten degrees and, in addition, certain actual and tentative rights were acquired over Saghalien. In 1875, Japan ceded Saghalien to Russia.

At present, the most northerly possession on the Pacific shore of the mainland is Possiet, named after an officer of distinction now Minister of Public Ways and Works, (*Pontaisow Abschenia*). But Possiet is an unfit terminus, and the coast frontier line will be imperfect until it includes the whole eastern shore of the Korean peninsula.

Petropavlovsk and Nicoliewsk are closed by ice for six months of the twelve. Between the Amur mouth and Vladivostock there are no good harbours, and Vladivostock, which is a very fine port, is not only closed by ice for one month of the year, but has also the disadvantage of being situated in a foggy region. The desire of Russia will not be fulfilled until she has two or more well situated harbours, to which access or egress are never barred by ice. Now as the Korean harbours are open at all times, their possession is necessary to Russia, to enable her to turn to account, in peace or war, her long unbroken Pacific coast line.

Admiral Lessofsky must be near at hand. His considerable force will be supplemented by the troops now being massed on the lines of northern Manchuria, on the Korean boundaries, and near to Vladivostock. It is not now necessary to consult China about her tributary, as China is at the very worst stage of disorganization, so much so that for any purposes of defensive war—offensive war has become an impossibility—the old material must be cast aside as worthless, to be replaced by new elements. Nor, as Russia has a distinct *casus belli*, will any Western nations have the right to stay her hand, if she elects to

take part of Corea, as one of the spoils of victory in war or diplomacy. With what Russia may now, or at a later time do with the extra-mural possessions of China, we have already dealt, in comments not altogether hypothetical. For the present we are face to face with the most important question of Russian action upon Corea and its potential developments.

By the acquisition of a portion of Corea, Russia would have a complete Pacific line, from Behring's straits at the north to a southern point not far above Nagasaki. She would have beautiful harbours, a territory blessed with a fine climate, abundant and cheap labour, and a strategic position that would make Russia the dominant maritime power on this side of the Pacific. She would at once control the coast of China, overshadow Japan, and be by land and on sea, perhaps the greatest power in Asia.

We are afraid we cannot dispute a foregone conclusion, and China, Japan, England, and other maritime powers as well, had best consider the possibilities of tempering or modifying the consequences of a conquest we must now regard as the inevitable result of the successful termination of Imperial designs, fostered if not conceived by the Czar Peter the Great, and faithfully carried out by his reigning descendant the Emperor Alexander, the son of Nicholas.

THE memorandum of Colonel Gordon on the subject of the steps which China ought to adopt for the purposes of immediate defence is, as might be expected from so able an officer, extremely instructive. In effect Colonel Gordon advises the Chinese Government to abandon all idea of attempting to cope with a properly organized enemy upon an equal footing, and to have recourse solely to a system of guerilla warfare. The wisdom of the advice tendered is apparent at once, and how successful such a mode of carrying on hostilities would ultimately prove, only requires one to recall the effect of similar operations in Spain, during the occupation of that country by the armies of the first Napoleon. The tenacity of the Chinese character, their utter disregard of human life and suffering, and the obstinacy with which they can endure great reverses, so long as there remains a hope of ultimately being successful, makes Colonel Gordon's programme thoroughly adapted to the Chinese, and shews the great insight that officer possesses of their character and capabilities. The concluding sentence in the report strikes at the very root of the cause which has produced China's present impotence. "China," says Colonel Gordon, "cannot have an army when Generals keep 2,000 men and draw pay for 5,000. Those Generals ought to have their heads cut off."

THE mercantile guilds of the Chinese appear to be a constant source of annoyance to foreign merchants. Not long since the notorious Swatow opium guild carried its interference to such an extent that protracted litigation before the Taotai resulted. The complainants—foreign merchants—got no redress, in fact exposure of the proceedings of the guild was as much as could be expected in a Chinese tribunal. Outsiders, however, considered the allegations of the plaintiffs fully sustained, while the animus of the presiding judge was so glaringly apparent, that the English Consul who was watching the case, left the Court in disgust and stated that he would certainly report to the Minister at Peking so serious an infraction of the commercial stipulations contained in the treaty between Great Britain and the Chinese Empire. In the last papers received from Shanghai we observe that an-

other guild—the tea guild this time—has been attempting to interfere with the legitimate operations of trade. From the report which appears in the *North China Herald*, of the proceedings at the meeting of merchants who assembled to consider the question, we are enabled to get a very good idea of the restrictions imposed upon commerce by the powerful associations which, under the title of guilds, flourish in the treaty ports of China. In the present case a slight difference of opinion arose between a hong of native tea-men and a foreign firm who had purchased from them. The parties actually concerned were, it is said, quite willing to submit the matter in dispute to arbitration, but the local tea guild interposed, refused to allow the native tea-men to go to arbitration, and threatened the foreign firm that, unless they submitted to the sellers' views, they would be "tabooed," and thus effectually prevented from doing any further business. Naturally the foreign firm declined to be coerced in this outrageous style, and thereupon the guild carried their menace into effect. The meeting referred to was accordingly convened and, after the matter was thoroughly discussed, a resolution was unanimously passed condemning the arbitrary action of the guild. It was also resolved that in the opinion of the meeting no interference on the part of the guild could be permitted. Further action has been left to the Chamber of Commerce, who will no doubt take the necessary steps to prevent in future the complications with the guilds which have hitherto been so frequent and annoying.

MR. Frank Dillon, an artist whose visit to this country many of our readers will doubtless remember, has published in London a work entitled "Drawings by Japanese Artists, Reproduced and Coloured in Facsimile by the Autotype Process." To these sketches Mr. Dillon has added letterpress descriptions and an admirable essay upon Japanese art. The drawings reproduced were for a time exhibited at the Burlington Fine Arts Club, and the method chosen by Mr. Dillon is peculiarly adapted to his purpose. The originals have been photographed and printed in autotype, and then each print has been coloured by hand. Those who are familiar with the laboured attempts that have been made to translate Japanese paintings by means of chromo-lithography will not be slow to recognize the superiority of Mr. Dillon's plan. The essential beauty of Japanese colour depends upon the transparency and purity of each separate tint, and these are just the qualities which chromo-lithography is powerless to render. On the other hand, the power of these drawings consists even more in skilful and refined draughtsmanship than in fulness of colour; and it is therefore of the highest importance that every subtlety of line should be reproduced by the faultless mechanism of photography. As bearing out what has been said, we may particularly refer to the wonderful study of a pheasant (Plate 4), where the intricate marking of the bird's plumage is faithfully recorded even to the most minute detail, and to the spirited sketch of a bantam cock (Plate 11), in which the colourist has most successfully followed the sweeping strokes of the painter's brush.

The chief interest, however, to readers in Japan, attaches to Mr. Dillon's essay upon the art of the country. "Among the many anomalies of Japanese art," he writes, "nothing is more noticeable than the conventional treatment of the human figure, contrasted with the realism which especially marks their rendering of smaller animals and inanimate objects. The vexed question as to how far this avoidance of actual types is intentional cannot be fully discussed here, although it would be an interesting subject for investigation. It will be sufficient to point out that certain qualities regarded by us as the highest aim of art are conspicuously absent from

their works. Instances of accurate drawing and varied expression may indeed be found in the figure-subjects which adorn some of the older temples, and notably in the famous Hong-gan-ji Temple at Kioto; but these must be taken as exceptions to a rule prevailing generally throughout the whole range of Japanese art. In the great majority of instances the stage has given the keynote for the rendering of the heroic incidents which the artist loves to depict, and the unreality of the prevailing types is a natural result of the exaggerated sentiment which pervades the drama of Japan—a mixture of the horrible and the grotesque, which meets the wants of a people in whom warlike instincts and a sense of humour are seldom absent. The faculty of appreciating the loveliness of natural scenery, the tender grace of flowers, or the subtle gradation of colour in the plumage of birds, is strangely blended in the character of men in whom such tendencies prevail; and this naturally suggests a comparison with nations in which qualities the very opposite to these are manifest." Mr. Dillon thereupon proceeds to comment upon the inferior importance assigned to the facts of natural scenery, and, passing to another aspect of his subject, makes some instructive remarks upon the relation between Chinese and Japanese Art, in which he assigns to the former an influence analogous to that exercised upon the schools of Europe by the example of classic style.

UNQUESTIONABLY afforestation is of great importance in Japan, where the active demand which has of late years arisen for timber is having the effect of rapidly denuding of trees very large tracts of country. On several occasions we have urged upon the authorities the necessity of protecting the forests and providing for future requirements. We propose to further stimulate their energies by reference to what has been successfully accomplished in Hongkong where afforestation is evidently conducted upon scientific principles, and therefore with due regard to the circumstances of soil and climate. In a recent *Hongkong Gazette* appears the report of the Superintendent of Gardens and Plantations, on Afforestation in the colony. From this document we learn that there are ten Government nurseries situated in Hongkong and on the Kowloon peninsula, which comprise about 150,000 two-year-old trees, and small seedlings raised this year to supply about 250,000 trees for planting in 1881. The 150,000 two-year-old trees now in the nurseries will be nearly all planted during the next two months; 60,000 trees have already been planted this year, and sites sown on the hills, where the seedlings will remain, for 60,000 more, which will make a total for this year's work of 270,000 trees covering an area of 245 acres. In addition to *Pinus sinensis*, which has hitherto been chiefly used for the endowment of the hills with forest vegetation, seeds of several of the indigenous trees of other kinds, such as the Oaks, Tallow-tree, &c., several species of Eucalypti, and other Australian trees, and the Japanese *Pinus Massoniana*, have been sown in the nurseries, so as to afford more variety to the future plantations, as probably many kinds of trees not yet used may be found to succeed, and render the plantations more valuable and beautiful in years to come. If the experiment which is being tried of sowing the seeds *in situ* proves successful, which it promises well to do, the cost of afforestation of the Island will be much reduced and the operations greatly accelerated, and the superintendent estimates that with the like sum of \$7,680 which was granted for each of the last two years, he will be able to sow *in situ* seeds to cover 600 acres, that is, about four or five times as large an area as could be accomplished by rearing trees in nurseries and transplanting.

Mr. Ford is also of opinion that the work of afforestation can, no doubt, be greatly advanced by the co-operation of Chinese, who would, if suitable encouragement be offered by the Government, undertake to plant large areas for the return of being allowed to use the thinnings of the trees under certain regulations, for a certain number of years, say 15, when the plantations might revert to the Government, or be leased for an extended period, under such a regulation, or modification of it, as clause No. 28 of the Mauritius Ordinance No. 12 of 1872. Three or four of the small market gardeners at Kowloon have expressed themselves willing to plant 100,000 trees next year under such an arrangement as the above; and one of the chief contractors in Hongkong says that he would like to plant trees if the benefit could be secured to him for 50 years. With such results before them the Government of Japan should lose no time in following the example of nearly every civilized community.

**SPELLING** reform has occupied a good deal of attention for some years past. Radical differences of opinion among the reformers prevented any considerable progress being made, but at length some prominent American papers have taken the matter in hand, and now the *Home Journal* of New York, the *Chicago Tribune*, the *Utica Herald*, and others, are using a formula which they have agreed to. In case any of our readers feel disposed to fall in with the new fashion, attention to the following rules will be all that is necessary:—

1.—Drop *ue* at the end of words like dialogue, catalogue, where the preceding vowel is short. Thus spell demagog, pedagog, epilog, synagog, catalog, etc. Change tongue for tung. When the preceding vowel is long, as in prorogue, vogue, disemagogue, rogue, retain final letters as at present.

2.—Drop final *e* in such words as definite, infinite, favorite, where the preceding vowel is short. Thus, spell opposit, preterit, hypocrit, requisit, etc. When the preceding vowel is long, as in polite, finite, invite, unite, etc., retain the present form unchanged.

3.—Drop *te* in words like quartette, cigarette, coquette. Thus, spell cigaret, roset, epaulet, redet, gazet, etc.

4.—Drop final *me* in words like programme. Thus, spell program, oriflam, gram, etc.

5.—Change *ph* for *f* in words like phantom, telegraph, phase. Thus, spell alfabet, paragraf, filosofy, fonetic, fotograf, etc.

P.S.—No change in proper names.

#### REVIEW.\*

**T**HE opening of a trade route through Burmah to southwestern China is a question to which the attention of the people of Great Britain will shortly be recalled, as the Manchester Chamber of Commerce are to be moved to take steps to bring the matter before the Liberal Government now in power. Colonel Sladen, who laboured so indefatigably to attain the desired end, and who some years ago conducted an exploring expedition to Momein is, we read, now in England, and the advocates of the scheme will undoubtedly find in the gallant Colonel a well-informed and sturdy advocate. Public attention being thus directed to the subject, the appearance of Mr. Roehrer's work will be hailed with satisfaction. This record of travel in the great province of Yün-nan, together with the author's observations upon the condition of the country, its productions, and the customs and the history of the inhabitants, is undoubtedly the most valuable contribution yet published to the knowledge we possess of the rich districts of southwestern China.

\* *La Province Chinoise du Yün-nan*, by Emile Roehrer, of the Chinese Imperial Maritime Customs. Leroux, Paris: Kelly & Co., Yokohama.

"The Chinese Province of Yün-nan," has been issued by the Statistical Department of the Chinese Imperial Maritime Customs at Shanghai, contemporaneously with its publication in Paris. In the preface the author relates briefly how his travels in Yün-nan originated, and the reader is thus enabled to learn the exceptional advantages enjoyed by Mr. Roehrer for the work he has since undertaken and accomplished so satisfactorily. The trip was decided upon in the month of June 1869—a decade before the results were made public—after the return of M. Dupuis from his exploration of the Red River or Hung-chiang, made by that traveller at the request of the governing authorities of Yün-nan. For some years previous a formidable revolt of the Mussulman population threatened to annihilate the authority of China, and the Viceroy of the province determined, in order to reduce the rebels to submission, to procure from Europe a quantity of war material. Owing, however, to the troublous state of affairs, and the rebels occupying positions which blocked the only easy and short means of conveying artillery into the province—that is the Red River route—insuperable difficulties presented themselves to carrying out the first idea. But the mandarins had heard such wonderful tales of the astounding effect of European artillery, that they determined to procure some cannon—no matter at what cost. M. Dupuis accordingly attempted to reach the Red River, but had to abandon the enterprise as the rebels were besieging Yün-nan-fu and the only passage open was commanded by their fire. A conference between M. Dupuis and the authorities was then held, and it was finally decided to bring up some light artillery as soon as possible by the Ssu-ch'uan road, and to assemble a staff of competent persons to establish an arsenal. After the completion of this special work an exploration of the mineral resources of the province was to be made.

The author recounts the different facilities he possessed for acquiring information, and states that the aim of his work has been to describe as succinctly as possible those portions of Yün-nan which he actually travelled through, to explain the events that have taken place during eighteen years of civil war, and to give the reader a general idea of this district, still so little known, and certainly one of the wealthiest provinces of the Chinese Empire. The description of the country and the inhabitants has, says the author, been furnished by his own journal written on the spot, and is without exaggeration. How well Mr. Roehrer has succeeded in accomplishing his task will, we trust, be patent to our readers.

In the concluding portion of the preface, the author explains that as a very great number of Chinese words which appear in the text have no satisfactory equivalent sounds in the French language, he has employed throughout the system of orthography adopted by Sir Thomas Wade, Her Britannic Majesty's Minister Plenipotentiary to China which is, in the opinion of Mr. Roehrer "the most perfect and generally known." The author acknowledges his indebtedness to Mr. Robert Hart, the Inspector-General of Customs, who bore the expenses of publication and to whom the work is dedicated. Several other gentlemen are also gratefully mentioned by Mr. Roehrer for the assistance they rendered him in his formidable undertaking.

The first chapter of volume I. contains an account of the journey from Hankow to Ch'ing-ch'ing and is mainly extracts from the author's diary. The party set out from the Fu-chou arsenal in September, 1870, but the travellers were not properly on their way until October, when they left Han-yang one moonlight night in three junks. An interesting account is given of the voyage, the various towns passed through, and the reception they met with from the authorities. Chapter II. describes the route from Ch'ung-ching to Yün-nan-fu the capital of the province and, like the preceding chapter, is mostly taken up with the details of the journey, and the various inconveniences suffered by the travellers through the impositions either attempted or practised upon them. The boatmen encountered appear to have been sorry specimens of humanity, and the party had to change junks a number of times before they reached Yung-Ning-Hsien on the 6th of January, 1871. The interpreter, Wang, who preceded the voyagers, had got everything in readiness and therefore no delay was occasioned. The appearance of the travellers when on the march was now sufficiently formidable, for no less than 120 horses and mules together with 20 coolies

were employed to carry their *impedimenta*. The load for the four-footed beasts of burden did not exceed more than 100 pounds Chinese (a little over 60 kilos) while the men carried the heavier packages. Here (Yung-Ning-hsien) Mr. Rocher separated from M. Dupuis, and went on ahead, while the latter and the interpreter formed a sort of rear-guard two days' journey behind. The chapter closes with the entrance of the travellers into the capital on the 1st of February. Mr. Rocher remarks that they passed almost unnoticed owing to the facility with which he spoke the language, coupled with their prudent adoption of the costume of the country. This, as the author also says, is in some degree explainable from the circumstance that the visits of great numbers of the inhabitants of Tonquin, Tibet and Burmah, accustom the people of Yün-nan-fu to the sight of strange faces and garments. "But nevertheless they are not exempt from the feeling of curiosity so characteristic of the Chinese, and a European, dressed in the latest fashion, with a 'stove-pipe' hat on his head, and a dandy cane in his hand, would not fail to attract a multitude of gazers;" this ordeal the travellers were luckily able to avoid.

The next chapter treats of the journey from the capital to Chêng-Chiang, which the Fu-t'ai or Governor, whom they had expected to meet in the capital, was busily engaged trying to capture from the rebels. As it was indispensable to have a personal interview with the Fu-t'ai, a few days welcome rest was taken at Yün-nan-fu and then a start was made for the camp. An account of the trip follows but, although very interesting, it presents no special features. The 4th chapter is occupied with a description of the visit made to Hsin-hsing-chou, and contains a glowing account of the rich country traversed. "The productions of the district are very important. Rice, wheat, beans, fruit of all kinds, oil-seed, opium, indigo, &c., &c., are all cultivated on a large scale. Sugar cane is also believed in by the farmers, but is only grown in small quantity, and as it requires nearly two years to come to anything, they do not pay particular attention to it. The nature of the soil is here so fruitful that, after the farmers have reaped their rice, a second crop of wheat, beans, or mustard is sure to be ready for harvesting by the end of the year. The inhabitants the district are gentle in manner, active in their habits, hospitable, and, above everything else, dealers." Mr. Rocher's description of these people and their charming country will certainly strengthen the hands of those who are urging the British Government to open up direct intercourse with this rich province.

The 5th chapter is devoted to a sketch of the history of Yün-nan from B.C. 226, when Han-kaoti, the first sovereign of whom there appears to be any record, occupied the throne. Of the merits of this portion of the work we are unable to say anything. Probably—as history—the annals handed down respecting the very early periods dealt with are not of great value, but the events of later years and the final conquest of the province by the Tartars are full of interest.

In chapters 6 and 7 Mr. Rocher describes the journeys from Hsin-hsing to Mêng-tzu, from Ta-chuan to Yün-nan-fu, and from Mêng-tzu to Man-hao. The return of M. Dupuis is also here recorded and reminds one somewhat of the meeting between Stanley and Livingstone. In the last chapter is given an account of the burying alive of two women at Ta-ying-t'ou, in pursuance of a judicial sentence. The following were the circumstances which gave rise to this awful barbarity. "A young man residing in the neighbourhood of the village fell over head and ears in love with the youthful widow of a Mussulman who, after the death of her husband, had been placed under the guardianship of her brother-in-law—also a Mussulman—and in whose house she resided. Not being able to procure a personal interview with the object of his affections and in order to proclaim his devotion, the lover—after the manner of the country—employed go-betweens or Mei-jên. He chose two neighbours of the lady, also widows, and who were in daily communication with his beloved. The young widow—who was only eighteen years of age—either because the guardianship of her brother-in-law was irksome, or else in order to put an end to the loneliness into which she had been plunged by the death of her husband, lent a willing ear to the proposals made to her on behalf of the lover. An interview—through a window—took place, and the aspirant for matrimony having an opportunity of pleading his cause in person, his honeyed

words, fine appearance, and graceful manners, won the lady's heart. The guardian had in the meantime obtained some inkling of what was going on, but did not attach much importance to it. The intrigue, thus commenced, could not be checked when apparently so prosperous. Yielding to the importunities of the lover the old women provided him with a rendezvous at their house. The youth, abandoning all prudence and knowing perfectly well that his being a Chinaman was an insurmountable obstacle to the union he desired, conceived the fatal design of eloping with his intended bride. The two go-betweens, when informed of the project, indignantly refused to be mixed up with it, but at last their scruples were quieted—he promised them twenty taels (120 fr.) each! Small as the sum was it seemed to these poor creatures inexhaustible wealth. Honest until then, they allowed themselves to be carried away by the magnitude of the temptation, and afterwards omitted no exertion to ensure the success of a plan regarded there as a crime. The preparations having been all carefully made the elopement took place. Four-and-twenty hours of anxiety had scarcely elapsed after the flight of the lovers, when the Tsung-t'ung (Governor) acting upon the complaint of the lady's guardian, sent in pursuit. The refugees had not used much diligence for they were caught riding along between Hai-K'ou and An-ning-chou. While being brought back the youth had plenty of leisure to reflect upon the probable consequence of his conduct, and to succeed in effecting his escape. Some said that he accomplished his purpose by bribing the guards; others that he owed safety to the swiftness of his horse. The unfortunate girl—now abandoned—was brought back to Ta-ying-t'ou and interrogated: she confessed everything. The two go-betweens were immediately arrested and the whole three cast into prison until the end of the trial. The depositions were sent to the capital where the following sentence was passed:—"The young widow is to be restored to her family, and the two old women are declared alone culpable. They are therefore condemned to be buried alive."

On the day fixed for the execution of the sentence, the Tsung-t'ung dressed in his ceremonial robes and with his staff of office in hand, awaits at the gate of his mansion the arrival of the victims. The guard, consisting of forty soldiers, advance fully armed, with their banners waving in the breeze. The gongs which head the party give forth their mournful sound; a large number of spectators are assembled and appear greatly touched, women above all crowd the streets to catch a glimpse of the procession. The two condemned present an air of perfect calmness. They go to their punishment with firm steps and not the slightest appearance of grief upon their countenances.

The place appointed for the execution was situated to the south of the village, on the right bank of a streamlet. Notwithstanding the journey is more than two kilometres, the crowd does not lose its cruel curiosity: they follow the escort which for the whole length of the road passes between two lines of villagers hastily assembled from the neighbourhood. Here again it is the women who are the most numerous, notwithstanding the torture which must be occasioned to those whose feet are compressed.

At last a halt is made and the executioners proceed to prepare the victims for death: their limbs are bound with cords. Standing upright in the same passive manner and apparently without feeling, they gaze with haggard eyes upon the trench dug out in front and which will presently engulf them. Eight soldiers, armed with shovels, station themselves to right and left of the trench ready to accomplish the work of death.

At a sign from the mandarin, the condemned criminals are hurled into the grave, face downward, and before they have time to recover themselves, vigorous arms have covered them with earth! A slight movement is visible upon the surface of the yielding soil . . . and all is over. They have ceased to live."

With this extract, which is a specimen of the many interesting anecdotes in "The Chinese Province of Yün-nan" we must close our review of the first volume. Anxious to give our readers a fair idea of Mr. Rocher's valuable work, we have already exceeded the limits we intended. Our labour has grown upon our hands, and therefore Volume II.—which is to the general reader probably the most attractive—must stand over until next week.

## JAPANESE PERSONAGES.

## ADMIRAL ENOMOTO TAKEAKI.

IN after years when the hand of time has swept away existing prejudices and misconceptions, ample justice will be done by the conscientious historian to the chivalrous and devoted subject of this sketch, who in a remote portion of the Empire remained constant to the fealty he owed his feudal superior and, disdaining like so many others to sever a tie consecrated alike by honour and gratitude, maintained a desperate struggle against the whole might of the Empire until the very hopelessness of the attempt rendered further resistance a crime. Then, and not till then, did Admiral Enomoto surrender his untarnished sword to the victors: defeated, but not dishonoured, he wrested admiration from his foes, and how well and faithfully he served his former master afforded a bright augury, since amply fulfilled, of the loyalty afterwards so often proved.

Sprung from the best blood of the Tokugawa, Enomoto was despatched to Holland with two companions in the year 1863 to study the art of maritime war. Of his career in the land of canals and dykes, but still teeming with memories of great naval heroes whose glorious example must have excited a spirit of emulation in the young sailor, we have unfortunately no record, and we next hear of him in the autumn of 1867, when he returned to Japan on board the *Kaigo Maru*, a man-of-war built by the Dutch for the Shogunate.

Enomoto received the appointment of Assistant-Administrator of the Navy, an important position he occupied when those troublous times fell upon the country, during which he inscribed with his sword a stirring record on the page of history.

When the downfall was apparent of the feudal system, which under the rule of the Tokugawa had preserved Japan from the horrors of intestine strife for nearly three centuries, the last Shogun was urged to commit *hara-kiri*, an insane proposal strongly and successfully opposed by Enomoto and others. Refusing, however, to despair of ultimate victory while a single hope remained, the admiral got his squadron—consisting of seven men-of-war—under weigh and, while the vanguard of the Imperialists entered the capital, he sailed from Shinagawa at night in the midst of a terrific storm of wind and rain. Negotiations which subsequently took place resulted in the surrender to the Imperial authorities of a portion of the war vessels, the remainder—still under Enomoto's command—being bestowed upon the Tokugawa. Dissatisfied, however, with the conduct of affairs, Enomoto again sailed from Shinagawa taking with him eight men-of-war and transports, a letter he left behind criticising the action of the government officials explaining sufficiently the reasons which prompted a step he must have since often and deeply regretted.

Enomoto then gathered together such scattered fragments of the Shogun's forces as could make their way to the sea shore, as almost every means of egress was beset by overwhelming numbers of their adversaries. With these reinforcements a descent on Hakodate was determined upon and, after some hard fighting, the town and district was captured. Here a conference was held with the foreign consuls and, although we do not affirm that such a course was recommended or joined in by the representatives of the Foreign Powers, still as a matter of history these last remnants of the once powerful Tokugawa established a Republic in Hakodate, Enomoto being elected President, Matsudaira Taro (now Consul at Vladivostok) Vice-President, and the other necessary officials duly appointed. Enomoto then sent a petition to the Imperial Government, through the kindly offices of the captain of a British man-of-war, and prayed that the island of Yezo should be granted to the Tokugawa clan, who would faithfully hold the "Northern Gate" of the Empire against all comers. This petition was refused and a powerful expedition fitted out to crush the last embers of disaffection then remaining in Japan.

The blow at last fell. After long continued resistance and the exhibition of a dauntless courage never surpassed in the brightest days of chivalry in old Japan, the day at length came when the generous offers of the Imperial commander had to be accepted, and Enomoto with his remaining comrades were transferred to the capital under arrest.

The Imperial clemency was shortly afterwards extended to the subject of this memoir and he again entered the

service of his country. Quick promotion soon followed. In 1874 he received a commission as Vice-Admiral in the Navy and was afterwards appointed Envoy Extraordinary and Minister Plenipotentiary to the Court of St. Petersburg. During his stay in the capital of Russia, the admiral studied the language of the country and also French. His proficiency in the latter is considerably above the average and he has translated from it into Japanese a work called "The State of Corea."

On returning from St. Petersburg the admiral received further official promotion, and in the beginning of the current year he was appointed Naval Minister of the Empire.

Of commanding personal appearance, affable in manner, and possessing in a unusual degree the rare combination of admirable qualities requisite to produce an able administrator and successful leader, admiral Enomoto is justly regarded as one of the most prominent men in the Empire of the Rising Sun.

## REUTER'S TELEGRAMS.

(FROM THE "HONGKONG DAILY PRESS.")

LONDON, August 20th, 1880.

The Secretary of State for India, in reply to a question, said that he discredits the report of an understanding between the Amcer and Ayoub Khan.

The enemy has commenced hostilities at Kandahar.

Numerous supposed Fenian emissaries have appeared in several Irish towns.

Mr. Gladstone's illness compels him to leave for Italy or Madeira at once.

LONDON, August 21st, 1880.

In the House of Lords, the Lord President of the Council (Earl Spencer), in reply to a question, said that the condition of Ireland in several parts presented the gravest aspects.

LONDON, 1st September, 1880.

General Roberts arrived at Khelat Ghilzai on the 23rd August, and marched for Kandahar on the 25th.

The Great Powers are making a naval demonstration in the Adriatic.

LONDON, August 24th, 1880.

The semi-official *Agence Russe* announces that a conciliatory spirit prevails between Russia and China. Tsong has had an audience of the Emperor.

LONDON, 3rd September, 1880.

Ayub Khan has retired from Kandahar.

## NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the JAPAN WEEKLY MAIL, must be authenticated by the name and address of the writer, not for publication but as a guarantee of good faith.

It is particularly requested that all letters on business, relating to Advertisements, Job-printing, or Accounts, be addressed to the MANAGER.

And that literary contributions of every description be addressed to the EDITOR.

YOKOHAMA: SATURDAY, SEPTEMBER 4TH, 1880.

JAPANESE ERA 2540, MEIJI 13TH YEAR, 9TH MONTH, 4TH DAY, DO-TO-SI.

## NOTES OF THE WEEK.

By the Mitsu Bishi steamer *Niigata Maru*, which arrived at this port from Hongkong via Kobe on Monday last, we received the English mail of July 16th. Despatches for Hongkong and Europe went forward by M. M. steamer *Volga* on the 3rd instant, and for San Francisco and beyond by the O. & O. steamer *Belgie*, this morning.

The *Mainichi Shinbun* published the following correspondence from Corea, under date of August the 19th:—The Italian man-of-war *Vettor Pisani* with H. R. H. the Duke of Genoa, the British Consul from Shanghai, and a Norwegian gentleman resident in Kobe, anchored here on the 1st instant.

This visit being made without ulterior object no such difficulties were raised as on the occasions of the visits of the French and American men-of-war recently. It seems, however, that last year an Italian merchant vessel was wrecked on the coast of Seishiu, and that the crew received the assistance and protection of the Korean authorities. His Royal Highness therefore sent a letter of thanks to the Governor of the Torai Fu (drawn up in Chinese by the British Consul at Shanghai) but the receipt of the letter was, as usual, rejected. On the 3rd instant, the Duke, the British Consul, the Commander, another officer of the *Vettor Pisani* and the Norwegian gentleman already mentioned, (who accompanied the party on account of his being thoroughly acquainted with Japanese) were entertained at a banquet given in the Korean style at the Japanese Consulate. H.R.H. the Duke of Genoa was greatly pleased with the banquet. On the 4th instant, the Duke and his party went on a shooting expedition in the island of Zekkei. The booty was one deer, one *horo*, and ten pheasants. [Conscientious sportsmen will be pleased to note the last item.—Ed. J. W. M.] On the 7th instant the corvette left for Vladivostok, and the Norwegian gentleman returned to Kobe in a native sailing-vessel, via Shimonoeki. On her passage to Corea the *Vettor Pisani* spoke the *Chitose Maru* off the island of Tsushima with the Korean Embassy on board. Public opinion in Corea considers this fortunate, as had the *Vettor Pisani* arrived in Corea before the Ambassadors started for Japan, it would have delayed the Embassy for some days. The Japanese man-of-war *Amaki Kan* arrived on the 14th instant, from the port of Gensan. She reports that most of the houses in course of erection are nearly finished and that settled trade is gradually beginning. The weather there was very cold.

We were sorry to see only a comparatively small attendance at Professor Hennicke's really excellent performance on Thursday evening. The various "illusions" were most astonishing and elicited loud applause from the audience. The "aerial suspension" and "Arabian box mystery" proved here, as elsewhere, a source of amazement, and thoroughly mystified the beholders; in fact the whole entertainment was thoroughly enjoyable. We would suggest to the Professor the desirability of giving an occasional performance in the Theatre; we feel convinced that he would find the experiment a financial success.

Letters received recently from London state—and we are happy to learn the fact—that Sir Harry Parkes has completely recovered from his illness and was again in vigorous health. He leaves for Japan by the first mail in October.

The *Courrier du Japon* of Monday states that an extraordinary law-suit is now pending at Douai in the north of France. A testator recently left a sum of 30,000 francs to pay for masses which, as the clause in the will states, "were intended to deliver his soul from the pains of purgatory." The priest charged with the duty of celebrating these masses claims the money. The executor, however, refuses to pay, and declares he will only do so "when incontestable proof has been adduced that the soul in question has got finally released from its torments"; he also requires to be allowed to examine the register of detentions kept there. It would, perhaps, be best to have the money paid in to the "suitors' fund."

H. M. S. *Comus* left for Chefoo via Nagasaki on Wednesday morning under sail.

We take the following from *Bell's Life* of July 10th:—At the Carrick-on-Suir Athletic Sports, held on Monday, July 5th, 1880, Mr. P. Dowin is stated to have cleared 6 feet 2½ inches in the high jump. Eight well-known gentlemen signed the following

#### CERTIFICATE.

We, the undersigned hereby certify that P. Dowin did, on this 5th July, 1880, at the Carrick-on-Suir Athletic Sports, clear the height of 6 feet 2½ inches, the same having been measured from the centre of bar, and the ground properly tested with a spirit level.

(Signatures)

This wonderful jumper began a series of victories in 1876 when he beat Blathwayte (C.V.A.C.) at 5 feet 7½ inches. In 1879 he cleared 6 feet and 6 feet 1½ inch on two separate occasions.

H. M. S. *Iron Duke* was safely docked at Hongkong on the 20th instant.

The first annual gathering of the Société Suisse De Tir will be held on Saturday, the 11th of September instant. Members of the society will alone be permitted to compete. The committee for carrying out the day's amusements consist of Messrs. C. Haenni, president: G. Hurlimann, Secretary: and Merian, Grob, and Hs. Abegg.

A cup, presented by a member of the Yokohama Rifle Association, was contested for on Saturday last, at 5 p.m., at the rifle range. The distances were 200 and 500 yards. The day was not favorable for good shooting, rain and the rapidly increasing darkness materially affecting the scores at the latter range. The prize, as on the last occasion, fell to Mr. Douglas. The score is appended:—

	SCORE.

The *Hiogo News* of the 26th instant, writes:—"Judging from the strong winds here yesterday, and from the readings of the barometer, a severe storm has passed very close to us. The *Coldstream* and a junk went ashore in Hiogo Bay during the blow, the former also colliding with a brig and injuring her on the bow. The S.S. *Tokio Maru*, on her way up to Yokohama, had to anchor in Osaki Bay.

We take the following statistics from the *Nichi Nichi Shinbun*:—According to a report compiled by the Tokio Fucho authorities for the month of July last, there are 253,844 buildings in Tokio Fu which cover an aggregate of 4,360,814 tsubo. Of this total Tokio alone contains 172,482 houses, covering 2,136,858 tsubo. The four post towns number 5,908 houses, covering 90,007 tsubo, and the six counties 75,454 buildings, extending over 1,133,948 tsubo. Of these buildings, 4,333 belong to the Government and cover an area of 218,913 tsubo.

The same paper publishes a report of the attempted assassination of "a Secretary of a certain prefecture" and asks whether an epidemic of assassination instead of cholera has broken out this year.

We learn from a native source that on the morning of the 25th ultimo, the prefecture of Ehime was visited by a severe gale and heavy rain. Numbers of houses and trees are lying prostrate. The storm ceased at daybreak, on the 26th.

Owing to the effects of the same gale, the Tonegawa overflowed its banks and flooded the rice fields and vegetable gardens in the neighborhood of Choshi harbour. The water did not subside before the 27th ultimo, but fortunately no serious damage has been done.

The *Nichi Nichi Shinbun* publishes the following return, compiled by the Tokio Fu authorities. The number of houses destroyed by fire, flood and gale in Tokio Fu during the years 1868-79 is as follows: 49,240 buildings, covering 517,987 tsubo were destroyed by fire; an average of 4,476 houses per year. 817 buildings covering 8,873 tsubo were damaged by gales; an average of 74 houses per year: and 31 buildings were destroyed by flood.

We learn from the *Mainichi Shinbun* that in consequence of the scarcity of rain in the prefecture of Okinawa (Loochoo) all the crops are withering, and the farmers are very anxious about the state of affairs. This scarcity of water frequently made itself felt in former days as the islanders were entirely dependent for their drinking-water upon the rain supply. Since the establishment of the prefecture, wells have been dug, but even these are now dried up and drinking-water is very scarce indeed.

We read in the same paper that some time ago, Mr. Yoshida Masaharu, an attaché of the Foreign Department, and Envoy to

Persia, accompanied by Mr. Yokoyama, of the firm of Okura and Co., and several other gentlemen, left for Persia taking with them a considerable quantity of merchandise, in the shape of the products of our country. At the time of their departure their intentions were severely animadverted upon by the editor of a certain foreign newspaper, who said that the only possible exports from Japan to Persia were tea and silk, and that the latter could obtain ample quantities of each from her nearer neighbours, China and India, and had consequently no need to draw them from so distant a land as Japan. 'Therefore,' said the authority referred to, 'opening trade between Japan and Persia is about as sensible an idea as beginning commercial negotiations with Africa.' The critic who remarked this was quite correct: the Japanese mission lost heavily, and naturally the other members attribute their losses to the want of knowledge of Mr. Yoshida.

We have received private information by the s.s. *Takasago Maru*, that Li Hung-chang has positively asserted that all danger of war between China and Russia has been averted.

We are glad to learn from the *Mainichi Shinbun*, that the manufacturers of cartons have resolved to adopt to some extent the advice so persistently tendered by the foreign journals, and limit the production. The price is said to be consequently much more than usual. Our Japanese friends should go a step further, and prohibit the export of cartons altogether. They would thus carry out the policy advocated by the foreign newspapers in its entirety.

The Dublin correspondent of the *Times* gives the following account of a dispute between landlord and tenant in which the former seems to have borrowed the tactics of the latter and thus turned the tables. "There has been another scene of violence on the Moybella estate, in the county Kerry, where a tenant named M'Namara and his family were restored by an armed mob to the occupation of a house from which they had been evicted. At a late hour M'Namara's house was again besieged by a party of armed men, who burst in the doors, front and rear, and then forced M'Namara and his family to leave the premises, hurling after them into the road every article of bedding and furniture which the house contained. Beyond M'Namara's expulsion from the house no violence or injury was done to either himself or his family. Some members of the constabulary who since the first outrage have been stationed at the house of Mr. Horgan, the landlord of the property, for his protection, were attracted by the uproar and commotion which they heard in the direction of the scene of the occurrence, but when they arrived on the spot the confusion had subsided. They observed M'Namara and his family on the road-side, and on entering the house they found three men, armed with two Enfield rifles and a musket, in possession. These men admitted having come there with others in the interest of Mr. Horgan to remove M'Namara, who they considered had no legal right or claim to possession of the premises after his eviction by the Sheriff. All the available constabulary at Listowel and Ballybunion proceeded, fully armed, to Moybella, and after some hours they returned, bringing with them several prisoners charged with complicity in these lawless proceedings. Among the prisoners is Edmund Horgan, one of the landlord's brothers, who was injured on the occasion of the outrage by M'Namara's party."

One of the London "Society" papers states that the health of Prince George of Wales (the second son of H. R. H. the Prince of Wales) was so much benefited by his recent trip in the *Bacchante* with his elder brother Prince Edward, that he will accompany the vessel on the cruise in the Pacific which has probably commenced before now. It is announced that the *Bacchante* will visit China and Japan.

We noticed at length some time since the exertions being made to open to commercial enterprise the promising field afforded by the great continent of Africa, which has witnessed so many sacrifices by daring explorers anxious to add to the world's knowledge of that fascinating country. A recent English journal states that "the French are well known to be exceedingly jealous of any European nation attempting to get a foot-

ing in North Africa except themselves. Only the other day Garibaldi (possibly with unnecessary officiousness) warned the Italians that the French were attempting to get the mastery in Tunis; and now we see from the last number of *L'Exploration* that they dread the influence of England in the region between Morocco and Algeria and Senegal. On the authority of the Algerian journal *Akhbar* we are told that an English factory has been established at the mouth of the river Sekia-el-Amara, right opposite the Canary Island, Fuente Ventura, distant fifty-six miles. A steamer carries on a daily service between Cape Jubez and the Canaries, and two sailing-vessels keep up communication with England. A fort has been constructed and mounted with cannon; and there are magazines and dwellings of stone, with a pier surmounted by a light. Besides the staff necessary to conduct the business, there are several families from the Canaries who cultivate gardens and carry on fishing. Commercial relations have already been established with Adrar and the Soudan, and friendly terms have been made with Mohammed-Beyrik, Sheik of Wed Nun and ruler of an extensive territory. This potentate has long wished to be independent of Morocco, and to obtain an outlet for his commerce otherwise than through that country. His son, we are told, has been in London, and was received by the Prince of Wales. It must have been done very quietly. We suspect all this must refer to the station established by Mr. Mackenzie, who has conceived the project of flooding the Sahara. Our neighbours, we believe, need have no dread of England's seeking to found any Imperial establishment in the region indicated, and the French are welcome to annex all the region between Algeria and Timbuctoo, which they are anxious to join by rail."

The *Statuto* of Palermo, writes the *Times* correspondent, announces that one of the priests of the Capuchin Monastery in that city, named Father Antonio Bonajuto, has been murdered by the cook of the establishment. At a very early hour, before the time for rising, the Superior heard a shriek from the cell occupied by the priest. He rushed to the spot and met the cook coming out of the cell with a carving knife in his hand. He forced the Superior by threats to give him five lire and then escaped. The priest had received thirteen wounds, most of them mortal; he lived only a few moments after the escape of the murderer. The cook had been a shipwrecked sailor, who, twenty years ago, was given a shelter in the monastery out of compassion. Latterly he has taken to drinking, and Father Antonio had reproved him. This seems to be the only explanation of the crime. The assassin has not been apprehended.

The *Pall Mall Gazette* does not, apparently, view with satisfaction the Mixed Court at Shanghai. Writing on the subject that journal remarks that "at Shanghai, where we and some other European nations and the United States have establishments, native criminals are dealt with by what is called a 'mixed court.' It is so called, no doubt, because a European or American Consul or other resident sits with the Chinese judge; but in all other respects it has little pretension to its title; for its course of procedure and its punishments appear to be of Chinese barbarism, unmixed with the faintest trace of European sense or humanity. Thus, a prisoner who refuses to divulge the names of his accomplices is ordered to receive fifty blows on the face; and if these, administered apparently on the spot, fail to overcome his contumacy, another fifty may be ordered. Beating the ankles with hammers, and kneeling on chains with the feet braced up, are other methods of persuasion which are employed by this mixed tribunal, graced as it is by the countenance and sanction of an official of some great Christian Power. According to a tabulated report prepared by Mr. F. Parry for the *Supreme Court and Consular Gazette*, the punishments consist of terrible floggings, or else of the *cangue*, or heavy table, in which the wearer's neck is enclosed, and which prevents him from lying down or from feeding himself. That such practices should go on from year's end to year's end with the placid acquiescence of influential European communities seems hardly credible. It is to be hoped, at all events, that they will not long survive the publicity which Mr. Parry has given them. If the European assessor is to sit on the judgment-seat simply to give the countenance of civilization and Christianity to the

stupid and horrible barbarities of the Chinese—to concur with a mandarin in administering blows on the mouth or hammering the ankles of prisoners who refuse to confess or to ‘peach’—the sooner he is removed from so shameful a post the better for himself and the civilized Power which he represents.”

Not long ago Shakespeare's comedy “As You Like It” was performed for the first time in the theatre at Wilna, Russia. The play gave great satisfaction, and the delighted audience began uttering loud cries for the author. The manager, in great embarrassment—for he knew no more of Shakespeare than the audience—at last came to the front, prepared to trust to luck for his excuse. Finally, after much preliminary verbiage, he regretfully announced that Mr. Shakespeare, the author of the piece in question, had been dead for nearly twenty-five years. Expressions of regret arose from the crowd, who, however, were quite satisfied with the explanation, and the manager retired, to congratulate himself upon his successful historical romancing.

About two years ago the Paris Police Tribunal passed a sentence of two years' imprisonment for swindling, on an individual of Russian nationality named Count de Tschernadief. The man had, however, escaped from Paris, and so far the sentence has never been executed. A short time back a traveller of rather distinguished appearance alighted at the Grand Hotel and took up his residence under the name of Count de Tschernadief. He obtained access to certain clubs, where he related that he had just inherited a fortune of 40,000,000 francs (£1,600,000), and was about to give a grand *fête* to M. Gambetta, of whom he was himself a fervent admirer. The rumour of this event soon spread in Parisian circles, and the reporter of a journal called at the hotel to interview the stranger, who appeared pleased with the attention, and described at length his estate at Glarus, in Switzerland, where the *fête* was to be given. It contained, he said, an avenue three miles long, which was to be illuminated throughout, after a banquet of 500 covers, and 5,000 invitations were to be issued for the evening. For several days the same journal continued to laud the wealth and hospitality of Count de Tschernadief, and the news at last attracted the attention of M. Mace, head of the detective service, who had not forgotten the adventurer of two years before, and still held a warrant for his arrest. He waited on the count at his hotel, and after a short conversation acquired the conviction that the two noble foreigners were one and the same, and had him at once arrested. An investigation has been opened to discover the identity of this person, as it is presumed that the title under which he passed is an assumed name. The most mysterious feature of the affair is that he really rents a fine estate at Glarus, for which he pays 25,000 francs (£1,000) a year, that he has carriages, hunters, &c., and is living at the rate of 200,000 francs (£8,000) a year, while two years ago, when condemned, he was in complete penury. The police will, of course, endeavour to discover the source of his rapidly-acquired fortune.

The Sioux (Dakota) *Panagraph* says that “probably there has never been in this country so much glorification over a wedding as that which made Nils Peterson and Mali J. Aansen man and wife. The ceremony was performed last Friday at St. Olaf church, north of Sioux Falls, by the Rev. O. Sando. The couple were accompanied to church by twenty-two wagon loads of friends, and from there they went to the home of the groom, near Republican Post Office, nine miles from here, where the glorification was held. Feasting and dancing commenced right away and were kept up until the following Tuesday. Part of the time there were as many as two hundred guests present, and during the whole four days there was a steady stream going and coming. There is no way of knowing how many were there together, but the preparations made for their entertainment indicate something of the crowd. For meat two large oxen were roasted whole, all of which was devoured; 100 pounds of white fish were also served, together with liberal supplies of caviare; bread and pastry enough for a regiment; and cheese, such as is made in the old country, was spread prodigally during the whole time. The supply of drinkables was almost a young deluge, and cigars were punished by the box. Six barrels of beer had been home-brewed from four

sacks of barley; a whole barrel of alcohol, forty-six gallons, was taken out from town, the surplus to be returned, and ten gallons of wine provided for the ladies. The alcohol was diluted somewhat for use, and the whole supply of liquor was continually on tap for anybody who could hold any more. While, of course, most of those present felt the influence of their beverage, there was no beastly intoxication, and everything was carried on without any breach of good nature. All the time dancing went on, except during such intervals as the participants were compelled to rest. It was altogether the most extended jubilee that the north-west has known, and will be long remembered by those who took part.”

The following paragraph from the *Globe* conveys intelligence which will be a perfect revelation to most residents in Japan:—“The society which protects animals in France holds quarterly meetings, at which papers are read, much in the same way as at the assemblages of the great academies. At the last of these a curious communication was read from the French Consul in Japan, describing the condition of all animals in that interesting country. If the writer is correct in his observations, it will be admitted that both in England, and probably all over Europe, the brute creation has much cause to envy the condition of those of its members which are found within the dominions of the Mikado. As for horses and oxen, their comfort is studied to such an extent that it is an unheard-of thing to make them go faster than at a foot-pace, for fear the poor creatures should suffer from fatigue. The cattle are, moreover, carefully shod with soft boots made of straw, lest in any moment of impatience they should injure themselves. A Japanese humanitarian who assisted at the Derby would be possessed of feelings very like those of a member of the Peace Society compelled to be present at a combat of gladiators. Donkeys are, it appears, unknown in Yokohama, and the sight of one which has been brought to that town by an Englishman for his children was hailed with unbounded admiration, the natives comparing his ears to those of their own divinities, and his voice to the finest notes of the baritone singers at the Japanese Opera. Dogs and cats live in the houses like members of the family, and are fed with exactly the same dishes and at the same time as their masters or mistresses. Of wild animals, the stag, the boar, and the hare were once protected under severe penalties, but they are now much less highly respected. Rabbits, however, are in extraordinary request, and a good one is said to command the incredible price of from 5,000 fr. to 10,000 fr. But of all animals the fox is the most especially honoured, his chief merit being the attribute of cunning, which the nation naturally regards with unlimited admiration.” Supposing—which we can hardly believe—that the gentleman named as the authority for this tissue of absurdities actually transmitted the information to the French Society mentioned, he can hardly have taken notice of the unfortunate horses employed in the vehicles in Tokio, and elsewhere in Japan.

A case of murder has recently been tried at the Court of Amises for Indre-et-Loire department, remarkable for an unusual amount of savagery on the part of the murderer, and of tenacity of life on the part of the victim. Outside Tours lived Madame Madrel, an old lady, well off and determined to keep what she had got; and living not far from her house was her daughter, married to a well-do-do-farmer named Jude. On Christmas day last it was noticed that Madame Madrel's house was shut up, and on the neighbors breaking in, the unfortunate woman was found alive, but insensible, with her skull fractured and her head and body covered with wounds. M. Jude was immediately informed of the occurrence, and seems to have over-acted the part of indignation and grief, especially as he had not been on particularly good terms with the old lady. Moreover, on her regaining consciousness, and being asked who was her assailant, she immediately pointed to her son-in-law, who was accordingly arrested. The post mortem revealed the singular fact that Madame Madrel had been subjected to two different attempts at murder at distinct intervals—the first on the evening of the 24th, when the assassin had attacked her with a chisel and stabbed her in several places. He appears to have been disturbed in his movements and to have left the house, returning the next morning with the expectation of completing

the affair. But the victim still lived, and this time he fractured her skull with a hammer, without even then destroying life. Evidence was brought forward that at both the presumed visits of the murderer, a man disguised, but thought to be Jude, was seen clambering over the wall, and as no valuables had been taken away, the strongest suspicion pointed to him as being the most interested in Madame Madrel's death. The admirable defence of M. Lachaud, however, coupled with Jude's previous good character, secured a verdict of acquittal.

The crude slag from iron-smelting furnaces, says *Cassell's Magazine*, has accumulated so much on the hands of ironmasters that the waste heaps have become an unsightly nuisance, and it is always satisfactory to learn that a new use has been found for this capable refuse. For some time slag has been made into sand, spun glass, and bricks for building purposes; but another important use for it has recently been discovered. This consists in making it the chief ingredient in a hydraulic cement, prepared by a gentleman who is well known for his successful efforts to manufacture artificial stone. Ransome's slag cement consists of a mixture of lime and slag-sand in certain proportion. It is delicate in color, sets rapidly in water, and is of extraordinary and increasing strength. According to experiments, in three days after application to a structure under water it is stronger than Portland cement after seven days; in fifteen days it is stronger than Portland cement after a year, and in twenty-eight days it is stronger than Portland cement after seven years.

"Hamlet, Prince of Denmark, with the part of Hamlet omitted by particular desire," would scarcely be a more remarkable performance than a burial from which the corpse had been "left out by mistake." Such inattention to detail on the part of all concerned in the ceremony of sepulture, as is involved in the latter omission, appears almost incredible. Nevertheless a strange story, published in the leading Italian newspapers, gives an example of this singular anomaly. It is stated that a native of Bosito, in Lombardy, lately suffered bereavement by the death of his wife, and his grief for the departed was so poignant that his relatives deemed it expedient to prevent him from being present at the final preparations for the funeral ceremony, and from assisting in person at its celebration. Returning to his house late in the evening after the burial, and entering his bedroom, he found to his horror and consternation the lifeless form of his wife, robed in its death cerements, reclining on the bier and still awaiting interment. The widower rushed into the street and lost no time in notifying what he had seen to the police authorities, who at first inclined to the opinion that sorrow had turned his brain. On accompanying him home, however, they soon convinced themselves that his extraordinary statement was in every particular correct. Inquiries were forthwith instituted, and resulted in the amazing discovery that the village undertaker had "forgotten all about the corpse," and had nailed up an empty coffin, which had been subsequently conveyed and consigned to the grave with due religious ceremony and sorrowful observance.

Two papers, one on iron as a Material for Architectural Construction, the other on Mild Steel and its Application to Building Purposes, have been read and discussed at meetings of the Royal Institute of British Architects. Mr. C. W. Siemens, F. R. S., took part in the discussion, and made clear to all who heard him what is meant in the present day by steel, particularly that form of the metal described technically as "mild steel." He made clear, too, the reason why steel is pure, and iron more or less impure. In producing the steel now used in engineering and architecture, a mass of some ton or twelve tons may be seen in the furnace in a state of perfect fluidity, in which state it is tested by means of samples both as to its chemical and mechanical condition. That steel can be shaped as required for any purpose. Mr. Siemens holds that "for purposes where boldness and grandeur of outline are essential no material can rival steel. When we want to bridge a third of a mile in span, or to construct a roof or dome of enormous size, there is no material that can serve our purpose like steel. If the object is simply to get tensile strength, as is the case in the chains of a suspension bridge, the use of steel wire enables us to attain a limit of strength exceeding a hundred tons per

square inch, or as much as five times the tensile strength of wrought iron." In building a house of an area thirty feet by sixty, the using of steel girders instead of wood would effect a saving of two hundred and ten pounds, and the rooms would be higher. This mild steel, which has nearly expelled iron from naval construction, has an absolute strength of about thirty tons per square inch; but its toughness is such, that if a bar eight inches in length is subjected to increasing strains, it will stretch to ten inches before giving way. This steel is of uniform strength—a great advantage when overloaded, or in case of fire; and it is capable of being wrought into the highest artistic forms.

A committee of gentlemen in London, on which is Mr. Labouchere, the editor of *Truth*, has been deciding a competition of salads, and declares in favor of the following recipe: From six to eight cos (or cabbage) lettuces remove outer and coarse leaves and strip from remaining ones the good part. The pieces should be two and one-half to three inches long, and may be broken up, but not cut; then wash them and let them remain about half an hour in water. Rinse in second water, place in napkin and swing till dry. For dressing take the yolks of two hard boiled eggs, crush them to paste in a bowl, adding one-half tablespoonful French vinegar, three mustard spoons mustard, one saltspoon salt, and beat up well together; then add, by degrees, six to eight tablespoons of Lucca or Provence oil, one of vinegar, and when thoroughly mixed, a little tarragon finely chopped, a dessert spoon of coarse white pepper, as pepper in powder irritates the palate. When all is well mixed place the salad in it and turn over and over patiently, till there remains not one drop of liquid at the bottom of the bowl. Put the white of the eggs in slices on the top and serve shortly after it is mixed.

Our readers will probably remember the dastardly murder in Texas of Porter the actor by "Jim Currie" a noted desperado. The trial, owing to the influence of Currie's friends only came off recently and the ruffian—who was proved to have been slightly intoxicated when he committed the crime—was acquitted on the ground of "emotional insanity." The *Galveston News* published the following skit upon the verdict:—A Galveston gentleman had occasion to go into a dentist's shop to have a tooth pulled. In order to nerve himself up to the ordeal, the sufferer had taken several strong drinks of whisky. The dentist, who had never seen the sufferer before, examined the tooth, and then retired for a few moments into the back room. When he reappeared he had two revolvers and a bowie knife strapped on his person. After placing a large shot-gun in a convenient corner, the dentist approached the sufferer with a forceps.

"What in the name of heaven does all this mean?" gasped the man in the chair.

"When a man's breath smells of emotional insanity like yours does, I am not going to exasperate him unprepared. You may be Jim Currie himself, for all I know."

As the dentist was afterward seen alive on the streets, the inference is that Currie is not in Galveston.

EDWIN WHEELER, M.D.,  
Surgeon-in-Charge.

## LONELINESS.

(From the Japanese.)

In the depth of mountain forests  
Far from human voice or sight,  
Climbing thro' the dusk-green shadows,  
Till I gain the distant height,  
What is this that waits to greet me,  
Like a vision of delight?  
Buds and blossoms without number,  
Every spreading bough encumber—  
Thro' their misty wreaths of snow,  
Soft rose-flushes come and go—  
Mountain-cherry all unmated,  
As I stand thus known to thee,  
Deem thyself revealed to me,  
To my lone life fettered, fated,—  
Other than thee, Radiant One,  
Friend or comrade have I none!

F. B. H.

Tokio, 31st August, 1880.

## LONDON LETTER.

London, 16th July, 1880.

I am much indebted to the Editor of the *Japan Mail* for his thoughtfulness in suppressing the names of the two Japanese gentlemen whom I mentioned in former letters. Japan is, after all, a small country, and they might have been identified, which is never pleasant for a person who wishes to preserve an incognito; and it would have been embarrassing to me to have been the means of officiously bringing them into public notice. I was only reminded of the circumstance last night by Mr. — himself who it seems has access to the Anglo-Japanese papers and who had recognized some of his own sayings; nor was he at all ill-pleased at this, only he evinced great sensitiveness on the point of personal publicity. Some months had elapsed since I last saw this gentleman, my avocations having kept me for the most part on the opposite side of London to where he lives, but while taking an airing in the Zoo, which is still a fashionable resort on a Sunday afternoon, I encountered my quondam companion at the door of the monkey house. The affinity for monkeys is a most instructive trait in human character. A patient observer like Mr. Darwin would evolve marvellous laws from a study of the demeanour of men in the presence of monkeys—the men classified according to age, sex, and calibre. There are two distinct kinds of sympathy between man and the animal kingdom. There is the lofty interest of the highly civilized orders which is as the overflow of their abounding philanthropy—the crumbs, so to speak, which by right fall to the dogs. That is a noble thing, and many a down-trodden donkey and thirsty cab-horse have reason to thank the fates that there are such people as Lady Coutts and the Society for the Prevention of Cruelty. But that is patronage more or less touched by emotion, and differs materially from the true sympathy which subsists between the lower, the younger, and the less advanced, orders of mankind, and the brute creation. Between the blind beggar and his little girl and his dog there is *esprit de corps*—no patronage. And so throughout the whole range of intercourse between animals and the inferior human strata. Domestic animals are in a real sense the companions, not the pets, of the rude races and classes of men. And even the wild species are regarded by them as somehow on a footing of equality, if not fraternity. The Indian shikari makes long speeches to the tiger in which he talks of his grandfather, his female relatives, and so forth, as if the beast were a human scapegrace whom he was coaxing back to the paths of virtue. And the Africans regard monkeys as men who are a little too clever to talk. Animals are felt instinctively to be either rivals or comrades by the lower races and the vividness of this sentiment affords a rude test of the grade in the social scale reached by the individuals under observation. For this kind of observation the Zoo affords great facilities. It was here that the distinguished emissaries from King M'tessa of Uganda were first betrayed into expressions of admiration for the power of England, for there they beheld the African elephant, tamed, and after mustering up courage to climb the steps leading to the huge creature's back they felt that they had really discovered the conquerors of the world! But whence this digression? I was almost forgetting what set me off on this tack, and it is hardly fair to my most obliging friend to recall it.

The odour of the monkey house is not exactly pleasant, as even in summer these delicate animals have to be kept pretty warm. I led my friend away through the grounds "far from the madding crowd" and found him nothing loth to plunge into the history of events since we last met. Many things have hap-

pened since then, according to a trite saying, originally attributed to Mr. Disraeli, and the only difficulty was to know where to begin. Remembering the keen interest Mr. — took in English politics when I first made his acquaintance, I took occasion to remind him of his gloomy anticipation in the event of the Gladstone party securing a majority at the elections. He had gone so far as to predict, that with the advent of Mr. Gladstone to power, the pillars of European peace would be shaken and the dread of it would pervade the nations to their hurt; and I thought it perfectly fair to point out to him how hazardous such vaticinations are, seeing the new Government had been only three months in power and had already secured the European concert which the Beaconsfield Government never really accomplished. "You wait a bit," replied Mr. —, "and you shall see. Little clouds in the Adriatic, darker clouds over the Bosphorus. Bulgaria once more converted into a Russian camp, the Berlin Conference delivered of its verdict, the Sultan defiant and resolved to die game—this," said he, "is a very quicksand to build your hopes of peace upon. And furthermore," he observed, "there is the Russo-Chinese quarrel. No doubt the Liberal Cabinet would resent the inference, but for my part I feel certain that it was the change of Government in England which gave Russia the courage to take up this Chinese quarrel seriously. Russia is determined to go to war. Preparations have been going on with immense activity in the dockyards for a naval war on a respectable scale, and Russia does not out of her poverty equip a fleet in the Pacific for nothing. Russia is resolute about having Corea, and probably Newchwang, so as to be always within striking distance of Peking. Her overtures to Japan are not known to have been successful so far, and it is to be hoped for the sake of the country that Japan will take no part in the Russo-Chinese imbroglio, for it would go equally hard with her whichever side she took." Whether these were —'s own independent views, or whether he has merely picked them out of some of the more outspoken English journals, I cannot be sure; but I should like very much to know. Half, and more than half, the political opinion in England is a mere *réchauffé* of newspaper articles nine-tenths of which are of no more genuine value than the babbling of a child. There are still people who read leaders in the *Times* I suppose. I never can get through one. Their insincerity is too palpable. A smart and smooth-reading leading article can be made to order like a pair of boots. One does not seek enlightenment from them, but merely notices their drift in order to know which way the popular current is believed by them to be moving. At the present moment our public life seems to be in a sort of eddy or cross current. Sundry rocks and snags have obstructed the even flow. The powerful majority has not proved so docile as a flock of sheep would have been, and already some ominous threats have been heard of sending the House of Commons back to the country.

Mr. — rallied me on the Bradlaugh episode, and this he did because on a former occasion I had taken up the cudgels rather strongly for the Christian view of Government *à propos* of the Treaties with non-Christian Empires. This affair has been so much before the public that your readers have learned as much of it as they probably care to know. But it is a fact, nevertheless, that the grounds of exclusion of Mr. Bradlaugh which really weighed with the House of Commons were not those alleged in the arguments which were used by the speakers. Mr. Bradlaugh might have got in to take his seat, Atheism and all, if he had not made himself notorious for disseminating odious opinions, and publishing disgusting books. A corrupter of the pure wells of youthful innocence is fortunately not a man to be tolerated yet in England. However, Atheism or not, Mr. Gladstone came to the conclusion that he must bring in Mr. Bradlaugh, even after the house had decided to keep him out, and so Mr. Bradlaugh attends the house and votes on every division. A question remains whether the law has not something to say to Mr. Bradlaugh's right to sit and vote, and some very zealous persons have taken out writs against him every day.

The way — turned the incident to account was this. An avowed Atheist has been admitted by the House of Commons to a seat and a vote. Therefore, theoretically, the whole House might be of the same negative creed. And if the House of Commons, why not the Lords? The whole Legislature, including the Ministers of the Crown, might be Atheists and maintain their full rights as now. And if the Ministers and the Legislature, why not the Sovereign, the Judges and every functionary? The simple truth which emerges from the Bradlaugh struggle is this; that although the majority of Englishmen happen to be Christians, England is not distinctively a Christian country. The pretence on which she imposes international disabilities on certain non-Christian States is therefore not merely a fiction but a falsehood. Hence some other basis must be found to justify the extra-territorial stipulations of the Treaties with China, Japan, Persia and Turkey. "I am not," he added, "such a fool as to suppose this will make any practical difference, for I know very well that when the strong imposes terms on the weak one justification just as good as another."

## PARIS LETTER.

(Scientific)

PARIS, 13th July, 1880.

Professor Vogt has drawn the attention of the National Institute of Geneva to the physiology of writing. It has been demonstrated, that certain parts of the brain, situated in the region of the temples have a predominating influence on the formation of articulated language. It is also wellknown, that the nervous fibres intercross in the brain, and in such a manner that the movements of the left arm, are governed by the right hemisphere, while those of the right arm are ordered by the left hemisphere of the brain. Apoplectic attacks, and extravasations of blood, are more frequent in the left than in the right side of the brain. Hence, when the left hemisphere is affected, paralysis and inability to speak result for the members of the right, while any lesion in the right hemisphere, while paralyzing the left members, generally leaves language intact. Now since a centre exists for language, does one also exist for writing? And, since we are accustomed to invariably write with the right hand, the power to do so ought to be paralysed when the left lobe of the brain becomes attacked. But we cannot the less learn to write with the left hand. This raises a general question: Does the manner in which we write depend on physiological necessities created by the structure even of the brain itself? All people write with the right hand; how then comes it that the arrangement of the lines and letters is different? The nations of eastern Asia write from top downwards, and in lines from right to left. Semites and Europeans place the lines one below the other, but the former shape the letters from right to left centripetally, while the latter do so, from left to right and centrifugally. The arrangement of the lines and letters and their formation, are independent of each other. It is the form and size of the letters which constitute individuality. The representation of an object by an image was the origin of writing; the knotted strings in use among the Aztecs were rather an aid-memory than a form of writing: besides, to make a knot on a handkerchief to sharpen the memory is not uncommon among moderns. The Mexicans have a combination of image and phonetic writing, suggestive of a rebuz. The Red Indians when they paint images on skins, differ in little from the races that did the same on rocks. The style of primitive writing depended on the material: on a cornice, the lines were horizontal: vertical, on a pillar; circular round a column. Naturally in a pillar the writing would commence from the top downwards. The Arabs and Mussulmans when writing, keep the hand fixed to the same spot, while the other—the left, gently pushes or spins the paper forward, from left to right. The Arabs also prefer to write when standing up; besides, the Koran enjoins that the right hand ought to remain motionless when writing. Easterns could never have written with the left hand, for that hand has ever ranked as impure; no Turk strokes his beard with the left hand, or employs it to receive food, and to present it to be shaken, ranks in the eyes of Westerns as an insult. With a Semitic, every religious action is accomplished with face turned towards the east, his prayer would be worthless if uttered in any other position. He also observes the same rule in writing, so that the light arrives from the south, and he writes from that point to shadowwards. Westerns receive the light on the left side, and curiously enough write also towards the shade. Both are physiologically correct in not writing in full light. A singular fact to note: an individual struck with paralysis experiences ever afterwards an inability to pronounce certain letters, *f. l. r.* for example; the correlation will extend to the incapacity to write these letters; a simple crook is at most all that can represent them. Naturally, as observed, the right hand predominates; this was the case in the time of Homer's heroes, and was so with their ancestors; and modern man writes easily as rapidly and, as a musician's fingers move unconsciously, because the images or letters are stored in the left hemisphere of the brain. Left-handed penmanship is only right-hand writing topsy-turvy; this explains the eccentricity of Leonardo da Vinci's explanations of his designs which puzzle so many persons; he wrote upside down at an early age, and continued the freak when residing in France. Many lithographers at present write on the stone with the left hand, and draw with the right. Professor Vogt concludes that the position of the lines in writing, and reciprocal arrangement of the letters, depend on no physiological necessity.

Mr. Herbert has been studying what was formerly the geological condition of the Straits of Dover, and concludes that, during the first phase of the tertiary period, a part of the straits was covered by the German ocean, and communicated with the basin of Paris by the plains of Artois, while it also extended to Belgium, Westphalia and Hanover. He fixes the opening of the straits during the quaternary period.

Professor Daubrée claims for Descartes the honor of being one of the creators of cosmology and geology; he had been replaced by Newton and Voltaire. Before Laplace, Descartes considered all celestial phenomena as simple deductions from

the laws of mechanics: he proclaimed the physical unity of the universe before the spectroscope had revealed the chemical composition of the most distant worlds, and that the earth and the heavens are made of the same matter. Heat according to Descartes, played a leading rôle in the formation of our globe, which was at one time a star differing in nothing from the sun save in being smaller; and that the dislocations in the celestial vault have been produced by coolings and contractions. The idea that igneous or crystallized rocks were at one time stratified, and afterwards coming in contact with the internal heat of the globe became volcanic, has been abandoned since the explorations of Humboldt in the Andes and of de Buch in Norway; the latter found crystalline rocks lying over stratifications, the same in the Tyrol and in the Canaries—proof of the subterranean activity of the earth. Cordier also concluded from the increasing temperature of mines with their depth, that the mass of the globe was still in a fluid state. M. Elie de Beaumont has based his vast system on this crust of the globe contracting by cooling: he also astonished scientists by asserting that the oldest mountains were not the highest, and that little hills in Brittany and Wales were older than the Alps and the Andes. The classification zoologic, and the classification by systems of dislocations and upheavings, to-day march side-by-side. Professor Daubrée points out that by no means can feldspar, or analogous silicate rocks be formed independent of heat and that the fissures in the rocks filled with metals have been in intimate relationship with the internal regions of the globe.

M. Perroncito has made some further researches as to the cause of the auemia which affects the workmen in the St. Gothard tunnel: he found the patients were invariably suffering from quantities of worms, like small eels, whose presence sufficiently explained the malady. The same diagnosis was observed in the case of the men who bored the Frejus tunnel.

Teeth have a very intimate connexion with health; bad teeth imply a bad stomach, and a stomach which performs its duties badly contributes to caries and the loss of the teeth. From the very earliest history the preservation of the teeth occupied attention; Homer, Hesiod, Euripides, &c., constantly alluded to the subject. By the law of the Twelve Tables, it was prohibited to bury the dead with gold, except when that metal served to bind the teeth. Cæcellius, the famous dentist at Rome, left when dying a fortune greater than that of a pro-consul. Tooth preservatives or powder were also in great request in ancient Greece; young ladies always had a portion of myrtle—the shrub sacred to Venus—in their mouth, and St. Clement blamed the ladies of his day for coming to the temple with their mouth full of the drug mastic. The adult has sixteen teeth in each jaw, the child but ten, till seven years of age. A tooth consists of the crown, which extends outside the gum, the neck, which is covered by the gum, and the root, which occupies the socket. The tooth is hollow, and filled with the pulp; closed towards the crown, but open at the roots to allow the nerves and blood vessels to ramify. Three different tissues compose the teeth: the ivory or dentine which exists at the root as well as at the crown, and forms the principal part; it is not bone as many think, though it has the same chemical composition: no vessel penetrates it, and it has neither medullary sap nor pores: it consists of layers, one over the other, and hardened even at the moment of formation. Next comes the enamel, which covers the crown of the tooth and resembles porcelain not a little, the shade varying with the temperament of each individual: it is so hard as to resemble blue steel; it marks the best files, and will strike fire with steel like a flint: third, the cement, which covers the tooth, and is thicker at the root than at the neck. The teeth live and grow by means of their pulp, a matter extremely sensitive, and when inflamed very painful, in consequence of the impossibility of augmenting its volume, being narrowed in on all sides by the ivory. It is owing to the sensibility of this pulp that we immediately feel the least differences between heat and cold, and the slightest shades in the food masticated. The incisors have only a crown and a root, and constantly grow as in the case of rabbits and other growing animals; they cut the food, while the canine teeth tear it. The "wisdom tooth," has roots and a crown less developed: its form varies and it appears at no fixed age; when it has no room to develop, grave results may ensue. When through age the teeth disappear, the form of the jaw bones alter, and impart a change to the physiognomy: the lower jaw-bone inclines backwards—as with infants, and the chin becomes pointed. Teeth grow irregularly from various causes, and the best period to correct the defect is between ten and fifteen years of age. For persons who have acid stomachs, and which thus favor the destruction of the enamel, alkaline drinks ought to be patronised, and alkaline powder, containing a little magnesia, employed. Caries can be either dry or humid—the former often suddenly stops of its own accord, but commences by a black spot, and marked sensibility to heat and cold. When the disease eats into pulp, the toothache appears in a most violent form. When caries appears, food should not be taken too hot or too cold; brushes rather soft than hard ought to be employed. Alkaline powders are excellent for combating the acid of the saliva—one of the chief

causes of caries; astringent preparations fortify the gums. When the teeth are lost, they ought to be replaced, not only in the interest of pronunciation, but in that of digestion, for on the efficacy of the latter depends a prolongation of our days.

There are numerous thermal stations or Spas in Europe: England has eight, Germany seventy-two, and France one hundred and sixteen; what is chiefly to be kept in view is not the quantity of mineral matters in solution, but their quality. There is no classification for natural mineral waters; their production is one of the most interesting problems of geology. The mineralisation is effected under the influence of heat and pressure; is in connexion with the nature of the soil, and is associated with chemical reactions as complicated as they are obscure. There is much difference in the composition of springs in point of yield, temperature, and richness of solution, and they have a relationship with barometrical oscillations and earthquakes. The Lisbon earthquake affected all the thermal springs of Europe. However, the best known mineral waters have a very stable and ancient origin.

#### JAPANESE NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as to make them readable and intelligible.]

#### COURT, POLITICAL AND OFFICIAL.

In future all documents forwarded to His Majesty the Emperor from the Cabinet, must be countersigned by three Prime Ministers and one of the Privy Councillors who is either the proposer, or has taken the matter in hand. Formerly the signature of one Prime Minister was sufficient.

The *Nichi Nichi Shinbun* states:—"The Government has ordered the Minister and Assistant Ministers of all the Departments to report by letter upon certain important subjects connected with political affairs. We cannot give any accurate details, but have been informed that their opinions are requested upon the five following subjects:—The revision of treaties; precautionary measures against the constant drain of gold and silver; the establishment of a National Assembly; the improvement of the existing legal codes, and relations with Corea. These five questions always form the subject of discussion at the official meetings of the Prime Ministers and the Privy Council.

His Excellency Mayeshima, Postmaster-General, arrived at Kioto, on the 26th ultimo.

His Excellency Hanabusa, Minister Resident for Corea, will proceed to his post about the middle of this month when the Korean Embassy take their departure.

A native paper states that various reports have been published to the effect that Kwasoku Asano Nagunori has been urgently insisting upon the establishment of a National Assembly, and that really all the ex-daimios agree with him. However, Kwasoku Shinazu Tadayoshi alone, who has governed the provinces of Satsuma, Osmi and Hinga, entertained entirely different views. These statements are published in many papers, but it is impossible to vouch for them.

His Majesty the Emperor is at present engaged in comparing the codes of various countries with that of Japan. His Imperial Highness Prince Arisugawa, the Junior Prime Minister and ex-President of the Senate, and His Excellency Privy Councillor Oki, the ex-Minister of Justice, attend and explain any points upon which His Majesty requires information.

A meeting attended by the Prime Ministers and Privy Councillors, was held in a building in the Fukiage park on Sunday, the 29th ultimo.

His Excellency Iwakura, Junior Prime Minister, gave a banquet at the Shiba palace at 6 p.m. on the 27th ultimo to the two Prime Ministers. A private conference preceded the banquet.

The Ambassador and Vice Ambassador of Corea, accompanied by His Excellency Assistant Minister Woonyo, and Mr. Secretary Endo, of the Department for Foreign Affairs, proceeded to the Imperial palace at 11 a.m. on the 30th ultimo, where they were presented in audience with His Majesty the Emperor. All the Prime Ministers, and the Privy Councillors were in attendance. The Ambassadors presented to the Emperor various articles brought from their own country, and were afterwards entertained with tea and cakes. The Embassy left the palace at 11.40 a.m. and on their way home paid a visit to the Naval College.

The *Daijo Kwan* has published some pamphlets on 'Loo-choo Affairs,' and distributed them among the Prime Ministers and Privy Councillors.

The Senate resumed its sittings on the 2nd instant.

The Korean Ambassador and Vice-Ambassador were entertained at a banquet in the European style, the day before yesterday. The Prime Minister, the Privy Councillors, the Ministers and Vice Ministers of the different Departments were all invited.

His Excellency Yamao, Minister of Public Works, is expected to leave shortly for the northern provinces on an official visit of inspection of the telegraph lines and mines.

His Excellency Hijikata Hisamoto, Vice Assistant Minister of the Imperial Household, has received permission to wear an Italian order presented to him by the King of Italy.

Mr. Mayeshima, the Post-master-General, arrived from Kioto at Kobe on the 17th instant; he attended the opening of a branch post-office in Kobaruja-cho, and left for Osaka on the following day.

Mr. Watanabe, member of the Senate and ex-Governor of Osaka, has been permitted to wear an Italian order presented to him by the King of Italy.

The French Chargé d'Affaires, who has been staying at Misaki in the province of Sagami since the month of July, returned to Tokio on the 2nd instant.

#### NAVAL AND MILITARY.

A telegram has been received reporting the safe arrival at Nagasaki, on the 26th ultimo, of the *Awaki Kan* from Corea.

The Military Academy was opened on Saturday, the 21st ultimo.

The 2nd battalion of the Tokio garrison arrived at the capital from the Takasaki barracks on the 26th ultimo.

The *Hochi Shinbun* states that of the military cadets who pass the college examinations in December next, two will most probably be sent to France to study.

A telegram has been received announcing the safe arrival at Singapore of the *Iiyoi Kan*, on the afternoon of the 26th ultimo.

The first brigade of the Imperial Guard will leave about the middle of this month for the province of Yashio, en route to the northern provinces, where field manoeuvres will be practised.

A visit to the Military Academy was paid recently by two officers of the Russian army.

Thirty-seven cadets for military bands in the Japanese army have been admitted on the 1st of this month into the Kiododan.

The *Mainichi Shinbun* says that ample supplies of timber for military purposes are now stored in the premises of the War Department, and that large quantities of lead, valued at present rates, at about 300,000 yen, are accumulated in the godowns of the artillery. There will therefore be no complaint of deficiency of the metal in question, even though there should occur a war twice as long in duration as the last south-western outbreak.

His Excellency General Saigo paid a visit to Yokosuka on the 28th ultimo.

Lieutenant-General Ozawa will avail himself of his summer furlough to pay a visit of inspection to the same place.

A native paper announces that on Saturday, the 28th instant, thirty-seven sergeants and men of the police force who distinguished themselves in the late Satsuma rebellion, were rewarded with decorations of various classes.

A native paper announces that a telegram has been received that the *Fuso Kan*, which left lately for Hakodate, is now in that port. She was severely tried by the severe gale of the 26th ultimo, and fears were at one time entertained that she might go ashore, but fortunately this accident was avoided.

Another telegram announces the departure, on the 28th ultimo, of the *Iiyoi Kan* from Singapore.

The Naval College will be reopened on the 11th instant.

The *Mainichi Shinbun* states that the history of the Satsuma rebellion, sent to H. I. H. Prince Arisugawa for inspection, has been presented by him to His Majesty the Emperor.

The same paper mentions that there is a rumour that General Yamagata, Chief of the Staff, intends to resign his office and will be succeeded by General Saigo.

From the same :—"Colonel Munier, a member of the French military mission in Japan, has been appointed by his own Government a Commander of the Legion of Honour, which is equal to our Order of the 3rd class."

100,000 rifles, after the pattern invented by Colonel Murata, are to be manufactured at the Arsenal.

#### INDUSTRIES, TRADE AND FINANCE.

The shizoku of the old Mito clan who bought by tender the breeding farm in the prefecture of Ibaraki have found themselves unable to carry it on owing to want of capital. The Kencho authorities have applied to the Home Department for a loan of 30,000 yen for these distressed shizoku.

Messrs. Shibusawa and Fukuchi have resigned their respective offices of President and Manager of the Tokio Stock Exchange Office. Their places have been filled by Mr. Iseki as President, and Messrs. Asafuki and Shokatsu as managers.

With the benevolent idea of benefiting the condition of the poorer classes of people, a Japanese pen manufactory has been established in the former yashiki of the ex-daimio of the province of Echizen, situated in the 1st ward of Echizen-bori, Tokio.

According to the *Akebono Shinbun*, Mr. Motono Hikoharu, a resident of Takeya-cho, Osaka, intends to leave for Corea to establish a paper under the title of the *Jensan Shinshi*. The paper will be published five times monthly.

A native journal states that 4,818 bales of silk were brought to Yokohama during the month of August last; of this amount 3,133 bales were sold to foreign merchants and 1,486 were exported on native account.

The new buildings of the Yokohama Exchange Office being completed they were opened yesterday. Many prominent gentlemen from Tokio and Yokohama were invited to the ceremony.

According to the *Choya Shinbun* new lines of steamers are to be established between Tamba-gawa and Nagata, and Lake Biwa and Yokasuga, to supply the deficiency of shipping facilities existing in the prefecture of Nagano.

The head office of the southern section of the Railway Bureau is to be removed to Kobe during the current year, the new offices being now in course of construction.

The *Choya Shinbun* gives it as a current rumour that the Tokio-Yokohama railway is to be sold to a company of kuw-soku.

We learn from the *Choya Shinbun* that many people formerly expressed their disbelief that any good results could come from the construction of the new road between Sendai and Gamo as proposed by Mr. Yuri Kinmasa, and in consequence the work was not very promptly executed. Lately, however, the capital has been raised to over 20,000 yen, so that a speedy completion is expected. When this most advantageous work is finished not only Sendai, but the towns of Yamagata, Sakata and other places will derive benefit from it.

The construction of the new road to Hakone-yama being delayed by want of funds, an official connected with the undertaking has requested some of the nobles to assist.

#### MISCELLANEOUS.

A native paper states that Mr. Nomura, a sakan of the 3rd class in the Tokio Saibanho, has been arrested and sent to the 3rd police station on suspicion of having accepted a large bribe in connection with the case of Komine-Mura, heard in the Tokio Saibanho. Many other officials, it is said, are also implicated in this disgraceful affair.

The Korean Embassy visited the Chinese Legation at Nagata-cho on the 26th ultimo. His Excellency Iwakura, Junior Prime, minister, visited the Embassy at the Hongwanji temple at Asakusa, at 9 a.m., on the 27th ultimo. His visit lasted for over two hours.

On the 27th ultimo the Korean Embassy visited the Asakusa rice godowns and Library, and returned home through the gardens at Uyeno.

A native paper states that at about 5 p.m. on Sunday last, the 29th ultimo, a serious fracas occurred in Tokio between some of the garrison troops and over a hundred police in front of the police barracks situated just inside the Gofuku-bashi. The fight lasted for two hours and many men were severely

wounded; eventually both parties withdrew from the field. A meeting of noncommissioned officers and police sergeants has been convened to inquire into this disgraceful affair.

The operation of laying the submarine cable to Hakodate will be commenced about the middle of this month.

Mr. K. Nakabayashi, sub-editor of the *Nichi Nichi Shinbun*, has been fined fifty yen, for publishing on the 10th ultimo an article reflecting upon the members of the Cabinet.

Under the guidance of Minister Hanabusa, and Foreign Secretary Kondo, the Korean Embassy recently paid a visit to the Oji paper mills. On their way back they were entertained at the country house of Mr. Shibusawa, President of the 1st National Bank.

As the members of the Korean Embassy are very anxious to return to their native country, it is arranged that their departure will take place as soon as possible after they have been presented in audience with His Majesty the Emperor.

The port of Okazaki, in the prefecture of Awa, is at present in a very flourishing condition, but still suffers from the shallowness of the harbour. It is therefore determined to deepen the port to allow a better anchorage for shipping, and also to construct a pier there.

The Korean Ambassadors are expected to visit the Yokosuka dockyard on or about the 5th instant.

The boundary between Iiura mura, Mino-gori in the prefecture of Shinane, and Shimata mura, Abu-gori in the prefecture of Yamaguchi, never having been distinctly marked, officials have been sent there by the Geographical Bureau, who have thoroughly surveyed the boundary and prepared a map thereof.

The prefecture of Yamanaashi was visited by the severe gale of the 25th ultimo. Several rivers overflowed their banks, but fortunately without causing any material damage to the crops.

News from Kioto announces that the effects of the gale were also felt in that city.

At the recent competitive examination held by the Tokio Saibanho for the admission of barristers-at-law, 205 candidates presented themselves, out of which number only 23 succeeded in passing the standard.

A special Court is sitting with closed doors to inquire into the case of Mr. Nomura, a *sakan* of the third class who, as reported in our issue of the 30th ultimo, is charged with accepting heavy bribes in connection with the case of Komine-mura.

Iwakuni and Sokido, in the Yamaguchi prefecture, have been connected by telegraph. A branch telegraph office is to be established at Tama-shima, in the prefecture of Okayama.

From the *Nichi Nichi Shinbun* :—"The number of prisoners in the Tsukudajima prison has of late increased so much that the accommodation is now inadequate. Consequently the old buildings that were about to be pulled down as useless are to be repaired and utilised. A contemporary remarks, 'How is it that in this benign reign law-breakers have increased in number? Is it the high price of rice, and if so how can this rise in price be satisfactorily explained?'"

The districts of Maroran and Usu, in Yesso, were visited by a severe gale and heavy rain on the 25th ultimo, which continued throughout the night. The Sugar Manufactory at Usu was greatly injured, and in consequence of the rivers in the neighborhood having overflowed, two bridges and one building have been carried away. The crops on both sides of the Kosari-gawa have been greatly damaged.

News of a similar nature has been received from Chita-gori in the province of Owari: rice fields, tobacco plantations, and cotton plants, have all equally suffered.

Under the guidance of Mr. Superintendent Tokuno, the Korean Embassy visited the Government printing office on the 31st ultimo.

According to the *Choya Shinbun* the railway at Kamaishi, in the prefecture of Iwate, is now completed, and will be opened for public traffic on the 7th instant. Their Imperial Highnesses Prince Kita Shirakawa and Prince Hitachi Fushimi will attend the ceremony as representatives of His Majesty the Emperor.

According to recent official statistics the population of Yesso amounts to 123,663 people, of whom 63,031 are males, and 60,637 females. There are in all 39,393 houses.

An ex-daimio of the Hirado clan in the Hizen province, feeling deeply the enormous preponderance of imports over exports, has determined never to use any single imported article except such as official ceremony commands: he has also laid a memorandum containing his views before the noblemen's association.

#### ARRIVAL OF THE ENGLISH MAIL.

(Per Mitsui Bishi Company's Steamer "Niigata Maru.")

##### TELEGRAMS.

London, 30th July.—The following troopships leave Portsmouth on the dates stated, each taking a battalion and a half: the *Orontes* on August 3rd, *Euphrates* on August 6th, *Himalaya* and *Malabar* about August 12th.

The *Times* publishes a paragraph stating that the Government has resolved not to re-establish the Indian Navy. London, 31st July.—The Great Powers have declined the proposals of the Porte to reopen negotiations on the question of the Greek Frontier.

It is reported that 20,000 Chinese troops are expected at Chugu Chak.

London, 2nd August.—Mr. Gladstone is suffering from a slight congestion of the lungs, accompanied with fever. He was absent from the Cabinet Council held on Saturday.

London, 3rd August.—Mr. Gladstone is progressing favourably and his condition is more reassuring. It is believed he will be able to attend the House of Commons during the remainder of the Session. His illness has caused great sympathy and excitement throughout the country and abroad.

Later.—Mr. Gladstone has passed a good night, and there is no increase of the fever.

Paris, 1st August.—The French Government have abandoned the contemplated purpose of sending a military mission to Greece.

Berlin, 29th July.—An interview between the Emperors of Austria and Germany is arranged to take place at Ischl on August 10th.

Berlin, 1st August.—The Minister for Foreign Affairs of the Austro-Hungarian Empire, Prince William of Serbia, and Prince Charles of Romania will meet the Emperors of Germany and Austria at Ischl.

St. Petersburg, 30th July.—An official despatch reports that after several days reconnaissance General Skobeloff took the offensive against the Tekke Turkomans between Buni and Geok Tepe, when hard fighting ensued. Frequent attacks were made by the enemy, but all were repelled.

St. Petersburg, 1st August.—It is stated that the Russian authorities have decided to reinforce General Skobeloff.

The Russian Press is again pointing out that the participation of Russia in the settlement of Afghanistan is inevitable.

Constantinople, 2nd August.—The Porte has resolved to increase its forces in Thessaly and Epirus to 500,000 men.

Allahabad, 30th July.—The catastrophe to General Burrows is overrated. Nine officers are safe; seven others are seriously wounded; three were killed. General Burrows' strength was 2,400 against 11,000. Two guns were lost. Troops are being pushed on from England and India.

Kabul, 30th July.—The news of the Kandahar defeat is not known in Kabul city. Mr. Griffin goes out to General Gough's camp this afternoon and will have an interview with the Ameer to-morrow morning. Our strength in Logar and about Kabul is over 20,000. If required, Sir Donald Stewart could send a strong compact division southwards.

From the Commissioner, Simla.—General Burrows is reported safe. The Gatai post has been attacked and is holding its own. Assistance gone. From Chaman there are reports that General Burrows' fight was severe, both sides losing heavily.

Madras, 30th July.—Lord Hartington's announcement of the annihilation of Burrows' Brigade is not borne out. To date Sir R. Sandeman reports that General Primrose up to eleven in the forenoon Wednesday did not know the extent of the defeat: His last message said disaster was not so great as believed, though very severe. The enemy was strong in guns, but only pursued for three or four miles. Two of our guns are taken, the rest were expected in. Parties of General Burrows' force have arrived safely at Kandahar, among them several officers. The cantonments have been vacated and the citadel occupied. Reinforcements were on the road between Quetta and Kandahar and are advancing rapidly. Troops will be concentrated immediately at Pishin for a speedy advance. Two fresh regiments will have already reached Kandahar. Two strong brigades will be sent up from India, Khelat-i-Gilzai affording all assistance.

Kabul, 31st July.—A private interview with the Ameer took place five miles from Kabul.

Simla, 1st August.—The latest reports from Quetta is that General Burrows has brought his force into Kandahar.

Madras, 1st August.—There is no direct news yet from the Kandahar army, but from the native sources Burrows' defeat is described as not crushing. The British cavalry and guns were induced to follow the enemy's cavalry and were thus led into an ambush. Ayub's army then attacked, and our troops suffered severely, the battle resulting in our retirement on Kandahar, but Ayub's army also suffered much.

Kabul, 2nd August.—Sir Donald Stewart, General Roberts, and Mr. Lepel Griffin have returned to Sherpur today. The Ameer for the present remains with his troops. Yusuf Khan assumes the Governorship of Kabul for the Ameer. The Puna-Khojak pass is to be occupied, and most active preparations are being made.

Bombay, 18th July.—The British Indian steamer *Madura* when off Calicut on Saturday morning, picked up the chief mate and six men of the screw steamer *Mahablescur*, who state that the vessel was wrecked on the midnight of the 15th June, on the island of Ancatta in the Laccadive group. The captain and eight men left Bingaroon the 20th June, presumably bound for the mainland. Five men remained on the island. The *Mahablescur* was bound from London to Bombay, with a cargo of Government stores. She is 1,304 tons, Captain Fisher; owner, W. K. Price, London. She sailed on the 10th February.

Bombay, 20th July.—Further particulars have been received of the loss of the *Mahablescur*. After remaining on the island for 15 days, the captain resolved to leave with as many men as the two boats could carry. The captain and six of the crew took the lead in one boat; the mate and six others followed in the other. Five men were left on the island, and received their fair share of the provisions. For three days, the captain and mate sailed in company, but on the night of the third day, they were parted by heavy weather. Nothing has been seen of the captain's boat since. However, it has a sail, and its compass was in good order when it left. The mate's boat, after drifting about at sea for a fortnight, sighted the *Madura* off Bey-pore in 15 fathoms water on the morning of the 17th, and

the crew were at once taken on board. The boat was considerably damaged and the men were much exhausted, having lived chiefly on spirits and beer, and suffered much from exposure. Before leaving the island, they suffered much from the hostility of the natives, and the persistent attacks of rats.

London, 22nd July.—The disarmament of the Basutos has met with opposition in some districts, and besides refusing to surrender their arms they have attacked the loyal Basutos. Reinforcements are being sent by the British Resident.

It is stated that war between Russia and China had been averted. The British Residency in Basutoland had not been attacked up to the 19th instant.

To-day Lord Hartington received a deputation of native gentlemen, who presented to his lordship a memorial relating to the Vernacular Press Act and the Arms Act, and admission of natives to the Civil Service. In reply, Lord Hartington expressed his concurrence with a considerable portion of the memorial, but said he could not agree to a hasty reversal of the legislative measures of a former Government. The operation of the acts objected to must be carefully watched and if necessary they would be repealed. His lordship further added that Lord Ripon himself deprecated a hasty repeal of the Vernacular Act. Regarding the Arms Act and the question of admission of natives to the Civil Service, Hartington promises to take them into consideration.

London, 23rd July.—In the House of Commons last night, the Secretary of State for India, in reply to a question, said he would state on Monday the share of the Afghan war expenses which the Government propose shall be sustained by England.

Constantinople, 23rd July.—The Porte, replying to the Collective Note conveying the result of the Berlin Conference, asks the Great Powers to leave Larissa, Janina, and Metzovo in the possession of Turkey.

London, 24th July.—In the House of Commons last night a long debate took place relating to the execution of reforms in Armenia, when the Premier made a statement concerning England acting in European concert in the matter.

Constantinople, 24th July.—Prince Nicholas, of Montenegro, has recalled the Envoy representing the Principality at Constantinople.

A petition is being signed by the leading bankers, praying the Secretary of State for India to extend the coupon system to the transfer loan of 1879.

It is stated that the Great Powers have resolved to send an ultimatum, summoning the Porte to satisfy Montenegro within three weeks.

Constantinople, 25th July.—A general levy has been ordered of Montenegrin forces. The agitation for the union of Bulgaria with Roumania is increasing.

Constantinople, 26th July.—The Turkish regulars in Europe are ordered to be increased to 800 per battalion.

London, 27th July.—*The Times* in a leading article this morning says that the statement of the Secretary of State for India, regarding negotiations with Abdul Rahman, will re-assure both England and India, and that Lord Hartington is to be congratulated on his moderate and firm course of action, which has resulted so satisfactorily, as well as on his adoption in substance of the main points of the policy of the former Government.

In the House of Commons last night the Secretary of State for India, in reply to a question, made a statement regarding the recognition of Abdul Rahman as Ameer. His lordship said that the negotiations which had been opened with Abdul Rahman by Lord Lytton had been continued by Lord Ripon because that Sirdar was the most powerful who laid claim to the Ameership. Negotiations were once nearly broken off, but Lord Ripon being firmly convinced they were continued until the present result had been reached. Abdul Rahman has been apparently cordially received by the sirdars and people at Charikal and proclaimed at Kabul. Negotiations of a conciliatory nature continue with other sirdars. His lordship further said he hoped our troops would shortly withdraw from Kabul, first to a healthy position, where the progress of events can be watched and the tribes which have been faithful to us protected, and afterwards in the autumn our forces will return to India. Lord Hartington added that

no formal engagement has yet been made with Abdul Rahman as the new Ameer, and he has been informed that no negotiations are yet possible relative to Kandahar and Gundamuck. He has also been informed that no foreign minister or foreign interference except British will be allowed at Kabul. Temporary pecuniary assistance has been promised to the Ameer and restoration of the guns taken at Kabul. He will not be asked to receive a British resident, but probably a Mahomedan envoy. He has been informed that if he conforms to our advice the British Government are prepared to assist him against unprovoked foreign aggression and that negotiation of a regular treaty will depend upon his conduct. The present assistance promised is only pecuniary.

London, 29th July.—The London press urge almost unanimously that our military supremacy should be effectively vindicated in Afghanistan, and the *Morning Post* urges that the leadership should be entrusted to Sir Garnet Wolseley. The *Daily Telegraph* publishes a paragraph stating that the Government have decided to despatch at once reinforcements to India and that the Viceroy has been advised accordingly.

The latest intelligence from Basutoland is reassuring.

The Porte has promised to execute the convention with Montenegro within three weeks.

In the House of Commons this evening, the Secretary of State for India, in reply to a question, said that though the latest information was more reassuring from Kandahar the defeat may possibly prolong the war. His lordship also said in contradiction to the *Daily Telegraph* that reinforcements would not be sent to India before the usual relief season.

London, 30th July.—The second battalion of the 24th Regiment, the 61st and 98th Regiments, and the first battalion of the 23rd Regiment, and the 77th Regiment, and the first battalion of the Rifle Brigade, are ordered to India.

The European press comments on the defeat of Brigadier-General Burrows' force: the German portion sympathetically.

The Porte has agreed to cede Dulcigno to Montenegro, to avoid a naval demonstration. The Servian army has been ordered to be mobilized.

## INDIAN TELEGRAMS.

### THE DISASTER OF THE HELMUND.

Allahabad, July 26th.—Wali Mahomed has resigned the Governorship of Cabul, and Sirdar Yusuf Khan succeeds him temporarily on behalf of Abdul Rahman. The Chief Political Officer's camp moved to General Gough's camp on Monday, where the first meeting with Abdul Rahman takes place. Troops under orders for returning to India via Shutargardan are ordered to arrange for carriage for fifteen days' rum, tea, sugar, and four days flour. General Ross's division going by the Khyber way arranges for similar supplies for ten and four days.

Cabul, July 26th.—General Charles Gough's force marches to-day from Zimma to Kili Hashtman, nine miles from Sherpur, whither Mr Lepel Griffin goes to await the arrival of Abdul Rahman. General Stewart will go out when the latter approaches. Preparations for our departure next month are being rapidly completed. A convoy of sick Europeans are leaving at once. The Khan of Lalpura was attacked on Saturday by Mohmuds, who dispersed at nightfall after inflicting a loss upon the Lalpura party. The Cabul river is reported safe for rafts, which are used largely in conveying stores, &c., down the line of communication.

Further Candahar news shows that the deserters from the Wali's army were pursued by a company of the 66th Foot, 3 companies of Jacob's Rifles, 300 sabres and E. B., R. H. A. The deserters' guns were silenced by a few rounds from the Artillery, and they themselves fled, pursued by our cavalry, but protected to a great extent by the nature of the ground, which was intersected by irrigation channels. Our loss was three men of the 66th wounded and several horses killed. All the Wali's guns, baggage, and treasure were recovered.

Cabul, July 27th.—News continues to be received of the pleasure felt by the tribesmen generally at the decision of Government regarding the Amir, although in some districts, notably Maidan and Calandar, collections of Ghazis still

exist. Such are of no importance, and the action taken by many of the more peaceful inhabitants in going to or sending to Abdul Rahman with assurances of their allegiance to his cause had the effect of ridding several districts of the presence of Ghazis. The influence of the malcontent leaders continues to decrease, and it is probable that Mahomed Jan, Mahomed Hussain Khan and other chiefs would willingly abandon all idea of further opposition at present were they not continually being incited to continue it by the partisans of Yakub and Mus Kwan in Kabul and different other places. Mahomed Jan has been taunted by the members of Sher Ali and Yakub's family with wavering, and many members of the above families have left Kabul, and gone in the direction of Ghazni. Abdul Rahman is still at Charikar. Mr. Griffin goes out into camp near Zimna some day the present week, where he will meet the Amir and transact business. The Amir may come into Kabul before the troops leave, but nothing is known for certain. In that case a review will probably be held of all the three divisions. The 29th N. I. is under order to march at once. It will be followed by the other Corps early in the ensuing month, but the mass of the troops will not, it is expected, leave before the 12th instant.

The 3rd division will move up to Logar towards Kabul, and return by the Khaibar route most likely, with the exception of the 2nd Sikhs and 1st P.C. which will accompany the force proceeding under Sir F. Roberts by the Kuram. A large European convoy left this morning, to-morrow a native convoy leaves. By the 8th prox. their carriage is expected back here. Yusuf Khan has formally assumed the Governorship of the city, and Kotwaly is in the hands of Abdul Rahman's men. Wali Mahomed is still here, but is likely to return with the troops towards India. It is reported that the Amir has made Musa Jan his heir, but this is not confirmed. Major Roberts of the 9th Foot, Lieutenant-Colonel Stewart of the Guides, and Lieutenant Young of the 1st P.C., invalided from Kabul, have left. Stores continue to leave rapidly.

Allahabad, 30th.—The particulars of the defeat of General Burrows' force are similar to the account supplied by the Press Commissioner. News from Cabul is that the mother of the late Abdulla Jan has escaped to Maidan and joined Hasim Khan. She has much wealth, and being a woman of restless spirit, may try to keep the Jacobin faction together by a liberal expenditure of money. Four hundred Sufis have joined the Maidan malcontents. Referring to Lord Hartington's recent statement concerning the restoration of guns to the new Ameer, the *Pioneer* says there is no intention of sending back the guns brought down to Peshawur. Some Afghan guns originally captured by General Roberts have all along been kept at Cabul in order that they might be given to any Ameer who should be established with the approval of the British Government.

A special telegram from London states that the Famine Report, with dissent of Messrs. Sullivan and Caird, has been published.

Simla, July 28th.—General Burrows has fought an action with Ayub's troops near Kishki Nakhund and sustained a reverse, particulars not yet known. Reinforcements pushing up.

Allahabad, July 29th.—The disaster that has befallen General Burrows' force on the Helmund appears to have been far more serious than the bare official statement of the Press Commissioner's telegram would imply. From other sources the *Pioneer* learns that the small force has been utterly routed if not destroyed. The news is said to have been brought into Kandahar by some thirty sowars who had ridden for their lives. General Primrose was entrenching himself at Kandahar, but the gravest fears are entertained for his safety. Colonel St. John is said to have been out with the Helmund Brigade, but to have escaped. A special meeting of the Council was held on Wednesday afternoon to consider the emergency.

Simla, 29th.—The statement in Reuter's telegram about General Burrows' force is not borne out by the facts ascertained up to date. Sir R. Sandeman reports that General Primrose, up the time the wire was cut at 11 a.m., did not know the extent of the defeat; but his last message was to the effect that the disaster was not so great as at first believed, though very severe. The enemy, who were very strong in guns which they worked well, only pursued for three or four miles; two of our guns were taken: the rest are expected in. Several parties of General Burrows' force

have arrived in Kandahar, and General Brooke has gone out to bring in others. The cantonments at Kandahar have been vacated and the citadel occupied. Before telegraphic communication ceased, the following officers were reported to have reached Kandahar safely:—Colonel W. Mainwaring, 30th N. I.; Colonel C. Griffith, 1st N. I.; Major C. Oliver, 66th Foot; Lieutenant F. Whittack, 1st N. I.; Lieutenant T. Geoghagan, 3rd Cavalry; Surgeon-Major C. Harvey, Horse Artillery; Surgeon G. Burroughs, 3rd Sind Horse; Surgeon G. Eaton, 16th N. I.; Surgeon A. Dave, 1st N. I.; Col. St. John was also safe up to the same time. The following casualties were reported:—

E-B. Horse Artillery, Lieutenant E. Osborn, killed; Major G. Blackwood, wounded; 66th Foot, Captain A. Roberts killed, Lieutenant H. Lynch wounded; 3rd Native Cavalry, Captain M. Mayne and Lieut. J. Reid wounded; 1st N. I., Lieut. W. Aslett killed; Lieut.-Col. H. Anderson wounded; 30th N. I., Captain H. Smith, Lieut. W. Justice, and Lieut. D. Cole killed. Reinforcements were on the road between Quetta and Kandahar when the defeat occurred and are going rapidly for ward. All the troops now stationed along the railway line and at Thall Chotiali will be concentrated immediately at Pishin for speedy forward advance. Sir R. Sandeman and General Phayre are using every exertion to push onward all the additional troops already marching on Kandahar and two fresh regiments will have already reached Kandahar. Two strong Brigades will be sent up with Artillery and Cavalry from India. Reinforcements are also coming from England. The Khan of Khelat has offered all the assistance in his power and has placed at the disposal of Government the resources of his State, sending at once a large number of camels and horses for transport purposes as well as supplies.

Allahabad, August 2nd.—As understood, General Primrose is shut up in Kandahar. Anxiety is felt at Simla that Ayub's forces may sweep on towards Ghazni, and overwhelm the small garrison at Khelat-i-Ghilzai; as, however this garrison includes two Companies of H. M.'s 66th and European Artillery, all well found with ammunition, it may be expected to hold its own. Great indignation is said to be felt at Simla at the alarming telegram despatched by General Primrose, who had nothing to go upon but the wild testimony of fugitive sowars. General Primrose is also held responsible for military mismanagement in sending forward a weak brigade to meet Ayub's first rush.

A telegram from Cabul, dated 31st July, reports that on that morning Mr. Lepel Griffin rode out from Khila Haji five miles to the north where a tent was pitched for an interview with the Ameer. Escort was drawn up at foot of the hill to the south-east, while a squadron of the 9th Lancers was about the tent itself. None of Ameer's troops could be seen, but were said to be beyond the hill. Mr. Cunningham, Captain Ridgeway, Kajah Jehandad Khan and Afzal Khan went to the Ameer's tent to meet him, Mr. Lepel Griffin and rest of the staff went half way. At a private interview which followed, the Ameer was attended by Yusuf Khan and Mr. Lepel Griffin by Mr. Cunningham and Major Hastings. The Ameer's appearance is said to be far more prepossessing than his photograph led to suppose, while his bearing is excellent. Mr. Lepel Griffin's and officer's escort were presented to the Ameer, who had provided refreshments for all comers.

## THE JAPANESE PRESS.

### OUR RELATIONS WITH COREA.

(Translated from the *Choya Shinbun*.)

THE contiguity of Corea to our own country, and the general importance of her geographical position in the East, are points worthy of great consideration in our dealings with her. If she is really a part of China it would undoubtedly be highly prejudicial to our interests should that country in future years obtain great influence with Corea. If on the other hand, she should eventually be swallowed up by Russia, we should lose possession of Iki, Tsushima and other islands, while Kinshin and the Central provinces would at once be exposed to the powerful attacks of Russia, if it should ever happen that difficulties were to arise between us. If we wish the prosperity of our own country we must do our utmost to assist Corea in maintain-

ing her independence; she must not only be free from fear of being absorbed by Russia, but also of coming under the control of China. We believe, too, that this was the sole motive of our own policy when some time ago the Government commenced negotiations with Corea, and, by threatening coercive measures, at last succeeded in concluding a treaty of peace and commerce. In reviewing however, the article in a certain paper\* treating on the subject of the four demands made by the Korean Embassy we cannot agree with the observations of the writer. His reasons for recommending Corea to maintain what is actually a policy of seclusion appear to us defective and short-sighted, and as such we must accept the task of criticizing them.

In a very long and verbose article, the writer has drawn a parallel between the present state of Corea and that of our country at the time when the treaty ports were first opened. He asserts that the intellectual condition of the people not having been improved, a similar state of affairs must exist in Corea now as existed then in Japan, and therefore that we ought not arbitrarily to refuse the demands made, but rather to accede to them as a token of our goodwill; this, it is argued, will induce a reciprocal confidence and we shall be able, when this is gained, to convince Corea of her true position among nations. To take, first of all, the demand that the export of rice should be forbidden. We know of no circumstances which call for this step. It may be the case, as the writer asserts, that the fact of our merchants having purchased large quantities of rice in Corea for export to Japan, combined with the annual drain by the people of Tanshima, has caused a scarcity and a consequent rise in prices in the interior, which have brought about feelings of irritation. Should this actually be the case, it might be necessary to make a stipulation that the export of rice should be temporarily forbidden. It is, however, a moot point whether the Korean Government have based their demand on such circumstances. Our own belief is that Corea made the original treaty solely under the influence of our naval demonstration, and that from her line of conduct ever afterwards her real desire is not to have the country opened up, but to maintain her old policy of seclusion. Circumstances no longer allowing her to express this desire openly, she wishes to hunt up some pretext for putting a stop to the present beneficial intercourse between the two nations which may result in the closing of the ports. Is it possible that a trained diplomatist, experienced in eastern affairs, can consider all the demands of Corea as right and proper, *prima facie*, without previously inquiring closely into her motives?

As to the revision of the customs' tariff, both import and export goods are duty free according to the present treaty. The only duty is the tax on tonnage which it is alleged does not furnish funds sufficient to pay for keeping the harbours in good order. Is it then desired to revise this and subject both imports and exports to a duty? If this is intended, and a fair tariff drawn up, we could have no grounds for objecting, but should Corea, bearing in mind her old policy of exclusion, levy a very heavy duty upon either imports or exports, our country will be decidedly justified in rejecting her demands. Has the writer of the article forgotten that only two or three years ago the Korean Government imposed an extraordinarily heavy and in fact prohibitory duty upon exports, which affected the business of Japanese traders in Corea so much, that a dispute with the authorities of that country actually arose? Corea has not in two years suddenly changed her whole line of conduct, so how can we possibly tell whether she may not be even now desirous of accomplishing by hook or by crook her previous desire?

As regards these two questions of the prohibition of the export of rice and the revision of the customs' tariff we ought perhaps to examine the circumstances of the case fully before giving our decision on one side or the other. As regards the two remaining points, however, no deliberation can be necessary: they should be rejected without hesitation. The writer before referred to, arguing from the past history of our own country, asserts that since stress of circumstances compel Corea to make these demands, we ought to accede to them just as the Treaty Powers acceded to our own demands before, and agreed to a postponement of the opening of Yedo, Osaka, and the ports of Kobe and

\* The article referred to appeared in the *Nichi Nichi Shinbun* and was translated and published in the *Japan Daily Mail*.

Niigata. Corea now may be in a similar condition to what we were then, but our relations with Corea differ greatly from ours with the Treaty Powers. The chief point of difference is this:—Their only reason for opening intercourse with us was for purposes of trade: our intention, however, in associating with Corea is not only to promote trade but to assist her to maintain her independence and make her a defence for us. To accomplish this we must rouse the Korean Government from its obstinate sleep and take the lead in improving and enlightening the condition of the people. One of the means by which only can this object be accomplished is the residence of our Minister in the capital. This is not all; if our Minister takes up his abode in the capital he can at once ascertain whether Corea is concluding treaties with China or Russia, and we can act according to such knowledge. And when the important port of Niusen in the Kiuki-dai has been opened and our traders have settled there, it will enable the leading people of Corea to become aware of the advantages of trade, without which the world could not go on. Considering the intellectual benefits this would confer, how can we be excused for not carrying out these two measures? O able critic! think for a moment what would have been the state of our country if, when it was first opened, the Foreign Powers had treated us leniently, admitting as proper and reasonable every claim we made. Who can assert that the policy of procrastination would not have prevailed and completely driven out the new-born spirit of activity and enterprise? But the reason why our country has made such rapid strides in civilization since it was first opened is simply that the Treaty Powers all took decisive and coercive measures in their dealings with us. To take the incident of the opening of Osaka and Kobe: our Government had the greatest objections to this step on the ground that these cities were both close to Kioto, the then residence of the Emperor. The Treaty Powers of Europe and America, however, sent a combined fleet, and under this demonstration held a conference and eventually obtained their object. The affair undoubtedly caused much illfeeling among us against foreigners, but it cannot be denied that the result has been a great gain to us: that our knowledge has thereby been improved and our civilization advanced. Similarly in dealing with Corea, coercive measures may sometimes prove necessary, and such we consider are called for by the two last demands of Corea. Talented writer! Once more remember that Russia is on the borders of Corea and that many people of the latter country reside in the territory of the former. Should Russia under some pretext invade Corea, compel intercourse with her and eventually absorb her, there will be no redress for our countrymen there, much as we may regret the course of affairs. Again, China has lately recovered from her condition of social and financial bankruptcy and is beginning to exert her political supremacy; may it not come to pass that by exercising this influence over Corea, she may reduce her to the condition of a dependency?

Considering the circumstances from this standpoint, it seems that every day spent in procrastination is a day lost to us. If we wish to promote our own welfare we must, without the slightest delay, assist Corea to maintain her independence, and thus prevent her becoming the spoil of other countries. We again assert that the suggestions made in the article we have been reviewing are calculated to defeat the real aims of our country.

#### A NATIONAL ASSEMBLY PREMATURE.

(From the *Akebono Shinbun*.)

It is a well known principle that practice is the result of theory. Before embarking on a new enterprise any rational man will first of all weigh well the arguments for and against it, and form his decision accordingly. It is well recognized that if these precautions have not been taken the best designed scheme may prove a failure. We all know that peaches and plums cannot be eaten with impunity until ripe: but a schoolboy who cares for the present alone only knows

\* The *Akebono Shinbun* like most native papers, is greatly in favour of the establishment of representative institutions. The article we now translate is from the pen of Mr. Nishi, who evidently holds diametrically opposed views on the subject.

that peaches and plums are meant to be eaten, and never troubles his head as to whether they are ripe or not. He thinks only of the enjoyment of the moment: the result is that unless restrained by some one of maturer years he indulges his appetite and makes himself unwell in consequence. In Japan just now there are many people clamouring for the extension of popular rights, and the establishment of a National Assembly; they remind me exactly of the school-boy I just mentioned: they desire a National Assembly before the time is ripe for such institutions and it is on this subject that I wish to make a few remarks.

When a community has reached the proper level of civilization there can be no better step than to found a National Assembly. We have proofs of this in the history of Europe, and America. But we must now most carefully consider whether the time has come for establishing such an institution in our own country. The mere clamour of the *ros populi* from its million throats that the time has come, is no argument. I hold an entirely contrary opinion and think that the agitation is premature and consequently I strongly oppose these views. I intend now to put before your readers, according to the best of my ability, the *pros* and *cons* of the case.

Members of the English Parliament or the United States Congress have, I am informed, power to discuss all affairs connected with the legislature, finance, or diplomacy, and that peace or war, the advance or decline of their country are so entirely in their hands, that even the Queen or the President, being really under their control, has no actual voice in the management of affairs. To obtain really beneficial results from a National Assembly we must give the members as much power as they have in the English Parliament or the American Congress. As this entails heavy responsibilities it is evident that the greatest care must be taken to elect men of integrity, education, and popularity. Again, even in the assemblies mentioned, it has happened that some members are unfit for their position, and that the results have been prejudicial to the interests of the country. Now we cannot pretend to compare the population of Japan with that of England or America from an intellectual point of view. If, then, even in those countries men unqualified for the position are sometimes elected, how much more likely is this to happen in Japan! It may be argued that England and America hold their assemblies in accordance with their own national customs, that we in Japan would do the same, and that consequently no parallel can be drawn; but this reasoning is obviously illogical.

Supposing that it is determined to establish a National Assembly. From what class of the people are the members to be selected? Is it likely that all the candidates returned from the various prefectures will be men of ability, and intellect? Most probably the majority of those elected will be local politicians from the various *Fu* and *Ken*, distinguished perhaps in their own little circle; but, being unable to take more than a superficial view of any serious question, they would blindly follow any leader. It would be madness to entrust such state questions as legislation, finance, or diplomacy to such people: everything would become mismanaged and complications both at home and abroad would arise. In private life there are individuals whose discretion and judgment qualify them for a National Assembly far better than many Government officials, but their experience would be overwhelmed by the short-sighted majority who did not comprehend the arguments used by these men. This system of voting by a majority has its defects: the decisions of experienced men are overthrown because they are in the minority. If our National Assembly were to be established this rule of voting would hold good, and no matter how ridiculous a measure might be passed, it would have to be put into effect because it was carried by a majority. Is not this a serious matter? The time for establishing a National Assembly has not yet arrived, and our responsible rulers should take no notice of what a mere section of the nation demands, but should make it their chief aim to promote the welfare and safety of the whole population, and, in the fullness of time, should issue a proclamation throughout the Empire announcing that a National Assembly would be established. As I before said, unripe fruit should not be given to children. A movement in this direction has however been set on foot, and I do not expect my humble efforts will have any effect in stemming the torrent.

## LAW REPORTS.

## IN THE U. S. CONSULAR-GENERAL COURT.

Before T. B. VAN BUREN Esq., Consul-General, Judge.

Monday, the 30th day of August, 1880.

RICHARD McCANCE v. R. P. BRIDGENS.

This was an action to recover the sum of \$273 with interest at 12 per cent per annum, being the amount paid by plaintiff in order to release his own goods which had been seized under a distress warrant of the Court, issued in favour of the Société Immobilière of Shanghai against the defendant, and which the latter did not satisfy.

The answer denied that the transfer of lease of the premises No. 81 A had been made with defendant's sanction, and stated that there was an amount of \$200 due from plaintiff to defendant for rent of the premises. A dismissal of the case with costs of Court was claimed as compensation.

R. McCance, sworn, stated:—I am the plaintiff in this case. I live at No. 81 A, Settlement. I have been there since the 6th of December last. I have owned the place since July 1st. I do not own the building but only the chattels and goodwill. I am the tenant of Mr. Bridgens. I had a transfer of the lease from Mr. Livingstone the former tenant. It was in writing and approved by Mr. Bridgens verbally, as he wanted to make out a new lease for me. I took the place over clear of all debts on July 1st. The Marshal of this Court came on the 10th July, and presented a distress warrant against Mr. Bridgens and seized goods amounting in value to \$250 belonging to me. I redeemed them by paying the \$250. I also paid costs amounting to \$23. I have demanded this amount from Mr. Bridgens, who has several times told me he would pay but has never done so.

The case was here adjourned until 1.30 p.m. to take the evidence of the Deputy Marshal who executed the distress warrant.

On the Court being reopened, defendant did not appear. Plaintiff stated:—As regards rent, all dues had been paid to Mr. Livingstone. Mr. Livingstone was present when Mr. Bridgens agreed to the lease. The latter also came to me in June for the month's rent. I paid my rent for July to the Consul, as I did not consider that Mr. Bridgens was capable of taking proper care of it.

G. W. Elmer, sworn, stated:—I was lately Deputy Marshal of this Court and in that capacity executed a distress warrant against Mr. Bridgens in favour of the Société Immobilière of Shanghai. Mr. McCance was occupant of part of the premises. According to instructions I took all the property in the place except such as was pointed out as belonging to lodgers. \$250 was the amount: it was only an agreed value between the plaintiff and the counsel for the Société Immobilière. Plaintiff paid \$250 and \$23 costs. This is the warrant which I executed on July 10th. This is the inventory of all the property taken under the warrant. The premises marked No. 2 in this were those occupied by the plaintiff. (Papers put in as evidence and marked Ex. 1 and 2).

Robert Francis Livingstone, sworn, stated:—I was formerly tenant of No. 81 A. I rented it from a Mr. Gaburitta who held it from the defendant. I bought this lease in February last and kept it to the end of June, when I sold it to Mr. McCance. I told Mr. Bridgens I had done this and he expressed himself perfectly satisfied with the arrangement. I have Mr. Bridgens' receipt for the whole rent up to the 1st of July. (Put in and marked Ex. 3). He gave it to me in my own house, No. 127. I was laid up at the time.

His Honour here remarked that the non-appearance of the defendant was possibly due to a misapprehension as to the hour at which the Court was to reopen. He would adjourn the case until two p.m. to-morrow when, in the event of defendant's not coming, judgment would be delivered.

The Court then adjourned.

Tuesday, the 31st day of August, 1880.

The Court met according to the adjournment: plaintiff present, defendant absent. His Honour delivered judgment as follows:—

It is ordered that the defendant pay to the plaintiff the sum of two hundred and seventy-three dollars Mexican, with interest at the rate of one per cent. per month from the 15th day of July, 1880, and pay the costs of suit and \$25 the costs of plaintiff.

#### M. RENAN'S HIBBERT LECTURES.

IV.

"ROME, the Capital of Catholicism," was the subject of the last of M. Renan's four Hibbert Lectures. In his introductory paragraphs the learned lecturer dwelt on the importance assigned in the primitive Christian Churches to Apostolic origin in determining their rank. The succession of the Bishops which linked the great Churches to the Apostles was the guarantee of orthodoxy. How high an assurance, then, of apostolicity in doctrine must a Church founded alike by Peter and Paul have possessed! It was Rome's masterpiece to have succeeded shortly before the accession of Antoninus in making all but universal the belief that Peter and Paul had founded Christianity at Rome in perfectly mutual accord, and had sealed there this work with their blood. Rome's ecclesiastical destiny was fixed from that time. In Christian dress, she was still to play through a new series of centuries her part—*regere imperio populos*. Under Antoninus and Marcus Aurelius Rome's greatness culminated, her reign over the world seemed undisputed, no cloud was seen on the horizon. The tide of emigrants from the provinces, especially from the East, was at the flood. Greek was more spoken than ever. The insinuating Greekling, adept at all trades, ousted the Italian from the great houses; Latin literature was in full decadence; Greek was becoming the literary, religious, philosophical tongue of the enlightened classes, as it was that of their domestics. The importance of the Roman Church grew with that of the city. Hyginus its chief gained the respect of all Christendom. Everything that sought the sunshine longed to get to Rome, nothing was consecrated which did not bear the mark of this Universal Exhibition. Gnosticism, ambitious to set the fashion in Christian preaching, was among the first to yield to this impulse. None of the Gnostic schools were born at Rome, but nearly all came to be stranded there. Valentinus was first to try his fortune. This audacious sectary might even have had the idea of sitting in the episcopal seat. He played the Catholic and preached in the bizarre style he had invented. His success was but moderate; this pretentious philosophy scandalized the faithful. Hyginus hunted the innovator out of the Christian chair. From that day forward the Roman Church showed the purely practical bent which was always to distinguish her, and displayed every readiness to sacrifice in an instant science and talent to edification. The centre of a Catholic orthodoxy of the future was plainly there. Pius had succeeded Hyginus, and was as firm in safeguarding the purity of the faith. Cerdon, Marcion, Valentinus, Marcellinus were banished from the Church by Pius. Under Antoninus the germinal bud of the Papacy was already well set. The Roman Church grew more and more indifferent to those hollow speculations in which Greeks, seething with intellectual activity, but filled with the reveries of the East, took such delight. The organization of the Christian society was the great business at Rome. Caring little for speculation, bitterly hostile to doctrinal novelties, her trained practical genius was watching over the development of discipline and the hierarchy.

What was created about 120-130 in the Christian Church was the Episcopate. But the creation of the Episcopate was eminently the work of Rome. Every *ecclesia* presupposes a little hierarchy, a *bureau*, as Frenchmen now say, consisting of a president, assessors, and a limited number of subordinates. The democratic clubs carefully make provision that these functions should be as much restricted as possible in both time and attributes; but the result of this is something precarious in their nature which puts an end to the club as soon as the circumstances which created it have ceased to exist. The Jewish synagogues have much more continuity, although the synagogal office-bearers have never attained to the rank of a clergy. If the powers of the Church had continued to be regarded as emanating from the Church itself, it would have wholly lost its hieratic and theocratic character. It was written, on the contrary, that a clergy should monopolize the Christian Church, should usurp her place. Speak-

ing in her name, pushing itself forward in everything as her sole representative, this clergy will be the Church's strength, but at the same time its worm at the root. History furnished no example of a more profound transformation than that which was accomplished about towards the times of Adrian and Antoninus. That fate befell the Christian Church which would befall a club in which the members should abdicate in favour of the officials, and in which the other officials should abdicate in their turn in favour of the president, so absolutely that from that time forward the members, even the seniors, should have no deliberative voice, no influence, no control over the management of the funds, and that the president would be entitled to say, "I alone am the club." The *presbyteri* (seniors), or *episcopi* (officers, inspectors), became very early the only representatives of the Church, and almost immediately afterwards another revolution of still greater importance was brought about. Between the *presbyteri* or *episcopi* there was one who by habitually seating himself in the president's chair absorbed the powers of the rest and became the *episcopus* or the *presbyteros* in a pre-eminent sense. The worship contributed powerfully to crystallize this unity. The eucharistic act could only be celebrated by a single person, and invested the celebrant with extreme importance. This *episcopus* in a marvellously short time became the head of the presbyterate and consequently of the whole Church. His *cathedra*, placed on high and having the form of an arm-chair, became a chair of honour—the symbol of the primacy. Each Church had thenceforward but one *presbyteros* in chief, who was called in a sense exclusive of the rest *episcopus*. Beside this Bishop were seen deacons, widows, a council of *presbyteri*; but the great step was taken; the Bishop had become the sole successor of the Apostles; the lay believer had totally disappeared. Apostolic authority deemed to be transmitted by the imposition of hands had smothered the authority of the brotherhood. The Bishops of the different Churches were afterwards to join hands, and to make the universal Church into a sort of oligarchy, which would hold assemblies, pass censures on its own members, decide questions of faith, and form by itself a power truly sovereign. Within a century this change was almost accomplished. When Hegesippus travelled throughout Christendom in the latter half of the second century he no longer saw anything but the Bishops; for him everything was a question of canonical succession; the living opinion of the Churches no longer existed. This revolution was not completed without protest; and the author of the "Pastor," for example, still tries to uphold against the growing authority of the prelates the primitive equality of the *presbyteri*. But the aristocratic tendency ended by winning the day. On one side the shepherds, on the other the flock. The primitive equality existed no longer; to speak truly, its duration was but ephemeral; the Church thenceforward was but an instrument of its shepherds, and these held their power not from the fellowship, but by spiritual inheritance, by a transmission pretending to reach back to the Apostles in an unbroken line. One felt that the representative system would never become in any degree whatever the law of the Christian Church. It was the Episcopate which, without any intervention of the civil power, without any support from the policeman or the tribunals, set order above liberty in a society based at first upon individual inspiration. We saw why the Ebionites, who had no episcopate, had no idea of Catholicity either. At the first glance the work of Jesus had no chance of living; it was a chaos based on a belief in the end of the world, which belief the years as they rolled on were to convict of error; it seemed that his congregation could not but break up in anarchy. Free Prophecy, spiritual gifts, speaking with tongues, individual inspiration, all this was more than was needed to dwarf it back into the proportions of an ephemeral chapel. Individual inspiration creates, but destroys what it has created. After liberty there must come rule. The work of Jesus might have been saved on the day on which it was acknowledged that the Church still has a direct power, a power representing that of Jesus. The Church thenceforward dominates the individual, drives him at need from her bosom. In a short time the Church, an unstable and shifting body, becomes personified in the elders, the powers of the Church become the powers of a clergy which is the dispenser of all intermediary acts of grace between God and the believer. Inspiration passes from the individual to the community. The Church has become everything in Christianity; one step more and the Bishop

becomes everything in the Church. Obedience to the Church, afterwards to the Bishop, becomes the first of duties; to lodge an appeal is to prove oneself in the wrong. Schism is to be henceforth for the Christian the worst of crimes. In one sense it might be said that this was decay, a decline in that spontaneity which had hitherto proved so mightily creative. It was plain that Church forms were about to absorb, to smother the work of Jesus, that all free manifestations would soon be brought to a standstill. Under the censorship of the Episcopate speaking with tongues, prophecy, the manufacture of legends, the production of new sacred books would be faculties dried up; spiritual gifts would be reduced to the ranks of official sacraments. Meanwhile, regarded in another way, such a transformation was the essential condition of the mightiness of Christianity. M. Renan proceeded to argue further that without the Episcopate the Churches gathered for a moment by the remembrance of Jesus would have been scattered. Christianity would have come to an end in three or four centuries, like Mithraism and so many other sects which could not weather the storms of those ages. Democracy was sometimes eminently creative, but it was on this condition, that from democracy conservative and aristocratic institutions should spring and hinder the revolutionary fever from being indefinitely prolonged. He called on his audience to behold the true miracles of nascent Christianity. It deduced order, hierarchy, authority, obedience from the free subjection of men's wills; it organized the crowd, it brought anarchy under discipline. How was this miracle, striking in quite another way than pretended violations of the laws of physical nature, brought about? The Spirit of Jesus, with which his disciples were powerfully inoculated, wrought it, that spirit of sweetness, of self-denial, of forgetfulness of the present, that unique pursuit of inward joys which kills ambition, that sublime preference given to children, the words incessantly repeated as those of Jesus, "Let him who would be first among you be servant of all." The impression left by the Apostles did not contribute less to the result. The Apostles and their immediate vicars wielded an uncontested sway over all the Churches. But the episcopate was deemed the heir of the Apostolic powers. The Apostles remained alive, and governed after their death. The idea that the president of the Church holds his mandate from the members of the Church who have nominated him was not met with once in the literature of that time. The Church thus escaped, in virtue of the supernatural origin of its power, the decrepitude inherent in all delegated authority. A legislative and executive authority might spring from the crowd, but sacraments, dispensations of heavenly grace, have nothing to do with universal suffrage. Such privileges come from Heaven, or according to the Christian formula from Jesus Christ, the source of all grace and all good. M. Renan went on to argue that the Bishop had never been really chosen by the whole brotherhood. The designation by the Holy Ghost, that is the secret resort to electioneering manoeuvres, the excuse for which was an extreme *naïveté*, sufficed for the spontaneous enthusiasm of the first Churches. When the Apostolic age was over and had to be replaced by ecclesiastical authority of the nature of Right Divine, it was the presbyters who chose their president from among themselves and submitted his name to the acclamation of the people. Since feelers as to how opinion was running were always put forth before taking the vote of the laity by a show of hands, their suffrage sank into a formality, but it kept alive the remembrance of the evangelical ideal, according to which the Spirit of Jesus dwelt in the community at large. The deacons were chosen by episcopal nomination validated by a like popular formality. It was a general Church law that the inferior never nominated his superior. It is this which gives the Church of to-day, in spite of modern democratic tendencies, such an overwhelmingly reactionary energy. It was in the Pauline Churches that the hierarchical and episcopal movement was especially felt. The Jewish Christian Churches, less instinct with life, remained synagogues and drifted less decidedly towards clericalism. Accordingly it was by writings foisted on St. Paul, such as the canonical Pastoral Epistles, that the hierarchical system was fortified, although several passages of his genuine letters already preached respect for a hierarchy of presbyters. The forger of the Epistles to Titus and Timothy was unacquainted with the Acts of the Apostles, and had but a vague knowledge of Paul's travels. The three Pastoral Epistles were plainly from the same pen, and were probably written at

Rome, precluding the spurious Papal Decretals. The learned lecturer summed up their contents with a view to show that the majesty of the Episcopate was their core. Thanks to the Roman Church, the religion of Jesus thus acquired some solidity and consistency. The great danger that Gnosticism would split Christianity into countless sects was warded off. The watchword "Catholic Church" echoed on all sides as the name of the great Corporation which was thenceforward to sail through the ages without making shipwreck. And there was already seen the character of this catholicity. The Montanists were branded as a sect, the Marcionites were caught falsifying the Apostolic doctrine, the various Gnostic schools were more and more rudely repulsed from the bosom of the general Church. Christianity came to mean the religion of the mechanical majority of the Bishops. Christianity, like all parties that want to live, disciplined itself, and pruned its own excesses. It combined with mystical excitement a fund of good sense and moderation which were sure to kill Chiliasm, the *charismata*, speaking with tongues, all those old *spiritualist* phenomena. A handful of excitement-mongers, like the Montanists, courting martyrdom, frowning on penance, condemning marriage, was not the Church. The golden mean triumphed; no chance was to be given to Radicals of any kind to destroy the work of Jesus. The Church was all the world's affair, not that of an aristocracy of inspired Phrygian pietists or Gnostic searchers after "deep things." Catholic opinion was the impregnable bulwark against which the countless heresies hurled themselves in vain. To confute a heretic no reasoning was required; it was enough to show that he was outside the Catholic pale; and the rule afterwards formulated by Vincentius of Lerins, *Quod semper, quod ubique, quod ab omnibus traditum* was already the test of truth. M. Renan showed with what energy this forensic argument of prescription was applied by Tertullian against the unorthodox. The letters interchanged between the Churches and regularly read on Sundays pursuant to Apostolic usage greatly helped also to consolidate them. The germs of the full-blown hierarchy, including the metropolitan sees, were already planted. Christianity, like Judaism and Islam, was to become a religion of cities, and the old worship was to die out as paganism, mere counterfeited superstition. Under Marcus Aurelius the Episcopate had quite ripened, and the Papacy itself was budding. Ecumenical Councils were as yet impossible, but provincial synods, over each of which the Bishop of the provincial metropolis presided, were held to settle the Montanist controversy and the Eastern question. The learned lecturer quoted the inflated panegyric of the hierarchical system in the spurious Ignation epistles forged, he said, about A.D. 160-170, part and parcel of the fraud being, he was inclined to believe, Polycarp's letter to the Antiochian Bishop and Martyr. Orthodoxy had now become the sovereign good, implicit faith in episcopal guidance was the way of salvation, the greybeard was to bow to the Bishop—even if a stripling.

Rome was the spot where this great idea of catholicity was developed. Day by day Rome was becoming more and more, as the successor of Jerusalem, the religious centre of humanity. This Church enjoyed a generally recognized primacy, based on her assumed double descent from Peter and Paul, the Romulus and Remus of the new Holy City. The Bishop of Rome became known as the Bishop of the Bishops, one who enjoyed the right of admonishing the others, and even the right of excommunication. This was instanced in the hereticism of the Artemonites, a sort of premature Arians, who had some grounds for deeming themselves wronged in being thus punished for believing what the whole Roman Church had held down to Pope Victor's days (c. A.D. 190). The learned lecturer proceeded to argue that even the spirit which in 1870 proclaimed Papal Infallibility was already very clearly recognizable from the close of the second century. The fragmentary *Murator* Canon, for instance, written about 180, shows us Rome determining for the Churches the Codex of Scripture. Irenaeus refutes all the heresies on the authority of what Rome believed, which Church he styles "the greatest, oldest, most illustrious, possessing by unbroken succession the true traditions of the Apostles Peter and Paul, the Church to which, in virtue of its primacy, all the rest of the Church was bound to have recourse." The immense charities which this very wealthy Church distributed throughout the world greatly helped to consolidate her authority. This practice had no doubt come down from the days of old. M. Renan further traced the history of this early Papal supremacy under Pope Cornelius, in the third century interfered so energetically in

the Novatian controversy, both in Africa and Italy. Sometimes the reins of discipline were so tightly strained that they threatened to snap, as in Victor's high-handed proceedings in the Easter controversy, of which a somewhat detailed sketch was given, including an account of the kind of concordat, embodying the principle of mutual tolerance, agreed to between Polycarp and Pope Anicetus in 154. When at the close of the century Victor disturbed this settlement by denouncing the Oriental Easter praxis, Irenæus mediated between the two parties, and Victor was strongly censured by even the Western Churches for thus prematurely stretching his crozier over the East. Polycrates, Bishop of Ephesus, was Victor's most redoubtable antagonist.

Authority loves authority, said M. Renan, who pointed out how, on this principle, men so conservative in spirit as the heads of the Church could not but feel strongly drawn to ally themselves with the public Powers. Jesus himself had laid down the rule of submission to Cæsar in things lawful, and had made the image and superscription on the coin the criterion of legitimacy. Even under Nero, St. Paul wrote the words read in Rom. xiii. 1—6. Some years afterwards Peter, or the writer who borrowed his name, wrote the almost identical passage 1 Peter ii., 13, 14. Clement was also a most devoted subject of the Roman Empire. In the days when Domitian was raging most cruelly against the Church and the human race, Clement held him to be none the less God's lieutenant, as appeared from his language in a fragment of his epistle lately brought to light. It is in the form of an invocation to God and reads thus:—"It is Thou, Supreme Lord, who by Thy great and unspeakable power hast given to our Sovereigns and to those who rule over the earth the power of the kingdom, to the end that, recognizing the glory and honour which Thou hast bestowed on them, we may be submissive to them, thus avoiding the contradiction of Thy will. Give them, Lord, health, peace, stability, that they may exercise without hindrance the sovereignty which Thou hast intrusted to them. Guide their will, Lord, in the good way, and in that which is agreeable to Thee, in order that by exercising in peace, with gentleness, and piously, the power which Thou hast intrusted to them they may find Thee propitious." Stress was also laid on like traits of deference to the Imperial authority in Luke's Gospel and the Acts, this writer standing, according to the lecturer, in the closest connexion with the Roman Church. Plainly enough, there were in other parts of the Empire excitable spirits who quite shared in the angry feelings of the Jews, and dreamt of nothing but the destruction of the idolatrous city which they identified with Babylon. Such were the writers of Apocalypses and the authors of Sibylline books. But the faithful belonging to the great Churches were quite otherwise minded. In A.D. 70 the Church of Jerusalem, from sentiments more Christian than patriotic, quitted the revolutionary city and sought peace beyond Jordan. In the revolt of Barkokhebas the separation was yet more marked. Not a single Christian would take part in this effort of blind despair. Justin Martyr in his Apology never attacks the principle of the Empire; he wants the Empire to examine the Christian doctrine. The most distinguished Christian teacher under Marcus Aurelius, Melito, Bishop of Sardis, makes advances more marked still. In his treatise on Truth, preserved in Syriac, Melito speaks like a Bishop of the fourth century, expounding to a Theodosius how his first duty is to bring about by his authority the triumph of the truth. "The race of pious men in Asia," he says, "is persecuted as was never seen before, ferreted out under the authority of new edicts. Impudent sycophants, greedy of the spoils of others, making a pretext of the existing laws, carry on their brigandage in the face of all, lying in wait day and night to seize people who have done no harm. . . . If all this is done by thine order, it is well, for it cannot happen that a just prince should order anything unjust; we would then willingly accept such a death as the lot we had deserved. We address to you but one request. It is that after having thine own self examined those brought before thee as agents of revolt thou shouldst judge whether they deserve death, or whether they are not worthy to live in peace under the protection of the law. . . . Yes, it is true our philosophy was first born among the barbarians, but the moment in which it began to flourish among the peoples of thy dominion having been the great reign of thine ancestor Augustus, it was, as it were, an august augury for the Empire. It was from that moment, in fact, that the colossal

development of this brilliant Roman power dates, of which thou art and wilt be, with thy son, the heir acclaimed with all our best wishes, provided thou art willing to protect this philosophy, which has been after a fashion the foster-sister of the Empire, since it was born along with its founder, and thine ancestors have honoured it equally with other religions. And what proves that our doctrine has been destined to flourish *pari passu* with the progress of thy glorious Empire is the fact that from the time of its appearance everything has been a marvellous success. . . . Nero and Domitian only, deceived by calumniators, showed themselves ill-disposed towards our religion, and these calumnies, as often happens, have afterwards been taken for granted without examination; but their error has been corrected by thy pious ancestors, who in frequent rescripts have repressed the zeal of those who wish that harsh measures should be taken against us. As for thyself, who cherishest the same sentiments towards us, with a still more elevated degree of philanthropy and philosophy, we are sure thou wilt do what we ask of thee." Thus the Church was already making court to the Empire. Through politeness, doubtless, but also by very legitimate deductions from her principles, she was very glad to have it believed, contrary to the fact, that certain Emperors had not been absolutely opposed to Christianity. Stories were told that Tiberius had wished to put Jesus among the gods. It was very untrue said that Hadrian and Antoninus had sought to make reparation for the cruelties of Nero and Domitian. Tertullian said the same of Marcus Aurelius. Tertullian doubted, indeed, whether any one could be both Cæsar and Christian. But a century afterwards no such incompatibility struck anybody, and Constantine was to prove that Melito showed himself a man of profound sagacity on the day on which he distinguished so clearly, a century and a half before the time, athwart the prosconsular persecutions, the figure of a Christian Emperor. The hatred of Christianity and the Empire was that of a pair bound to love one another. Under the Severi the language of the Church remained what it was under the Antonines—plaintive and tender. The apologists laud the Church as Legitimist; she was ever the first to salute the rightful Emperor. No pretender like Cassius, Albinus, Niger, for a Christian! In point of fact this assumed worship of legitimacy was the worship of success. This correct attitude of the Church in regard to the civil power was dictated quite as much by outward necessities as by her principles. The Church was already a powerful association, and as such her bent was naturally conservative; she needed order and legal guarantees. This was illustrated by the history of Aurelian's decision of the action of ejection brought against the brilliant heresiarch, Paul of Samosata, Bishop of Antioch. The Emperor adjudged the Episcopal Palace to Paul's orthodox rival, the litigant favoured by Rome and all Italy. It was becoming clear that Christianity and the Empire could not live without each other. The world wanted a religion of congregations, churches or synagogues, a religion whose essence was brotherhood. Christianity fulfilled all these conditions. Its admirable worship, its pure morality, its wisely organized clergy assured it the future. Several times in the third century this historical necessity tended to become a reality, especially under the Syrian Emperors, and the eclecticism which they favoured seemed to promise a peace made, not as under Constantine by the total defeat of one of the parties, but by a broad reconciliation. The struggle became a deadly one when those great reformers, animated by the old spirit, Diocletian and Maximian, believed themselves able to re-endow the Empire with a new life by keeping to the narrow circle of Roman ideas. The Church triumphed by means of her martyrs; Roman pride stooped; Constantine saw the hidden might of the Church; the populations of Asia Minor, Syria, Thrace, Macedonia—in a word, of the eastern part of the Empire, were already more than half Christian. He made the whole Empire Christian. From the Occidental point of view this might astonish us, for in the West the Christians were but a weak minority. But in the East Constantine's policy was not only natural but imperative. One remarkable thing was Rome's temporary eclipse in consequence of the removal of the seat of the Empire to Constantinople, and still more remarkable was the manner in which, under the politic inspirations of such Popes as Sylvester, Damasus, and Gregory the Great, she struggled through her dark centuries and emerged stronger than ever when Charlemagne restored the Western Empire. M. Renan wound up with an eloquent

plea for perfect toleration, even of intolerance itself, unbounded freedom of thought being the best guarantee for the dispersion of darkness, the attainment of truth, and the progress of mankind.

After alluding to future Hibbert lecturers who might treat other periods of the history of Christianity, he said:—That which I have described before you is one full of grandeur. One is impartial towards the dead only. Seeing that Catholicism has acted as a hostile power, threatening freedom and the human mind, it was right to combat her. But when history becomes polemical one does not narrate well. Our age is the age of history; for it is the age of doubt as to dogma. It is the age in which, without discussing system, an enlightened spirit says to itself: "If, ever since men began to reason, so many thousands of creeds have pretended to present the whole truth, and if this pretence has always been found a vain one, is it likely I shall be more fortunate than so many others, and the truth has awaited my coming to make her definitive revelation?" There is no definitive revelation. There is a touching struggle of this poor disinherited being, man, to make his lot bearable. But what that calls for is not disdain, it is kindness. Whosoever believes he has aught to teach us about our lot and our end ought to be welcomed. Call to mind the judicious and discreet judgment of that Northumbrian chief in the assembly which was debating whether it should embrace the doctrine of the Roman missionaries. "Perhaps thou recallest, O King, a thing which sometimes happens in the wintry days, when thou art seated at table with thy captains and thy warriors, while a good fire is burning and the hall is pleasant and warm, but it rains, snows, and there is a high wind outside. There comes a little bird which flies across the hall with fluttering wings, coming in by one window and going out by another. The moment of its crossing is for it full of sweetness, it no longer feels either rain or storm, but that moment flies, the bird passes in the twinkling of an eye, and from winter it goes back to winter again. Such," Coifi went on, "seems to me to be men's life upon this earth, and its momentary flight as compared with the length of time which precedes and that which follows it. This time is dark and irksome for us, it torments us by the impossibility of knowing what it is. If, then, the new teaching can shed but the least light upon it for us it behoves us to follow it." (Beda, Hist. Eccles. II., 12). Alas! The missionaries from Rome brought us but a *minimum* of the certainty with which the old Northumbrian chief decided he would be content. Life seems to us to be ever a short passage between two long nights. Happy he who can sleep amid the empty noise of the threats which aforesaid troubled the human conscience; noise which ought no longer to be aught but as the rocking of its cradle. One thing only is certain: it is that the fatherly smile at certain hours shines across nature, assures us that there is an eye looking at us and a heart which follows us. Let us keep aloof from every absolute formula which might one day become a hindrance to the free expansion of our minds. There is no religious communion which does not still possess the gifts of life and grace, but it is on condition of sympathetic adhesion following upon humiliating docility. The comparison of the regiment, invented by Clement of Rome, and often repeated, ought to be utterly abandoned. You have wished me to recall your thoughts to the grandeur of Catholicism, at its best epoch. I thank you for so doing. Bonds of childhood, the strongest of all bonds, attach me to Catholicism, and I am often tempted to say of it what Job said, at least in our Latin version, *Etiam si occiderit me, in ipso sperabo*. This family is too numerous not to have still a great future before it. The strange excesses of the last half century, the unheard of Pontificate of Pius IX.—the most astounding in history—cannot end in dulness and common-place. There will be thunderstorms yonder, explosions like all which accompany God's great days of judgment. And to remain possible still, bearable by those who have loved her, would she have much to do, this old Mother who would not know how to die so soon? Perhaps she will find out, to slacken the strides of her conqueror—Modern Reason—arts of sorcery, words like those Balder murmured on the funeral pile. The Catholic Church is a woman, let us mistrust the charming words of her agony. Let us imagine her some day posing and saying to us "My

children, everything here is but a symbol and dream. Nothing is clear in this world save a little ray of blue light which flashes across the dark pall and looks as it were the reflex of a Benevolent Will. Come into my bosom, where you will find how to forget. For him who wants fetiches, I have fetiches; for him who wants his hand full of work, I offer works; for him who wants drunkenness of heart, I have milk in my breast which intoxicates. For him who wants love, hatred too, I have more than enough of both; to him who likes irony, I pour it forth from a brimming fountain. Come, all of you, the time of dogmatic dejection is over; I shall have music and incense for your funerals, flowers for your marriages, the joyous welcome of my bells for your new-born babes." Well, were she to talk so, our embarrassment would be extreme; but perhaps she will not say it. . . . Your great and glorious England, ladies and gentlemen, has resolved the practical part of the question. In proportion to the theoretical impossibility of solving the religious problem is the ease with which the State and individuals can mark out the line of conduct to follow in matters of the kind. Everything is summed up in a single word—Liberty. What more simple? Belief cannot be had to order; we believe what we believe to be true; it is at no man's pleasure to hold as true what he has been led, right or wrong, to find false. To refuse freedom of thought is a kind of contradiction in terms. But from freedom of thought to the freedom of saying out what one thinks there is but a step. For the right of all is the same; I have no right to forbid anybody to say what he thinks; but nobody has the right to forbid me to speak as I think. See here is a theory which will seem a very poor one in the eyes of the transcendent doctors who fancy themselves in possession of absolute truth. We have them at a great advantage, ladies and gentlemen. To be logical they are obliged to be persecutors; as for us, we have leave to be tolerant, tolerant towards all, even towards those who if they had the power, would be anything but tolerant towards us. Yes, let us not flinch from this paradox—Liberty is the deadliest weapon against the foes of liberty. Some tell us in all frankness, "We accept liberty from you because you owe it us according to your own principles, but you shall get nothing of the kind at our hands, for we do not owe it you." Very well; let us give them liberty all the same, and let us not imagine we shall be worsted in the bargain. No; liberty is the grand solvent of all fanaticisms. By claiming liberty for my foe, for him who would stamp me out if he could, I make him really the most fatal of all presents. I oblige him to swallow a strong drink which will turn his brain, while I keep mine steady. Science can stand the manly training of liberty; fanaticism, superstition, cannot stand it. We do more harm to dogmatism by treating it with implacable sweetness than by persecuting it. By this sweetness we teach the very truth which cuts up all dogmatism by the roots—namely, that every metaphysical controversy is barren, and that in questions of this kind the truth for each man is what he thinks he gets a glimpse of. The great thing is not to silence dangerous teaching, gag such and such a discordant voice; the great thing wanted is to put men's minds into such good temper that the masses may see the emptiness of these angry squabbles. When this temper becomes the atmosphere of society the fanatic will find he can hardly breathe in it any longer. He finds himself beaten by the general softness. If, instead of lending Polyuctus to punishment, the magistrates, with a smile and a shake of the hand, had sent him home, Polyuctus would not have been caught offending again; perhaps in his old age he would even have laughed at his escapade and would have become a sensible man.

METEOROLOGICAL REPORT

FOR WEEK BEGINNING FRIDAY, AUGUST 27TH, 1880.  
Observatory of Daigaku, Moto-Fujicho, Hongō, Tokio, Japan.

REMARKS.

Heavy line represents barometer.  
Light continuous line—max. & min. thermometers.  
..... represents velocity of wind  
..... represents percentage of humidity  
Max. velocity of wind 14.0 miles per hour on Thursday, at 3 p.m.  
The barometer is reduced to the freezing point and to the level of the sea.  
The highest reading of the barometer for the week was 30.066 inches on Thursday, at 10 p.m., and the lowest was 29.662 inches on Saturday, at 10 p.m. There has been a considerable rise in the barometer during the week, accompanied by a decided fall in temperature. The highest temperature for the week was 80°4 on Saturday, and the lowest was 63°7 on Wednesday. The maximum and the minimum for the corresponding week of last year being 89°4 and 68°5 respectively. Rain has fallen every day of the week except Monday, the total amount being 2.455 inches against .025 inches for the corresponding week of last year.

SHIPPING INTELLIGENCE.

INWARDS.

Aug. 28, Japanese steamer *Kokomaru Maru*, Dithlefsen, 1,133, from Hakodate, Mails and General, to M. B. Co.  
Aug. 29, American sloop-of-war *Squalor*, Commander Sampson, 1,900, 8-guns, from Hakodate.  
Aug. 30, Japanese steamer *Nigata Maru*, Walker, 1,603, from Hongkong via Kobe, Mails and General, to M. B. Co.  
Aug. 30, British steamer *Belgic*, Davison, 2,627, from Hongkong, Mails and General, to O. & O. Co.  
Aug. 30, British steamer *Essex*, Wilkings, 1,401, from London via Shanghai, General, to Mourilyan, Heimann & Co.  
Aug. 30, H.M.S. gun-boat *Fly*, Commander St. Clair, 461, 4-guns, from Kobe.  
Sept. 1, Japanese steamer *Siro Maru*, Frauck, 480, from Hakodate, Mails and General, to M. B. Co.  
Sept. 1, Japanese steamer *Fukushima Maru*, Christensen, 1,343, from Kobe, Mails and General, to M. B. Co.  
Sept. 2, Japanese steamer *Tokuyama Maru*, Young, 1,270, from Shanghai and way-ports, Mails and General, to M. B. Co.

Sept. 2, British steamer *Ajar*, Kidd, 1,524, from London via Hongkong, General, to Butterfield & Swire.  
 Sept. 2, British steamer *Cleveland*, Harvey, 763, from Saigon, Rice, to Janline, Matheson & Co.  
 Sept. 3, British steamer *Sunda*, Reeves, 1,704, from Hongkong via Nagasaki, Mails and General, to P. & O. Co.  
 Sept. 4, German schooner *Lottie*, Hiltz, 26, from Kurile Islands Skins, to Hohnholz & Co.

## PASSENGERS.

Per British steamer *Belgic* from Hongkong:—Messrs. E. D. Paira and G. D. Castro in cabin. For San Francisco:—Mrs. Burton and Mr. W. H. Loxley in cabin; 7 Europeans and 93 Chinese in steerage.  
 Per Japanese steamer *Niigata Maru* from Hongkong via Kobe:—Mrs. Kiyohara, Mr. P. S. Synes, Dr. Hange, Dr. Biddle, U.S.N., Mr. V. Ragusa, Messrs. Nakamiya, Nakamura, Matsumoto and Satoura in cabin; 1 European and 180 Japanese in steerage.  
 Per Japanese steamer *Seirio Maru* from Hakodate:—50 Japanese.  
 Per Japanese steamer *Wakamatsu Maru* from Kobe:—20 Japanese.  
 Per Japanese steamer *Takasago Maru* from Shanghai and ports:—Rev. P. B. Power and Miss Power, Mr. Brown and 10 Japanese in cabin; 1 European, 3 Chinese and 233 Japanese in steerage.

## OUTWARDS.

Aug. 30, Japanese steamer *Tsuruyama Maru*, Cheetham, 661, for Hakodate, Mails and General, M. B. Co.  
 Aug. 30, Japanese steamer *Toyoshima Maru*, Hubbard, 946, for Kobe, Mails and General, despatched by M. B. Co.  
 Sept. 1, British barque *Furion II*, Wade, 945, for Kobe, General, despatched by Malcolm & Co.  
 Sept. 1, British corvette *Comus*, 2,383, Captain East, 14-guns, for Nagasaki.  
 Sept. 1, Japanese steamer *Tokio Maru*, Swain, 1,146, for Shanghai and ports, Mails and General, despatched by M. B. Co.  
 Sept. 1, American sloop-of-war *Alert*, Captain Huntington, 1,020, 4-guns, 600 n.r., for Chefoo via Nagasaki.  
 Sept. 2, British steamer *Exambin*, Wildgoose, 1,401, for Kobe, General, despatched by Mourilyan, Heimann & Co.  
 Sept. 2, Japanese steamer *Kokunoye Maru*, Dithlelsen, 1,133, for Hakodate, Mails and General, despatched by M. B. Co.  
 Sept. 3, French steamer *Volga*, Guirand, 1,502, for Hongkong, Mails and General, despatched by M. M. Co.  
 Sept. 3, American ship *Bohemia*, Trask, 1,645, for Kobe, General, despatched by Jardine, Matheson & Co.  
 Sept. 3, American barque *California*, Love, 724, for San Francisco, Tea, despatched by Walsh, Hall & Co.  
 Sept. 4, Japanese steamer *Seirio Maru*, Franck, 626, for Hakodate, Mails and General, despatched by M. B. Co.  
 Sept. 4, British steamer *Belgic*, Davison, 2,627, for San Francisco, Mails and General, despatched by O. & O. Co.  
 Sept. 4, Japanese steamer *Wakamatsu Maru*, Christensen, 1,343, for Kobe, Mails and General, despatched by M. B. Co.  
 Sept. 4, Japanese steamer *Niigata Maru*, Walker, 1,603, for Hongkong via Kobe, Mails and General, despatched by M. B. Co.

## PASSENGERS.

Per Japanese steamer *Tokio Maru*, for Shanghai and way ports:—Col. and Mrs. Unterberger, Mr. and Mrs. Minoura, Miss Winn, Mrs. Leuz and infant, Miss Starkweather, Miss Gouldy Mrs. Winn and two children, Dr. Rogers, Messrs. ## COMMERCIAL INTELLIGENCE.

**IMPORTS.**—Generally a fair to good business passing. In *Tarn* more doing, and prices are decidedly firmer both for English and Bombay shippings. *Shirtings*—some inquiry for 9 lbs. at quotations. *Turkey Reds* in good demand. *Velvets* are quiet, other *Cottons* dull. *Woolens* are barely saleable and we leave all quotations unchanged.

**COTTON YARNS.**

Nos. 16 to 24. Common to Medium	per picul	\$27.00 to 30.50
" " (Good to Best)	"	\$31.00 to 33.50
Bombay, No. 20 do.	"	\$28.00 to 30.00
Nos. 28 to 32. Common to Medium	"	\$34.00 to 35.00
" " (Good to Best)	"	\$36.00 to 37.00
" 38 to 42	"	\$39.00 to 42.00

**COTTON PIECE GOODS.**

Union	54 " to 56 " "	0.32½ to 0.60
Blankets, green, 6 to 8 lbs.	per lb.	0.38 to 0.41

**SUGAR.**—Our market is quiet at quotation, estimated stock 160,000 bags.

**KEROSENE.**—Dealers have entered the market pretty freely, and a rise to quotation is the consequence. Stock 705,000 cases.

Sugar:—Takao in bag	per picul	\$4.05	Japan Rice	per picul	\$3.20 to \$4.00
Taiwanfoo in bag	"	\$4.00 to 4.05	Saigon Rice [cargo]	"	\$2.05 to \$2.10
Ching-pak and Ke-pak	"	\$7.50	Kerosene Oil	case	\$1.70
China No. 4-5, Kongfun & Kook-fah	"	\$6.00 to \$8.00	Newchwang Peas	picul	\$2.05 to \$2.10

**EXPORTS.**

**SILK.**—We have had rather an active market for Silk since the 28th ultimo. The simultaneous departure of the French and American mails induced a number of transactions, and sales for the week amount to about 450 shipping bales. Prices for *Hanks* have risen fully \$10 per picul and many holders do not care to sell even at this advance. In *Filatures* a fair business has been done for America, but prices of this class of silk as well as of *Kakodas* are unaltered.

	Exchange 3.9½	Exchange 4.65
New Silks { Hanks.—No. 2	\$510 to \$520 = 17 1 to 17 6 = fcs. 47.80 to fcs. 48.60	
" " 2½	\$485 to \$490 = 16 6 to 16 7 = " 45.20 to " 45.60	
" " 3 and 4	\$450 to \$470 = 15 3 to 15 11 = " 42.40 to " 42.90	
" Filatures.—Best	\$650 to \$ — = 21 8 to " 60.00	
Old Silks { Filatures.—Medium to Best	\$600 to \$650 = 20 to 21 8 = fcs. 55.50 to fcs. 60.00	
" Kakoda.—	\$580 to \$640 = 19 5 to 21 4 = " 53.75 to " 59.25	

Stock 2,600 shipping bales. Total shipments to date 2,645 bales against 2,202 bales same time last year.

**TEA.**—Transactions have been small, settlements for the week only amounting to 2,000 piculs. Fine to Choicest leaf has been most in demand, prices for which have advanced; but the lower grades, if anything, are rather easier. There is a large stock on offer principally composed of Common and Medium sorts.

The s.s. *Escambia* is on the berth for New York via Suez at £3 10/- per ton.

Common	{	...	...	...	{	\$17 to \$21	Fine	...	...	...	...	\$29 to \$30

**SHIPPING.**

**SHIPPING.**—The s.s. *Clelland* has arrived from Saigon with rice. The s.s. *Escambia* is on the berth for New York, and the s.s. *Ajar* for London. The *Obed Baster* is filling up for New York with general cargo. No demand exists for sailing vessels at the moment.

## MISCELLANEOUS.

## THE GREATEST

WONDER OF MODERN TIMES  
HOLLOWAY'S PILLS.

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says, "I ordered the dragoman Muhomet to inform the Fakay that I was a Doctor, and that I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!  
HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse-feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World May 17th, 1873.

"HIGHEST AWARD & PRIZE MEDAL PHILADELPHIA  
EXHIBITION, 1876."

## MIN REEF WHISTLING BUOY.

NOTICE IS HEREBY GIVEN that a red and black chequered automatic Whistling Buoy, 10 feet in diameter at the water line and with the word **MIN** painted on it in white letters, has been moored in 11 fathoms of water about one cable to the north-east of the northern extreme of the Min Reef. From the Buoy:—

Chang Chi Peak bears N. 49° E.

Sharp Peak „ N. 73° W.

By order of the Inspector-General of Customs.

DAVID M. HENDERSON,  
Engineer-in-Chief.

Imperial Maritime Customs,  
Engineers' Office,  
Shanghai, 3rd August, 1880.

W. & A. GILBEY'S  
WINES AND SPIRITS.

W. & A. GILBEY have special facilities for carrying on an extensive Foreign Trade, having held for many years in their Excise Bonded Stores, for the purpose of their Home Trade, a stock of not less than 12,000 Casks of Wines and Spirits, which are equally available for Export. These stores are by far the largest private Duty Free Warehouses in the World, and are under the supervision of a staff of Excise Officers specially attached to these Warehouses.

THE EXTENT of W. & A. Gilbey's purchases enables them to give the best VALUE to the public, as a twentieth part of the Foreign Wines consumed in the United Kingdom is supplied from their stock. In the year 1876 W. & A. Gilbey paid duty on 1,881,049 gallons of Wines and Spirits, and the average quantity bottled and sent out by them daily was 3,050 dozens or 36,600 bottles.

QUALITY is guaranteed by W. & A. Gilbey, and is the same whether the Wines or Spirits are obtained direct from their Head Establishments or from any of their Agents. The purity and genuineness of every article in this list are guaranteed in accordance with Act of Parliament, 38 and 39 Vict., Cap. 63.

W. & A. Gilbey have always adhered to the standard of Bottle Measure recently recognised by the Government, namely—

6 bottles contain one gallon; 12 half-bottles contain one gallon.

SECURITY is ensured to the purchaser, each bottle bearing W. & A. Gilbey's seal and label guaranteeing quality and measure, and the strength also in the case of Spirits.

EDWARD FISCHER & Co.,  
Agents for Japan.

## MISCELLANEOUS.

**BUGS, FLEAS, MOTHS, BEETLES,**

and all other insects are destroyed by

**KEATING'S INSECT POWDER,**

which is quite harmless to Domestic Animals.

In exterminating Beetles the success of this Powder is extraordinary, and no one need be troubled by those pests. It is perfectly clean in application.

Ask for and be sure to obtain "KEATING'S POWDER," as Imitations are Noxious, and fail in giving satisfaction.

SOLD BY ALL CHEMISTS IN BOTTLES, 1/- &amp; 2/6 each.

**KEATING'S WORM TABLETS,**

A PURELY VEGETABLE SWEETMEAT, both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for **INTESTINAL** or **THREAD WORMS**. It is a perfectly safe and mild preparation, and is especially adapted for Children.

## TESTIMONIAL.

Medical Hall, Gildersome, Nov. 28th, 1876.

MR. KEATING,

Dear Sir,—I think it nothing but my duty to inform you of the immense sale I have for your Worm Tablets, which I may justly say is enormous, and in every case gives the greatest satisfaction. I have now in stock two bottles containing the Round Worms brought me during the last few days by customers, one Worm 40 yards long. I dare not be without the remedy.—Yours respectfully,

M. A. WALKER.

SOLD IN BOTTLES, BY ALL CHEMISTS AND DRUGGISTS.

Proprietor—**THOMAS KEATING, London.**

**REWARD AND CAUTION.**—Whereas fraudulent imitations of this unsurpassed remedy have been sold, I hereby request anyone knowing of the vendor of the same to communicate with me, on conviction of the offender a liberal reward will be paid.

April, 1880.

**WEEKLY EDITION.** The "Japan Weekly Mail," a Weekly Review  
of Japanese Commerce, Politics, Literature and Art:—Per  
annum, \$24: Six months, \$13: Three months, \$7.

**FORTNIGHTLY EDITION,** being a Summary of the foregoing, is pub-  
lished for transmission by the American Mail Steamers via  
San Francisco. Per annum, \$12; Six month, \$7; Three  
months, \$4.

THE JAPAN DAILY MAIL is published every morning (Sundays ex-  
cepted) and contains the Arrivals and Departures of all  
Shipping, Passenger lists, Cargoes, Vessels on the Berth and  
in Harbour &c. &c. Also the latest Telegrams, Japanese  
news, Reports of Trials in the Courts of Law, Meetings of  
public bodies, and all matters of interest to the Community.  
Special attention is called to this Journal as a medium for  
circulating local advertisements. It has a large and con-  
stantly increasing circulation, its low price bringing it within  
the means of all classes of the community. It therefore  
affords exceptional advertising advantages, and secures to all  
announcements the utmost publicity, the object aimed at by  
advertisers.

SUBSCRIPTION PER MONTH—ONE DOLLAR.

## CHINA.

ACCORDING to the meagre telegrams vouchsafed by Reuter, the Marquis Tseng had a good reception from the Russian Czar in St. Petersburg, negotiations progressed quickly afterwards, so that on or before the 8th instant, a new treaty between Russia and China was agreed to and signed.

Some weeks may pass before details of the second treaty are divulged. In the meantime, we may be sure of at least three of the principal stipulations in the new document. The Livadia treaty of Chung How will be ratified without further reference, discussion, or delay. Chung How must be restored at once to rank, honor, office, and favor; and China will have to pay to Russia, within a stated time, the costs of the movement of Russian troops along a frontier of over four thousand miles in length; the expenses of Admiral Lessoffsky's fleet; and, further, all the Russian expenditures for ships, stores, arms, &c., &c., incurred in preparations for war. There will be other stipulations; some concerning trade, others concerning political and territorial rights. Yet, although we could put forth some plausible guesses, we will not at this moment deal with matters that are hypothetical. It is enough to say Russia has dictated her own terms, and that China has had to yield to all demands immediate and unconditional compliance.

The political consequences, which affect Europe as well as Asia, are vast and momentous, but yet may be the means of giving to the Celestial Empire unity and vigorous national life.

A short year ago the two Emperresses, having effectually crushed all revolts within the limits of China proper, had reconquered the ancient possessions of the Empire with the exceptions of Khokand and Ili, the lands of Siberia and Manchuria ceded to Russia, the island of Hongkong

surrendered to England, and the Loochoo's annexed by Japan. The Chinese Empire, conscious of its vast strength, had assumed a threatening attitude towards this country. Troops were massed against Ili, in such numbers that Russia became alarmed for the safety of Toorkestan and the Khanates. France was warned that opposition would be made to any invasion of Tonquin; Nepal, Burmah and Thibet had again submitted to tribute; and Siam was made uneasy by a peremptory demand from Peking for payment of all arrears due to China, the suzerain power.

Now all has been changed. Japan will henceforth hold Loochoo unchallenged. The troops of Tso will probably retire from Kashgar, and seek the shelter of the Great Wall. Siam will preserve her independence, and Russia will, when the Czar wills, absorb Kashgaria, Hi, Mongolia, Manchuria, and Corea. China will be happy to be permitted to retire within the boundary of the Wall, her outlying possessions will fall from her; and Burmah, Nepal, Thibet—like Siam—will cease to offer tribute and homage.

The revulsion is indeed very great, yet—strange to say—it has been foreseen and will not, in truth, be unwelcome to the Chinese statesmen who have felt the influence of the modern spirit. A nation which is homogenous and which—after all reverses—consists of some three hundred and fifty million souls, (we reject higher estimates) will, when thrown back upon its own resources, quickly discover its elements of both strength and weakness and will, if leaders arise, repair, reform, consolidate and grow strong, under the pressure of a hostile and aggressive neighbour. Popular indignation may be able to overthrow the provincial usurpations—the curse of the Empire—and the vast, chastened, and federated peoples may be so fused into unity, that the Chinese nation will become a prodigious single force instead of being, as now, a number of discordant and incoherent provinces.

Up to the year 1860 China kept aloof from the outer world, and was a decaying State, torn by revolt and apparently unable to struggle against the successions of calamity. After that year, an active and powerful, but yet numerically small, section of the governing class of China accepted the conclusion that the nation must to a wide extent modify her system of internal government and foreign policy, as the traditional antagonism to western ways and rigid isolation of the Empire, could not be persisted in without endangering the State, which at the time was almost exhausted by the Taeping rebellion. This conclusion was an enforced and unwelcome one, and the able, clear-sighted, but yet narrow-minded men who saw the need for general reform, and who wished to give the Empire the forces that came from unity, were anxious to keep China as much as possible apart from the western world; so that, for instance, if foreign inventions were adopted, they would be but the means of rendering China independent of foreign science and culture. Tseng-kwo-fan, Tso-t'sung-

t'ang, Shên-pao-chên, Li-hung-chang, and their following, considered that western thought was too explosive for China. They all approved of western arms, discipline, and organization, and would give them to China—but as the means of keeping foreigners out of the country. Li is in favor of railways and telegraphs being made, that they may develop the resources of the Empire, and make it independent of foreign trade. Others, like Chung How for instance, wished to build steam cotton-mills and large works for manufacturing iron and copper, so that no foreign cottons and no foreign metals might be imported. A Chinese steam-ship company was formed with the help of state money and subsidies, that it might drive away foreign vessels from Chinese waters, and all other plans approved of had really for their object the peaceable, but ultimate and thorough, expulsion of foreigners. In this narrow spirit the leaders of China projected reforms and changes and, as the sequel shows, have vastly injured the nation. Changes of real benefit to China might have been made during the last eighteen or twenty years if the leaders of opinion had been less blind, selfish and exclusive, but the precious time has been wasted, and at this crisis China finds herself with a Government that has become contemptible in the eyes of the people; without foreign sympathy or respect; with undisciplined armies, undisciplined fleets, without means of internal communication, no transport, no commissariat, no organizations, no scientific service, no central direction, no national councils, no leaders. The blood and treasure of the nation has been wasted in the north-west for nought; the Empire is about to be shorn of its old possessions, and the people are profoundly humiliated and afflicted.

It is certain that the perturbation is already great and is becoming general, and, if it lasts unredressed or unallayed, will lead to a rising against existing authority, as the pride or self-respect of the Chinese people is deeply hurt by the vacillations, intrigues, corruptions, disunions, and incompetence of the governing class. The recent action of Peking against Li has caused much excitement. The literate and official class think that Li's real fault was that he showed the weakness of the Empire under its present system, and its utter unfitness to encounter the risks of war. Also, that he wished to apply remedies so that the vast dormant forces of the nation be turned to account, as might easily be done.

Li again, is now jealously watched. He has been refused the large sums of money he wanted for the army and navy. The Peking Government, abetted by most of the great provincial officials, clings to worn out, useless ways, and seems disposed to run all risks of national decay or disintegration rather than accept the necessity of organic change. Probably even the last bitter lesson will be lost.

The discontent will grow, and has already become dangerous. For the present all eyes are again turned towards Li, whose conduct is closely watched by both the Peking Government and the Chinese nation. He is too powerful a subject to please the Manchu dynastic party; he has the second largest and second best army of China; he is a man of great courage, ability, and vast ambition. His faults are great, but may be condoned. On the other hand the dynasty has just received an alarming shock, it has a weaker hold on China now than at any previous time, and, although the Empresses are women of ability, and Kung and Tso are bold counsellors, the dynasty is in no condition to bear any strain. Further, the new-born national feeling of China is against the Ta t'ing dynasty, the people are ripe for a new and vigorous rule, for the abandonment of the old order, and the acceptance of

complete change of government, national policy, and, perhaps, religion.

#### COLONEL GORDON.

THE visit of Colonel Gordon to China was an important event. He had nothing to gain by a new connexion with the Chinese Government. His position in the British service was a high and enviable one, while his career is as distinguished as it is exceptional, and but a short period will see him a General. His appearance, then, on the scene of his former great labours implied nothing but devotion to the interests of civilisation and progress. His previous experience of China was a sufficient guarantee that he fully understood the questions he would have to deal with. He knew that China was weak in military organization and experience of modern warfare, but he knew also that she was strong by means of her population and her wealth, the two great sinews of war. He knew that the internal dissensions existing in the Cabinet at Peking rendered a struggle with Russia undesirable in the interests of China. He knew also that trade in general would suffer if such a struggle were to take place. But he was likewise aware that, should the contest be forced upon China, he, as a soldier whose wide military experience had chiefly been gained in leading troops untrained to modern warfare, and who had achieved signal successes in the past as a commander in China itself, was perhaps better fitted than any man living to assist her at such a crisis in making the best use of her position and resources. Yet, though all this must have been well known to Sir Thomas Wade, it is to be feared that the spirit which has influenced him in his late extraordinary action towards Colonel Gordon is the result of the limited views acquired during former experience in subordinate positions, and is the same spirit which is noticeable in others of Her Majesty's officials who, instead of appreciating or utilising any influence or confidence which their countrymen may acquire among Eastern peoples, omit no opportunity of assuming an antagonistic attitude, and thus lose the benefit of valuable assistance. Under such circumstances it is no wonder that those of the other Foreign Representatives who pursue a different course in this respect,—as for instance Monsieur Brennier, in the case of Captain Giquel—as a rule enjoy greater diplomatic weight and influence with the native governments.

It would have been only reasonable to hope that an exception to this prevailing feature of existing British policy, might be made in the case of the distinguished officer of whom we are writing; but apparently no considerations of his high character and disinterested services influenced the British Representative at Peking, who seems to have looked upon the late Commanding General of the "Ever Victorious Army" as a meddlesome and unwelcome intruder, who embarrassed his own position.

The Home Government when appealed to, being naturally enough unable to understand fully the position of affairs, doubtless felt it incumbent to support their Representative at a critical moment, and not only took the extraordinary and unusual step of refusing to accept Colonel Gordon's resignation of his commission, but cancelled his leave of absence and directed him to hasten out of China.

By this deplorable decision we fear that England has thrown away a fine opportunity of increasing her prestige and power in China, for that nation will feel that, in deciding upon the recall of Colonel Gordon, the British Government acted more out of fear of Russia than in the interests of peace; and once more her rulers will be able

to estimate the amount of reliance they can place on such feeble supporters and friends when their serious interests are at stake.

From this picture of mistaken policy as exhibited at Peking, it is refreshing to look back upon the very different treatment which is pretty well known to have been experienced by Colonel Gordon at the other end of the Empire. We refer to the welcome which he received from the Governor of Hongkong, who, though we believe previously unknown to him, seems to have wholly sympathised with Colonel Gordon in his mission of reconciliation and peace, and to have thoroughly appreciated the value of his presence in China on such an occasion. Nothing could well stand in stronger contrast than the attitudes of the British Representatives at Hongkong and Peking in this matter, the one viewing it in a wide and statesmanlike spirit, the other apparently taking a view circumscribed by a regard for his own supremacy in British influence upon the councils at Peking.

If Sir John Hennessy had been Minister at Peking, matters would doubtless have taken a very different course, and we should not have to regret, as we now do, another false step in British policy towards China.

WE read with mixed feelings of pleasure and surprise the recent announcement by the *Nichi Nichi Shinbun* of a new Silk Company started in the capital. We are pleased that a want which has long been felt (?) should be at last supplied: but we are somewhat surprised at the reasons given, viz: "There has never been any such association before, consequently the foreign merchants have always the upper hand and the native dealers suffer loss." This seems to us rather apocryphal, to say the least of it. Is there not a grand *Kiito Arntame Kuwisha* in Yokohama, with numerous smaller guilds all over the country? Does the astute foreigner *always* succeed in outwitting the wily native? Have we never heard complaints of false packing—silk arriving with two or three per cent of superabundant moisture in it—all sorts of inferior staple being reeled into well-known shapes—mixing and casing without end? Or, are all these things myths and inventions on the part of the rapacious foreign merchant? We fear, however, that there is only too much cause for all these complaints; and if the Tokio Silk Company can influence the trade for the removal of these abuses, the future success of Japan Raw Silk as an article of export will be assured. If the directors of the new company think to coerce foreigners into paying exorbitant rates for an inferior article, they will soon discover their mistake; for, with the markets of the world open to them the manufacturers of the West will not hesitate to operate largely in other countries. This has been the case during the present season as comparison between the figures of export at Shanghai and Yokohama will readily prove. Perhaps, however, the new company intends to ship direct to the consumer, but with the late experience of direct operations in silkworm-eggs before them, we imagine that even the members of a Japanese company will not rush madly into such a risk. It may be, however, that the new arrangement is merely a scheme to increase the profits of the dealers of this country or to replace the export duty proposed to be abolished. However this may be, the fact is patent that if Japanese growers will take care to improve the quality of their silk, they will not fail to find a ready market at good prices for all they can produce, even without the assistance of the Tokio Silk Company. On the other hand, if the quality of the staple is allowed to further deteriorate, all the powerful machinery of *kuwaisha*, patriotic companies

of *kuazoku*, samurai, *heimin*, *shonin*, *et hoc genus omne*, with the fostering care and tenderness of Government patronage thrown in—all this will be impotent to force Japan silk into consumption against the better judgment of foreign buyers—*Verbum sap.*

THE action taken by the merchants of Shanghai in opposition to the attempt of the local Tea Guild to dominate the trade, has not apparently brought that association to its senses. The reference to arbitration offered by the foreign firm to the native hong in order to settle the dispute between them was accepted. The award of the referee stated, according to the *North China Herald*, that having reweighed the chop of tea about which there was a dispute as to the weight, he found that it weighed 290.27 piculs, whereas Messrs. Blain & Co.'s weight was 290.00, and decreed that the Yik Kee hong be paid for the 290.27 piculs at the contract price. "Thus Messrs. Blain & Co.'s weighing was more in the interest of the Chinese than that of the arbitrator. They have, we consider, remarks the *N. C. Herald*, "acted most honourably in this dispute. They pressed for arbitration, they called the foreign buyers together to inquire into the dispute, they placed their weigh-books at their disposal; and did everything that it was possible for them to do to obtain a full, open and honest investigation of the matter. And now that their weighing has been proved to be more than satisfactory by an arbitrator chosen by the Chinese themselves, they are entitled not only to the sympathy of the foreign buyers, but to their combined support to resist the influence that the Tea Guild is still exercising over their trade. Their hong is still 'tabooed,' they have had no tea musters since the 21st instant, and a member of the Guild incidentally told us yesterday that it was not probable the taboo would cease; it was his opinion that 'Kungtoan' (Messrs. Blain and Co.) must sluttee." The Chinese Government should be compelled by the Foreign Ministers to adhere to the stipulations of the treaties which forbid these combinations called guilds, which seek to control foreign trade. Disunion among the people most affected—the merchants—is probably the true reason why the guilds continue to flourish. It is patent that if the abuse remains unchecked much longer it will be almost futile to attempt to remove the evil, glaring though it certainly is, and highly prejudicial to commercial enterprise. It so happens, too, that the treaty entered into between France and China in 1858, contains an express provision on the point which seems to render unassailable the position taken up by the opponents of the guilds. The fourteenth Article of this treaty provides that "no privileged commercial guild of any kind can henceforth be started in China, and none in any case likewise can be organized for the purpose of exercising monopoly in any branch of trade. In case of infringement of the present Article, the Chinese authorities, upon representation from the Consul or Consular Agent, will take steps to do away with such Guilds, the starting whereof they will moreover prevent by prohibitions beforehand, in order to avert them in a general way." Under the "favoured nation" clause in the English treaty the subjects of Great Britain can claim equal advantages with those of France, and we shortly expect to see a determined effort made—which must ultimately prove successful—to abolish those hindrances to trade—Guilds. Untaught by the experience of the neighbouring Empire we notice a tendency here in Japan to establish these associations. Knowing how prejudicial they must ultimately prove to the best interests of the country we would suggest the propriety of there being

inserted, in the new treaties, some similar provision to that we have quoted from the French treaty with China.

A CORRESPONDENT supplies us with an interesting account of a youthful genius now astonishing the scientific community of Paris. Our informant states that the wonderful "Calculating Boy," Jacques Ynaudi, is giving public exhibitions of his inexplicable faculty, and being carefully studied by the scientific lights. Only a short time ago, this "youthful phenomenon" (to borrow Mr. Vincent Crummel's expression) was a little loughaired Italian vagabond, earning a miserable existence by exhibiting his own antics and those of his monkey. At the close of his little displays—on a bit of old carpet, in the streets of the towns which he visited for coppers—he used to ask any intelligent looking person among the crowd of on-lookers, to "ask him sums," which he forthwith worked in his head, giving the result almost instantaneously. He is described as a smoothfaced child, pleasant in ways, but with the precocious "old" look of a poor little wanderer, precociously ripened by intercourse with a hard world, in which bread is dear and coppers are hard to win. A Marseilles merchant, struck with the wonderful powers of the poor little vagrant, gathered him in, not long since, when he was performing his little antics in the streets of that town, fed, washed, brushed, and clothed him, put a little money into the pocket of his new coat, and sent him, under good care, to Paris, to be investigated by the lights of science there residing. He has appeared at several private parties, and his head has been weighed, measured, fingered, and generally studied by the leaders of the Anthropological Society of the city. Dr. Broca finds that his skull is much more developed on the right side than on the left; but no one can get any explanation from him of his mental proceedings, which, to the boy himself, appear as natural as breathing, and which he is totally unable to analyse. When a problem is proposed to him he clasps his hands over his head for a few moments; and as his forehead is painfully large and developed, one fears that he may split his skull in working out his problem. But the little fellow does his work merrily, and is evidently delighted to show off his powers. He has been exhibiting at the Lecture-room on the Boulevard des Capucines, and when the audience, as sometimes happens, fears that too much difficulty is laid upon him, and cries "Enough! enough!" the boy laughs and cries, "No, no; give me more—give me more!" He subtracted a line of fifteen figures on a recent occasion from another line of the same number without any appreciable delay, the answer (correct) being given almost instantaneously. An old gentleman in the audience said, "I am twenty days less than 86 years old. How many hours have I lived?" After a mental calculation of about a minute, Ynaudi replied, "753,896 hours," which proved correct. He was then made to do multiplication and division sums, with lines of figures by trillions and quadrillions, and worked them out "in his head" without delay, hesitation, or error. Among his trials was a simple equation. A gentleman asked, "If to my present age I added a third of my age and six years more, I should be a hundred and twenty-six years old; what is my age?" Ynaudi replied, "Oh, that is easy enough; you are ninety." Somebody else asked him the cube root of 39, 304, and the boy instantly answered, "Thirty-four." These calculating wonders have not been uncommon, and, sad to say, premature death is the ordinary accompaniment of their abnormal powers.

THE *Pull Mall Gazette* recently animadverted very severely upon the spectacle afforded by the "Mixed Courts" in the treaty ports of China, where the Christian assessor approves by his presence the barbarous punishments inflicted by his heathen coadjutor. The last mail from Shanghai brings an account, told in the most matter-of-fact way, of a horrible torture to which a woman has just been subjected in pursuance of a sentence of the "Mixed Court" of the model settlement. We read in the *Celestial Empire* that, on the 26th of last month, "before Chen, Chinese Magistrate, and F.D. Cheshire, Esq., U.S. Assessor, a Cantonese woman, mistress of a brothel, at 'Lao Kee cheong,' was brought up, charged with having brutally assaulted two slave girls, aged, 11, and 7 years, belonging to her; and with throwing boiling hot water on them. She had cut the eldest girl very badly with a knife, her hands and face being covered with blood and presenting a most horrible spectacle. There appeared to have been no provocation for this inhuman treatment on the part of the prisoner. The little sufferers were sent to the Gutzlaff Hospital to be placed under treatment, and the brutal woman was handed over to the Magistrate to be vigorously dealt with." No doubt the woman's crime was serious and deserved severe punishment, but no sentence was, apparently, passed upon her, she was simply "handed over to the magistrate to be vigorously dealt with." And Cheng, as was no doubt fully understood at the time, proved himself equal to the occasion, and "vigorous" enough in all conscience. Elsewhere we learn that "the Cantonese woman who threw boiling water over two little girls last week received part of her punishment this morning. Eighty blows on her lips, with a leather strap, were administered at the Mixed Court." It will be interesting to hear what the remainder of this "vigorous" treatment consists of. We should imagine that everybody connected with such inhuman proceedings, from "Cheng, Chinese Magistrate, and F. D. Cheshire Esq., U. S. Assessor," downwards, had reduced themselves to the same brutal level as the criminal. A few more such examples of vigorously dealing with offenders will inevitably involve the abolition of these Mixed Courts, a consummation which is plainly much to be desired.

THE New York *Nation*, which is certainly one of the very best out of the many excellent papers published in the United States, is following the commendable course of trying to bring into disrepute that most objectionable feature of American politics, which consists in the unscrupulous blackening of the private character of political opponents. Although Republican in its tendencies, the *Nation* honestly admits that General Hancock, the Democratic candidate, is a man of untarnished honour, and that the "mud-buckets" are emptied in vain against him. Speaking in caustic language of the astounding assertions which appear in the partizan journals on both sides, the *Nation* remarks:—"The other campaign stories of the week are not bad. General Hancock has at last been exposed as having wilfully failed to do his duty in one of the fights before Richmond. He confessed, as usual, on the night before the engagement, to a man who slept in the same tent with him, that he took no interest in the fight 'because, if there was any glory in the thing, Sheridan would get it all.' Accordingly, he so arranged matters that the men of his corps on coming into action only fired two rounds each, and then ran away. It only remains now for the man to appear who met Hancock the day before, and, although

seeing him for the first time, clearly perceived his traitorous designs in the expression of his face, and would have felt justified before God and man in shooting him on the spot if he had had a pistol about him, like Colonel T. C. H. Smith in the Fitz-John Porter case. We have little doubt this witness will turn up before next week. The *Times* calls this an 'unpleasant story,' and so it is; but, esteemed contemporary, it is nothing to those which are still coming when the old soldiers get through the haying and have a little leisure. We have not yet reached the first of August. On the other hand, President Hayes, while travelling on the railroad in company with some delegates to the Cincinnati Convention, freely expressed his belief that Hancock was 'a noble fellow,' and would be his (Mr. Hayes's) successor. General Beauregard, by the way, requests us to say that there is no truth in the 'story' to which we recently referred, that he refused an invitation to dine with General Hancock unless the latter hauled down the American flag from over his own door, and that it was hauled down accordingly. General Beauregard says he never was invited to dinner by General Hancock at all. We had suspected as much." The following issue of the same paper continues the subject:—"There are no campaign stories worth mention this week except some trifling testimony as to the almost superhuman goodness of General Garfield's childhood and early manhood. General Meyer says that 'his poor words' are wholly inadequate to describe what 'a grand, good man' he is; but this suggests the enquiry, 'Why should General Meyer enter on a task to which his natural powers are unequal? The venerable Simon Cameron has cruelly repudiated the sentiments about the Administration recently put in his mouth by a *Herald* interviewer. Mr. English has been exposed as an appropriator of moneys and securities belonging to an Indiana street railroad, to the amount of \$10,000, to which he held on with disgusting pertinacity until compelled to 'disgorge' by a suit at law. He also only gave one dollar towards the relief of the sufferers by the Chicago fire. Other particulars of a similar character will doubtless be soon forthcoming." The *Nation*, of course, considers that the Republican party ought to continue in power, although we imagine the election in November will probably result in the return of the Democrats. At the same time our contemporary remarks that "the evasion by all four candidates of the silver question, is probably as discreditable an incident as has ever occurred in American politics."

#### REVIEW.\*

AS we mentioned last week the second volume of Mr. Rocher's work is undoubtedly the most interesting to the general reader, full of interest as the previous volume certainly is. In the first chapter we have a description of the present representatives of the original population of Yün-nan before the Chinese conquest of the province. After the conclusion of the war, the inhabitants were driven or fled to the mountainous districts and have since preserved a sort of quasi-independence. The Miao-tzu hold aloof from the Chinese altogether, and live in villages built in almost inaccessible places in the mountains, and which are surrounded with earthen walls or palisades to provide protection from the attacks of robbers or wild beasts. These people raise wheat, rice, &c. (when the situation is favourable) as well as horses and cattle. They also work in the silver mines. When describing the remnants of the original inhabitants Mr. Rocher says:—"Among the dwellers in the eastern portion of Yün-nan and Kuei-chou, we made out three different races, viz: the

White, the Red, and the Black. These descriptive titles, however, do not apply to the colour of their skin but of their garments. Without this distinction it would be difficult to distinguish between them; they are all, as far as appearance goes, of the same race. Although generally of short stature, the Miao-tzu are well made and robust. Their complexion has a slight gypsy tint; their features are regular and their eyes are not oblique. The hair is worn long, and arranged on the top of the head somewhat after the manner of a chignon. The toilette is none the less an important item; and among the women, we meet with the coquetry natural to the sex. Skillful and enthusiastic hunters, they take the field in the dull season. On the frontiers of Yün-nan the game is usually musk-deer and leopards, and as these animals are to be found in great numbers, the occupation of the hunter is remunerative. The skins and musk-bags of these animals are either sold or exchanged in the nearest bazaar, and sometimes even, to save themselves the trouble of going down to the plains, the hunters deal with the pedlars and petty traders who make periodical visits to the different villages. The Miao-tzu detest the Chinese and consequently avail themselves of any favourable opportunity to avenge upon their enemies the many exactions of every kind to which they are subjected by the mandarins, and as it is difficult for soldiers to pursue them in their mountain fastnesses, the authorities have to content themselves with exercising an active surveillance over them." Of the other tribe the author remarks:—"The aboriginals who next to the Miao-tzu strove most energetically against the Chinese invasion are undoubtedly the Man-tzu. These people who, according to Chinese records, were very numerous before the conquest, occupied the north of Yün-nan and the south of Sui-ch'uan. Notwithstanding an obstinate resistance they were driven back to the high mountains bordering the course of the Yang-tzu-chiang, the branches of which extend to the west as far as Talifu, and to the east into the Kwei-chow district. This tribe seem the only one of all the primitive races that does not deserve the appellation of barbarian or savage, of which the Chinese are so prodigal. Weakened by the continuous war waged upon them for many years, and in spite of the improvements introduced in the neighbouring province of Hei Lo-lo, they still maintain their primitive isolation to such an extent that the Chinese have given up troubling them." A result for which the Man-tzu must be extremely thankful. The remainder of this chapter is occupied with a capital account of the other inhabitants of the province, their manners, customs, &c. One of the most amusing and extraordinary descriptions is that of the marriage ceremony of the Lo-lo or I-jen, which resembles in some respects practices that lingered until not very many years since in the remote parts of Wales and Scotland. Summarizing his experience on the subject of the original dwellers in Yün-nan, Mr. Rocher says:—"From the observation we have made we have come to the conclusion that the autochthones are, beyond all doubt, a race far more hardy and robust than the Chinese; on the other hand, the latter have the advantage in industry and aptitude for commercial pursuits. After an intimate acquaintance with these people one is astonished that the Government has not tried to accomplish by kindness what it has been unable to effect by force. Instead of arraying against them these powerful auxiliaries, this class of indefatigable toilers who could have rendered unequalled assistance in the development of the mineral resources of a country, which are always more or less suffering from the deficiency of labour, the authorities have devoted themselves, with their national haughtiness, to keeping these people in ignorance; they have been induced also to adopt this course by the fear of seeing the inhabitants one day or the other reassert their rights."

The following chapters deal with the great Mussulman rebellion. This terrible outbreak rose out of quarrels between the miners of different districts and may be said to have commenced in May, 1856, with a pitiless massacre organized and carried out by the Chinese. For sixteen years afterwards Yün-nan was a scene of treachery, cruelty, bloodshed, and crime, unparalleled in history. Of this terrible period, Mr. Rocher furnishes us with a graphic description, so much so indeed, that we cannot refrain from bringing before our readers some examples of the stirring incidents narrated. After detailing the different engagements and

\* *La Province Chinoise du Yün-nan*, by Emile Rocher, of the Chinese Imperial Maritime Customs. Leroux, Paris; Kelly & Co., Yokohama.

movements made with varying success, the rebels being as a rule victorious, except when vastly outnumbered, we come to the surrender of the important town of Ch'eng-chiang to the Chinese army. "On the day appointed for the capitulation, the rebels, faithful to their engagements, opened the gate. As soon as a portion of the town was occupied the massacre began. The soldiers attacked the inhabitants furiously, killing, plundering, and destroying everything they came across. The Mussulmans, maddened by the treachery of which they were the victims, rushed to arms and entrenched themselves behind barricades in an isolated quarter of the town. A quarrel suddenly arose among plunderers belonging to different battalions and from abuse they came first to blows, and next to using weapons until blood was shed. Shao-ta-jen, sent by the Fu-tai to quell the disturbance, was obliged to resort to force, which only augmented the disorder. There was a terrible mêlée, and when night put a stop to the combat, between three and four hundred soldiers lay dead on the ground. The rebels, who had assumed the defensive, profited by the disorder to make their escape; but the women, children, and aged people being unable to follow them, fell victims to the fury of the Imperial troops. When order was once more established, the massacre recommenced. Women, driven senseless by fright at the prospect of finding themselves delivered to the unbridled license of the soldiers, committed suicide by throwing themselves and their children into wells. Those whom the fear of death restrained from this source of escape were first violated and then sold to the highest bidder. This was the shameful fate of between five and six thousand human creatures. The aged people were all shot and their heads exposed upon the ramparts. Four or five days after these scenes of carnage, while the streets even then ran with blood and corpses lay everywhere mutely asking for burial, the Fu-tai, anxious to inspect his work, entered the city. His first act was to summon before him Shao-T'ien-Kuei and his friend Yang-siao-Lao, whom he reprimanded severely for having used force against their colleagues. They replied to His Excellency that, having being instructed to re-establish order, they had been unable to accomplish his orders without recourse to violence, owing to the excited state of the soldiery. The Fu-tai appeared dissatisfied with this explanation and declared that should any such measures be again resorted to, he would put the authors to death. An angry discussion followed and Shao-T'ien-Kuei sharply reproved the Fu-tai for his hypocrisy. Then, hearing an order given for his arrest, he drew a double-barrelled pistol and presented it at his superior. At the same moment, one of the aides-de-camp, who observed the movement, threw himself forward and fell pierced with the two balls that were destined for the Fu-tai. The friend of the would-be assassin feeling himself lost, also attempted to take the offensive but was arrested. The Fu-tai, terrified at the scene, and the danger he had just escaped, sat motionless and speechless. On recovering himself he ordered the immediate execution of both offenders in his presence. He also lodged a complaint against the families of the two officers and sent messengers to the capital to fetch the wives and children of the culprits, and they were shortly afterwards killed." This Fu-tai must have been an unfavourable specimen even of the heartless despots who are the virtual rulers of China. After the capitulation of Kuang-i and when the rebel leaders were in his hands, the Fu-tai could enjoy his vengeance at leisure. Ma Min-king, who was a man of herculean frame, attempted to burst his bonds, but being unable to do so, his abortive effort resulted in subjecting him and his companion in misfortune to new tortures. Entirely destitute of clothing they were rolled on a floor studded with very sharp nails an inch in length, in such a manner that with every turn their flesh was torn and streamed with blood. In this mangled condition they were handed over to the executioner, who beheaded them. Their bodies lay unburied, and the heads were sent to Lin-an, their own district, where they were exposed upon the ramparts until the flesh completely rotted away." Another example of the Fu-tai's sanguinary policy is also interesting. "The Fu-tai, under the pretence of celebrating the surrender of the city, invited all the leading Mussulman inhabitants to a banquet; those who had openly opposed the capitulation suspected some snare, but those who had been the prime movers in it, and on whom

honours had been lavished, saw nothing but an ordinary ceremony. Yang Yü-k'o pleaded indisposition and sent one of his subordinates in his place. All the others attended. The Fu-tai received them very graciously, overwhelmed them with flattery and then, at the moment of passing to the banquet hall, soldiers already stationed there for the purpose, seized the guests indicated to them, and seventeen heads fell to the ground. Immediately the Fu-tai issued orders to fire six cannon, the preconceived signal to commence the work of massacre in the city. This was on the eleventh day of occupation. What follows is indescribable. The soldiers flung themselves upon the very people whose hospitality they had enjoyed, while the populace who thought everything satisfactorily settled, and were thus taken unawares, did not attempt to defend themselves. However, the instinct of self-preservation made itself felt later on, and although the massacre continued, night allowed some of the more energetic to collect in crowds. When the sun rose on the following morning it disclosed an assemblage of five or six thousand men who had armed themselves with anything they could lay hands on, and were prepared to sell their lives dearly. The imperial army, fully occupied in pillaging the city, offered no serious opposition, and this multitude of people, desperate and without resource, escaped by the south gate and reached Hsia-kuan and subsequently M'eng-hua-t'ing, a distance of seventy li from Ta-li." Ta-li, the scene of this awful atrocity, was the last stronghold of the rebels which offered resistance, but victory did not make the authorities merciful; fearful punishments were inflicted upon the people, those who escaped with life being subjected to every imaginable indignity. Thirty thousand persons perished in the three days of carnage at Ta-li; eighty hampers of human ears and the heads of seventy rebel chiefs, were exposed as trophies in the pillory at Yün-nan-fu. Mr. Rocher concludes his graphic account of this great rising in the following vigorous language:—"Thus concluded this civil war, the most terrible scourge that a country can sustain. The ravages during this period of sixteen years surpass anything that a civilized nation can imagine. It is interesting to see a people, but lately as peaceful as that of Yün-nan, become in so short a time one of the most warlike in the Empire. Intelligent, energetic, proud, and determined, the inhabitants of Yün-nan knew, even in their most critical moments, how to avail themselves of any advantage. Labourers in the morning, one saw them in the afternoon with musket or lance in hand, mounting guard before their menaced villages, and always ready to sell their lives dearly. Wonderful to relate, instead of allowing themselves to be overcome by the calamities which the carelessness of the provincial administration brought about, they have always remained at their posts, relying on the future, and the exceptional resources which the richness of their country has placed at their disposal, to rejuvenate their strength and to recommence their labours and industry, as soon as the last breath of oppression has been dispersed."

The seventh chapter—on the mineral resources of the province, and the eighth—on the routes of communication with the sea coast—complete the work, but a proper notice of these important subjects must stand over for the present.

#### CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our Correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

#### TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

DEAR SIR:—In "The Mikado's Empire," page 161, I find the following statement:—"Among the Asiatic poor, where ceaseless drudgery is often the lot for life, where a vegetable diet keeps the vital force low, where the tax-gatherer is the chief representative of government, where the earthquake and the typhoon are so frequent and dreadful, and where the forces of nature are feared as malign intelligences, life does not wear such charms as to lead the human soul to long for an eternity of it. No normal Japanese would thrill when he heard the unexplained announcement 'The Gift of God is eternal life,' or 'Whoever believeth on me, though he were dead, yet shall he live.' Such words would be painful to him, announcing only a fateful fact."

I have frequently seen this assertion made respecting the

people of China and other countries nearer the equator, and I am not prepared to deny its truth as applying to them; but a residence of several years in Japan prepares me to doubt, and even to deny its truth, as regards the Japanese. There is among them, I am persuaded, the same "longing after immortality" which consciousness revealed to the Greek philosopher and the Roman sage. If any of the readers of your valuable journal have evidence to the contrary, I should, for one, be glad to have it produced. A young Japanese friend has told me that, once in his boyhood, as he stood gazing at the starry splendour of a winter's night, how at the thought that while those stars would shine on in undiminished brilliancy from century to century he was the creature of a few brief years, *his heart rose out of him*. Do we not find in this one of those touches of nature which prove the kinship of the Japanese to the whole human race? And is not this the feeling which exists, often partially obscured it may be, in every Japanese heart?

Yours &c.,  
M. L. G.

DO-YO-SI.

#### NOTES OF THE WEEK.

The O. & O. steamer *Guelic* arrived in port on Sunday afternoon last, with San Francisco dates to August 16th. She was followed the day after by the M. M. steamer *Menzaleh*, from Hongkong, with London advices to July 23rd. The home mails were forwarded by the P. & O. steamer *Sunda*, on Thursday, the 9th instant.

The otter hunting schooner *Lottie* returned to port during the early part of the week. All her crew were sick and only six skins had been procured. From native sources we learn the others are very shy, and that the hunters are likely to have only a poor return for their labour and outlay this season.

Training for the Autumn Meeting of October 26th, 27th and 28th, has commenced in earnest, and we expect a very full attendance after Monday next. The ten China Subscription Griffins have not yet arrived, but are expected on Thursday next. The *Genkai Maru*, brought over the pony *Eastlander*, who ran at the Tientsin Meeting in May of this year. He ran second on two occasions to *Harlequin*, when the latter won the Northern Cup, of three-quarters of a mile, in 1m. 33s., and the Tientsin Cup, of 1¼ miles, in 2.43½.

The entertainments given by Professor Hennicke are evidently increasing in popularity. In spite of the unfavourable state of the weather on Monday night, an audience who thoroughly enjoyed the performance attended and fully appreciated each feat of skill. The tableaux of various nationalities in the "aerial suspension" were hailed with shouts of applause which reached their climax in the chorus of "Rule Britannia" upon

the representation of England. Professor Hennicke will perform in the Gaiety Theatre during the ensuing week.

A vernacular paper says:—One of the crew of the German otter hunting schooner *Lottie*, which has just returned from the Kurile Islands, gives us the following information. "Hunting and fishing have proved very profitable occupations in the northern seas of Japan, notwithstanding the great dangers to be encountered from wind and weather. Many people have consequently braved the risks and gone to there year after year. This season, however, the boats of the Colonization Department have been mounting guard on the fishing and other hunting grounds, and the number of native boats engaged in this business has increased greatly. The foreign-owned boats, therefore, could not fire at short ranges along the shore as was their former practice, and so were compelled to sail for the Russian coast. There, owing to the entirely different character of the country, they met with much more severe and trying weather, and sport was far worse in proportion. The vessels altogether obtained some twenty or thirty skins between them, so that the owners cannot hope to recoup themselves for the original outlay. It is to be expected, consequently, that the number of foreign-owned boats will be greatly diminished next season."

A propos of the Tauner excitement is the following anecdote of a London lady of fashion as related in an American paper. She was walking with one she deemed a kindred spirit. The lunch-bell rung. The lady was thin and æsthetic, and proud of her mental and physical etherealness. Her companion suggested a move to the dining-room. The lady said, with one of her sweetest, saddest smiles, "I have eaten half a rose; I have kept the other half for my supper."

The following anagram is said to be probably the longest in the English language. It appeared originally in the *Philadelphia Progress*:—

Vote ye for General Winfield S. Hancock!  
Let fools fear every check. Go in and win.

We notice in an English paper that the monument in course of erection at the Hague in honour of Spinoza, was to have been unveiled early this month. It is the work of the sculptor Frederick Hexamer, of Paris, and represents the philosopher in a contemplative attitude, seated in an armchair. The pedestal is of red Swedish granite, and bears only the inscription "Spinoza."

Those of our readers who have had the never-to-be-forgotten pleasure of seeing Mr. Southern in his impersonation of "Lord Dundreary," will regret to hear that the celebrated actor's intellect is impaired. It is feared that his friends will be obliged to place him under restraint.

We take from a native contemporary the following statistics of vessels that entered the harbour during the past month.

Number.	Nationality.	Passengers.	Cargo.
109.....	Japanese .....	4,782	357,417 pkgs.
17.....	Foreign .....	824	—

107 Japanese and 27 foreign ships cleared in the same period.

We translate the following from the *Tokio Keizai Zasshi*:—It has been reported to us that a proposal which finds great favour with the Cabinet is one to raise a new foreign loan of £20,000,000, and to gradually withdraw paper currency to the extent of 10,000,000 yen from circulation. It is said that the execution of this scheme is firmly resolved upon. Even if it should not be carried out, it is certain that the authorities intend to take some measure to remedy the present financial troubles, a result to which we look forward with pleasure.

We read in a native paper that since the month of June 1873, about 1,400 shizoku of the old Kurumo clan have been continually petitioning the Government to restore them their confiscated pensions, but without success. Recently some hundreds of them applied to the Kencho authorities on the subject, and declared that if no notice of their demands was taken this time they will proceed in a body to Tokio, and apply personally to the officials.

We are informed that the Mitsu Bishi Company's steamer *Sumida Maru* left Hongkong on Saturday last having on board the European mail. The *Sumida Maru* may be expected here on Monday next at daylight.

The *Furness Abbey* sailed from New York for Hio-go on the 24th of July with 75 tons pig iron, 500 cs. slates, 58 pkgs. hardware, 48 bales domestics, 6 bxs. perfumery, 10 cs. whisky, 1 iron safe, 36 cs. sewing machines, 25 bbls. plaster, 343 bags hoofs, 33,250 cs. kerosene and 58 pkgs. glassware. The *Grandee* cleared for Yokohama on the 2nd of August with 52 bxs. acid, 3 cs. handles, 2 cs. hardware, 2 pkgs. blacking, 40,000 cs. kerosene, 100 tons pig iron, 4 cs. glassware, and 4 cs. borax. On the 27th of July the *Brazos* left for Anjer with 30,130 cs. of kerosene; and on the 30th the *Bertha* for Shanghai with 11,000 cs. On the 10th of August the *N. Boynton* was on the berth for Shanghai, but no vessel was loading for Japan.

The Korean Embassy came to Yokohama on Wednesday by the 10.45 a.m. train from Tokio, and embarked on board the *Takasago Maru* to return to Korea. The cortège had the same imposing appearance as that when landing.

A Base-ball match was played on the cricket ground last Saturday between a team from the U.S. men-of-war now in port, and the local club. The excellent fielding of both sides elicited loud applause from the spectators of whom there were a great number. The visitors were too powerful for their opponents and gained a comparatively easy victory. By the courtesy of Admiral Patterson and the officers, the band of the U.S. *Rickmond* was in attendance, and played a selection of airs which contributed in no little degree to the enjoyment of the afternoon. We append the

The Russian corvette *Zabiaka*, Captain Lohman, came into port on Tuesday evening. She is one of the new Russian corvettes built for the purpose of preying on an enemy's merchant fleet. The *Zabiaka* was built in the United States, but armed in Cronstadt. Her six cannon are very powerful, and the vessel, altogether, is a formidable cruiser specially adapted for attacking and destroying merchant ships. As the *Zabiaka* is a new class of vessel we may compare her with the best examples of new men-of-war we have had in our port lately, viz:—the *Champlain* and *Comus*. If the *Zabiaka* is compared

with the *Champlain*, the latter will be found to have much more speed, say over fifteen knots against the *Zabiaka*'s thirteen and three quarters. But the *Zabiaka*'s six guns are equal to the *Champlain*'s ten; in fact, have a longer range. The *Comus* is a much better ship than the *Zabiaka*, being equal in speed under steam, and with great superiority under canvas. But here the advantages end. The *Zabiaka*'s guns have an initial velocity of over 1,600 feet, those of the *Comus* of about 1,350 feet only. The *Comus* could, however, endure a great deal of hammering and the *Zabiaka*, which is merely a strong iron ship without special protections, could not endure more than three or four well directed shells. The *Zabiaka*, is, however, a new idea which, so far, has been successfully carried out.

The vitality of the Rifle Association must be a cause of congratulation to those gentlemen who took an active part in its re-organization. Another contest for a cup presented by a member came off on last Saturday, the terms being 5 shots at 300 yards standing, and 5 at 500 yards in any position. The prize was taken by Mr. Barnard. The total scores were as follows:—

Mr. Barnard ..	... ..	31
" Beretta ..	... ..	25
" Guisani ..	... ..	22
" Douglas ..	... ..	22
" Herbert ..	... ..	21
" Dare ..	... ..	21
" Bland ..	... ..	13
" Geoghegan ..	... ..	13
" Motta ..	... ..	12

Reuter's telegram received on Thursday conveyed the very satisfactory intelligence that disaster has swiftly overtaken Ayub Khan and his followers. A loss of twenty-seven guns, ten thousand prisoners, and the numbers assuredly slaughtered by the army of retribution when dealing out vengeance for the defeat of General Burrows' command, will probably deprive Ayub Khan of any further prominence in Afghanistan politics for some time. This is the most effective blow struck at Afghan conceit during the war, and cannot fail to exercise a beneficial effect upon Abdul Rahman the new Ameer. General Roberts has again proved himself an able and daring soldier. Cut off from all communication with the rest of the British army, he boldly forced his way through the country amid swarms of enemies, and succeeded in inflicting upon the Afghan army a defeat which recalls the glories of the historic battles of India. Not the least satisfactory feature of this great achievement is the rapidity with which the blow was struck. Scarcely can the tale of the reverse suffered by the English have excited the bazaar of Asia and the Great Peninsula, than it has been followed by news of the full and complete vengeance exacted. The prestige of England has been thoroughly restored and no obstacle apparently remains to impede the evacuation of the country; unless, indeed, the Liberal Government can be induced to adopt the bold and sound policy of seizing Herat, a course recommended by the greatest living authorities on Central Asian politics.

In another column will be found an interesting account of the ingenious device by which the Peruvians blew up a Chilean transport, and caused a loss of one hundred and fifty men.

After a fine passage the O. & O. Company's steamer *Gaelic* arrived in harbor on Sunday afternoon considerably before she was expected, thus taking everyone by surprise. The regularity of the vessels on this line is very noticeable and affords pleasing evidence of the superiority of British built ocean steamers. The *Gaelic* was "dressed" owing to Admiral J. M. B. Clitz, U.S.N., being on board.

Papers by the O. & O. Company's steamer *Gaelic*, announce that Dr. Tanner has completed the forty-day fast to the entire satisfaction of his challenger, Dr. Hammond. At the close Dr. Tanner presented a miserable appearance, but he has since improved with astonishing rapidity and consumes enormous quantities of food.

A correspondent in San Francisco, writing on the date of the *Gaelic*'s departure informs us, that "the city is threatened with an epidemic of small-pox, generated in the filthy Chinese quarters. A number of deaths of Chinese has been recorded

and a few cases have been found of whites suffering from this dreaded disease. The municipal authorities have ordered the fumigation of Chinatown, which work is being actively pursued. The State Board of Health has issued a circular urging the necessity of immediate vaccination."

We notice in an American paper that the steamer *Harter*, from Yokohama via Hongkong for New York, came into collision with an Italian barque which sank in consequence. The crew were all saved.

We learn from our correspondent in San Francisco that "the steamer *Ho Chung*, one of the fleet of the China Merchants Steam Navigation Company is expected daily in this port. The steamer has of late been engaged in carrying passengers from Hongkong to Honolulu. Her trip to this harbour is purely experimental and her agents Tong Wo and company stated to your correspondent that as far as her freight is concerned she will not at all interfere with the Pacific Mail or the Occidental and Oriental steamers, and that on her return voyage to Hongkong she will carry about 200 passengers and but a small quantity of freight, owing to her having to use a portion of her hold for the storage of coal, she being rather a heavy consumer of fuel. The arrival of the *Ho Chung* was heralded with joy among our Chinese population it being, I am informed, the first time that the dragon flag has ever been displayed in the waters of our bay."

The *Hioigo News* takes the following particulars from the *Osaka Nippo*:—At 1.03 p.m. on the 31st, a cloud of black smoke was seen to rise up at the Arsenal at Kamonoguchi, and a loud noise was heard. On despatching news collectors to the spot, it was first reported that the explosion took place while several workmen were conveying boxes of gunpowder at the gun ball manufactory, one of the men having let a box fall, and as soon as it exploded all the other boxes exploded also. Another report reached the same paper attributing the accident to the bursting of a boiler at the south-east part of the Arsenal. Many workmen both inside and outside the buildings were blown to pieces by the explosion, many are fatally wounded, and others have arms and legs broken. The dead and injured number between 50 and 60. The *Osaka Shimpō* says that over 30 workmen have been killed, being torn into pieces, and heads, arms, and legs separated from the bodies. Some of the workmen outside the buildings escaped from death, but have been wounded. Immediately after the explosion, military officers hurried to the spot on horseback; and a police inspector with a large body of policemen also went to the scene of the accident. The gates of the Arsenal were guarded by the soldiers. The wounded were sent to the Military Hospital; and the dead bodies were collected in front of a godown at the Arsenal, but the bodies are so mutilated that they cannot be identified.—A correspondent writes saying that it was the powder magazine which blew up, and that two storehouses are also totally destroyed. The Japanese are keeping everything regarding the explosion as secret as possible.

The *Glenfallock* arrived in New York on the 8th of August ultimo.

In accordance with previous notification, an extraordinary meeting of the members of The Yokohama Amateur Rowing Club was held at the Grand Hotel, at 5 p.m., yesterday. Present:—Messrs. Litchfield (captain), Wood (secretary), G. M. Dare, Andersen, Alcock, Hunt, Van Buren, Churchill, Whitmore, Playfair, Gordon, Hepburn, Herbert, Hazlewood, Walter, Butt, Glennie, Dodds, Boag, Mitchell, Rickett, Bernard, and others.

Mr. Litchfield explained the cause of summoning the meeting, which was to lay before the members a statement of what had been done with regard to obtaining a new site for the boat-house. He was glad to say that, owing to the kind exertions of the Board of Consuls, the piece of ground asked for on the French Hatoba had been obtained, and the lease would be very shortly signed. His hearers knew the dilatory character of Governments and would understand the delay. As regards the building now on the ground there were two schemes he had to offer to the members as to how it should be utilized. The first was to pull down the entire structure, and erect a new one more conveniently arranged for the requirements of the Club;

the second, to utilise it as it stands but making alterations and additions. He produced plans showing the alterations proposed in both schemes. Next came the question of bathing accommodation which was a difficult one to deal with. A floating bath-house has been suggested, to be anchored about 200 yards from the shore: or another similar structure to be reached by a bridge, but either scheme required mature deliberation. He would be glad if any gentleman would make suggestions.

Mr. W. B. Walter proposed the adoption of the first scheme the motion was seconded by Mr. Gordon and carried unanimously.

Mr. Litchfield said that until the lease was actually signed they could not begin the new buildings, or ask for money. He suggested that when it was signed a special meeting should be held to discuss the plans, or to appoint a building committee who should be empowered to raise the funds—\$2,500 were required.

Mr. W. B. Walter proposed and Mr. Herbert seconded, that the present committee be empowered to raise this sum on debentures as was done previously, and that the committee be empowered to add to their number if necessary. The motion was carried *sem. con.*

Mr. Hepburn proposed that the question of the bath-house stand over to the general meeting, as the bathing season would soon be over. This was also carried.

A ballot for a new committee man to fill the place of Mr. Hall, resulted in the election of Mr. Behr.

Mr. Litchfield then said that the original programme of the forthcoming regatta would be reconsidered owing to the delay that had occurred. It would be better to let it consist this year of races for Club fours, champion pairs, and double sculls, and to hold it on separate afternoons, and describe them only as Club races.

After a vote of thanks to the Board of Consuls and the committee, the meeting dissolved:

Information was received yesterday afternoon of the interruption of the Shanghai-Amoy cable. The repairing steamer is not on the spot at present, so that it will be at least a week before communication is restored.

Judging from a paragraph in the *Hioigo News* of last Wednesday, Commodore Shufeldt has abandoned all idea of opening up communication with the Corea Government. We learn from the *News* that the *Ticonderoga* arrived in Kobe on Tuesday last, and was expected to leave for San Francisco today.

The *Hioigo News* of the 8th instant states that "an extraordinary tragedy is reported in the native papers, being no less alarming than a murder and robbery in a railway train,—a style which has frequently been adopted in western countries, but this is the first case of the kind which has happened in Japan. On Friday last, the 3rd instant, at 8.15 p.m., a train left Kioto for Otsu, and three men travelled in a first-class carriage. At Yama-shina station, the second station from Kioto, two of these men left the train. After the train arrived at Otsu—it being an hour's run between Kioto and Otsu, and 20 minutes between Kioto and Yama-shina—and all the passengers had left the station, the officials went into the train to check the carriages. In the first-class carriage they were greatly surprised in discovering the body of a man lying on the floor, and the officials at once called a doctor, but his treatments were of no avail. It is said that the murdered man had had a large sum of money with him, and that the other two men had learned this and followed him secretly, and went by the same train in order to carry out their robbery. They had throttled him in the carriage, and carried off his baggage, as none of it can be found. The name and address of the unfortunate man have not yet been found out; his body has been temporarily buried by the police, and a strict search is now being made to discover the two murderers."

#### LONDON LETTER.

London, 15th July, 1880.

Although no serious deductions have, so far, been made from the large estimates of our growing harvest, yet the weather for some weeks past has been of an unfavourable character. The

long, dry spring, threatened to ruin the grass crops, only second in importance to the cereal, but rain at length fell in time to nourish a middling growth of hay on most lands. Only the proverb was too literally fulfilled which says "it never rains but it pours," for the rain has been too heavy and too continuous, and now when somewhat rank crops of hay are ready for the scythe—a good fortnight behind time—there is no getting a day's sunshine in which to cut it, still less a second dry day in which to ferment it, or a third in which boys and girls may tumble in it like young dolphins. The absence of sun and the chronic disturbance of the atmosphere by thunderstorms, cannot but be detrimental to the ripening of the corn crops. As all prospects of general amelioration in trade—internal and external—turns upon the expected bountiful harvest, the importance of the weather just now is apparent. This is a question which affects all the nations of the earth, for English trade plays so important a part in the general ramifications of the world's commerce, that anything seriously affecting its source must be felt along the whole system. It was clearly ascertained that the deficiency in the grain crops produced in the United Kingdom last year, as compared with an average harvest, amounted to £60,000,000 sterling. This is a very enormous sum to be deducted from the year's income of one country. Nor was it by any means the only item to go to the debit side of the year's account, for the losses in trade of different kinds, and in industries of all sorts, were likewise heavy though difficult to tabulate. Now it is quite evident that the deficiency in our bread supply has compelled us to disburse an equivalent amount to purchase bread from foreign countries in excess of what we are in the habit of expending for this purpose. It is certain that nothing has happened since last autumn to recoup to us any part of this exceptional loss of capital. It is true a sort of delirium seized us last October, which lasted almost into the new year, during which prices of all commodities advanced by leaps and bounds, and vast amounts of property were no doubt turned over and over at rapidly increasing values. All this rested on no foundation except the contagious excitement in the brains of a few thousand speculators, who by this time are mostly hoisted with their own petard. The country was not made a penny the richer, but probably a good deal the poorer by that pseudo-revival of trade. We are still left with all the "dead horse" to work off, for which we have been relying on a good harvest. But even if a good one, can it be expected to be as much, or half as much *above* an average as that of 1879 was below it? And failing this bountiful harvest what have all to fall back on to fill up the vacuum? Years of patient, plodding, industry and severe economy. It is this last consideration which touches the nations of the world, for though England sells largely to them, and seeks to do so still more largely, she buys from them more than she sells, being richer than they in realised wealth, which is money. But it is obvious we cannot spend our £60,000,000 twice over, and having spent it on the necessities of life we have it not, as in other years, wherewith to buy luxuries. Hence we are reduced to buy either a smaller quantity, or at smaller price, those numerous articles of produce and manufacture which come to us from abroad, which add so greatly to the pleasure and comfort of our lives, but which in the last resort, can be done without.

Still they say "it is an ill wind that blows good to no one," and there are, of course, countries which have made large temporary profits by supplying grain to us in excess of their usual supplies, and commensurate with our own shortfall. On the face of it, therefore our loss has been the gain of others and then by extending the field of vision beyond the interest of this country, we see that the equilibrium has been maintained. This, however, is fallacious. The seeming gain of these wheat-growing countries is illusory, and will entail on them more than an equivalent amount of loss. For this reason. It may be accepted as an axiom that spasmodic gains are never real. Adventitious prosperity is an injury to the community enjoying it. The stimulus of profit has in all cases a more or less intoxicating effect. Human nature, as a whole, is not sober enough while the tide is rising to reflect that it must also fall. Hence enterprise, with its two slaves capital and labour, makes a rush for the commodity which has come suddenly into demand. If it is steamboats or railroads that are in demand, you will have new iron mines opened, new furnaces lighted up, new foundries erected, an army of new hands engaged at high wages and vast hostages given to fortune in the shape of gold melted into the bowels of the earth, or poured like water over its surface—perhaps never to be rescued thence again. If it is corn that is wanted you will have lands turned to account for its production which are ill-suited for it, other lands cleared which have not before been violated by the plough. You will have new railways built to convey the new produce. You will have in a little while sensational, or at any rate poetical articles from Special Commissioners sent out by great newspapers, expatiating on the marvellous capabilities of the Western prairies. They depict an undulating ocean of rich and well-watered soil waiting to be tickled with the plough in order to smile into a harvest, lacking only the friendly hand of man (with £300 and

a young wife) to produce in abundance the golden fruit. There are the rivers and the lakes, they tell you, ready made by the hand of God for the express purpose of conveying this glorious grain to those who have the money, but not the bread; and of conveying back the money or money's worth to those who are in the converse condition. You will then have an efflorescence of big placards and small handbills from Steamboat Companies, Railroad Companies, Emigration Agencies, and so forth; orators, philanthopists, and enthusiasts take up the cry, and, behold, an exodus of men and women to the new Eldorado. But there are limits even to wheat-growing. American farmers can live by their labour and afford their families opportunities of doing likewise. That is something; nay, it is a very great deal. But when the swarms of new men have broken up their new prairies and the producing powers of not America only, but California (they are always separated in the wheat connection) Australia, New Zealand, the Cape, and India, have been by these artificial stimuli worked up to the pitch of providing liberally for the wants of Europe in a semi-famine year; and then the wants of Europe suddenly subside, it appears to me that the last end of the wheat-growers is likely to be worse than the first. The wheat scarcity lasts just long enough to give all this new machinery time to be set a-going, and when once started it is utter ruinination to stop it. Yet with a couple of good seasons in Europe, such as are fairly to be expected after so many failures, you may hear of a million quarters of wheat lying rotting on American farms, not being worth the cost of carrying away. And then where will be these swarms of adventurous farmers planted in the heart of a new continent, with their £300 of capital consumed, and no market for their produce? Possibly like the commercial speculators I alluded to, their latter end will be worse than their first; and they will sit down by the waters of Babylon and weep.

It is extremely difficult for me to realize that you can be interested in what passes in this country for politics. Hence I have troubled you very little with the goings on of our popular assembly. The tone of the House of Commons has undoubtedly deteriorated, as its members have become more largely leavened by the uncultured orders. Coarse and not at all humorous personalities take the place of the brilliant and polished sarcasm which I am old enough to remember. A quarter of a century ago a false quantity in a Latin quotation would have produced a subdued shudder all over the house. Now, members have much to do to keep their h's in any kind of decent order. The number of new members who have been unseated for corruption—including even a Cabinet Minister—is not creditable to the moral tone of the local associations which have to such a large extent taken the elections out of the hands of the electors.

And the outcome of the united wisdom, so far, does not belie the character of the legislature. There is a bill now before parliament for effecting an important modification in the relations between landlord and tenant, in a section of Ireland which nobody has been able to explain, even the Government giving different and contradictory accounts of the measure, its intention, its reason, and its scope. It is no secret that a majority of the House of Commons are in their hearts opposed to it, but nevertheless, for certain well-understand reasons, they have allowed it to pass. This Irish Land bill has yet to run the gauntlet of the House of Lords where it will certainly be sincerely objected to; but the Lords may not have the courage to throw it out.\* But how can a measure so regarded pass through a legislature of honest men? The answer is—The men are not quite honest. This and other bills are promoted for reasons such as do not appear on their face, it is for their effect on party interests and not for the good they are expected to do to the country. The present Government is certainly in some embarrassment. They came into power without a programme except the undoing of Lord Beaconsfield, and they have therefore felt themselves constrained to reverse, or appear to reverse, his policy on as many points as possible. Hence they allowed the the Peace Preservation Act for Ireland to lapse at a critical time; that is to say, in the midst of a dangerous agitation among the peasantry for the abolition of rent. The Government having thus parted with one of their exceptional weapons for maintaining order, are forced to resort to some other means, and they hit upon this rent bill as a sort of partial concession to the wishes of the Irish tenants, much on the principle that a worthless mother quiets her child with opium and syrup. Even the financial arrangements of the Government partake of this restless character. Taking off one tax and putting on another seems an operation hardly worthy of the undoubted financial genius of Mr. Gladstone, in the middle of a session too. Many of their smaller bills partake of the same character of change for change sake. Vaccination is to be no longer compulsory, so long as the individual can pay a small fine. There are not ten members of the House of Commons who do not consider that this is a wrong move, and one injurious to the country, but it pleases a very noisy section of the supporters of the Liberal party who must be conciliated. Le-

\* They have done so.—Ed. J.W.M.

gislation on any such shifting grounds of expediency as these must be wrong, and it is very disappointing to find a Government, whose members were so loud in denouncing all the incertitudes of the Tories, yielding so early to transparent insincerities.

As for the reopening of the Eastern question, that is probably more important than all, but as I have not the faintest idea what the secret policy of the various Powers is (excepting Russia) I will not say anything by way of vaticination.

In the Far East, Russia's game is developing. The annexation of Corea is strongly recommended in semi-official newspapers, and a learned Russian has opportunely discovered that the Coreans are a kind of Bulgarians who are sighing for the armies of the Great Liberator. The Czar also writes to the Admiral who is to command on the China coast hoping that he will have occasion to distinguish himself. All this is very cheering for you. Certain it is that Russia is not going to be fooled into sending an expensive naval expedition to the China and Japan waters for nothing.

#### PARIS LETTER.

Paris, 17th July, 1880.

One of the most beautiful fêtes France has ever witnessed was that during the Universal Exhibition of 1878, when Paris improvised a display of tricolors, lamps and fireworks, that astonished even the oldest inhabitants by its profusion and ingenuity. Relatively speaking, all that was but an overture in comparison with the display in honor of the anniversary of the fall of the Bastille, and the presentation of new colors to the army a few days ago. It was a common patriotic joy, felt stronger even than expressed, of the union of the civilians and the *militaires*. The result has demonstrated beyond appeal that the French, when not excited by their governments, are not a people of *émeutes*, and that the French army is not an army of a *coup d'Etat*. Foreign countries sent their thousands, but the provinces their tens of thousands, to assist at a ceremony as serious as it was joyful, and where no manifestation was organized. Into the fêtes the nation seems to have put its soul, vigorous and confident in its strength, covetous of peace and tranquility. The reactionists assisted, dumbfounded, at the spectacle of two millions of people maintaining order themselves, filling streets, concerts and promenades, without excitement or bravado, confident in the law and universal suffrage to uphold all rights and secure every liberty. The sinister predictions of persons who have eyes and see not, ears and hear not, have not been realized. No officers have been insulted, no houses sacked, no windows smashed, no tumultuous defiles on the boulevards or in the Père Lachaise cemetery, no red-flag processions, no hurrahs for the Commune. The political and financial situation of the Republic is superb. The army, on which the partisans of the pretenders counted, is more democratic than the nation; soldiers, citizens, and policemen even, mingled in common, toasted the Republic in common, and danced in the public quadrilles with pretty *citoyennes*.

Each nation has its peculiar fashion for rejoicing and displaying its enthusiasm. The Chinese carry a lantern on the end of a pole; the Spaniards disembowel a horse and its rider by a bull; the Turks wash their faces; and the Arabs catch the cholera and give it to others; the English, as in the time of Froissart, take their pleasure sadly, while the French sing and dance. And they have reason to add "gaiety" to the sacramental words—liberty, equality and fraternity. No nation has suffered more than the French from the schemes of pretenders, and the vaulting ambitions of nonentities, and the fête of Wednesday last was the closing of the era of those culpable attempts to gag a people and then rule. And the anniversary of the destruction of the Bastille, signifies in the popular mind, not the destruction of an old fortress, but of a tyranny that oppressed not France, but Liberty. What was demolished was the representation of centuries of accumulated arbitrary power, of condemnations without judgment, and executions, dark as they were infamous. That which fell with the Bastille, was personal power and irresponsibility; that which succeeded was law, modern society, and attachment to progress. It was on that day populations became truly peoples. It was at the Bastille that the King was truly King. The Prefect of Police sent an unfortunate to the fortress "as a very bad subject," and the Governor wrote back asking—"Under what name is he to be interred?" The dungeons of the Bastille were proverbial for their horrors. The prisoner rotted as well as lived there: If he refused to eat, in order to die, he was condemned to live by having his teeth opened with a key, and food poured down his throat. If he was obstinate in living, he was left 133 hours without food, as in the case of Latude. It was the supreme right of life and death, of confiscation of property and individual liberty, that the Bastille embodied. The Tuilleries or Versailles were the palaces of royalty, but the Bastille was its den. No wonder England celebrated its demolition with banquets, and Sheridan toasted its destruction, while in Russia people wept for joy in the streets of Moscow. The Revolution sprung from the debris of the Bastille, and mankind felt it was born again. That Revolution created an army where it was no

longer necessary to be a noble to possess a grade, where bravery, not family, secured advancement, and where each soldier felt there was a Marshal's baton in his knapsack.

It will thus be readily understood why the army and the nation are one, and why the advocates of privileges attack themselves to regimes that no longer are known to France. The fête just celebrated has been the most brilliant, intense, and unanimous expression of republicanism that France has witnessed since 1790; the population took part without difference of creed or social position; there was much amusement, many congratulations—that was all. It terminates and crowns the work of 1798. It would require volumes to even catalogue the resources of the masses to express their joy, and register the symbols of affection for the Republic, which has secured the country such security and wealth. The three colors were worked up in every imaginable manner, in dress, fireworks and decorations. Not a family in the Faubourg but was out for the day; only the bed-ridden remained compulsory prisoners; at many a window an invalid had been placed to look upon the happy crowds, and survey the life they were on the eve of quitting. Numerous small parties had brought the materials for love feasts, and quietly enjoyed a picnic under the trees of the Boulevards, or the exterior alleys, to see the soldiers coming home with their new colors. The smallest streets disappeared under flags, green boughs and lanterns; kiosques were erected for dancing at every open space, and free bands executed their most enticing airs. There were busts of the Republic, of Republican worthies, everywhere; the most popular heroes being Messrs. Grévy and Gambetta, not a Communist was honored, and Rochefort must have felt the neglect keenly that while thousands welcomed him as the living proof of the total amnesty, they had not the slightest idea of sympathizing with his Communist ideas and his indecent personal attacks on Gambetta.

The ceremony of the distribution of the flags had been long looked forward to. For ten years the French army has been a widower in having no standards, thanks to Bazaine packing them up like bales of cotton, and handing them over to the Prussians for a receipt in full. In former times an emperor only presented a regiment with a new flag when it took one from the enemy. In the present case it was a marshal that delivered up the honor of his soldiers, who at Borny, Bezovill, and Saint Privat, three days before being shot up in Metz, had left 40,000 dead on the battle-fields—proof of what Prince Eugene wrote to one of his lieutenants: "Try and bribe the General; as for gaining the French private soldier in that manner, it is impossible." The day was superbly brilliant for the presentation of the colours, and the rice course of Longchamps never was greener. The army of Paris and the deputations from every regiment in France looked most imposing, and the sheen of bayonets, sabres, artillery and uniforms was dazzling. In front of the ordinary grand stand a second had been erected—a kind of dome with wings—for the accommodation of Senators and Deputies, as well as Ambassadors and the high dignitaries of State. Behind them was a splendid perspective of the soldiers drawn up in line, and behind these again the crowd—a sea of upturned faces. As Meissonier and Detaille were taking sketches, he assured the scene will be truthfully handed down to posterity. The three Presidents—or rather two, for no one seemed to regard M. Say of the Senate, the fifth wheel in the state coach—arrived, escorted by a squadron of cavalry. M. Grévy then delivered a pithy address, which must have stirred the soul of every Frenchman, in which he announced to the officers that he confided the colors to their honor for the defence of the country, and the maintenance of the Law. There was no vaunting, yet no feebleness; it was a discourse strong, from right. The deputation of one thousand officers, after receiving the four hundred and sixty flags, simultaneously drew their swords and promised to preserve their flags *sans peur sans reproche*. The officers then marched past, saluting M. Grévy by dipping the colors; then followed a general review, which attested continued and serious progress in the reorganization of the army; the artillery, having no improvement to accomplish, was perfectly at ease; the cavalry was better, and kept line; evidently the little Araby horses are being weeded out—a consummation devoutly to be wished. The infantry is a moot point; some desire to see them march with the mechanical precision of Prussian or even English troops. I have ever maintained that such can never be attained, as it is contrary to the character and temperament of the French soldier; he must be left a good deal to his own initiative; he will then neither be among the laggards nor the invalids, and always to the front when wanted. The marching past of the pupils of St. Cyr—the young officers—displayed the Prussian mathematical step; the observer felt the whole effort to be stiff and unnatural, as you did the short, quick, irregular *pas* of the infantry to be correct. General Farre, the Minister of War, commanded the review, and in a serious, business-like fashion. He is a capital Minister, and having personally witnessed his energetic conduct in the 1870-71 war,—making the best of a bad position—it required no great difficulty to predict his success in a higher station. Besides, he is one of Gambetta's selection, and Gambetta is the reorganizer of the French army. It was a

noble sight to witness as each regiment entered Paris with its new flag, the crowd took off their hats, and cheered the symbol of their regenerated country.

At least 800,000 people were present at the distribution ceremony, and one half of this total were voluntary deputations from the provinces. In the Grand Stand the box of the Jockey Club was empty. This was a protest on the part of the aristocracy against the triumph of the Republic, but this proof was not needed to mark the profound abyss between the populace and the nobility—the majority of mushroom creation and questionable authenticity in many cases. Old MacMahon stayed away, though officially invited; he did not even hang out a flag from his residence. Yet the unfortunate was at one time ranked as a "Saviour of society," and spoke like a Louis XIV. Mr. Grévy speaks in the name of the nation, of the law, and there is an agreeable absence of "I will answer for order," and such ex-imperial fireworks. The flags were not "blessed"; the people are of opinion that it is best to keep providence out of human slaughterings. There are no incidents to record; the pickpockets were nearly absent; one lady in a fit of indignation pulled a gentleman off a chair because he obstructed her view; in the effort she carried away his coat tails; he seized her and handed her over to the police, but before the Commissary the assault and battery was compromised by the lady apologising, and then and there busting on the coat tails.

Though slightly damped by a cooling shower, the illuminations and fireworks were a decided success, only the angry reactionists kept dark, and so saved a little money. They said it was their mourning for religion and liberty—pleasantries well comprehended. The churches were beautifully decorated and lit up, thanks to the radical corporation. The Grand Hotel was the most artistically decorated edifice, in point of combination of gas, flags, tapestry, arms, and red, white and blue electric lights; the latter, in the case of the boulevards, looked fairy-like from lanterns suspended from the trees. I noticed the Spanish Embassy only displayed its own flag, and the Geographical Society had none at all, which will seal the fate of that body. There were pretty transparencies of Gambetta and Grévy. The students marched in procession to the central part of the fête, at the Place de la Republique, and deposited a crown at the foot of the statue of the Republic through the medium of a pretty child, aged two years, in white and blue, her rosy cheeks supplying the third color. Then the boys indulged in beer, baccy and sausages, with songs not fit for boarding schools; but, as Rabelais observes, in such cases, modesty has only to shut ears and close eyes. There were several hundreds of balls. That in the Central Market was scenic—the women all in pretty costumes, their hair decorated with tricolor natural flowers; the men had every variety of Republican favors; and to secure a pretty partner it was only necessary to solicit a *citoyenne* to "join in honor of the Republic." There was an enormous consumption of drinks, and one speculator dispensed a cocoa which he called the "national beverage," and sold with a free sandwich of Chicago corned beef—antidote and bane.

#### JAPANESE NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as make them readable and intelligible.]

##### COURT, POLITICAL AND OFFICIAL.

The *Nichi Nichi Shinbun* states, under the usual reservation that His Majesty the Emperor recently held a meeting of the Prime Ministers and Privy Councillors in his private study. The proceedings were so secret that not even a secretary was admitted, but the discussion is reported to have been in connection with treaty revision.

Their Imperial Highnesses Prince Kita-Shimokawa, and Prince Higashi Fushimi, left Tokio on the 3rd instant on a visit to the Shimosa farm and returned here on the 7th instant.

The ex-daimio of the island of Tsushima sent a complimentary message, accompanied by presents, to the Korean Embassy on the 3rd instant.

His Excellency Okuma, Privy Councillor, held a two hours' interview on the 23rd instant, with H. E. Iwakura, Junior Prime Minister.

His Excellency the Postmaster-General who is now staying at Kobe, will return to the capital on the 15th instant, calling in on his return at the port of Tsuruga, in the prefecture of Ishikawa.

In consequence of the contemplated introduction of the new criminal and judicial codes, the Minister of Justice has requested the Daijo Kwan to increase the present number of judges.

According to the *Mainichi Shinbun* the three following

gentlemen, who visited Tokio in the spring bringing with them a petition from the Miyagi prefecture in favour of the establishment of a National Assembly, have received official appointments. Mr. Akiyama to be sakan of the 6th class of the Miyagi Ken, Mr. Minegiishi to be an attaché at the salary of 25 yen per month, and Mr. Monuki to be police sergeant of the 7th class. The paper asks whether the Kencho intends to purchase the silence of those who desire representative institutions by appointing them to various offices.

The *Mainichi Shinbun* learns that Her Majesty the Empress has recovered from her recent slight indisposition.

His Excellency Admiral Kawamura, Privy Councillor, paid a visit to the Yokosuka dockyard on the 3rd instant, and returned to the capital on the 5th.

His Excellency General Yamagata, Privy Councillor and Chief of the Staff, left for Nikko on the 4th instant.

The *Mainichi Shinbun* states that the Secretary of one of the Foreign Legations has asserted, that what the Treaty Powers are most anxious for in connection with the revision of treaties is the matter of judicial rights, and that they do not so much care about the tariff question. Therefore, if the Japanese Government were to agree to put some limit upon its judicial power, and consent to the establishment of Mixed Courts, the Foreign Governments would, without hesitation, agree to the tariff proposals.

Their Excellencies Sano and Yoshiwara, accompanied by a suite of secretaries, inspected the Oji paper mills on the 7th instant.

Mr. Under Secretary Hasegawa, of the Public Works Department, left the capital on the 7th instant for a tour of inspection of the Anin, Innai and Kamaishi mines.

Judge Okanchi, President of the Nagasaki Saibanho, and Judge Yamada of the Mito Saibanho, have arrived in Tokio on official business.

The *Mainichi Shinbun* states that in Osaka such distress prevails among the lower classes in consequence of the high price of rice, that many of them deliberately commit breaches of the law in order to be sent to prison, where the Government must maintain them. There are now no less than 1900 prisoners in the gaols which are all as full as they can hold. In consequence of the large consumption of rice that such an amount of prisoners entails, the expedient of mixing wheat and rice in equal proportions has been adopted.

The same paper states that His Excellency Matsukata, Minister for Home Affairs, has been permitted to wear a decoration presented to him by the King of Saxony.

His Excellency Nakashima, Envoy Extraordinary and Minister Plenipotentiary to the Court of Rome, arrived at his post on the 6th of August last, and Mr. Nakamura, the Japanese *Chargé d'Affaires* in that city having handed over charge, was expected to leave for Japan on the 7th of this month, by a French mail steamer.

His Excellency Yanagiwara, Minister Plenipotentiary to the Court of St. Petersburg, arrived in Paris with his staff on the 20th of July last, where His Excellency was received by Mr. Secretary Nagata, of the Japanese Legation at St. Petersburg.

Judge Kiyo-oka, President of the Osaka Saibanho, returned to that city by the *Takusago Maru* on the 8th instant.

The Tokio Saibanho, and other local courts, will be opened at 9 a.m. and closed at 2 p.m. on and after the 13th instant.

The *Mainichi Shinbun* states that at "about 8.20 a.m. on the 8th instant, His Excellency Privy Councillor Oki called upon His Excellency Prime Minister Sanjo, and had a short interview with the latter, who then proceeded to His Excellency Iwakura's Yashiki, the Prime Minister returning home about 12 o'clock. Again the Prime Minister went to see H.I.H. Prince Arisugawa, Sadaijin, about 12.50 p.m. and then went to the Daijo Kwan, where a secret meeting with some of the members of the Privy Council was held. His Excellency returned home at 4.20 p.m. and at once went to the United States Legation, where he remained about an hour. The object of all this official business was, however, unknown."

The search ordered for an authenticated portrait of the Emperor Godaigo Tenno has, we learn from a native paper, resulted in the discovery of one now in the possession of

Kwazoku Ikeda Terutomo, ex-daimio of the old Tattori clan in the province of Inaba. The picture which has been an heirloom for generations, is to be presented to His Majesty the Emperor as soon as the ornaments which surround it have been renovated.

The new building for the Foreign Department at Kasumigaseki, Tokio, is to be completed in course of the present year at a cost of 35,000 yen.

According to a native journal the bureau established in the Genro-In, for the purpose of compiling a code of civil law under the presidency of H. E. Oki, is actively engaged with its work, but the task is so onerous that a speedy conclusion cannot be expected.

#### NAVAL AND MILITARY.

His Excellency Admiral Kawamura, Privy Councillor, accompanied by Mr. Suyekawa, Secretary of the Navy, paid a visit on the 2nd instant to a certain mercantile firm in Yokohama. It is reported that their object was to contract for the purchase of fire-arms.

A review of the infantry, cavalry, and artillery of the Tokio garrison was held on the Hibiya parade ground on the 4th instant, in honour of the Korean Embassy. The troops were under the command of Lieutenant-General Nozu. H.E. Lieutenant-General Oyama, Minister of War, Lieutenant-General Ozawa, and other General officers were present.

It is reported that several Colonels and Majors of long service in the Japanese army are shortly to be decorated with the Order of the Rising Sun.

A large number of time-expired soldiers of the Imperial Guard will be disbanded on the 20th instant.

Rear-Admiral Akamatsu who lately resigned his office in the Naval department, has been gazetted to another post in the same department.

Rear-Admiral Maki and Mr. Secretary Takabatake have now completed their task of compiling the new naval code, which will therefore be handed to the authorities for inspection. The code for naval offences is already under examination.

The military members of the Privy Council held a meeting recently at the War Department, but the subject under discussion is unknown to the native journal which mentions the fact.

The examination of the new military code by the Senate was completed on the 6th instant, and a final inspection is shortly to be held.

The *Taukuba Kan* is expected back from her trip to America about the 12th instant.

Twenty-nine new cadets were admitted to the Naval Collego yesterday.

A telegram has been received that the *Fuso Kan* left Hakodate on the morning of the 7th instant, and arrived at Muroran on the same afternoon.

Lieutenant-General Takashima, Commander of the Osaka garrison, left for his post on the 8th instant.

His Excellency Admiral Enomoto, Minister of the Navy, left Hakodate on the 7th instant, and was expected here yesterday.

#### INDUSTRIES, TRADE AND FINANCE.

We gather from another native contemporary that a Japanese merchant bought from Messrs. Jardine, Matheson & Co., to whom the ship was consigned, 2,260,000 pounds of rice brought up from Saigon by the s.s. *Cleveland*.

The Government Printing Department is busily engaged in the manufacture of fans for export.

The *Nichi Nichi Shinbun* states that at a recent meeting of the Cabinet His Majesty the Emperor attended, and addressing the Prime Ministers and Privy Councillors expressed his wish that all agricultural and other industries should be more and more encouraged. It is reported that in consequence of this the number of agricultural farms and other industries in every Fu and Ken is shortly to be increased and the requisite amount of capital advanced by the Government, and that the poorer shizoku are to be employed on these works.

The *Choga Shinbun* says it has been a very general idea that Japanese iron was of so inferior a quality that the raw material could only be worked up at a loss: the Public Works Department consequently used to employ imported iron. Re-

cently, however, the iron from the Kamaishi mines in the prefecture of Iwate has been found to be of so good a quality, that experiments are now being made in the workshops of the department with the view to its ulterior adoption.

A native journal states that the estimates of the revenue and expenditure of the Japanese Government, was communicated by the Daijo Kwan to all the Departments and the local Governments on the 30th of last month.

It is currently reported that the Government intends to revise the tax on sake, and that the following rates will be enforced. An annual license fee of thirty yen on all brewers; a tax of two yen per *koku* upon *neishu* (ordinary sake) one of four yen upon *meishu* (sake brewed from various fruits) and one of three yen upon *shochiu* (spirit).

According to the *Nichi Nichi Shinbun*, several native merchants connected with the silk trade have started a firm in the capital under the title of the Tokio Silk Company. They give as their reasons that the want of such a company has long been felt, and although silk occupies so prominent a position among the exports of Japan, there has never been any such association before. Consequently, the foreign merchants have always the upper hand and the native dealers suffer loss.

The *Hochi Shinbun* mentions that according to statistics compiled in January 1879, the indebtedness on account of foreign loans amounted to 11,012,692 yen, of which 976,000 yen is the original loan, and 10,036,692 yen the new one. If the total amount be divided among the entire population, which numbers 35,768,584 souls, it shows an average of only 30 sen 7 rin 8 mo per head. Some patriotic people considering therefore that it would not be difficult to pay off the debt by such a system of division, if the nation were to imbibe a true patriotic feeling, are about to explain this idea and to enrol subscribers. Thus the whole population would pay off the loan on behalf of the Government, and could then ask in return the establishment of a National Assembly. There are 7,469,120 houses in Japan: this number, divided by the total of the foreign debt, would bring the amount to be subscribed to an average of 1 yen 47 sen 4 rin 4 mo per house.

The *Nichi Nichi Shinbun* states that thirty cartons from Tsuegawa, in the Boshu province, were received by Mr. Kushida Shinjiro, of Nichome Nakadori on the 6th instant. These are the first of the season.

Several Italian *graineurs*, who arrived by the *Menzaleh* on the 6th instant, have opened an office on the premises of the old Horiasha Bank near the Ooye-Bashi.

The delay in the arrival of cartons this year is owing to the extreme unwillingness of producers to sell for export.

A native journal says that the eldest son of Mr. Oono of the Osaka Mint, who was sent in 1877 to Switzerland to learn watchmaking, completed his studies last March and returned to Osaka. He has now established a watch manufactory at Hinokuchi with the assistance of Mr. Fukuoka Sobai, one of the wealthier merchants of the city. That gentleman contributed 30,000 yen towards the required capital, and a further sum of 2,500 yen was granted by the Government.

An umbrella manufactory has been established at Nagaoka-cho, Honjo, Tokio, and was opened on the 1st instant. It is announced that the umbrellas manufactured there are intended both for home use, and also for export to China and America.

The *Hochi Shinbun* announces "the establishment of a society in Hokkaido called 'The Society of Progress.' The objects of this association will be works of reclamation; operations have been actively commenced, and over 1,200 acres of waste land are to be brought under cultivation this year. The estimates have been shown to us and we learn that crops suitable to the ground will be planted. Hemp is found growing wild and attains a height of seven or eight feet. It will most probably be decided to cultivate this extensively, and we consider it a most sensible idea. The farmers of the company come from the province of Toshima and Ibari."

The proposed new taxes on sake which we published on the 8th instant, are expected to bring in a revenue of about 3,200,000 yen, an excess over the present duties of about 2,000,000 yen.

The *Akebono Shinbun* is responsible for the following:—The proposal for raising a foreign loan, which we have ex-

tracted from the *Keizai Zasshi*, is now said to have been determined upon by the Cabinet, but we have not heard what is to be the amount.

We take the following from the *Nichi Nichi Shinbun*:—"The silk crop in Italy is very bad this year, and only amounts to one-third of the usual year's outturn, so that she must seek her supply from other countries. The foreign silk-worm merchants who lately arrived here, gave orders for the purchase of large quantities of silk, but they offered as low prices as before. The amount of silk manufactured in the province of Shinshu is so small that it will not suffice even for home consumption. On receipt of the news of the bad crop in Italy, the native manufacturers raised their prices, and foreigners having now experienced these unexpected difficulties, intend making different arrangements this year. On the other hand, the native silk manufacturers fearing that when the goods are sent to Yokohama very low prices will be offered, intend sending them up to Tokio. A report from Yokohama says that about nineteen Italian silk-worm merchants will arrive here by the next mail steamer, on the 18th instant."

#### MISCELLANEOUS.

On and after the 1st of October the first train on the Tokio and Yokohama line will leave at 8 a.m., and the last at 9.30 p.m.

According to the returns there were 1245 deaths in Tokio during the month of June last; of these 644 were males and 601 females.

The *Mainichi Shinbun* says:—"Their Excellencies Prime Minister Sanjo, and Privy Councillor Ito, held a private conference with His Excellency Iwakura, Junior Prime Minister, on the forenoon of the 7th instant. After the conference the Junior Prime Minister hastened to the Imperial Palace in his carriage. We conclude therefore that there must have been some very pressing official business under discussion."

The *Hochi Shinbun* learns from a correspondent that H. R. H. the Duke of Genoa, sailed round Yesso after leaving Corea, and eventually arrived at Niigata at about 9 a.m. on the 30th ultimo. After landing and visiting various places of interest, the Duke left for Hakodate the same night.

The Korean Embassy paid a visit of inspection to the Museum and Bazaar at Tatsunokuchi on the 4th instant. Later on, the Vice-Ambassador and another member of the Mission visited the Yokohama Customhouse on the 4th instant.

A new steamer had been completed in the Hirano dockyard, Tokio, and, after undergoing inspection by the authorities, will be despatched to run between Niigata and Nagaoka in the province of Echigo.

The *Akebono Shinbun* states that on the evening of the 4th instant, a young woman was run over and killed by a train at the rear of the 4th ward in Tamachi, Tokio.

The *Hochi Shinbun* learns that a telegram has been received announcing the arrival of H.R.H. the Duke of Genoa at Hakodate, on the afternoon of the 3rd instant.

On the 6th instant the Korean Embassy paid a visit of inspection to the Educational Museum in the public garden at Uyeno.

Five members of the Embassy had an interview at the War Department with some officials and inspected the manuals of instruction employed in the department. The Embassy shortly afterward visited the Imperial College of Engineering.

During the past month the passengers by the Yokohama-Yokosuka boats amounted to 28,740.

At a meeting of the Kuazoku Bucho Kioku on the 7th instant, a proposal to purchase the Tokio-Yokohama railway from the Government was discussed.

A vernacular journal announces that Mr. Ozaki, of the St. Petersburg Legation, is about to start for London to marry an English lady.

According to the *Choya Shinbun* some English missionaries residing in Tankinji, Tokio, have recently established a charitable institution in Irifune-cho, for the relief of children whose parents are no longer able to support them on account of the high price of rice. The children will be fed and educated, and instructed in the doctrines of Christianity.

The following statistics from the *Hochi Shinbun* may be of interest:—Nothing is so remarkable as the increase of the population of the world within the last hundred years, and

it is also peculiar that the production of articles of daily use and consumption has not kept pace with the increase of the population, with the exception of tea and saké. The following statistics will show the increase in production on other articles:—

	1780	1880
Iron.....	150,000 tons....	15,000,000 tons.
Iron for cables...	40,000 " ...	3,000,000 "
Printing paper...	1,000 " ...	500,000 "
Cotton.....	50,000 " ...	150,000 "
Sugar.....	100,000 " ...	2,000,000 "
Wine .....	2,000,000,000 gals....	30,000,000,000 gals.

It is proposed to construct a new harbour on the coast of Ohama mura, in the province of Kazusa, Chiba Ken.

A native contemporary states that some gentlemen have lately been engaged in the task of erecting a new shrine to Yuki Mune Hiro, one of the most faithful servants of the Southern Government at the time when that and Northern Government existed. The old shrine is in the province of Ise. His Majesty the Emperor on the matter being reported to him, announced his intention of subscribing 200 yen towards the work, and we hear that further contributions are expected from the Princes of the Blood, and the Ministers.

Native papers state that Mr. Isono Koyemon, a wealthy merchant of Osaka, has made a contract for the purchase of the Government paper mill at M'wetsu, for the sum of 180,000 yen, of which he has already paid up 50,000 yen on account.

The Post Office at Hakodate, which was destroyed by fire last year, is now to be re-built at the cost of 10,000 yen.

#### ARRIVAL OF THE AMERICAN MAIL.

##### TELEGRAMS.

Cork, August 12th.—At one o'clock this morning a large party of men left shore in six whaleboats and boarded the Norwegian ship *Jann*, repairing at Queenstown, went into her hold, and stole three cases of rifles which formed a part of her cargo. The robbers cut the telegraph wires leading to Cork.

All the raiders appeared to be armed. A pool of blood was also found on the deck. The captain, mate, and revenue officers were shut up in the cabin an hour and a half. They finally forced the door, and saw the marauders departing in boats. Six men have been arrested who evidently formed a part of the shore party. They were found lurking about the road to Cork.

Fully a hundred men were engaged in the robbery of the arms. There were seven boats each carrying seven men.

The crew of the *Juno* were batted down in the fore-castle, and armed sentries placed over them. The captain and the revenue officer were shut up in the cabin. After the departure of the robbers it was found that only forty stand of arms had been taken. The wires being cut, news was sent to the police by horse express. A body of police soon arrived and searched the ship and vicinity. A fragment of a human scalp with the hair attached was found in the hold. The captain of the *Juno* says he saw an injured man taken off in a boat, apparently dead.

Constantinople, August 12th.—While the Ministers were in council to-day, the Sultan's secretary brought in an Imperial order for Risa Pasha to proceed to Scutari instead of the Minister of War. He is to start on Friday, and carry out the convention of April 18th, which provides for the cession of Tusi and which caused the uprising in Albania. If he fails in this object, he is to endeavor to bring about a cession of Dulcigno. Selim Pasha has left for Albania with 2,000 men. Moukhtar Pasha will bring a battalion to Scutari from Salonica, and Asim Pasha two battalions from Crete.

St. Petersburg, August 12th.—The disturbed and unsatisfactory state of the Caucasus is seriously occupying the minds of the Russian central authorities. The terrible destitution into which the greater part of the country has been plunged by the acute famine which began last Autumn, renders it probable that the revenue of those provinces will hardly pay the expenses of collection. A general outcry has been raised against the maladministration of this naturally rich country.

London, August 12th.—The iron makers of the west of Scotland met at Glasgow yesterday, and fully considered the position of the iron and coal trades. They agreed that the state of trade did not warrant an advance in the wages of workmen at present, and as the strike of the colliers and miners is general throughout Lanarkshire, it was resolved that all the furnaces in the country belonging to the firms represented at the meeting be thrown out forthwith.

London, August 12th.—The House of Lords has passed a bill indemnifying Lord Plunkett for voting on the Compensation bill without having previously taken his oath as a peer. The bill was brought down to the House of Commons on Tuesday, and was ordered for a second reading yesterday; but Thomas O'Connor, Home Ruler, having raised an objection, the second reading was postponed. O'Connor will move a rejection of the bill to-day.

Paris, August 12th.—The French press, except the Government organs and a few Socialist journals, loudly protest against such a high-handed attack on its rights and liberties as the expulsion of Baron Harden Hickey, editor of the *Triboulet*. The Baron, however, was not a citizen of France, and the authorities are strictly within the law.

Montreal, August 12th. A private cablegram from a passenger on the steamer with Leopold and Louise says: The Prince was obliged to use crutches on board. The Princess expressed the warmest attachment to Canada, and promised to revisit the United States on her return, which she said would be at an early day.

Paris, August 12th.—A mass of earth fell yesterday and crushed two houses at Vieuxport, near Poitiers. Ten bodies have been recovered and ten more are said to be under the ruins. The fall of earth was occasioned by an immense land-slide which destroyed some large lime kilns.

London, August 12th.—In the House to-day a motion for the rejection of a second reading of the Burials bill was negatived and the bill was then read a second time.

Cork, August 13th.—It is no secret that there were arms on board the ship *Juno* lying in the harbor. All the man-frauders were armed with revolvers. The six men arrested were before the magistrate yesterday. They all belong to Cork, and were unable to give an account of their presence at the Passage. They were remanded for trial. The most remarkable circumstance connected with the affair is, that while the boats were leaving and still in view from the vessel, no alarm was given by the captain or revenue officer on board. At the time of the robbery the patrol were on the road outside the dock wall, only twenty-five yards from the ship, and the slightest alarm would have reached them. The police at Black Rock, a village between the Passage and Cork, patrolling at three o'clock yesterday morning, saw two boats passing up, containing a number of

men whom they recognized as belonging to Cork. At this time the Black Rock police had not heard of the robbery. The occurrence had produced an uneasy feeling in the neighborhood, as it recalls to mind the Fenian disturbance, and shows that the element of disorder still exists.

Four of the rifles stolen from the ship have been found in a garden at Rochestertown. It is understood that the police have a clew to the man who fell into the hold of the vessel. A hundred police patrolled along the river all of Thursday night, but no further clew to the identity of the raiders was obtained.

Sixteen more rifles have been found in furze, not a hundred yards from where the first lot was found. It is stated that the owner of the missing ferryboat, which was employed in the raid, has been arrested. The constabulary have taken charge of two boats found derelict.

The seized rifles bear the stamp of 1840, and appear to have been polished up before consignment on the *Juno*.

Dublin, August 13th.—It is remarked that a greater number than usual of sinister looking persons having an American air, are to be seen about the cities and towns of Ireland, and within the last four days about 400 stand of the best firearms have been purchased here by such persons.

Vienno, August 13th.—General Prochazka, the retired Austrian officer, on trial here for fraud, was acquitted to-day, and discharged. General Prochazka and his agent were charged with obtaining 120,000 francs and a promise of 28,000 more from Paris speculators, by means of a forged concession for a casino gaming table from the Republic of San Marino. General Prochazka obtained a concession from the Chief of Police of San Marino, which was absolutely worthless; but in October he submitted to four Parisian financiers a concession purporting to be signed by two Secretaries of State, for which the financiers gave him 120,000 francs, on account of which sum he gave the Chief of Police 50,000 francs and 20,000 to his agent, and tried to get a bill for 28,000 francs discounted; but before the money was paid the concession was discovered to be a forgery by the Chief of Police, and General Prochazka was charged with being accessory thereto. On being interrogated he maintained that the Chief of Police, who had absconded to escape prosecution, had imposed upon him. He acknowledged his financial troubles, and said that the erection of a gaming table was not an act of high morality on the part of a retired soldier and the bearer of several decorations, who had served creditably in campaigns from 1849 to 1866; but he represented himself as a dupe of the Chief of Police.

London, August 13th.—In the house of Commons to-night, O'Connor Power called attention to the medical reports in regard to the condition of the fever-stricken districts in Mayo and other parts in the west of Ireland, and moved a resolution that it was essential that effective Sanitary arrangements should be immediately made.

Thomas Sexton, a Liberal Home Ruler and member for Sligo County, seconded the resolution.

Forster, Chief Secretary for Ireland, said the distress had been much exaggerated. The Government had sent an efficient medical staff. He would be willing to have a resolution placed on record to the effect that in the opinion of the House, the present condition of the agricultural population of Mayo, Sligo, and the other parts of the west, demanded the immediate attention of the Government. Forster incidentally spoke of contributions made by Irish-Americans to relieve the distress in Ireland, and said that English laborers would probably not have done as much for their own people under similar circumstances. Power accepted Forster's resolution, which was then agreed to.

London, August 13th.—The *Times*' Paris correspondent thus summarizes the course matters will take: The Montenegrin question will be settled on the basis of Count Corti's scheme. The naval demonstration will be suspended, and the Powers will mediate between Turkey and Greece. There will be negotiations regarding Janina, which the Turks will not cede at any price, but which the Greeks might safely waive, and Greece will imperatively demand the cession of Metzos, with support of the Powers.

Paris, August 13th.—It is again stated that one of the Powers proposes a reply to the Porte's last answer on the Greek question, by another collective note. The other Powers, however, hesitate to assent, lest it should render

coercion inevitable. It is considered probable that the long period of negotiations will insure order, and that the Powers may agree as to the best means of obtaining a result by which all interests will be protected.

New York, August 14th.—A long-range rifle match between Canada and the United States teams took place to-day at Creedmoor. The shooting began at 10:15. The firing was rapid, and in about an hour each side had finished work at the 300 yards range. Following is the score: Americans, 439; Canadians, 427. At 900 yards the score was: Americans, 416; Canadians, 407. Wind and rain prevailed. At 1,000 yards the Americans made 418; Canadians, 401. The grand total was 1,273 out of a possible 1,350 for the Americans, or an average of 212 in a possible 225. Pleasant speeches were made at the conclusion of the shooting.

New York, August 14th.—The *Herald* comments as follows: The most conservative nation in the world finds itself tempted, and it appears, out of its haughty seclusion, by the seductions of modern trade. It is not so long since pious but industrious England was forcing opium at the cannon's mouth into the Flowery Land, and it seems but yesterday that China was at all contented with permitting anything like reciprocity in commerce, yet to-day she makes her first entry in the lists for the carrying trades of the sea. The Chinese steamer *Ho Chung*, which in a few days is to pass through the Golden Gate, will doubtless be the precursor of a merchant fleet flying the dragon flag that will ultimately penetrate every port that a pound of tea can be sold in. So rovel is the experiment that our Treasury officers have to look cautiously about to find exactly what duties are leviable upon the steamer's arrival. But these points once settled, if the Chinese enterprise follows up the experiment as it should, the result will be the pushing of China more rapidly into the family of nations than by any other step her people could take. The Chinese shipowners will not desire to labor under disabilities in foreign ports, and to avoid them China must swing her own gates wider and wider ajar. Where she needs Consuls and Ambassadors now, she will need men-of-war presently, and gradually she will find herself penetrated to the core by the restless spirit of modern trade. Her subjects have shown that in commerce they can hold their own with any people, and we may be sure that once upon the sea, they will give to China more and of the profit which is legitimately hers. They will not reach success in this "new departure" without encountering heavy opposition in which, since the United States is without a mercantile marine of any account, we shall have little part, but in England, France and Holland the news will create a stir of keen interest.

London, August 14th.—According to reports from Bucharest, 45,000 Russians are concentrating near the border, so as to be ready in the event of the action of Bulgaria. Transportation of munitions, horses, commissary stores, and troops, is continually going on near the Roumanian frontier. A steamer arrived at Galatz recently with Russian artillery and ambulances destined for Bulgaria. It is also stated that the Russians are concentrating at Radzenloff on the Austrian frontier.

London, August 14th.—The trial by Court-martial of Sergeant Marshman for false marking at Wimbledon began at Gosport yesterday. The charges include offences in 1878 and 1879. On the reopening of the Court, to-day, the prosecutor stated that one of his principal witnesses had been knocked down and kicked by persons who had profited by Marshman's practices.

Kieff (Russia), August 14th.—The Military District Court has just tried twenty-one individuals charged with forming a society for forcibly overthrowing the existing order of the State. Two were sentenced to death, three to twenty years penal servitude and sixteen to hard labor for terms varying from ten to fifteen years.

Paris, August 14th.—Experiments with the submarine cable from Brest to Penzance were made yesterday in the presence of the Director of the French cable and others. A new system, invented by Dr. Herz, was very successful. The Bell and Phelps system governed the experiments. Edison's system failed.

Bucharest, August 14th.—Bulgaria positively refuses to cede Arab Tolba to Roumania, and there are large armed bands of Bulgarians in that vicinity. Roumania has taken

measures to occupy a position immediately on the receipt of notification from the Powers.

Paris, August 14th.—Diamont, manager of the newspaper *Gil Blas*, has been sentenced to a month's imprisonment, and to pay a fine of 500 francs for indecent publication.

Athens, August 14th.—A vessel arrived to-day from Trieste with 280 horses, the first instalment of 1,400 purchased in Hungary for the army.

St. Johns (N. B.), August 14th.—Wallace Ross, the oarsman, has not yet received Leahy's acceptance of his challenge, said to have been forwarded from San Francisco.

London, August 14th.—Mr. Gladstone's recovery has been rapid, and it is expected that he will attend the House of Commons next week. He was present to-day at the Cabinet Council, which had much important business to consider.

France is resolved to withdraw from the combined European movement against Turkey if any steps are proposed beyond moral suasion. Gambetta's speech at Cherbourg shows why she pursues this course. The German Press manifests considerable anxiety. The attitude of France disappoints many Liberals, though the close relations of Sir Charles Dilke and Gambetta enables the Foreign Office to understand the French ex-Dictator's real motives. The attitude of France behoves Mr. Gladstone to move circumspectly. If too impetuous he may leave the other Powers behind and precipitate a conflict. At present nothing but a naval promenade has been agreed to, and that will prove ineffective.

The seizure of arms at Cork is generally regarded as a melo-dramatic performance for effect in New York. Only 57 old smooth-bore muskets were stolen, and 20 have been recovered. The fact that 50 men suddenly assembled, nearly all with revolvers, on hearing that the ship possessed arms, is very significant. Secret societies have developed lately, and it is alleged that many Irish Americans have arrived. The agrarian murder at New Ross is not attributed to the rejection of the Compensation bill. The plots against the victims are of older date. The projected popular demonstrations have not been successful. The Clonmel meeting was a notable failure. Many Dublin correspondents assert, notwithstanding the agitation in a few places, that there is an unmistakable improvement in public opinion in Ireland.

The Chinese Ambassador's journey to St. Petersburg creates some interest. Before leaving London he talked of issuing letters of marque. Many Europeans have been engaged for the Chinese forces.

Paris, August 15th.—The *Verité* publishes a letter from M. Gambetta to a Councillor-General, explaining his views in regard to the recent elections. He says the elections were profoundly Republican and Democratic. The Democrats do not wish a Republic in form only, but want to organize the institution in order that the Democracy may not longer be a lie and the Republic a snare. It is by the constant application of such methods at home that the Democracy will succeed in bringing into play its admirable resources, the measures and hidden force and might of our great country; and that France will be permitted to assume without precipitancy the advanced rank which belongs to her in the world, regain those provinces violently torn from her, and by reason of her restored integrity to make a pledge for the peace of Europe.

Glasgow, August 15th.—Serious rioting took place at the Home Rule demonstration on Saturday, owing to the Home Rulers passing an Orange Lodge, and the police, who endeavored to restore order, were overpowered. Two policemen were injured so badly that they are not expected to recover. One was stabbed by a spear. Twenty persons were arrested.

Athens, August 15th.—France having declined to draw up a note in answer to the Porte's objections, England telegraphed a circular to all the Powers on Friday, proposing a new joint note, entirely rejecting the last suggestion of the Porte, and insisting upon the fulfilment of the original mandate.

Buenos Ayres, August 15th.—The political crisis has become more serious. The National Congress refuses to accept the resignation of President Avellaneda, but insists upon the overthrow of the Provincial Chambers. The President, however, adheres to his resignation. The garrison of Buenos Ayres has been reinforced.

Paris, August 15th.—General Grévy, brother of the President, has been elected Senator.

Sunday being the day which is observed as the National Fête Day under the Empire, many Bonapartist manifestations were made in response to which shouts of "Vive La Republique" were raised. The police made some arrests of disturbers.

St. Petersburg, August 15th.—The *Agence Russe* says: It would show a want of knowledge of the Afghan character to regard Ayool Khan and Abdurrahman Khan as other than irreconcilable rivals.

The *Agence* categorically denies that Russia is concentrating 45,000 troops near Bender.

Paris, August 15th.—*Le Voltaire* announces the death of Marshal Bazaine, and says his body, escorted by three Spanish soldiers, passed through Limoges on the 12th instant. The authenticity of a letter imputed to Gambetta, and published in *Verité*, is doubted.

London, August 15th.—Lord Stratford de Redcliffe (Sir Stratford Canning), for many years British Ambassador to the Porte, is dead.

London, August 15th.—A number of meetings were held in Ireland yesterday to protest against the rejection of the Compensation for Disturbance bill. Very violent language against the landlords was used by the speakers.

Athens, August 15th.—The statement that Greece has made an advance into Serbia, with the view to the conclusion of an offensive alliance, is denied.

Rome, August 15th.—It is authoritatively stated that the Italian Ambassadors at London and St. Petersburg have been summoned to Rome.

London, August 15th.—Adelaide Neilson died suddenly to-day at the Continental Hotel, Paris.

London, August 15th.—Gladstone has gone to Helmburg, pursuant to recent announcement, to remain some days.

Berlin, Augst 15th.—Cathedral of Cologne is completed.

Bath (N. Y.), August 14th.—About five this afternoon, K. E. Parkhurst, a young lawyer of this village, shot and killed Fannie Howell, the daughter of a prominent merchant here, and killed himself. They were married about four years ago, but immediately divorced. They were in a room in a hotel when the tragedy occurred. The young man and woman belonged to the best families in the place, and quite a romance is connected with their lives. Six or seven years ago they were married at a picnic, but their parents interfered, and the Courts declared the marriage null and void. Since arriving at age Parkhurst desired re-marriage, but the girl's parents objected, and illfeeling was engendered. To-day Parkhurst again tried to persuade the girl to live with him, and upon her refusal he drew a revolver, shooting her and then himself.

Dublin, August 16th.—John Dillon, Member of Parliament for Tipperary, speaking at a land meeting at Kildare, yesterday, said that as soon as the Land League had 300,000 men enrolled they would be able to strike against rents entirely, if their demands were not granted, and all the arms in England would not be able to levy rent in Ireland. They would have no Coercion Act, and they could go out at any hour of the night they pleased and carry rifles with them. At the meeting of the Land League at Cork, the *Juno* affair was condemned, and the belief expressed that the raid must have been effected by persons desiring to see a renewal of the Coercion Acts, and wishing to give the Government good value for their secret service money.

London, August 16th.—In a faction fight yesterday at Portadown, County Armagh, Ireland, between Catholics and Orangemen, many persons were badly wounded. The Catholics were routed. The Catholics had demonstrations in various parts of Ireland yesterday in connection with a festival of the Assumption or Lady Day celebration. At Dungannon there was serious rioting. The police, who had been severely stoned, fired on the procession, and one man was killed and twenty wounded. There was also rioting in other parts of the country, and several police were injured.

London, August 16th.—The *Post's* Berlin correspondent says: It is expected that at the next session of the Reichstag the entire question of the currency will be reopened, for, despite the semi-official contradiction, the agitation against an exclusive gold currency is daily gaining ground. In Government circles, it is said that Bismarck favors the readoption of silver as a legal tender.

The President of the Imperial Bank has, in a remarkable treatise, exposed the mistake made in abolishing the silver standard.

Constantinople, August 16th.—The Ambassadors have forwarded to the respective Governments a request of the Minister of Foreign Affairs to prolong twenty-four days the time granted for the settlement of the Montenegro question, and to assent to a modification of the Dulcigno project. Abeddin Pasha proposes that Turkey keep Dinoche and Gruda, and that some other compensation be accorded.

London, August 10th.—The *Daily News* learns that for some time past large quantities of printed matter, intended to excite Indian Mussulmans against the British Government, have been sent from Pera to India. The attention of the Government has been called to it, and circumstances have been discovered indicating that these inflammatory publications have been forwarded with the knowledge of the Porte.

Paris, August 16th.—*La France* publishes a telegram from Tunis announcing that the Italian Consul there has persisted in his representations to the Bey, with a view of preventing the completion of certain branch lines of the Boua-Guelma railway. The French Consul has communicated with his Government on the subject, and the difficulty causes considerable excitement in Tunis.

Paris, August 16th.—The *Republique Française* announces that Gambetta's letter in the *Verité* yesterday, was written on the 16th of October, 1871, when it appeared in all the Paris newspapers and was also published in pamphlet form. Nevertheless the dispatch from Berlin says the letter has produced a painful impression there.

Berlin, August 16th.—A lady of the Sultan's harem who took refuge in the British Embassy at Constantinople, and was subsequently surrendered, has been strangled as an accomplice in the palace conspiracy.

Prince Alexander of Bulgaria was thrown from his carriage yesterday, and received serious injuries.

Toronto, August 16th.—Robert Wilkes, a wholesale jeweler of this city, his daughter Florence, aged fifteen, and his son Bertie, aged eleven, were drowned at Sturgeon Point to-day. Florence and Bertie were bathing, and the boy, getting out beyond his depth, the father, who was in a boat, jumped out to save him. The daughter also went to the rescue, and all were drowned.

Pesth, August 16th.—The defeat of the Government candidate at Nazy-Kaniszer and the election by a large majority of a number of the Extreme Left, has shaken the Tisza Ministry to its foundations. The result will probably be a fusion between the Government and the Moderate Opposition.

London, August, 16th.—A flood swept down the Glen of Glendote, County Donegal, Ireland, to-day, flooding the church of Cammieuon and drowning several persons, who were carried away by the rush of the waters. Two bodies have been recovered.

London, August 16th.—Thos. McGrath, described as an engineer belonging to the American man-of-war *Trenton*, has been committed for trial for killing a man in an affray at Gravesend.

Paris, August 16th.—Madame de Lesseps has presented her husband with a fine boy. The mother is doing well.

Denver, August 16th.—The *Tribune* has a much special from Messila, N. M., to the effect that there is much excitement throughout Messila Valley over the elopement of Father Todorou Ronalt, a priest of Las Cruces, and a brilliant and beautiful young lady, Miss Marguerita Garcia, from the Convent of the Sisters of Loreto, who recently entered the Couvent, it is said at the solicitations of priests, against the wishes of her parents. After continued scandalous proceedings, the couple eloped and were overtaken at a small hamlet, whence the priest appeared *en deshabille* and was struck, and would have been killed by the uncle of the girl, if friends had not interfered. The priest and the girl were finally married. The former tells horrible stories about the bishops and other priests.

New York, August 16th.—The *Herald's* Paris special says: Our Madrid correspondent telegraphs as follows: The Archduchess Isabella, of Austria, mother of Queen Christina, has arrived at Madrid with a suite of ladies and five attendants, to be present at her daughter's accouchement. She intends to stay here for several months. She was received at the station by the king and the royal family. The first interview of the Queen and her mother was very

affecting. Apartments in the palace have been prepared for the Archduchess, close to the magnificent suite of rooms recently fitted up and furnished for the expected heir to the throne. Queen Isabella is expected about the 24th. If the child should be a male, he will probably be christened as Philip or Ferdinand; if a female, she will be named Isabella.

For godfather Pope Leo and the Emperor of Austria, are mentioned; for godmother, Queen Isabella and the Archduchess. The health of the young Queen is quite satisfactory. She is able to drive about with the King in the cool of the evening.

London, August 16th.—It is officially stated that cattle on fifteen farms in Lancashire are infected with pleuropneumonia.

#### CHILI AND PERU.

New York, August 3rd.—The *Panama Star and Herald* of July 22nd has a story of the loss of the Chilean transport *Loa* in Callao bay. A Peruvian officer constructed a launch, put a torpedo into it, and over this placed a false bottom resting on springs, kept down by the weight of the cargo, then loaded it with a very choice assortment of fruits, and towing it out toward the blockading squadron before daylight, set it adrift. All day it floated about, but toward evening, fearing it would fall into neutral hands, a boat was sent out to bring it back. The *Loa*, seeing a boat from shore making toward a neutral vessel, caught sight of the launch and turned toward it. The *Loa* lowered two boats, brought the launch alongside, and the discharging commenced. As the weight in the launch diminished, the machinery in connection with the torpedo was set fire, and in a moment 3,000 pounds of dynamite were exploded. The *Loa* was almost lifted out of the water, and appeared enveloped in a mass of flame, which resolved itself into dense clouds of smoke. When this cleared away, the vessel seemed not to have suffered, but suddenly she went down by the stern and disappeared. Ships of war and non-combatants quickly lowered boats and picked up about forty men struggling in the water, of whom it is probable many will die. At least 150 men perished. The only officers saved are the second commander (wounded), the doctor and one engineer. Every house in Callao was shaken to the foundation by the explosion, and every ship in the bay shivered as if by a fearful earthquake.

[The *Loa* was an old gunboat, carrying two guns, and formerly owned by Peru, but was captured during the present war by Chili and utilized as a transport.]

New York, August 4th.—A Lima letter says of the taking of Tacna by the Chilean troops: Only one street escaped sack. Hundreds of wounded prisoners were slaughtered in cold blood. Not one wounded ally was found alive on the field the day succeeding the battle. Women and girls of the tenderest age were violated, and many killed. Farmers in the vicinity and their families shared the fate of the town. Every day six, eight or ten murders are committed, while the bodies of the victims are allowed to remain unburied until removal becomes a necessity. Arica suffered even more severely than Tacna. All the houses are either totally or partially destroyed. Out of 1800 defenders only 600 survived. Those of the 1200 who did not fall in the fight were subsequently massacred in cold blood. It is an authenticated fact that forty-nine soldiers who had thrown away their arms and taken refuge in the United States Commercial Agency, over which our flag was flying, were taken out and butchered in the street.

New York, August 12th.—Advices from Lima of July 13th state that the enrolling of the population of Lima and Callao to form an army reserve has been finished. At 3 o'clock on that day the Cathedral bell was rung and at once all business establishments were closed. Railway trains, street-cars, and nearly all coaches ceased running. And the whole of the male population between 15 and 60 turned out to answer the roll-call; the foreigners, the old men and women, to look on. The closing of business establishments is to take place every day, so as to give different members the necessary time to drill.

The Chilean *Times* of June 19th says: The Chilean people and the press are nearly unanimous in the determination to go on to Lima as soon as possible, and there is some talk of strengthening the army by two additional divisions of 4000 men each. It is not yet known what steps

the new Cabinet may take to provide funds for carrying on the war. It is to be feared that an additional issue of paper money will be made. During the last six months Government bonds and other securities have been steadily rising.

#### THE JAPANESE PRESS.

#### GOOD NEWS FROM THE NORTH.

(Translated from the *Kinji Hioron*)

THE increasing popularity of lectures is one of the best evidences of the progress of civilization among a people. Therefore we are more anxious to witness their spread than for a fall of rain in time of drought. We have been apprehensive that the Regulations controlling public meetings would have destroyed freedom of speech, just as the heats of summer dry up the rice fields and vegetable gardens. Very fortunately, however, our fears have vanished like smoke or dew, and we have good proof in evidence of our statement. The fact we rely upon is as follows:—

The Seigisha Society in the Hokoroku (North) lately received a large accession of members, and has consequently grown wealthier. This society recently commenced the construction of a magnificent lecture hall in Tamai-cho, and the ceremony of laying the foundation stone took place on the 18th of August ultimo, on which occasion a grand entertainment was given, and some of the members delivered congratulatory addresses on the progress of their society. The building of the hall will be completed during the present month, and lecturing resumed about the middle of next October.

Oh! What glorious news! The patriots who always direct their attention to the welfare of the country, and are ready to sacrifice their lives for the community, are those who ought to carry out such a splendid undertaking. They may be certain that the spirit of freedom will spring out from amid the mountains in the Northern provinces, and hereafter we shall sit ready with pen in hand, watchful to record what comes out from the North!

#### THE PATRIOTIC PARTY AND THE GOVERNMENT.

(Translated from the *Kinji Hioron*.)

Who is responsible for the report that the Government intends to entrap all the truly patriotic members of the community, by using the golden bait of personal interest, with a view to stopping the agitation for a National Assembly? We cannot believe the Government capable of such measures. Still, we should like to hear some explanation of these rumours, which are so common that we cannot help treating them as suspicions. To give instances of what we refer to:—the *Wakayama Shiabun* states that Mr. Endo Motojiro, a shizoku of Kanazawa, Ishikawa Ken, a man well known to the public as an able patriot, was recently ordered to appear before the Daijo Kwan. He felt it only his duty to obey the summons though greatly puzzled as to the meaning of it. On his presenting himself he was led to a private room by a Secretary, and informed that his appointment had been made out as Chief Secretary of the Daijo Kwan, and that it was trusted he would fulfil his duties honorably: the written commission was then handed to him. Mr. Endo was naturally taken by surprise and energetically declined to accept the post and have his name inscribed upon the official registry. The Secretary before mentioned exhausted all his eloquence in trying to induce him to alter his determination, but without effect; Mr. Endo was obdurate and finally left the office, emphasizing his refusal in the most decisive method of the Japanese, viz: by vigorously shaking the sleeves of his *kimono*.

But here is another view of the matter. Mr. Kiba, ex-Director of the Rissai-sha, has accepted a subordinate appointment in the local government of his prefecture; and another, Mr. Minami-kawa, formerly manager of the United Club of Fukuoka, has been appointed mayor of a county. Thus it is that in this large Empire many cannot resist the bribe of Government service. Mr. Endo alone has not given way to

this ambition, so that we cannot help praising him for his determination.

How is it, we ask again, that the Government seeks out any man of patriotic feeling and offers him an appointment? Even a child knows that among the governed there must always be many men of ability; if all such men are taken out of the masses will it tend to the peace and security of the Empire? All experience points to the contrary. Our Government must know this and we are, perhaps, not justified in paying any heed to these rumours though they may give us occasion for anxiety.

#### LAW REPORTS.

##### IN THE U. S. CONSULAR GENERAL COURT.

Before T. B. VAN BUREN, Esq., Consul-General, Judge.

Messrs. A. S. FORD and E. R. SMITH, Assessors.

Tuesday, the 7th day of September, 1880.

SIDNEY M. SMITH, of San Francisco, by his Attorney F. C. Spooner *versus* ISAAC BUSH and AUGUST LANGFELDT.

(Continued from the 1st of July last.)

Mr. Hill appeared for the plaintiff; Mr. Litchfield for the defendant Isaac Bush, and Mr. Langfeldt appeared in person.

On the opening of the Court His Honour said that the report drawn up by Mr. Talbot upon the defendant Bush's books had, he believed, been seen by the counsel on either side, and it was therefore quite unnecessary to read it. The accountant states that, from what he can gather, the books in question were kept in a most loose and incomplete style, but still he can see no evidence of fraud, unless it be in connection with the kinsatzu speculation account, of which, as the books show no record, he knows nothing whatever. His Honour presumed that counsel would not desire this report to be sworn to.

Both counsel acquiesced.

Mr. Hill addressing the Court said he understood that the previous adjournment was made on three points; 1st, for Mr. Talbot's report on the books; 2nd, for the receipt of certain papers from San Francisco, and 3rd, to obtain a report about the kinsatzu speculations. Mr. Talbot's report had been already heard, and he had lately received all the various bills, etc., from San Francisco, which he had shown to the counsel for the defence: he believed they were not disputed.

Mr. Litchfield.—Mr. Hill has shown me each assignment, and to save time and trouble I am willing to accept them as accurate. It appears, however, from the affidavit appended to these papers that the debt of one creditor, the principal one in fact, Messrs. Dodge, Sweeney & Co., has been assigned to the Cutting Packing Co., a corporation carrying on business in San Francisco, and not to Mr. Sydney Smith. This is dated May 11th, 1880. Another affidavit is made of an assignment to Mr. Ruggles, dated April 24th.

Counsel then called Mr. Isaac Bush, who testified to his having received the documents now under discussion by post, and identified the cover.

In reply to a question by the Court, Mr. Litchfield said that there was among the papers a summons with an affidavit attached to the effect that all efforts to serve the summons on the defendant in the United States had been fruitless. The amounts shown are \$5,233.09 in favour of Dodge, Sweeney & Co., and \$1,083.05 in favour of the Cutting Packing Company (Counsel handed in the various documents).

His Honour said that the Court held that the papers are not authenticated; they appear to be copies, but the particular claims covered by them will be held under advisement until it can be shown if such an action is now pending in the Supreme Court of the State of New York, County of Steuben, whence the summons was issued. He certainly would not give judgment against defendant until the existence of the County and Judge named in the summons were clearly proved. He would not have his Court made a convenience of by everybody in San Francisco who chose to do so.

Mr. Hill said that as regards the assignment to Mr. Sydney Smith he could give an easy explanation. A transfer is always made in the case of corporations, in the names of the members of the firms. A corporation can do nothing without a seal; he thought that as Mr. Smith happened to be a member of the Cutting Packing Company, the transfer was made by some negligence in his name. He thought that by referring to the power of attorney (Exhibit A) and connecting

it with these two assignment papers mentioned, it would put an end to any question about the matter; he would like to put in these papers as the complement of Exhibit A. (Papers put in and allowed.)

His Honour.—By the sworn statement appended these were signed three days after April 4th.

Mr. Hill.—The next, and in fact the only point left, is to prove the alleged fraud in kinsatzu speculations. Now I claim that the onus of proof in this case rests with the defendant. I have summoned several witnesses whom I intend to examine, but at the same time I claim that by law I am able to call on the defendant to produce evidence on this point.

Mr. Litchfield.—I have been unable to find the broker through whom Mr. Bush transacted his business. I have applied to the authorities for assistance and have been informed by the Governor of Kanagawa that only one person of the name of Takijiro is known. He is a very small broker and denies having had any transactions with the defendant.

His Honour.—The defendant's books say that certain sums of money were lost in kinsatzu speculations. Why cannot this be proved? It is entered only as drawn on "Private Account."

Mr. Litchfield.—Beyond the sworn testimony of the defendant himself that the money was paid away to a kinsatzu broker we can adduce no evidence.

Mr. Hill.—I believe that the defendant ought to show testimony himself: however, as I said before, I have called witnesses. I have also made investigations myself and have found a man called Takijiro which is, however, as I said before, what we should call a Christian name, just like Thomas or William. But I wish to refer to "Hilliard on Remedies for Torts," pp. 401-402, and also to "Taylor on Evidence," Vol. I, pp. 384-385, to show that the *onus probandi* rests with defendant. (Counsel read extracts).

His Honour thought that it was unnecessary to do this as there was the defendant's sworn testimony.

Mr. Hill.—True, but, as I have just read, a presumption must always exist in these cases. The defendant has sworn to his testimony. I must therefore raise a presumption, which is as much as to say that I believe, as I really do believe, that Mr. Bush has perjured himself.

His Honour.—I take it that the position is as follows:—You have shown that the defendant was in possession of money from the realization of goods. This he admits, but says that it has been consumed by family and business expenses, and by speculation in kinsatzu. This latter is not shown by the books but we have his sworn testimony, any evidence to contradict which is perfectly legitimate.

Mr. Hill.—That is correct and all that I require. I only wish to obtain the benefit of the full force of my arguments.

Counsel then called:—Morris Bieber, who made an affirmation and stated:—I speculated greatly in kinsatzu in the end of December last, and up to March, 1880. I have brought no documents connected with such transactions.

His Honour.—I must ask you to produce them. There is no intention of prying into your private affairs. I simply want you to show from your experience what sums of money must have passed through your hands.

Through the medium of Mr. Shimidzu, who, His Honour stated, had kindly given his services as interpreter, Matsumoto Tonanosuke, warned, stated:—I am an exchange broker. Mr. Midzutani Takajiro is ill to-day, and has sent me to represent him.

Mr. Hill explained that this was not at all what he required, and that he must insist on the attendance of Takajiro himself.

The witness gave Takajiro's address as No. 8, Ichome, Bentendori. He himself did not know the defendant, but had been told by Takajiro that he came once to see him about some kinsatzu speculations.

Mr. Hill said he had two empowered agents of the Shosha, one of whom he proceeded to call.

Imadate, warned, said:—I am a member of the Yokohama Shosha, and am the present representative of the house of Mogisobe who is head of the Shosha. I have been well acquainted with the operations and clients of the Shosha for some time. In the Shosha there are books kept shewing the various transactions. The Japanese regulations do not allow transactions in kinsatzu outside the Shosha in amounts above \$1,000 at one time. I know most of the brokers who did business in kinsatzu last year. I know Midzutani Takajiro. He kept a small exchange shop; I believe it was in Otamachi.

In December and until March he might have been a client of the Shosha; I believe he was, but could not vouch for it without examining the books. He always did his business through the Shosha.

The Court, at the suggestion of the plaintiff's counsel, asked the witness to examine the books of the Shosha transactions carefully for the months of November and December, 1879, and January, February and March, 1880, and to bring in a compiled statement of Takajiro's transactions, and also, if he found such records, of his doing business for Mr. Bush.

On the witness remarking that this would entail considerable trouble, Mr. Hill said he thought it would only be fair to to make some compensation to him.

His Honour remarked that he wondered where the money was to come from.

Witness continued:—Foreigners can only deal with the Shosha through Japanese. When a foreigner does large transactions in this way, I should not be able to know it as a matter of course. I do not know either Mr. Bush or Mr. Bieber. If I could have the dates of any of the transactions you wish inquired into, it would save time and trouble, as the Shosha books are very voluminous.

Mr. Hill said that he was unable to give those dates as Mr. Bush had described the transactions as being of daily occurrence: the aggregate would do, if details could not be given. He found too, on referring to his notes, that the transactions during December, 1879, and January, 1880, would be sufficient. If possible to be given, the names of the buyer or seller in the transactions would prove useful.

After some discussion as to when this statement could be ready, witness agreed to produce it on Monday, the 13th instant.

Mr. Litchfield reserved his cross-examination.

Suzuki Masakitchi stated:—I am an employé of Amenugiya, a general merchant in Bentendori. He is also an exchange broker. I do not know Mr. Bush but I know Mr. Midzutan Takijiro. I do not know him well. He is always at the exchange. I do not know anything about his transactions.

Mr. Litchfield did not cross-examine.

His Honour:—Mr. Bieber, you will attend at this Court with the documents already mentioned, on Monday the 13th instant at 10 a.m. until which time the case is adjourned.

The Court then rose.

#### IN THE U. S. CONSULAR-GENERAL COURT.

Before T. B. VAN BUREN Esq., Consul-General, Judge.

Messrs. P. HUSSEY and G. FARLEY, Jr., Assessors.

Friday, the 10th day of September, 1880.

THE MITSU BISHI MAIL STEAMSHIP COMPANY vs. THE PACIFIC MAIL STEAMSHIP COMPANY.

(Continued from the 28th of July, 1880.)

The Court opened at 10 a.m. and Mr. Kirkwood asked His Honour if he had not promised to give his decision upon the question of granting a commission.

His Honour:—Yes, but I also stated that first of all I wanted all the available testimony on both sides.

Mr. Kirkwood then called Iwasaki Iwanosuke and produced an interpreter.

Mr. Hill considered this unnecessary as the witness was well acquainted with English.

Mr. Kirkwood however stated that it was the wish of the witness, as it was the first time he had ever been in Court, and would naturally feel more at home in speaking his own language. After some discussion it was agreed to take the evidence through the interpreter.

Iwasaki Iwanosuke, warned, stated:—I am general manager of the Mitsu Bishi Mail Steam-ship Company and entrusted by my brother Iwasaki Yataro, who is the proprietor, with full powers. I remember two occasions certainly when conversations were held with the defendants prior to the execution of the contract of the 16th October, 1875. On the first Messrs. Center, Irwin, my brother and myself were present. The two former appeared on behalf of the P. M. Co. I understood that Mr. Center was agent of the P. M. Co. and Mr. Irwin in No. 14.

Mr. Kirkwood—Tell us what took place on each of the occasions you refer to?

Mr. Hill objected to the question.

His Honour said the question was objectionable.

Mr. Kirkwood:—Well, what conversations took place

with reference to the sale of the *Nevada*, and as to the terms and time of transfer of the ship?

Mr. Hill rose to say that the witness had already twice corrected the interpreter, and that, as a matter of legal right, he claimed that Mr. Iwasaki should give his testimony in English.

Witness:—I had a conversation about the transfer of the property of the branch lines to Shanghai of the Pacific Mail Co., but it was explained that this company had a contract with the U. S. Government for carrying mails and the Pacific Mail Company wanted our company to carry these mails under the American flag until the 31st December 1876. The *Nevada* was to be transferred to the Mitsu Bishi Company on the 1st of January 1877. This conversation took place at my house in Tokio about two or three weeks before the signing of the contract. I never saw any contract, but Messrs. Center and Irwin told me that a contract existed for carrying mails between Shanghai and America up to the 31st December. No time was specified as to the number of months that the *Nevada* was to run, the only point was that the transfer was to be made on January 1st 1877. The other conversation was held at the office of Messrs. Fischer and Company, No. 14 Yokohama, about two or three days before the contract was made. Messrs. Center, Irwin, Ness and myself were present. Nothing was said then about carrying the mails, as that question had been settled before. I don't remember if anything was said then about the transfer of the steamer, but Mr. Center had told me before that it would take place on the morning of the 1st of January.

Mr. Kirkwood:—what do you consider would be a fair charge for the detention of the *Nevada*?

Mr. Hill objected to this as irrelevant until some detention was proved.

His Honour said that sworn evidence had been adduced for this already. Objection not admitted.

Witness:—I think \$500 per day is not excessive. I could not have chartered the *Nevada* for less than \$15,000 per month. I consider that a proper price to charge for carrying mails from Shanghai to Yokohama, as the *Nevada* did, would be \$4 per nautical mile. The distance is about 1,200 miles. I base this estimate from contracts I have to go to the Bonin Islands. This is a separate contract from the general one of carrying mails. For the mail service to the Bonin Islands I get 3,000 yen for the trip and return. The distance there and back is, I think, about 1,000 nautical miles. I make three trips a year. There are no restrictions about the steamer, except that it must be a vessel that can safely go there. There is no fixed time, except that there must be a trip once in four months, and then we must give the Post Office ten days notice.

Mr. Hill again wished to have the evidence in English.

His Honour said he thought that the examination could continue as it had begun.

Mr. Hill said it was a serious matter to him; he would bow to the ruling, but begged the Court to note his most serious objection.

Cross-examined by Mr. Hill:—The Mitsu Bishi Company has a subsidy from the Japanese Government for carrying the mails. The Bonin Island contract is paid in paper, whether paper is high or low. I cannot tell the lowest discount of paper during the contract, as it commenced about four years ago. The lowest I remember was 30 or 40 discount. I am not quite certain as to the exact distance of the Bonin Island trip, but could easily get it from the map and log-book. I don't know anything about the number of the population of the Bonin Islands. There is no large business there, but there is a small colony, so that once in four months there are enough goods to load a small steamer.

Mr. Hill:—Can there be any possible comparison between the Bonin Islands and others?

Witness:—I know nothing about that. I base my calculations upon the freight.

Mr. Hill:—Apart from the mail subsidy, would the freight and passengers pay for the line to the Shanghai ports?

Mr. Kirkwood objected to the question.

His Honour said it was perfectly legitimate; Mr. Iwasaki had fixed a sum which he said he considered fair.

Witness:—I cannot answer now, as I have never looked into the matter respecting Shanghai. The business depends on time and circumstances.

Mr. Hill:—Well, I will not press the matter just now but I may have to do it later.

Witness :—The subsidy is not paid by the number of miles but by the trip. The subsidy for the trip between here and Shanghai via ports is 200,000 yen annually. The company has no contract made as to the number of steamers, but we follow the example of the P. M. S. S. Co. and use four steamers. The steamers leave about once a week throughout the year. During the last year some extra steamers have been running to way-ports which carried mails. The Mitsu Bishi Company is required to take mails on all the regular mail steamers leaving for Shanghai or ports. The other steamers are more intended for freight.

Mr. Hill :—I wish to show Mr. Iwasaki the original contract, dated October 16th, 1875. (Plaintiffs' Ex. A. shown.) Now does the witness remember the exact Japanese words by which his office is designated?

Mr. Kirkwood objected, but His Honor said he could not listen to the objection.

Mr. Hill said what he intended to prove was, that the witness's evidence was useless.

His Honor :—Is there any question as to whether the man referred to as signing was authorized to sign that contract?

Mr. Hill :—That is exactly what I want to ask. (To Mr. Iwasaki) Was your brother actually manager then, as described in this document?

Witness :—Yes, certainly he was, he is proprietor of the whole firm.

Mr. Hill :—Is the Mitsu Bishi Company an actual company or a firm?

Witness :—We call it a company, but there are only a few persons in it.

His Honor :—Can you state the exact Japanese words used by your brother to designate the company at the signing of the contract?

Witness :—Yes Yubin Kisen Mitsu Bishi Kaisha Cho. He signs all documents thus.

The interpreter explained the name thus :—Yubin, mail; Kisen, steamship; Mitsu Bishi, Mitsu Bishi; Kaisha, company; cho, head.

To a question from Mr. Hill, witness said :—Kaisha means in one sense a company with shareholders; in the other, simply a business house in which many people are employed.

Mr. Hill :—Was your brother authorized to sign the contract in the manner he did?

Witness :—Yes.

Mr. Kirkwood said that the contract was admitted.

Mr. Hill said it was important to know this point about the signature.

Mr. Hill :—Had you and your brother known that the mail service would have been prolonged by one more mail, would it have made any difference?

Witness :—I cannot tell for certain, but if we had known we should probably have made some reduction in price if the steamer was to be handed over on the 14th of January. On the 1st of January 1877, and even before that, the steamer was wholly and completely under the control of the Mitsu Bishi Company. As to the *Nevada* there was no fixed place for transfer. No officer was appointed to transfer the vessel, but such an appointment could have been made at any time by my brother or myself if we had been asked for it.

The Court here adjourned until 1.30 p.m.

On the re-opening of the Court Mr. Hill said :—Under the ruling of the Court, it was ordered to produce the United States contract; now defendants have received a certified copy which I offer, if necessary.

Cross-examination of Iwasaki Iwanosuke, continued :—This specimen produced is the proper way of writing my brother's name. There was no person authorized to receive the *Nevada* outside of Japan, but we could have appointed one if necessary. On the 1st of January the *Nevada* was on the way to Shanghai from Kobe. I believe so but am not certain. Had she discharged freight, coaled and left Shanghai as quickly as possible and returned to Yokohama, I think it would have taken seven days between her arrival and her return.

Mr. Hill :—It is admitted that the *Nevada* reached Shanghai on the 4th of January.

Witness :—I consider a fair charter for the steamer would be \$15,000 per month at which estimate detention should be paid, no matter to whom due. To charter the steamer only I would not have taken \$15,000. I consider the *Nevada* was at the time mentioned worth to the company \$1,000 a day.

Mr. Hill :—The last last mail for Shanghai leaving here on 27th December, 1876, was it the duty of the Mitsu Bishi Company to carry it or not?

Witness :—Not in my opinion. The steamer was to leave on December 27th, and be transferred on the 1st January, and the Pacific Mail Company ought to have delivered her then to us. They could have detained her a few days here and completed the transfer but as it was, we let her go on the 27th December to accommodate the Pacific Mail Company. I think there is some correspondence on this subject: at that time we were on amicable terms and so took this particular mail to oblige the Pacific Mail Company.

His Honor :—I think it plain that the Mitsu Bishi Company was bound to carry this mail, but that it was none the less the duty of the other company to deliver up the steamer at the earliest opportunity.

Witness :—I read Mr. Bramsen's and Mr. Irwin's evidence in the paper. It was not agreed that fifteen round trips were to be made as stated in Mr. Bramsen's evidence.

Mr. Hill here requested the Court to order Mr. Kirkwood to desist from continually interrupting him. After a warm discussion this was granted, His Honor stating that if Mr. Kirkwood had any remarks to make, he could rise up from his seat and address himself to the Court in a proper manner.

Mr. Hill :—From your knowledge of your brother's intentions was it meant that fifteen round trips were to be made?

Witness :—No: I took no steps to find out what the contract between the Pacific Mail Co. and the United States Government said, but trusted to what Mr. Irwin and Mr. Center told me. I have not had time to find out the distance to the Bonin Islands. My brother is living at Tokio and could easily come down here. I cannot accurately remember if the first interview I mentioned this morning took place in September.

Re-examined by Mr. Kirkwood :—My brother does not speak English. At our interviews Mr. Irwin did the majority of interpreting. I interpreted sometimes. The 200,000 yen subsidy I mentioned this morning was only for the through steamers. I do not recollect the price of satsu then, but I think they were about 2 per cent discount.

Mr. Hill :—I believe I may ask if the other steamers running to the various ports received extra pay also?

Witness :—Yes, but they go only to Kobe.

Mr. Hill put in as evidence the specimen identified by the witness as being the correct form of his brother's signature.

Mr. Kirkwood had no further evidence to call, and said he would reserve his remarks until Mr. Hill had called his witnesses, if any, for the defence. He would wait for the decision of the Court on the subject of granting the commission he has applied for.

Mr. Hill :—We have considerable evidence but do not want to put it in until all the plaintiff's evidence has been heard.

His Honor :—I will not issue the commission until I can have a conference. I don't think it right. At the same time I think the right of commission is incontestable.

Mr. Hill :—I accept the ruling of the Court. I have already mentioned that we have received a copy of the contract made between the Pacific Mail Company and the United States Government from New York; there is also a lot of contemporary correspondence which completely shows the intention of Mr. Center. The contract could not have possibly come into force before the 18th October. Having received this contract we shall put it in evidence.

Counsel then offered an authenticated copy of the original contract made between the United States and the Pacific Mails Company for carrying mails between the ports of San Francisco and Hongkong, with a branch line connecting at Kanagawa to Shanghai, and from Hongkong to San Francisco, dated June 1st, 1872.

Mr. Kirkwood objected to the authentication and admission of the paper on the ground that the authentication is defective in being an office copy, and not a notarially certified copy. Also there is no proof why the original, of which the Government as well as the defendants should hold a copy, is not produced.

Mr. Hill said this only applied to official documents: the document was authenticated by five different seals.

His Honour said that there might be any number of seals which might yet have no virtue, and after some

further discussion on the subject, declined to admit the document at present.

Mr. Hill:—I understand that it has been ruled that the contract should be produced by one side or the other: we have done our best and should like to ask what efforts the plaintiffs have made.

His Honor considered that if it was anybody's duty it was that of the defendants.

Mr. Hill:—The plaintiffs claimed that the end of the service was the end of the year; perhaps it was a mistake but it was most clearly stated that the contract depended upon another one. I think it certainly the plaintiffs' duty to produce the other contract.

His Honor:—Have you taken any steps Mr. Kirkwood?

Mr. Kirkwood:—No, I never understood that we had to do so.

Mr. Hill:—It seems to me a plain issue. Undoubtedly there is some ambiguity in the contract. A contract referring to another one is bound by that other and it is the plaintiffs' duty to bring it to clear up any ambiguity. As I before said was it the time or the service? At the first glance I considered that the introduction of the question of time caused an ambiguity, and even from Mr. Iwasaki's evidence it appears that such might have been the case. However, as the contract really only began on the 18th of the month and it was impossible for it to begin before. After the witness's evidence I do not know that anyone actually knew when the contract ended. If there is a mistake we could have a record made and find out when the service ended. The leading idea of the contract was to protect the mail service of the United States. I should much like to call Mr. Iwasaki Yataro to give evidence on the subject of expenses. At present I will call another witness.

C. D. Harman, sworn, stated:—I am chief accountant of the Pacific Mail Company. I have been here about seven years. I recognise these accounts as being reports of commanders of the branchline of steamers which sailed between this port and Shanghai while running for the Pacific Mail Company. Also some reports from pursers as to the delivery of mails and some letters from the Japanese post office signed by Mr. Bryan. The commanders' reports refer to the distances run, arrivals and so forth. Mr. Bryan's letters refer to compensation due to the company for Japanese mails between here and San Francisco. I recognise all the commanders' signatures.

Mr. Kirkwood objected to the papers.

Mr. Hill said that he proposed to show that his clients performed services for the Japanese Government.

Mr. Kirkwood denied the right of the counsel to put these papers in the witness's hands and His Honor ordered them to be laid down again as it was distinctly irregular, and noted that the counsel for the plaintiffs made an objection to the witness having the papers any longer than was necessary to identify them.

Mr. Hill said he proposed to put all these papers in evidence if necessary.

Mr. Kirkwood objected to some of the papers.

Mr. Hill explained that his intention was to bring in all these papers as evidence, and he wished to ask questions about them. He intended to show by Mr. Harman's evidence the accounts and amounts paid to the Pacific Mail by the Japanese Government.

The papers were then handed back to witness who continued:—I identify letters from the Japanese post office officials in Yokohama, in reference to the amount due the Pacific Mail S. S. Co. for the carriage of Japanese mails from here to San Francisco. They are signed by Mr. Bryan and Mr. Carr, both of whose signatures I know well.

Mr. Kirkwood again objected to the papers but the objection was overruled.

Witness:—I see now that the first two papers cover six months. They represent the charge for two steamers. The amount appears as due to the P. M. S. Co. for the service from January 1st 1875 to June 30th 1880. There were two trips: the amount was 241.05 yen: the next amount was 134.83 yen from 1st July to 31st December 1875; next is from January 1st 1876 to March 31st, total yen 595. The next, 367.52 yen, from March 1st to June 30th. Next, four steamers; you 651.49 July to September: next October to December, 1877, three steamers, you 594.30. Next January to March, 1878, two steamers \$377.09 and there was a dispute about you. April 1st to June 30th,

1878, three steamers, \$556.35; July to September 30th, 1878, three steamers \$674.97; October 1st to December, 1878, two steamers \$481.99. January 1st to March 31st, 1879, \$496.54; April 1st to June 30th, 1879, four steamers, \$569.27. I believe the distance between San Francisco and Yokohama is about 4,700 miles. The last mail under the subsidy was transported on the 3rd or 4th of January, 1877. The average expenses of the *Nevada* for a round trip to Shanghai and return, including her lying in port at Shanghai and at Yokohama, until ready to leave again, would be about \$245 per day.

Cross-examined by Mr. Kirkwood:—The amounts mentioned were arrived at by a calculation of so much per weight, as one of the letters put in explains. We had a subsidy from our Government for the regular steamers, but the two first mentioned here were extra and were not affected by this. We never had any contract or agreement but took the mails as a courtesy and accepted whatever the Japanese Government liked to give us. I have seen no correspondence between our company and the U. S. Government about any unpaid claim for a subsidy, but have heard it talked about as having been made.

S. Bryan, sworn, stated:—I am director of posts. The Hongkong Government pays \$25 per steamer regardless of the amount of matter carried from Hongkong to Yokohama and San Francisco. The basis on which the post office here paid was, to the 1st of January, 1880, 6 cents per oz for letter mail and 6 cents per lb. for other articles. There was no contract, but it was based on an old understanding between Great Britain and the United States, and was the same as fixed by a law which ceased, in the United States, after the Burlingame treaty was put in force, I think in the first part of 1875. After the establishment of a Japanese post office here, the Japanese mails brought from Shanghai on the *Nevada* were included in those sent to the United States.

Cross-examined by Mr. Kirkwood:—The *Nevada* also brought mail matter for the way ports and Yokohama. The American post office at Shanghai did not make up any mails for Japan after 1875. The mails made up at the U. S. post office never passed through our office and were therefore not included in the compensation. I never gave any consideration as to what would be a fair price per mile for carrying mail matter between here and Shanghai.

The Court then adjourned until the 14th instant at 10 a.m.

## DESMOND'S MODEL.

### I.

Four o'clock on a sultry June afternoon. The sun beat fiercely on the Tuscan landscape; not a cloud dimmed the burning blue of the sky. The Apennines were dreaming in a haze of heat, which softened their rugged outlines; in the Valley of the Secchia the river rippled languidly over its stony bed, bereaved of its myriad tributary streams. The grass was burned brown, the vines were white with dust; only the olive trees looked cool, with their soft, gray-green foliage, vaguely suggesting mist and moonlight.

Dust, drought and sultry silence, broken only by the cicada's tiny chirp, prevailed over all the landscape.

At the end of the valley furthest from Lucca, a rough, zigzag road winds upward into the solitude of the hills. Two figures were just now toiling up the steep ascent; not Tuscan peasants, but a couple of Englishmen, in dusty tweed suits, each having a bundle of artists' traps strapped above his well-worn knapsack. The taller of the two stepped out at a good pace some yards in advance of his companion, singing: "Mandolinata" in a musical baritone; the other, who was some years older, and of a stouter build, plodded on stolidly behind him, pausing now and then to wipe his forehead and grumble at the heat. His pauses grew more frequent as they proceeded for the road got steeper at every yard. At length, when a sudden turn revealed another long ascent before them, he uttered a smothered groan, and, stopping abruptly, hailed his companion.

"Hallo—Desmond!"

The latter turned. "What is it?"

His friend only beckoned in reply, and, sitting down on the sun-burned turf by the roadside unstrapped his knapsack and leaned back with a long sigh of relief. Desmond paused a moment, then came leisurely back, humming the conclusion of his song. He was as handsome a young fellow as you will meet in a summer day. Fair, but sun-burned, with curly brown hair, frank, happy blue eyes, and a smile whose caressing sweetness few men, and still fewer women, could resist. He was dressed with an odd mixture of undified nicety and Bohemian carelessness. A paint-stained coat and battered brigand hat seemed little in harmony with his superfluous linen, to say nothing of the diamond ring on his little finger, which showed to advantage at this moment as he stooped twirling the ends of his mustache and looking down at his friend on the bank.

"Well old fellow, what's the matter?"

"The matter is that I am dead-beat. Not another step can I go up this heart-breaking hill."

"Is it, then, your intention to spend the night on that bank?"

"It is my intention to rest here until after sunset, at all events, unless some good Samaritan with a cart happens to pass by and will give me a lift."

"Well, but, my good fellow, you must be shockingly out of condition to be so easily knocked up. The fact is, Thorburn—don't be offended—you are getting fat."

"Fat!" Thorburn sat upright to give emphasis to his indignant protest. "Fat! It's a libel. I was never in better training. But on a road like this, with the thermometer at heaven knows how much in the shade—"

"Stop! stop!" interrupted Desmond, laughing. "I retract. I apologize. It is the heat, of course. You see we left Lucca an hour too late this morning—"

"Yes, you were flirting with that pretty American widow at the Hotel del' Universo; otherwise—"

"How could I better employ myself while you were snoring, you lazy humbug! If you had got up when I called you, instead of pitching a boot at me and going to sleep again, we should have been at San Giovanni-della-Rocca by this time."

"Well, if you are in a hurry to reach San-what's-its-name, go on, and leave me to follow at my leisure."

"In a hurry? Not I," Desmond returned, throwing himself on the grass at his friend's side, and lighting a cigar. "I am quite content to sit in the sun, and let things take their course."

A pause of meditative puffing.

"How still it is; how lonely, how grand! What a noble purple on those distant hills! One might be content to stay here for ever—the world forgetting, by the world forgot."

"The world would forget us soon enough, you may be sure," muttered Thorburn. "A short memory is one of its many pleasing—"

"Shut up, you old cynic, and don't abuse the world," interrupted Desmond. "It has its faults, no doubt; but—"

"Until you can show me a happier planet, More genial and bright, I'll content me with this."

He sang the lines, and then clasping his hands under his head, watched the smoke curling up from his cigar.

Thorburn gave him a glance, half envious, half admiring, and wholly affectionate. In spite—or perhaps, because of the difference in their characters—they were fast friends. They had been chums at school, fellow-students at the same drawing academy, and started abreast on the race of life. Desmond had already distanced his companion, but that fact had in no degree affected their friendship. "Yes, you will find it a jolly place, no doubt," said Thorburn. "So should I if I were in your shoes, with not a care to burden me."

"That remark shows how little you know me," replied Desmond. "Cares! I have heaps of them! I was brooding over one when you hailed me just now. Here we are, nearly at the end of our tour, and I have not yet found a model for my 'Lucretia Borgia.' If she doesn't turn up soon, that great picture, which was to take the public by storm next May, will never be painted."

"I thought you found her at Lucca. The coppersmith's handsome wife—"

"A glorious creature; but she was dark, my dear boy," interrupted Desmond, raising himself on his elbow. "Now, La Borgia was a golden blonde; there is a lock of her hair in the Ambrosian Library at Milan. Are you listening?"

"Yes," Thorburn answered, drowsily. "Well, perhaps you'll find her at San Giovanni; who knows? Suppose you go on, and look for her, and if there is a conveyance of any sort in the place, you can send down for me. Pray go."

"Disinterested advice!" laughed the other, as he rose and shook himself. "Would a wheelbarrow suit you, *faut de mieux*? If there is anything in the place that will carry you, I'll send it; but if it doesn't arrive in an hour's time, you had better walk on. Remember, we are to put up at the 'Aguila Nera,' in the Piazza."

He went a few yards, then paused, and stooped to read the half-defaced inscription on a boundary-stone which marked the point where a path branched off to the left.

"I shall go this way," he called out, looking back: "It is rougher, but shorter, I fancy."

"Stick to the road," was Thorburn's caution.

"It is the road, unless this thing fits like a tombstone. 'San Giovan' del'—and some hieroglyphic, intended, no doubt, for Rocca. It's all right. *A rivederci*!"

And he was gone.

Having watched him out of sight, Thorburn settled himself luxuriously on the turf, put his knapsack under his head for a pillow, and in five minutes was fast asleep.

The golden afternoon waned toward evening. As the sun declined, deep, gloomy, purple shadows spread up the slopes, and gradually enfolded the hills like an imperial mantle. A rosy light still lingered on the peaks, but the valleys were lost in soft, mysterious gloom.

At length Thorburn woke, feeling chilled and stiff, and having only a hazy idea of where he was. Looking round, he was startled at the lengthening shadows, and hastily buckling on his knapsack, set off again. Having a rooted distrust of "short cuts," however plausible, he kept to the main road.

Soon the sun's red rim dropped out of sight behind the farthest mountain range; the brief twilight was quickly past, and "with great strides came the dark." The sky was soon all luminous with stars; then a ghostly light like dawn spread upward from behind the cleft summit of La Pagna, and presently out of that light rose the full-orbed moon.

The artist trudged on in the silence and the moonlight, his feet falling noiselessly on the dusty road, where himself was the only living object visible for miles. Once a convent chime ringing for the Benediction Office sounded musically from a neighboring hill-side, and a little church, hidden among olive woods in the valley

below, answered with a single cracked bell. Then there was silence again; the majestic silence of the hills, fraught with solemn meaning.

At length, another turn of the weary way brought him in sight of his destination—an ancient, world-forsaken little town, perched on a rocky eminence, dark against the stars; its brown, sun-baked houses nestling round a ruined citadel, athwart whose route the moonlight slanted.

Up a steep stretch of road, with horizontal lines of rough stone paving at intervals, like the rungs of a ladder; past a wayside crucifix, with a blind beggar sitting on the steps at its foot; over a bridge which spanned the dry bed of a water-course, under an arch in a massive wall, where a dim oil-lamp burned before the shrine of "Our Lady of the Seven Sorrows," and into a crooked, dark, ill-smelling street, where the houses seemed to meet overhead, shutting out the sky.

The day's work was over, and the townspeople stood about in the arched doorways and on the steep steps of their houses to take the fresh air—"pigliare il fresco"—though it was still hot and close enough in the narrow ways where there was a mixed smell of garlic and melons and wine and polenta, with here and there a whiff of odors less ambrosial.

Women with white head-gear leaned out of the unglazed casements; men lounged on the pavement playing at "Morra;" brown, half-naked children played and fought in the gutters. Some one was strumming a mandolin, and ringing a plaintive Tuscan "Rispetto."

The street emerged into a paved square, on one side of which stood the church, a quaint, ancient edifice, with a Lombard tower and an open belfry, where the bats were fitting in and out among the bell-ropes; and on the other, the inn, a flat-roofed, stone-galleried house, with one wide doorway.

The inevitable group of gossipers lounged on the steps; the cooper and the baker, and the little barber from next door, and the barber's stout wife, with a baby in her arms, so tightly swaddled that it looked like a wax doll. The landlord surveyed the group from the doorway, which he completely filled; a burly, good-tempered looking man, with a large, clean-shaven, olive face, and a shining bald head.

On Thorburn's approach the conversation ceased, and half-a-dozen dark eyes were turned upon him, curiously, but not rudely. The men made way for him to pass, uncovering with grave courtesy, while the "padrone" bowed himself backward into the house, with a gesture which placed himself, his establishment, and all his belongings at the traveller's disposal.

The door opened at once upon a great bare sala, with stone floor, frescoed walls, and a rafted ceiling, from which an oil lamp was suspended by a chain.

"My friend has arrived, I suppose?" the artist said, glancing round.

The inn-keeper paused in the middle of a bow, and looked at him inquiringly.

"The Signor expected to meet a friend here?"

"Certainly; he went on first, and must have arrived two or three hours ago."

The other shrugged his shoulders with a deprecating smile, and gesture of outspread palms.

"I have not had the honor of welcoming this gentleman. The Signor himself is the only traveller who has arrived here to-day."

"Perhaps he has gone to some other inn," Thorburn began, "though he certainly said—"

"Excuse me, Signor, there is no other. 'L'Aguila Nera' is the only inn of San Giovanni."

And the group at the door, who were interested and attentive listeners, promptly confirmed the padrone's statement. Thorburn looked perplexed.

"I fear he must have lost his way," he said, after a pause. "He was probably misled by the inscription on a boundary-stone, where a path—"

"Ecco! that leads to St. Giovanni-in-the-Vale, a village two leagues and a half from here!" half-a-dozen voices exclaimed at once.

"Then he certainly will not be here to-night," the artist remarked, as he threw his knapsack on the table and sat down.

"What sort of place is this other St. Giovanni? There is an inn, I suppose, where he could put up?"

"Ma sì, there is an inn—of a sort," mine host assented with a shrug, as he spread a coarse white cloth over one end of the long oaken table. "Alessandro Morelli's. Not in the village itself, but on the hill-road, half-an-hour's walk beyond. It stands on the site of an ancient Carthusian monastery. Morelli bought the land for a song, ruins and all, and built himself a house out of the old stone. Some say it was sacrilege, and that the house is accursed—"

"The man is," put in the cooper in an undertone.

"Keep thy tongue quiet, Tonio mio," the host returned, with a grave, cautionary nod. "We know nothing against Sandro Morelli, except that he is sullen and unsocial, and that he is jealous of his wife; and as she is a handsome woman, nearly twenty years younger than himself, that is excusable."

"Bella Belissima—la Bianca!" exclaimed the little barber, rapturously. "Per Baccho, if I had a wife as handsome—no offence to thee, mia gioja," he added, turning to his fat and decidedly plain better half—"I should be jealous as Bluebeard—via!"

"And what handsome woman would marry a snipplet like thee?" his 'joy' returned composedly, on which there was a general laugh.

"Brava, Caterina," exclaimed the landlord. "Your tongue is sharper than Nello's razors. Yes, Bianca is beautiful," he continued; "but, to my thinking, there is something uncanny about her. She has a frozen look. Her face is like a lovely mask, and what the soul behind it may be, heaven only knows."

"She is unhappy, perhaps," Thorburn suggested, wondering whether this beautiful "uncanny" woman would prove to be the model Desmond had been seeking.

"How should she be otherwise with such a husband as she has got?" demanded the barber's wife, shrilly. "Santa Maria! if he were mine, I'd cure him of jealousy, I'll warrant you."

"Ay, your face would cure him of that, mia bella," remarked her husband dryly; and this time the laugh was against her.

"Ebbene, my friends," said the landlord, as he set knife and fork, plate and glass before his guest: "it is getting late, and as the Signor's supper will be ready in the space of a credo—"

The visitors took the hint in perfect good part, and at once withdrew, wishing the stranger "buena notte."

The supper was not long in making its appearance. It consisted of a basin of vegetable soup, flavored with grated cheese, a portion of roast kid, smoking hot, a scrap of Parmesan, on the same plate with half-a-dozen wizened little apples, and a cup of black coffee to conclude with. Everything that was not flavored with cheese tasted more or less of garlic. However, a flask of capital Monte Pulciano made amends for the defects of the cuisine, and when he had finished it, and had taken a stroll in the Piazza, where the quaint shadow of the church lay black across the moon-whitened pavement, the artist asked to be shown to his room.

It proved to be a long, draughty apartment with a tiled floor; clean enough, but supremely uncomfortable. However, too used to roughing it to be critical, he soon "turned in," leaving the lamp burning. Tired as he was, it was some time before he slept.

Fragmentary recollections of the past day haunted him; the hill scenery unrolled before him in an endless panorama; he heard the convent bells, the tinkling mandolin, the voices of the gossip at the inn door. Then his thoughts reverted to Desmond, whom he pictured arriving next morning, brisk and blithe, and *debonnaire*, making himself at home in the place at once, joking with the host, rambling about the old town in search of his "Lucretia Borgia," and incidentally making acquaintance with every man, woman and child he encountered.

With a smile at the thought, Thorburn at length fell asleep.

How long his sleep lasted he never knew. He woke with a start—woke completely, passing without transition from the deep insensibility of dreamless slumber into full consciousness—and sat up in bed, looking round him with a bewildered stare.

Had he dreamed it, or had he really heard Desmond calling him?

He listened. Within and without the house all was profoundly still—so still that he could hear the owls hooting in the wide, dark country outside the walls of the town.

He sprang out of bed and went to the window; perhaps Desmond was waiting for admittance in the street below?

Half in the forlorn light of the waning moon, half in the black shadow of the church, the Piazza lay, bare, silent, solitary, with no living creature visible save a vagabond dog creeping stealthily across it. The town was silent as a city of the dead; and in the distance the owls still hooted mournfully with a sound as of "Woe—woe!"

As he leaned on the window-ledge looking out and pondering over his strange delusion, a curious feeling of numbness and insensibility began to creep over him. It was as though a thick veil or cloud were gradually interposed between his senses and the outer world. There was an interval of blank unconsciousness, from which he awoke—into a dream. His wide-open eyes were still fixed on the Piazza, but with some mysterious inner vision he beheld a quite different scene—one utterly unfamiliar to him.

He was standing, he thought, in the interior of a half-ruined tower, which seemed to have been the campanile of some church or chapel. Through a breach in the walls he could see, outside, a large weed-grown courtyard, with the remains of a cloistered walk at one side, and at the end a low stone house half hidden by trees.

Suddenly he heard Desmond's voice calling him. It seemed to come, hollow and muffled, from beneath the flooring of the tower, under his feet. He looked around, and noticed for the first time a low, arched door in one of the massive walls. It was open, showing a flight of worn stone steps, leading to a vault or crypt below.

He was not conscious of changing his position, but the next moment he seemed to be in the crypt. It had a damp and earthy odor, and was profoundly dark, except where a faint, mysterious light at one end showed him—Desmond, stretched on the damp stones in a pool of his own blood.

The shock of horror which ran through him at that sight broke the spell. His vision suddenly faded into darkness; gradually, as it had gathered the cloud passed from his perceptions, and he regained consciousness, to find himself still standing at the window, with his eyes fixed on the moonlit piazza.

He sank into a chair, passing his hand over his damp forehead. His heart beat tumultuously; his mind was in a whirl. What had he seen?

Was it only a waking dream—an hallucination—the result of, perhaps, over-fatigue? No; it was far too real, too vivid! That terrible picture seemed burned into his brain. When he closed his eyes he could still see it, painted on the darkness, and Desmond's voice—urgent, imploring, reproachful—rang in his ears; a passionate, despairing summons, uttered in a moment of supreme peril. Had it reached him too late?

The thought went through his heart like a knife. He started to his feet, resolved to lose no more time in vain conjectures, but to get ready at once, and be away with the first gleam of morning in search of his friend. Already the moon and stars were paling, as a faint cold light crept upward from the east, and by the time that he was dressed the sky was flushed with the lovely rose of dawn.

## II.

Half-an-hour later, Thorburn passed out of the gate, under the shrine of "Our Lady of the Seven Sorrows," and went his way down the steep road, leaving behind him the forlorn little town on

its rocky height, dark against the dawn, as last night he had seen it dark against the stars.

Beautiful beyond telling was the scene which stretched before him, bathed in the ineffable brightness and stillness of early morning. The bare and melancholy Apennines, transfigured by the flush of sunrise, looked radiant, rose-colored, ethereal, like mountains in a fairy-tale or a dream. The valleys were still white with mist, but here and there a rent in the gauzy veil disclosed distant towns and villages, a monastery or hill-side belfry gleaming white from amid woods of olive or chestnut. The swallows wheeled high up in the luminous air; little golden-green lizards basked in the sunshine; myriads of yellow butterflies flitted past, like leaves that the light breeze scatters in sport.

Everything seemed full of life and joy this radiant summer morning, and, in spite of himself, Thorburn felt the influence of the scene. He could not altogether shake off the vague apprehension which oppressed him, but he felt, somehow, relieved and reassured. Out here, in the air and the sunlight, supernatural fears seemed absurd.

The dew was still on the grass when he reached St. Giovanni-in-the-Vale, a squalid, straggling village, with one "long, unlovely, street," where fowls, pigs and children disported themselves indiscriminately.

On making inquiries he found that Desmond had been seen in the place the day before, but a little goatherd—a grinning, white-toothed, sunburned urchin—had passed him "just after sundown, on the hill road, not far from 'Sandro Morelli's.'"

Without a moment's delay Thorburn set off again.

The road, which wound upward out of a thickly-wooded valley, was little more than a wagon-track, dry and crumbling, and strewn with pebbles, like the bed of a torrent. He had followed it for some distance before he reached any habitation, and then it was only a solitary farm-house standing back from the road, with a few poor fields of maize and corn, and a little grove of chestnut trees at the side.

A man was digging in the field close to the house, and Thorburn approached him to learn how far he still was from his destination.

On being addressed, the other shook back a tangled mane of black hair and looked up. He was a muscular, broad-shouldered fellow, of the type which, in Tuscan phrase, is "moulded with the fist and polished with the pick-axe," with a sombre, olive-tinted face, and fierce, haggard, dark eyes. His blue and white shirt was open at the neck, showing a massive brown throat; his bare feet were thrust into wooden shoes.

He thrust his spade into the ground, and looked his interlocutor over at his leisure before he replied, nodding over his shoulder at the building behind him. "There it is."

"That! But that is a farm, not an inn."

"Call it what you like. There is the house, and here am I, 'Sandro Morelli, if you want me.' And he went on digging.

The artist turned to look at the house, and noticed for the first time that the bough which serves in lieu of sign at the humbler class of osterias, hung over the door. It was a poor place, roughly built of great blocks of stone, which had evidently once served a more dignified purpose. No ruins were to be seen from the road.

"A friend of mine, an Englishman, put up here last night," Thorburn resumed: "shall I find him indoors?"

The man looked up again, shading his eyes from the sun.

"You are mistaken; your friend did not put up here. We had no guest in the house last night."

Thorburn started, looking at him in doubt and incredulity. "But—but there is no other inn where he could have lodged, and when last seen he was close to your house."

"When was that?"

"Just after sunset, yesterday."

"I was out then; my wife may have seen him pass. You can ask her; there she is."

The artist turned toward the house, and found himself in the presence of the loveliest woman he had ever seen or dreamed of. She stood in the doorway, like a radiant picture in a dark frame; "a daughter of the gods, divinely tall, and most divinely fair." She was in the noontide of her beauty; her figure full, but not heavy, her small head nobly set above the rounded throat and shoulders. Her complexion was of that warm whiteness which an old poet calls "a golden pallor;" hazel eyes, soft as velvet, looked out from under level brows; rippled hair, of a rare and lovely shade of tawny gold, was coiled in superb luxuriance round her head.

"Half light, half shade she stood;

A sight to make an old man young."

But her face had an expression which seemed out of harmony with its radiant and gracious beauty; a fixed, inscrutable look, like that which perplexes one sometimes in the marble features of some antique statue, whose legend is long forgotten.

"Speak then," her husband said roughly; "you heard the question."

"A gentleman—a signor inglese—passed by yesterday evening, after sunset," she answered, addressing Thorburn.

"Passed by?" he repeated: "did he not come to the house?"

There was a pause before she answered. Her husband looked up at her, with his foot on the spade.

"He came to the door," she said slowly, looking at him, and not at the questioner. "I was standing here, and he asked me for a glass of water."

"And then?" Thorburn interrogated anxiously. "That was not all?"

"What more should there be?" the man exclaimed impatiently; "he asked for a glass of water, and when he had drank it, went on his way."

Thorburn glanced from one to the other, and, after a moment's pause said, quietly: "I have had my walk for nothing, it seems. I will rest a few moments, if you please, and taste your wine before going further."

As Bianca drew back for him to pass, her eyes met his with a look that thrilled and startled him. Fear, warning, entreaty—what did that eloquent glance express? He felt that it was full of significance if he had but the clue.

The door opened upon the kitchen, a quaint, homely place, with coarse frescoes on the walls, gaudy cups and plates displayed on a cupboard, and a waxen image on the chimney-piece. One wide, unglazed casement, with prison-like bars across, looked out upon the fields; opposite the entrance was another door, closed. The room was hot and close, pervaded by a musty smell of dried herbs and beans and onions.

The man followed them in at once, and half sat, half leaned on a table under the window, with his back to the light.

Moving like Juno, and looking, in her homely dress, like a queen in disguise, Bianca placed before the visitor a flask of wine and half a loaf of coarse bread.

"Are there any remains of the convent which once stood here?" he asked, as he poured out the wine. "I see no ruins."

"They are in the court at the back," the man replied: "only a cloister and the bell tower."

Thorburn was raising the glass to his lips. He set it down untasted.

"Apparently our wine is not to your liking!" Morelli remarked. "The room is close; I feel stifled."

Obeysing a gesture of her husband, Bianca opened the door, opposite to which Thorburn was sitting, and admitted a flood of sunshine.

Outside, in the light and heat, was a spacious wood-grown courtyard, incumbered with wood-stacks, oil-presses, and heaps of hay and straw.

At one side was a damp, dilapidated stone cloister; at the end a ruined Lombard tower.

The artist put his hands before his eyes, as if the light dazzled him.

He felt a creeping chill among the roots of his hair, and his hands, burning but a moment ago, were suddenly damp and cold. Plainly as if it were then before him, he could see the dark vault, the prostrate figure, the dreadful red stain on the stone floor.

For a moment horror paralyzed him, but that weakness passed and left him deadly calm. His hand was steady, his senses quickened, his nerves braced to meet danger in any shape. He furtively felt in the breast-pocket of his coat to make sure that something, without which he never travelled, was still there, then rose and approached the door.

"Are those the ruins? They are picturesque. I should like to have a nearer view of them."

"Scusa," Morelli returned, "we do not make a show of them. If you are curious in old stones, there are plenty to be seen elsewhere."

"But I have heard that these are particularly interesting," Thorburn answered deliberately. "That there is a vault or crypt under the tower?"

"Who told you that?" The exclamation seemed to have escaped him involuntarily. He bit his lip, and added hastily, "There is no crypt: at least I know of none."

"Perhaps you have not looked for it! Curious discoveries are made in such places sometimes." He spoke the last words looking the other full in the eyes.

Morelli's face changed—turned ashy pale, haggard, terrible; and his hand stole to his waistband. But he checked himself, and, after a moment's pause, said, with a sudden and sinister change of manner to ironical courtesy: "Well, Signor, if you are bent on making discoveries, I will not thwart you. You shall see the tower. Come with us, *mia bella*," he added, turning to his wife, who was standing motionless in the shadow at the end of the room.

She came forward, moving mechanically, like a sleep-walker; her eyes fixed upon her husband's face.

"Go first," he said, drawing back for her to pass. She preceded them out of the house and across the courtyard to the entrance of the tower; there she paused, and stood in the arch, with her hand on a projecting fragment of masonry, while Morelli and the artist entered.

Thorburn looked round. The place was like and unlike the scene of his vision. The general features were the same, but the details differed. The tower was roofless; overhead was a space of cloudless sky, where a flock of pigeons fluttered, white against the blue. Heaps of debris incumbered the floor, and were piled against the walls. No door was visible. As he looked round in perplexity, his eyes lighted on Bianca's face. With one lightning glance, unobserved by her husband, she indicated a point in the wall opposite to the entrance. He took but one stride toward it, and began to tear away the rubbish that was heaped against it—hastily, fiercely, flinging the stones behind him, regardless where they fell. Behind, deep set in the massive masonry, was a low, nail-studded door.

He looked round at Morelli, pointing to it without a word. The latter approached. There was an ill-omened smile on his lips, but his face was white and his eyes had a look of menace; not to be mistaken.

"The Signor is a magician truly. Such knowledge is wonderful—and a little dangerous. It is always dangerous to know too much." Then, with a gesture of mock courtesy, he added: "Eccellenza! I follow you."

Thorburn had his hand upon the bolt, but before he could draw it a voice behind cried, "Stay, stay!" and a hand grasped his arm. It was Bianca. Bianca—so transformed by excitement that she looked like another woman. The stony, apathetic expression had fallen from her face like a mask: her eyes were dilated, and a scarlet spot burned in her cheeks.

"You must not pass that door till you have heard what I have to tell you," she panted. "Ay! I will speak now, though you kill me the next moment," she added, turning to her husband with a

gesture of defiance. "The Signor shall know all—and so shall you. I have something to tell that you do not dream of."

Morelli looked at her stupidly; he seemed too amazed at the change in her to take in the sense of her words.

"I know or guess the worst already," Thorburn said solemnly, "I know that my friend lies in the vault under our feet. I believe that he has been fully murdered—"

"No, no!" she interrupted triumphantly "not murdered—for he is alive!"

The two men uttered a simultaneous exclamation—Thorburn of joy, the Italian of rage and incredulity.

"It is false!" he shouted furiously, threatening her with his hand; "clever as you are, you could not bring your lover to life again."

She looked at him with a smile of scorn. "My lover! I never saw him till yesterday, when he came to the door to ask for a drink of water. He begged me—as courteously as if I had been a queen—to let him draw my face, to put in a picture he was painting, I consented: where was the harm? but he had hardly begun, when you burst into the place—you had been watching me, I suppose, as usual—insulted him, struck me, and, when he interposed to defend me from your violence—O Dio! shall I ever forget seeing him fall at my feet?"

She shuddered, and hid her face in her hands.

"But listen," she went on breathlessly. "When I was hiding in this place last night—for I could not breathe under the roof that sheltered you—I heard a sound in the vault below. It was a noise—the voice of the man you had left there for dead—crying for help. I hurried back to the house, got a lantern, a flask of wine, and some other things, and went down into the vault. There he lay, on the damp stones, bleeding to death in the dark. He was conscious, but his mind wandered. He took me for an angel, and said such wild, beautiful things! I bound up his wound and sat with him all night, putting wine to his lips to keep the life in him. Toward morning he fell into a stupor, and then I left him, piling up the stones outside the door, as I found them. You kept close watch upon me, but if you had tied me hand and foot I would have found a way, before the sun was high, to escape and denounce you."

With a hoarse cry of rage he rushed upon her, knife in hand, Thorburn interposed just in time; and, placing himself before her, drew out his revolver. Savage and desperate, the man made a snatch at it, wrenched it from his grasp, and pointed it full in his face. Quick as thought, the artist struck up his arm. There was a flash, a sharp report, and Morelli staggered backward and fell headlong, shot through the brain.

The first moment of stupefaction past, Thorburn bent over the body and turned the face upward. After one glance he rose.

"Your husband brought his death upon himself," he said, gravely; "but if you had told me the truth when I spoke to you at the door, this might have been avoided."

"Signor—forgive me! I tried to speak, but—but with his eyes upon me, I durst not. You do not know what he was," she added, in a shuddering whisper with a sidelong glance at the prostrate figure, never more to be feared now.

Thorburn looked at her compassionately. "I understand," he said gently: "I will not reproach you. Come—let us waste no more time. There is a life to be saved;" and, drawing back the heavy bolt, he descended the steps into the crypt.

An oil lamp in one corner diffused a feeble circle of light around, leaving the extremities of the vaulted chamber in obscurity. Near the light, on a heap of straw and rags, lay Desmond, with an awful stillness and pallor on his face, which made the handsome features seem unfamiliar to his friend.

"We are too late!" groaned Thorburn.

"No, Signor; he is only in a swoon, just as I left him." She put back the damp, disordered hair from his forehead. "How beautiful he is!" she murmured, with a sort of awe; "like the pictures of the blessed St. John."

Her touch seemed to rouse him. His eyes unclosed and rested on her face.

"You are still here? Oh, you are kinder than my friend," he whispered. "I called to him—till my voice failed—but he never came."

Those words gave Thorburn a curious thrill.

"I am here now, Frank, old fellow," he said huskily; but Desmond had already relapsed into insensibility.

"He must not remain here; but can you help me carry him, Bianca?"

"Yes, yes," she assented eagerly, extending her strong white arms.

Between them they bore him up the steps, across the courtyard, and into the house, and laid him down on the bed in an inner chamber—a bed which he was not destined to leave for many a weary day.

III.

"Here's a pretty state of things! I must have been as blind as a bat not to have seen it before."

It was Thorburn who spoke, and the words were addressed to himself in a tone of vexation and perplexity.

Three weeks had passed away, and Desmond, thanks partly to an excellent constitution, but chiefly to Bianca's tender nursing, had "healed him of his grievous wound," and was pronounced by the worthy leech of San Giovanni to be quite well enough to travel. But he showed a reluctance to leave his present quarters, which Thorburn was at a loss to understand, till, on returning from a sketching expedition one afternoon, he was accidentally the witness of a scene which let a flood of light into his mind, and caused him to utter the ejaculation recorded above.

Desmond, white and gaunt, but as handsome as ever, lay on the turf in the shadow of the chestnut trees at the side of the house. Bianca sat near him: she had a tress of straw in her fingers, but she was not plaiting. Her hands lay idle on her lap, her eyes were downcast. Never had she looked so lovely as at this moment, when

her face was transfigured by some new and sweet emotion.

Leaning on his elbow and his side, and looking at her with all his heart in his eyes, Desmond was speaking earnestly, passionately; evidently pleading his cause with all a lover's eloquence.

Thorburn saw her give him one quick glance, in which joy and sadness were strangely mingled; saw him take her hands, and draw her nearer, till her golden hair brushed his lips—then suddenly becoming conscious that he was playing the spy, he went indoors, and sat down at the table near the window. "H'm—well, if he *will* make a fool of himself, he must. Certainly, she is a lovely creature, and she saved his life, and—Anyhow, I can't interfere." He had not long arrived at this conclusion, when, to his surprise, Bianca entered. There was a look on her face which made him exclaim:

"What is a matter? Is Desmond worse?"

"No, Signor, he is better," she said quietly; "so much better that he can spare me now. So I am going."

"Going!" he echoed: going where?"

"To the Convent of Corellia. Lucia will take charge of the house till I return—if I ever return. Perhaps, by-and-by, I shall take the veil."

He looked at her without speaking. She stood before him in an attitude of composed and patient melancholy, her hands folded before her, her eyes veiled by their white lids.

"Does my friend know?" he asked at length.

Her lips quivered.

"No, I—could not tell him. You will tell him to-night when I am gone."

"He will be deeply hurt at your leaving him in this way. You must know that he—"

"Yes," she interrupted, "I know. It is because I know it that I leave him. Signor, he has just asked me to be his wife—me," she repeated, with a smile of self-pity. "Look at me and think of it."

Thorburn did look at her, standing before him in her matchless loveliness, and, regardless of prudence, said what came into his mind. "Your beauty would grace any station."

"My beauty—and when that fades, what is there left to charm him? I am an ignorant peasant. I could not live his life or think his thoughts. Sooner or later he would weary of me, and then—then my heart would break."

She was silent a moment.

"No, no," she continued. "It is a hundred times impossible! He will grieve for a while, but the world is all before him; he will soon—yes, soon forget."

"And you, Bianca?"

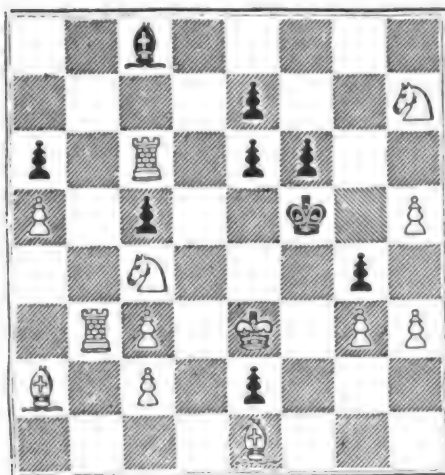

She looked out through the window, as if she were looking into the dim vista of years to come.

"And I—shall remember," she murmured, as she turned away.—*The Argosy.*

### METEOROLOGICAL REPORT

FOR WEEK BEGINNING FRIDAY, SEPTEMBER 3RD, 1880.

Observatory of Daigaku, Moto-Fujicho, Hongō, Tokio, Japan.

### REMARKS.

Heavy line represents barometer.

Light continuous line—max. & min. thermometers.

.....represents velocity of wind

.....percentage of humidity

Max. velocity of wind 12.5 miles per hour on Thursday, at 4 p.m.

The barometer is reduced to the freezing point and to the level of the sea.

The highest reading of the barometer for the week was 30.092 inches on Friday, at 7 a.m., and the lowest was 29.888 inches on Tuesday, at 2 p.m. The highest temperature for the week was 83° on Wednesday, and the lowest was 63° 2 on Monday. The maximum and the minimum for the corresponding week of last year being 82° 2 and 61° 5 respectively. The total amount of rain for the week was .852 inches against a total of 1.260 inches for the corresponding week of last year.

### SHIPPING INTELLIGENCE.

#### INWARDS.

- Sept. 5, British steamer *Garlic*, Kidley, 2,652, from San Francisco, Mails and General, to O. & O. Co.  
 Sept. 5, Japanese steamer *Tyushima Maru*, Hubbard, 597, from Kobe, Mails and General, to M. B. Co.  
 Sept. 6, French steamer *Menzaleh*, Homery, 1,273, from Hongkong, Mails and General, to M. M. Co.  
 Sept. 7, Japanese steamer *Tsuruga Maru*, Steadman, 661, from Hakodate, Mails and General, to M. B. Co.  
 Sept. 6, German barque *Wallyre*, Walters, 804, from New York, Kerosene, to Adamson, Bell & Co.  
 Sept. 7, Japanese barque *Kanagawa Maru*, Eckstrand, 1,184, from Nagasaki, Coal, to M. B. Co.  
 Sept. 7, Japanese barque *Sunamonra Maru*, Spiegelthal, 925, from Nagasaki, Coal, to M. B. Co.  
 Sept. 7, American ship *Panay*, Bray, 1,190, from New York, Kerosene and General, to C. & J. Trading Co.  
 Sept. 7, German schooner *Auguste Reimers*, A. Thomson, 207, from Takao, Sugar, to Jardine, Matheson & Co.  
 Sept. 7, Russian corvette *Zabiaka*, Captain Loman, 1,050, 6-guns, from Nagasaki.

Sept. 8, American barque *Ellen Goodspeed*, Morse, 1,201, from London, General, to Malcolm & Co.  
 Sept. 8, German 3-masted schooner *Juliane*, Oestmann, 126, from Takao, Sugar, to Jardine, Matheson & Co.  
 Sept. 8, German barque *Imo*, Brorson, 344, from Takao, Sugar, to Jardine, Matheson & Co.  
 Sept. 8, German schooner *Nachsholt*, Brodersen, 187, from Takao, Sugar, to Chinese.  
 Sept. 8, Japanese steamer *Genkai Maru*, Conner, 1,260, from Shanghai and ports. Mails and General, to M. B. Co.  
 Sept. 10, Japanese steamer *Wakanoura Maru*, Christensen, 1,343, from Kobe, Mails and General, to M. B. Co.  
 Sept. 10, French despatch vessel *Bunce*, Captain Dauge, 6-guns, from Saigon.

## PASSENGERS.

Per British steamer *Santa* from Hongkong via Nagasaki:—Dr. O'Brien in cabin, and Paloo Was on deck.  
 Per British steamer *Gaelic* from San Francisco:—Admiral I. M. R. Clitz, (U.S.N.), Commander C. S. Cotton, (U.S.N.), Lieutenant W. L. Field, (U.S.N.), Lieutenant N. E. Mason, (U.S.N.), J. F. Laby, (U.S.N.), W. E. C. Haasen, (U.S.N.), C. A. E. King, (U.S.N.), Franklin Swift, (U.S.N.), F. G. Dewey, (U.S.N.), Cramer, (U.S.N.), M. K. Eyre, (U.S.N.), M. C. Gorge, (U.S.N.), W. J. Maxwell, (U.S.N.), Chas. Cabaniss, (U.S.N.), W. Trutrum, (U.S.N.), P. R. Alger, (U.S.N.), E. T. Leiper, (U.S.N.), E. Simpson, (U.S.N.), Joseph Beale, (U.S.N.), Mrs. R. P. Bridgens and child, Messrs. J. L. Anderson, M. Y. Proda, M. Crare, and J. W. Wendell. For Hongkong:—Messrs. J. T. MacLeod, Alfred Rowe and 207 Chinese.  
 Per French steamer *Menzaleh* from Hongkong:—Mr. and Mrs. Sonnemiyal, Mr. and Mrs. Eynard and three children, Messrs. Geband, F. Biffi, F. Ricardi, G. Buttal, G. Maurens and Hiro Suzuki.  
 Per German schooner *Auguste Reimers* from Takao:—Mr. R. Dross and one Japanese.  
 Per Japanese steamer *Genkai Maru*, from Shanghai and ports:—Mr. and Mrs. Goto Shojiro and family, Lieutenant Farnard, Dr. Doderlin, Messrs. I. Ellis, Raffin, Taylor, Oestman, Glennie, and L. L. Forbes, and eighteen Japanese in cabin; 5 Europeans. 317 Japanese and 4 Chinese in steerage.  
 Per Japanese steamer *Wakanoura Maru* from Kobe:—123 Japanese in steerage.

## OUTWARDS.

Sept. 7, British steamer *Gaelic*, Kidley, 2,652, for Hongkong, Mails and General, despatched by O. & O. Co.  
 Sept. 7, British steamer *Ajax*, Kidd, 1,524, for Kobe, General, despatched by Butterfield & Swire.  
 Sept. 8, Japanese steamer *Takayago Maru*, Young, 1,230, for Shanghai and ports, Mails and General, despatched by M. B. Co.  
 Sept. 8, Japanese steamer *Higo Maru*, Moore, 896, for Coast ports, Mails and General, despatched by M. B. Co.  
 Sept. 9, American barque *Obed Baxter*, Baxter, 750, for New York, General, C. & J. Trading Co.  
 Sept. 9, British steamer *Santa*, Reeves, 1,704, for Hongkong, Mails and General, despatched by P. & O. Co.  
 Sept. 9, Japanese steamer *Toyoshima Maru*, Hubbard, 597, for Kobe, Mails and General, despatched by M. B. Co.  
 Sept. 9, Russian corvette *Zabiaka*, Captain Loman, 1,050, 6-guns, for Nagasaki.

## PASSENGERS.

Per British steamer *Gaelic* for Hongkong:—Mr. & Mrs. Fauchat, Messrs. A. H. Albers, Alfred Rowe, J. T. MacLeod, A. J. Lewis, and 208 Chinese.  
 Per Japanese steamer *Takayago Maru*, for Shanghai and way ports His Excellency Chin Wing Gup, and Suite, (18), Messrs. H. Busch, Reynders, Brown, Brinkworth, Urasa, Suminaya, Kajiyama, Tada, Takashima, Doil, Meyerlechs, Worch, Baron Stillfried, Cramer, Luby, Roda, Hosson, C. A. King, Marshall, G. Bell, Mura, Kawabae, Dr. Winn, Commander Cotton, (U.S.), Lieutenant N. S. Moe, Mr. and Mrs. Sakurai and child, Messrs. Rioka, Wada, and Takaike.  
 Per British steamer *Santa* for Hongkong:—Colonel and Mrs. Geddes, 6 children and European maid, Mr. and Mrs. Bishop and children in cabin; 3 Chinese in steerage.

## CARGOES.

Per French steamer *Mingchih* from Hongkong:—  
 From Marseilles and London ... 1,753 pkgs.  
 „ Hongkong ... 1,300 bags.  
 Per Japanese steamer *Takayago Maru* for Shanghai and port:—  
 Treasure ... \$ 18,000.00  
 Per Japanese steamer *Genkai Maru* from Shanghai and ports:—  
 Treasure ... \$ 10,000.00  
 „ ... Yen 90,000.00

## REPORTS.

The British steamer *Gaelic* reports:—Left San Francisco at 2 p.m. on the 17th August; passed the *Nash* American from Yokohama for San Francisco on the 18th; experienced light variable wind throughout the passage. Arrived at Yokohama on the 5th at p.m.  
 The Japanese steamer *Toyoshima Maru* reports:—On September

4th 4.30 p.m. Cape Sima N. by W. 30 miles distant passed M.B.M. S.S. Co. barque *Kanayama Maru* bound to Yokohama.

The German schooner *Auguste Reimers* reports:—Left Takao on the 22nd August; light variable breezes and calms throughout the passage.

The American ship *Penny* reports:—Left New York on the 21st of April. Had fine weather in the Atlantic. Crossed the Equator in long 29 W.; had moderate S.S.E. winds and ran the easting down between the parallels 42 and 44. Made Anjer on the 31st of July, and anchored two days: was in company with the *Ellen Goodspeed*, and had light winds and calms thence to port. Passage, 138 days.

The American barque *Ellen Goodspeed* reports:—Left London on the 2nd of May. Had fine weather in Channel and to the Equator, which was crossed on the 28th of May, in long 27 W. Experienced very strong S. E. trades between Latitudes 10 and 20 S. had her upper topsails blown away. Crossed the Meridian of the Cape in lat. 42 South, 46 days out. Ran the easting down on the 42th parallel, and made Java Heads on the 29th of July, where were detained three days. Had light winds and calms through the Gaspar straits and Formosa Channel, and light winds past the Loochoo group to the Japan coast. Arrived in port on the 8th of September. Passage, 128 days.

The Japanese steamer *Genkai Maru* reports:—Fine weather all the way.

The Japanese steamer *Wakanoura Maru* reports:—Light breezes and fine weather throughout. Left Kobe, 11 p.m., 8th September.

The French man-of-war *Rance* brings up 328 men reliefs for the *Champlain*.

## COMMERCIAL INTELLIGENCE.

**IMPORTS.**—Good business all round. *Yarn.*—Owing to the scarcity of *Bombay* sorts *English* spinings of the lower qualities has been largely dealt in and prices are considerably higher for these grades. *Shirtings*—stocks are much reduced, and a large business has been done chiefly "to arrive;" other *Cottons* are fairly active with the exception of *Velvets* and *Lawns*. The last named are quite out of season now. *Woolens*—a fair business all round. *Mouselines* are unchanged in price, but *Orleans*, *Lastings* and *Italian Cloths* are sensible higher. *Blankets* are in some request at quotations.

**COTTON YARNS:—**

Nos. 16 to 24, Common to Medium ...	per picul	\$28.50 to 31.25
" Good to Best... ..	"	\$31.75 to 33.25
Bombay, No. 20 do. ....	"	\$30.00 to 32.00

Cloths, all wool plain or fancy... 48 in. to 52 in. ....	0.60 to 1.50
Pilots... 54 " to 56 " ....	0.32½ to 0.47½
Presidents... 54 " to 56 " ....	0.60 to 0.65
Union ... 54 " to 56 " ....	0.32½ to 0.60
Blankets, green, 6 to 8 lbs. ... per lb. ....	0.40 to 0.43

**SUGAR.**—Arrivals have taken place of the *A. Reimers Nuedesha*, *Juliane*, and *Ino*, with some 16,000 piculs, but stocks proving lighter than was estimated and sholders being firm, a decided rise has taken place to quotations.

**SAIGON RICE.**—The cargo of the *Cleveland* is being stored in godowns, and our quotation is purely nominal. Sales are virtually impracticable.

**KEROSENE.**—The *Panay* with 23,500, and the *Walkyre* 27,850 cases have come in, and a slightly weaker quotation is the result.

Sugar:—Takao in bag... ..	per picul	\$4.25 to \$4.30
Taiwanfoo in bag... ..	"	\$4.25
Ching-pak and Ke-pak ...	"	\$8.00
China No. 4-5, Kungfun & Kook-fah...	"	\$6.50 to \$8.50

Japan Rice ... ..	per picul	\$3.00 to \$4.20
Saigon Rice [cargo] ... ..	"	\$2.00 to \$2.10
Kerosene Oil... ..	case	\$1.68
Newchwang Peas ... ..	picul	\$2.00

**EXPORTS.**

**SILK.**—Scarcely any business has been done in silk during the past week. The news from the home markets continues unfavourable, but in spite of this the Japanese shew great firmness in upholding rates; the greater number even do not care to sell at quotations, and declare that they are disposing of quantities of silk at higher rates to native manufacturers.

Whether this be true or not, the fact remains that business at reasonable rates has become almost impossible. The only silks for which holders appear in any way willing to entertain offers are filatures.

	Exchange 3/9½	Exchange 4.65
New Silks { Hanks.—No. 2 .....	\$510 to \$520 = 17 1 to 17/6	= fca. 47.80 to fca. 48.60

## W. & A. GILBEY'S WINES AND SPIRITS.

**W. & A. GILBEY** have special facilities for carrying  
on an extensive Foreign Trade, having held for  
many years in their Excise Bonded Stores, for the purpose  
of their Home Trade, a stock of not less than 12,000  
Casks of Wines and Spirits, which are equally  
available for Export. These stores are by far the largest  
private Duty Free Warehouses in the World, and are under  
the supervision of a staff of Excise Officers specially at-  
tached to these Warehouses.

THE EXTENT of W. & A. Gilbey's purchases enables them  
to give the best VALUE to the public, as a twentieth part of  
the Foreign Wines consumed in the United Kingdom is  
supplied from their stock. In the year 1876 W. & A.  
Gilbey paid duty on 1,881,049 gallons of Wines and Spirits,  
and the average quantity bottled and sent out by them  
daily was 3,050 dozens or 36,600 bottles.

QUALITY is guaranteed by W. & A. Gilbey, and is the same  
whether the Wines or Spirits are obtained direct from their  
Head Establishments or from any of their Agents. The  
purity and genuineness of every article in this list are  
guaranteed in accordance with Act of Parliament, 38 and  
39 Vict., Cap. 63.

W. & A. Gilbey have always adhered to the *standard of*  
Bottle Measure recently recognised by the Government,  
namely—

6 bottles contain one gallon; 12 half-bottles contain  
one gallon.

SECURITY is ensured to the purchaser, each bottle bearing  
W. & A. Gilbey's seal and label guaranteeing *quality and*  
*measure*, and the *strength* also in the case of Spirits.

EDWARD FISCHER & Co.,  
Agents for Japan.

## MISCELLANEOUS.

THE GREATEST

## WONDER OF MODERN TIMES HOLLOWAY'S PILLS.

Persons suffering from weak or debilitated constitutions will dis-  
cover that by the use of this wonderful medicine there is "Health  
for all." The blood is the fountain of life, and its purity can be  
maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I  
"ordered the dragoman Mahomet to inform the Fakay that I was a  
"Doctor, and that I had the best medicines at the service of the  
"sick, with advice gratis. In a short time I had many applicants,  
"to whom I served out a quantity of Holloway's Pills. These are  
"most useful to an explorer, as possessing unmistakable purgative  
"properties they create an undeniable effect upon the patient, which  
"satisfies him of their value."

## SIMPLE, SAFE AND CERTAIN! HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of all  
kinds. It acts miraculously in healing ulcerations, curing skin  
diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in  
1871, says—"I had with me a quantity of Holloway's Ointment. I  
"gave some to the people, and nothing could exceed their gratitude;  
"and, in consequence, milk, fowls, butter, and horse-feed poured  
"in upon us, until at last a tea-spoonful of Ointment was worth a  
"fowl and any quantity of peas, and the demand became so great  
"that I was obliged to lock up the small remaining stock"  
Sold by all Chemists and Medicine Vendors throughout the World  
May 17th, 1873.

**THE BEST REMEDY FOR INDIGESTION.**

TRADE

MARK.

*CAMOMILE PILLS* are confidently recommended as a simple Remedy for Indigestion, which is the cause of nearly all the diseases to which we are subject, being a medicine so uniformly grateful and beneficial, that it is with justice called the "Natural Strengtheners of the Human Stomach."  
"Norton's Pills" act as a powerful tonic and gentle aperient; are mild in their operation, safe under any circumstances, and thousands of persons can now bear testimony to the benefits to be derived from their use, as they have been a never-failing Family Friend for upwards of 45 years. Sold in Bottles at 1s. 1½d., 2s. 9d., and 11s. each, by all Medicine Vendors throughout the World.

**CAUTION.***Be sure and ask for "NORTON'S PILLS," and do not be persuaded to purchase an imitation.*

November 11th, 1878.

## MISCELLANEOUS.

**BUGS, FLEAS, MOTHS, BEETLES,**

and all other insects are destroyed by

**KEATING'S INSECT POWDER,**

which is quite harmless to Domestic Animals.

In exterminating Beetles the success of this Powder is extraordinary, and no one need be troubled by those pests. It is perfectly clean in application.

Ask for and be sure to obtain "KEATING'S POWDER," as Imitations are Noxious, and fail in giving satisfaction.

SOLD BY ALL CHEMISTS IN BOTTLES, 1/- &amp; 2/6 each.

**KEATING'S WORM TABLETS,**

A PURELY VEGETABLE SWEETMEAT, both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for **INTESTINAL** or **THREAD WORMS**. It is a perfectly safe and mild preparation, and is especially adapted for Children.

## TESTIMONIAL.

Medical Hall, Guildersome, Nov. 28th, 1876.

MR. KEATING,

Dear Sir,—I think it nothing but my duty to inform you of the immense sale I have for your Worm Tablets, which I may justly say is enormous, and in every case gives the greatest satisfaction. I have now in stock two bottles containing the Round Worms brought me during the last few days by customers, one Worm 40 yards long. I dare not be without the remedy.—Yours respectfully,

M. A. WALKER.

SOLD IN BOTTLES, BY ALL CHEMISTS AND DRUGGISTS.

Proprietor—**THOMAS KEATING, London.**

**REWARD AND CAUTION.**—Whereas fraudulent imitations of this unsurpassed remedy have been sold, I hereby request anyone knowing of the vendor of the same to communicate with me, on conviction of the offender a liberal reward will be paid.

April, 1880.

## TERMS OF SUBSCRIPTION.

WEEKLY EDITION. The "Japan Weekly Mail," a Weekly Review of Japanese Commerce, Politics, Literature and Art:—Per annum, \$24; Six months, \$13; Three months, \$7.

FORTNIGHTLY EDITION, being a Summary of the foregoing, is published for transmission by the American Mail Steamers via San Francisco. Per annum, \$12; Six months, \$7; Three months, \$4.

THE JAPAN DAILY MAIL is published every morning (Sundays excepted) and contains the Arrivals and Departures of all Shipping, Passenger lists, Cargoes, Vessels on the Berth and in Harbour &c., &c. Also the latest Telegrams, Japanese news, Reports of Trials in the Courts of Law, Meetings of public bodies, and all matters of interest to the Community. Special attention is called to this Journal as a medium for circulating local advertisements. It has a large and constantly increasing circulation, its low price bringing it within the means of all classes of the community. It therefore affords exceptional advertising advantages, and secures to all announcements the utmost publicity, the object aimed at by advertisers.

## THE ESTIMATES.

IN another part of our present issue we publish a careful translation of the estimated revenue and expenditure of the Empire of Japan for the current fiscal year, beginning on the 1st of last July and ending on the 30th of June, 1881. Although somewhat later than usual in making its appearance, the delay, slight as it is, in the publication of the Finance Minister's report, is readily understood when we come to peruse the mass of figures brought to our notice, which bear evidence of the evident desire of the Japanese Government and financiers—to borrow their own expression—"to make the financial system as perfect as possible."

On looking through the tables we find that the total estimated revenue is 59,933,507 yen as against 55,851,979.054 last year. This increase is principally in the customs duties and rent of land, or as it is termed land tax, although as matter of fact the State is the sole landed proprietor as the word is understood in Western countries. In numerous other items a considerable increment is anticipated, the railways and telegraphs occupying a gratifying position in this connection.

A diminution in receipts is expected from nine sources, and is accounted for in the report principally from the items affected being transferred in these estimates under different headings. This decrease is, however, only the comparatively insignificant sum of 454,070 yen, and when set against the calculated increase of 4,282,127 yen, shews, as we have already mentioned, a nett estimated increase in the revenue of 4,282,127 yen over that of last year.

The estimated expenditure is, as in former years, precisely the same as the expected revenue. As there is an increase of 4,282,127 yen in the one, so also is there a correspondent augmentation of the other. This increase is principally apparent in the provision made for the War and Naval Departments. The Finance Minister explains

the addition to these items by the necessity which has arisen for the formation of a Land Transport Corps in connection with the Commissariat. In the Naval estimates the increase is owing to the new levy to be made during the current year, to the establishment of torpedo schools, and the purchase of a stock of those formidable appliances of modern naval warfare. In both items dealing with the armed forces of the Empire, a portion of the increased cost is attributed to the rise in the price of provisions.

The table which will, it appears to us, attract the most attention, is that dealing with the National Debt and Reserve Fund. This statement shows at a glance the condition of the liabilities of the Empire during the current and four previous years. The debt is estimated this year—excluding rin—at 858,047,290 yen, as against 863,827,974 yen in 1879-80, thus shewing a diminution of 5,280,683 yen, a very respectable and gratifying sum, but which sinks into comparative insignificance when we notice that, as compared with the year immediately preceding, that is 1878-79, the decrease is 17,208,065 yen. The figures for the fiscal year 1877-78 also shew that the National liabilities were then over five millions of yen more than this year, but the outbreak in the south-west in the year 1876-77 exercised a very unfortunate effect on the finances, as the table we are alluding to makes very apparent. From the report we learn that the whole domestic debt of the Empire amounts to 847,094,594 yen, inclusive of the paper currency and all the bonds issued on the commutation of the pensions payable in kind at the time of the restoration. To this Domestic Debt has to be added the Foreign Debt of 11,012,696 yen, which gives a grand total of liability amounting to 858,047,290 yen. The paper currency has been reduced during the past year by 4,744,788 yen either withdrawn from circulation or lost, but a very considerable addition to this cancellation will be necessary before the quotations for kinsatsu become settled at anything like a reasonable figure.

On the whole, the present estimates exhibit a very promising state of affairs. To us, it seems that the principal object with the Finance Minister should be the reduction of the floating paper currency. This can only be done speedily by negotiating a loan abroad, a proceeding for which the present time is eminently suitable. The credit of Japan stands well in the money markets of the world, and very justly so; there is a plethora of wealth in Europe—that is France and Great Britain more especially—seeking investment, and we feel no doubt that any reasonable amount Japan required could be readily obtained on favourable terms. If the money so borrowed be applied in the redemption of kinsatsu, the power of the Banks to issue notes curtailed, a judicious customs tariff established, and some other amendments in the policy of the country gradually adopted, there is nothing but a bright prospect for the future finance of Japan.

## POSTAL REFORM IN CHINA.

WE do not join in the popular cry that no real progress, in accordance with European standards, is even now discernable in China. Doubtless the Chinese may appear to move provokingly slow in these days of high-pressure action, but in their admirably organized and economically conducted Foreign Customs and Lighthouse establishments, in their efficient Coast steamer service, as well as in their promising mining developments, and now in the proposed postal reform, the thoughtful will find sufficient evidence to show how erroneous are the assertions so commonly indulged in.

The establishment of an effective and regular postal service in China is a further indication of the silent influence Japan is having on her sister Empire. The Chinese Government is not singular in recognizing the advantages of the efficient postal service of Japan so successfully established under the superintendence of Mr. Bryan, and although a somewhat slow, expensive and defective postal service has existed in China for years, it is possible that either the people themselves have begun to feel its insufficiency, or the Mandarins recognize that the time has come for improvement. The Russian difficulty has doubtless somewhat delayed carrying out the postal programme of Mr. Robert Hart, the Inspector General of Customs, and his able lieutenant, Von Dehring, the Commissioner at Tientsin, but, as a matter of fact, a very comprehensive and perfect service has been designed, and we trust now will soon be in full operation.

If we only consider what a well organized postal service really means in a country, as yet, without one, and if we bear in mind the enormous benefits which, in spite of difficulties and outlay at the beginning, have everywhere resulted from the establishment of an efficient postal undertaking, we cannot be wrong in drawing the happiest auguries from this movement in China, whatever be the motives which inspire it, for it is at least a step, and a highly important one, in a direction which Chinese well-wishers must approve of.

Moreover it may be found possible, eventually, to combine the money order system with the post offices throughout China, if this can be done, it will have a most beneficial effect on trade generally, for the complicated currency prevailing in the different provinces, and even in cities of China but a few leagues apart, is a serious tax upon trade. To successfully accomplish this we are aware, will be a task of the greatest difficulty in face of the existing complication of currency, a complication which for their own ends and interests the Mandarins, and astute money dealers throughout the Empire, will naturally cling to.

We have stated at the outset that the example of Japan had doubtless been instrumental in bringing about the reform mentioned. For the last forty years and more, the nations of the West have vainly endeavoured by persuasion and menace to force modern improvements on China; the case under consideration almost seems to show that the key to the problem has at last been found. A neighbour, at China's very doors, closely akin to herself in language, religion and customs, has suddenly emerged from an exclusiveness which some 20 years ago was at least as rigid as her own, and is now fairly entitled to a place among the civilised nations of the world. By this, she is already reaping advantages to which the rulers of China cannot be blind, though the suddenness of the change may puzzle them, but with their minds opened to this fact there is every encouragement to hope that they will continue in the same direction, however slowly they may determine to move.

Slowly, quietly, yet not the less surely, has western medical science worked its way in China during the last half century, and without doubt has done something towards removing prejudices, its good is year by year becoming more evident to the officials and people of China, and, from a properly established postal service, with all its civilising influences and effects, we may confidently anticipate a greater stride in the path of progress than any yet known in the modern history of China.

## FORECASTS.

ADMIRAL LESSOFFSKY lost no time in proceeding from Hongkong to Shanghai. Probably, at this date, he is in Peking, so that the Prince Kung will, before many days pass, understand the bitterness of the Russian phrase: "an ill quarter of an hour." Russian diplomacy, especially when, as at present, it is backed up by iron clads and regiments, is not given to "longanimity." It will make itself understood, with perfect clearness. As for China, the enemy is at her gates, and there is no time left to unearth precedents from Puffendorf or Grotius.

An ominous phrase comes from St. Petersburg—"rectification of frontiers." What it means, we will know before long. However, it hardly applies to Corea, as Russia will enforce the Czar's will, without any formalities of discussions at Peking. The threatening phrase scarcely concerns Ili-Kuldja, as the Livadia treaty, which is to be enforced with addenda, gave to Russia all she wanted for strategic, political, or trading purposes, in fact made a Chinese re-possession of the rest of the country mere occupation on sufferance. The vague demand may include Ourga (or Urga) in Mongolia, the seat of the second Lama, as Russian troops occupied the town in 1870 for a while, to the great vexation of Peking. We think the rectifications more probably apply to the valleys of the Onon and Sungari rivers. If this should be the case, the desirability of such possessions will be apparent if a map is examined. In the hands of a colonizing people, whether Anglo-Saxon, American, or Dutch, the cis-Amur territory would quickly become extremely valuable. The forests are full of fine trees; the earth, when tilled, brings forth the best wheat and barley. In the rock strata, gold in plenty can be gained. In other formations there are thick veins of coal. The iron ore is equal to that of the Uralian ranges, and, it is known, there are abundant deposits of copper, tin, nickel, cinnabar, &c., &c., all of which would be sure and permanent sources of wealth to an industrious people. The Russian proper, that is the man of mixed Turanian and Slavic race, is not industrious, and generally fails as a colonist, because he is too much given to lean on the State, and depends too little on his own powers and enterprise. Russia, however, would not fail to profit by the new territory that seems destined to be hers, as she would benefit by an influx of the Manchurian peoples, who now live miserably under a bad government, tempered by brigandage. The Chinese Manchus are, physically, a fine race, and, if brought into orderly ways, would form a good population, from whom might be drawn what Asiatic Russia greatly needs, numerous and hardy labourers. There is already hope of improvement on the old ways, as economical reforms are promised by St. Petersburg, and Russia, in truth, with her discontents, her financial dilemma, her bad harvests, her frightful losses by insect plague, the ruin of her stocks and herds by pests, and general impoverishment, has no time to lose. She will do well to profit by the now dormant wealth of Manchuria. She

will do well, by encouraging immigration, to develop the riches of Siberia, whose gold yield should not be the chief or, in fact, only product. To no country have nature's gifts been more profuse, but the vast terrain is—as it was one hundred and fifty years since—away from the few worn tracks, a dreary, silent and deserted land. Then too there is Kamschatka, a vast, silent country, whose earth is full of silver. Nevada is not nearly so rich in precious metal, but out of all the incalculable inexhaustible wealth of the argentiferous soil, we think that probably the Czar's treasury has never profited by even five thousand roubles from the unequalled store.

That Russia is about to make large acquisitions of long-coveted territory, much of it of immense value, cannot be doubted. We trust that when she has obtained her heart's desire, a liberal commercial policy will be formulated rather than a future of war's alarms and aggressions. In Siberia, Manchuria and Korea, are all the materials for a great commerce. For instance, on the Pacific shores there are immense forests. Now disafforested China will take the fine woods of Manchuria and Korea in vast quantities, particularly as the plantations that furnished the pole rafts which cumbered the Min, the Han, and the Yangtze, are now almost exhausted. Then the vast wheat fields of the Volga valley and Tamboff, which of old gave Europe vast supplies, are now becoming exhausted and sterile. But in the coming years the world may get grain from the banks of the Obi, Lena, Yennessai, Amur, and Sungari. The merinos of South Russia thrive in many parts of Siberia, and many other noble industries are possible, if immigration is encouraged under liberal laws. In Russia, there is already an idea of the formation of a new and mighty empire in Asia. The idea has grounds for its existence. There is a general unrest among the peasants of European Russia, so that, with but little inducement, a great migration—of a race in whose veins there is much nomadic blood—might be directed towards Siberia and Manchuria. There are many reasons for thinking such an exodus is neither improbable nor undesirable. The once rich corn lands of Russia have for ever lost their fertility, as nature is revenging herself for perhaps a century of harvests grown on unmanured fields. If the Imperial Government would but encourage an influx of its own people into the Pacific coast possessions and Amur valley, and permit Chinese and Manchu immigration also, the sufferings of European Russia will be abated or healed, and a mighty nation will grow apace between the Uralian slopes and the Pacific shores.

Although our information is very imperfect, it would appear that as Admiral Lessoffsky will in no way soften the clauses of the Livadia treaty concerning Ili and Kashgar, Tso-tung-t'ang will, as soon as peace is made, retire with all his forces from both Kashgaria and Dzungaria. We have been assured on good authority, when Chung How left Peking for St. Petersburg, there was a consent amongst the Chinese councils that without Ili, Kashgar was untenable. Probably by force of circumstances, without treaty or invasion, Kashgar will become a Russian possession before long.

The turn of events is very surprising. In six months the entire political relations of Asia have undergone a change, whose reactions will disturb many coming years, but which ultimately may bring vast benefit to both the Western and Asiatic peoples.

WE commence with this issue the publication of "Ecclesiastic and Missionary Notes." No credit is claimed for this new feature on the score of originality, as

a similar course has been adopted by the *Friend of India* and *Statesman* for a long time. Christianity is exercising a constantly increasing influence in this Empire, and anything which tends to give prominence to the various missionary enterprises in the country must eventually be productive of good.

STORIES are frequently heard from gold producing countries of the accidental manner in which the precious metal is discovered. Not uncommonly children playing about the street of a mining township have lighted upon welcome nuggets, and there is a tradition in Victoria of the stones composing an old house being passed through a crushing machine with good results. New Mexico has recently afforded another example of how people may reside for years within reach of wealth, without in the slightest degree realizing the fact. We read that a sensation was created at Santa Fe lately by "the announcement of a rich mining strike in the Mexican village of Las Placitas, about thirty miles distant. The village is built of adobe huts and corrals, and the foundations of the houses are of rock. A prospector named Jesse Marin detected mineral in this rock, and pounded up and hammered some of it, and, getting a rich result in gold, he located the streets of the town from whence the gold rock was taken, and had assays made, with a result of \$4600 gold to the ton. The lowest grade of rock assayed \$43. Governor Hew Wallace has returned from the place. He panned off the lead, making it eighty-four paces in width. Its length is not known, but 9000 feet along the vein has been located. Subsequent assays in Santa Fe give from \$3000 per ton. The whole village is built on the ledge, and rock worth \$3 per pound has been thrown around as worthless."

OWING to the want of space, we are compelled to hold over other editorial matter until next week.

#### REVIEW.\*

The concluding chapters of Mr. Rocher's work are occupied with an account of the mineral resources of Yün-nan, and the different trade routes to that rich province. As regards mineral wealth, Mr. Rocher considers that Yün-nan cannot be over estimated. Iron mines—the most numerous—were worked in remote times, before the Chinese with their more advanced knowledge of metallurgy occupied the country. Iron is so generally distributed throughout the province that there is not a district, no matter how small, that does not contain it. The great cost of transport, however, renders it necessary to only work those mines which are near the large centres of population, or the banks of rivers which afford cheap water carriage. The method followed in the reduction of the ore is minutely described by Mr. Rocher, the letter press being aided with well-executed drawings of the apparatus mentioned. As Professor Lyman gave a very excellent account of the various processes employed in the reduction of ores in Japan, in his progress report of the Geological survey for the years 1878 and 1879, it may be interesting to compare Mr. Rocher's account of similar work in Yün-nan. Regarding the iron mines Mr. Rocher says that "the ore when brought to the smelting works, which are situated close to the mine itself, passes under a hammer with an iron stamper of six or seven centimètres in diameter to be crushed, and is then passed through a sieve. Two men—generally of the hill tribes—superintend this operation; one by the mere weight of his body raises the stamper and the other feeds it with the ore that requires crushing. Next

\* *La Province Chinoise du Yün-nan*, by Emile Rocher, of the Chinese Imperial Maritime Customs. Leroux, Paris; Kelly & Co., Yokohama.

the ore is passed through a sieve, the meshes of which are not more than four millimètres in diameter; any portions too large to pass are returned to the hammer. In this operation the workmen have to be careful to make as little actual dust as possible, as, according to the leading authorities on smelting, when the ore is too fine, instead of stopping among the charcoal it sometimes falls immediately into the corf. As it has then no time to become melted, when it falls to the bottom it tends to lower the temperature of the melted mass and the graphite becomes separated. The ore, when sifted and washed, is ready to be smelted. A section and ground plan of the furnaces used in all the smelting works in the province is given by Mr. Rocher and is thus shortly described:—"The exterior is square, and the interior presents the appearance of a quadrangular cone reversed. The bottom is furnished with a door as in enplan which is closed with infusible sand during the operation of smelting. By opening this door the metal in a state of fusion is let out, and afterwards all the refuse that is not sufficiently liquid to flow out by itself is raked out. The tweers, the most important part of the furnace, is made of infusible sand fitted for a certain distance with a wrought iron tube, which serves to support the sand and also to conduct the blast; the nozzle protrudes a long way into the furnace, and the position is such that the blast strikes the opposite angle of the bottom of the furnace. According to the opinions of the best smelters, the success of the operation depends greatly upon the angle at which the tweers is set, and they therefore bestow great pains on the making of it. The diameter of the tweers at the nozzle is from seven to eight centimètres, increasing towards the socket where it is attached to the bellows. The bottom of the furnace is lined with a composition consisting of four parts of powdered charcoal and one part of clay; this mixture is placed in layers of from two to three centimètres thick, up to the height required. This lining is placed there to prevent the slag and cinders—which only escape when the furnace is opened to let the ore run out—from adhering to the bottom of the furnace and thus to make the drawing of the charge easier. The bellows used in all the Yün-nan smelting works, is as simple as it is inexpensive. It consists of the trunk of a large tree, hollowed out into a cylinder and measuring from 1m. 50, to 1m. 75 long. In this there moves a piston the end of which is covered with feathers to prevent the air from escaping. Almost at the two extremities two openings are made, which give access to the sides of the cylinder, where a box is fastened which serves as an air-chamber. These two openings have valves which work in opposite directions, so that when one is open to admit air the other is shut, and *vice versa*. On the ends of the cylinder, which can be taken out at will, there are also two valves which admit the air when the piston is in motion, in either direction. The diameter of these bellows in the most important works is from 35 to 55 centimètres. As it is very difficult to obtain trunks of trees seasoned and without blemish, a round bellows of the dimensions given is worth from ninety to two hundred taels, which is a very high price. Although the round bellows are, as a rule, preferred by the workmen, it happens that in some places from motives of economy similar bellows are constructed of a square form out of planks. These cost but half the price of the others and are quite as effective." The details of the remainder of the process are very interesting and will well repay perusal. Before leaving the subject of iron smelting, Mr. Rocher gives some particulars of a peculiar description of cast iron pots and pans manufactured in the province. He says that:—"In Yün-nan this class of artisans appear to have settled themselves at Lu-feng-hsien in the department of Yün-nan-fu, and at Lu-nan-chou, a village in the department of Lin-nan-fu to the north of that city. In these places this industry is solely in the hands of a class of workmen who are called Kuo-chiang, or cast iron pot makers. They have but few apprentices and possess, so to speak, a monopoly. The pots of Lu-feng have a great reputation; they are a little thinner than those of Lu-nan and consequently require less fuel. They combine, with their economic advantages—qualities fully appreciated by the Chinese—a more graceful shape, and last longer. In spite of the difference between the two classes of goods each of unly is to be met with at all the markets, and both sell square, well. One meets these manufactures, as has been said before

near the mines or at a short distance from them, and, as a rule, in the mountains, where the cheapness of the raw material allows them to be sold at low prices." Before proceeding with the treatment of the more precious metals Mr. Rocher explains the methods employed in converting iron into steel. "The most renowned manufactory of steel in the east and south of Yün-nan is undoubtedly that of Lao-lu-kuan, both on account of the quantity and the quality of the metal produced. This village is situated some 250 lis from the capital, 80 lis from Hsin-hsing-chow, and 40 from Hsi-oh-hsien. In spite of the expense of transport, which is conducted entirely on the backs of mules, the article does not go beyond Yün-nan-fu. The ore used in the manufacture of steel is nearly the same as that employed in the blast furnaces, except that it is little duller and harder, and consequently of greater gravity. To enable us to judge of the loss in weight in manufacture we had several bags of ore treated in a blast furnace. The result showed about 67 per cent, and the product of the smelting operation was perfectly white and very brittle. The galleries, which we visited, are pierced in the sides of the mountains almost at their feet, and only about twenty lis from the village. Here mining presents several difficulties, but as the works are less active than the iron manufactories, and as the process of treatment is more lengthy and costly, the mine owners take out in fine weather, only just as much as will meet their requirements."

Copper mining is also a leading industry in Yün-nan, and ranks next in importance to iron. This mineral is found in different forms—pyrites, grey ore, and oxides—the latter being the most common. Mr. Rocher states that the great wealth of copper in Yün-nan has been the principal reason why the Chinese Government made such enormous sacrifices in order to quell the Muslim rebellion. "It is difficult," he says, "to indicate the spots where the lodes are most numerous, because they are everywhere, but perhaps the north-east would take the first place. The mines in the south are worked but little owing to the difficulty of transport. Although the rebellion caused the closing of a great number of the mines in the west, east and south; those of the north-east, and some in the centre of the province continued, just as before, to furnish to commerce, industry, and the Government, the required quantity of metal. These mines, situated in the districts of K'un-yang-chou and Tung-ch'uan-fu, are capable of producing a great quantity of copper. Unfortunately, pecuniary difficulties compel the industry to be followed only on a small scale." The Provincial Government exacts at least half the products of the mines by way of tax, but how much finds its way to Peking, and how much is absorbed by the ravenous officials, it is impossible to say. But another impost is added in addition to the one-half already mentioned.—"To the demands of the Government must be added the cupidity of the Mandarin Collectors, and thus an industry, which might be a source of wealth to the province, remains stationary and furnishes only a small proportion of what the returns could easily be made." Mr. Rocher mentions in a note that, in 1872, at the request of several merchants and Mandarins of capital "the governor authorized the formation of a society, at the head of which was a Mandarin of the grade of Tso-t'ai. The aim of this association was to encourage manufacturers, by lending them capital to develop their industries to a larger extent; in addition to which the society proposed to purchase all the copper produced, giving a higher price than that fixed by the Government and to discharge the taxes. The society was, however, formed with too limited a capital, and did not hold together, moreover peace was not thoroughly reestablished in the province at the time, and the metallurgists fearing fresh troubles, would not undertake any personal risks. The author goes on to say that "Of all the mines that we visited during our stay in Yün-nan those of copper are followed farthest into the bowels of the mountains. This metal is rarely found close to the surface. As a rule, it is discovered from various indications. Sometimes these are springs which leave a deposit of sulphate of copper on the ground they cross, and sometimes mountain torrents bring with them fragments of copper pyrites of a low quality." Tin is only met with in one portion of the province, Kuo-chiu—where the mines have been worked for over two hundred years. Gold, silver and quicksilver, are also to be found in quantities and are, according to Mr. Rocher, easily

obtained. In addition to these mineral riches are various kinds of precious stones, such as rubies, topaze, sapphires, and rock crystal, all of which are found in the southern portion of the province, while in the west the neighborhood of Ta-li furnishes a kind of marble, of which the veins assume all kinds of shapes. This is a beautiful stone, much esteemed by the Chinese, and was regularly sought for before the fatal rebellion which proved so ruinous to the welfare of this rich and highly favored country. Speaking of this marble, Mr. Rocher says he has himself seen specimens in which the veins assumed a perfect representation of houses, trees, and the profiles of cats and horses. Jade stone of magnificent quality is also found in the western district, and is celebrated throughout the whole of the Empire for its exquisite colour, which renders it more valuable than any description of the stone.

The remaining chapter of the work is devoted to the different trade routes to Yün-nan. As we have already drawn so largely from Mr. Rocher's text we shall merely remark that, after a careful examination of the various routes followed, he unhesitatingly accords the preëminence to that by the Red River or Song-Koi, for reasons which will well repay perusal by those who desire to gain full knowledge of the subject. This route enables goods to be brought from Saigon by water into the heart of the province, and probably explains the anxiety of France to possess Tonquin. She would then control the Red River route altogether, and with it a great influence in the vast undeveloped trade of south-western China. On the other hand, the English trade route is through upper Burma by way of Bhamo, being that followed by Mr. Margary. This route would necessitate a railway between Bhamo and Ta-li-fu, to the construction of which Mr. Rocher considers the Chinese Government would never willingly consent.

Notes on the great plague in Yün-nan, which was treated at length in a former portion, complete the text of Mr. Rocher's valuable work. These notes are meant for those readers who are specially interested in the subject.

Attached to the volumes are maps of the province showing the various routes followed by different travellers, and a plan of Ta-li-fu copied from a Chinese map, and showing the fortifications. This town was the head-quarters of the rebels and the scene of the frightful atrocities to which we have already alluded.

The two volumes are, as might be expected, admirably got up. Mr. Rocher's style is eminently pleasing, and altogether we consider "The Chinese Province of Yün-nan," one of the most sterling publications we have met with for a long time. To those interested in China and the development of her trade, it will be found of the utmost value.

## THE FINANCE MINISTER'S REPORT AND ESTIMATES FOR 1880-81.

[TRANSLATION.]

### NOTIFICATION, No. 44.

To the Council of State, Ministries, Senate, Colonization Commission, Cities and Prefectures.

It is hereby notified that, in accordance with the resolution passed at a special session of the Privy Council, the following Report and Estimate of Revenue and Expenditure for the 13th fiscal year, beginning with the 7th month of the 13th year of Meiji (July, 1880), and ending with the 6th month of the 14th year of Meiji (June 1881), have been presented to me by the Minister of Finance, according to the prescribed form, and, after being audited by the Board of Auditors of the National Finance, have been found to be correct.

SANJO SANEYOSHI,  
Prime Minister.

Tokio, 30th August, 1880.

### INTRODUCTORY REMARKS ON THE ESTIMATES FOR THE 13TH FISCAL YEAR.—1880-81.

Before proceeding to specify the causes of the increases and decreases in the various items appearing in these Estimates as compared with those of the preceding year, there is one important matter which requires consideration; it is as follows:—Although at the time the fiscal period was established, i.e., in the 8th year of Meiji, the regulations affecting Receipts and Disbursements on account of the Government service were considerably modified, and the various headings of Expenditure clearly specified, thus greatly improving the general aspect of our financial system, yet no definite rules were laid down for the arrangement and classification of the minute details. However, by Notification No. 50, issued in the 12th month of the 12th year of Meiji (December, 1879), the requisite rules were laid down, and consequently our financial regulations may now be said to have been brought almost to perfection. We are therefore now enabled to frame the Estimates from the records of each Public Department in accordance with the system provided by law, and to show the relation existing between the estimated and actual expenditure, and the general and specific items. In this way the easy comparison of the Estimates and Expenditures has been greatly facilitated, and there can be no doubt that the difficulty of furnishing exact statements, which proved so great a source of embarrassment in the past, has now been considerably overcome.

Speaking generally, the estimated Revenue and Expenditure for the current year so well balance each other as not to leave any difference whatsoever, but it is important to distinguish the ordinary accounts from the extraordinary, and show the increase and decrease which have occurred in them and the causes thereof. Accordingly we will state here first, the amounts of the Ordinary and Extraordinary Revenues and their proportion of the whole Revenue. We find them to be as follows:—

Ordinary Revenues ..... Yen 56,616,500.  
Extraordinary Revenues ..... „ 8,316,000.

Proportion to the whole Revenues:—

Ordinary Revenues ..... 94.5 per cent.  
Extraordinary Revenues ..... 5.5 „

If now we look into the similar proportions for the last fiscal year, we find the Ordinary Expenditures to be 94.7 per cent. and the Extraordinary 5.3 per cent. Thus comparing this proportion with that of the current fiscal year we will find some falling off of the ratio of the Ordinary Revenues, while there is some increase in the Extraordinary.

Secondly we will notice the amounts of the Ordinary and Extraordinary Expenditure and their proportions to the whole Expenditure. They are as follows:—

Ordinary Expenditures..... Yen 56,494,000.  
Extraordinary Expenditures ... „ 3,438,000.

Proportion to the total Expenditures:—

Ordinary Expenditures ..... 94.3 per cent.  
Extraordinary Expenditures ..... 5.7 „

Looking into the similar proportion for the last fiscal year, we find the Ordinary Expenditure was 93.8 per cent. and the Extraordinary 6.2 per cent. The ratio of the Extraordinary Expenditure for the current fiscal year shows therefore a great falling off, while that of the Ordinary Expenditure shows some increase. This is the result at which we have arrived after careful examination of the various items; at the end of the current fiscal year, however, if we find a surplus remaining from the estimated Ordinary Expenditure, the proportion to the whole may become the same as that of last year.

Out of the sum of 1,200,000 yen described in the last fiscal year's Estimates as subsidy to *Famine Relief Fund*, 360,000 yen has already been advanced as special relief to the distressed; the balance of 840,000 yen is to be reserved as the *Central Relief Fund*, and it has been resolved therefore to convert the same into Government bonds payable in gold. The funds for the same purpose are also estimated at 1,200,000 yen, but, since it was announced by Notification No. 31, issued in the sixth month of the present year, that the administration of the said Fund shall be con-

menced from the first month of next year (January, 1881) the sum of 600,000 yen, which is the proportion of the said Fund for the first half of the current fiscal year (from July to December, 1880) can be deducted from our estimates and be afterwards employed for relieving cases of special distress according to the old relief law. Although we cannot yet tell how large an amount may be required before the new law comes into force, whatever balance remains from the above-mentioned sum of 600,000 yen will be paid into the *Central Relief Fund*, in accordance with our usual custom.

The outstanding amount of the National Debt, both domestic and foreign, has been diminished by 5,283,583 yen since the returns of last year. This decrease is due to a diminution of 4,815,000 yen in the domestic debt, and of 816,000 yen in the foreign, against an increase of 350,000 yen on account of the capitalized pension bonds.

Again, the amount of paper in circulation, which is in fact a portion of the national debt, has been reduced by a sum of 4,744,788 yen, of which amount 2,000,000 yen was absorbed in the usual manner, 2,730,000 yen has been converted, and public bonds payable in gold (both principal and interest) issued, and 14,000 yen old paper money lost or destroyed. Again, if we estimate the amounts cancellable during the current fiscal year, we find, besides the sum of 2,000,000 yen already mentioned, a sum of 840,000 yen set aside as belonging to the Central Relief Fund to be converted into Government bonds payable in gold, and one of 2,205,000 yen authorized last year to be converted into the same securities during the current fiscal year. These make a total of 5,045,000 yen to be redeemed during the present fiscal year.

On the first day of the present fiscal year (July 1st, 1880) the *Reserve Fund* amounted to 51,325,515 yen which, compared with that of last year, shows an increase of 426,643 yen. The explanation of this is that, during the 11th year of Meiji, no actual accounts of the state of the finances were taken, and consequently there was no formal handing over of a surplus to the said Reserve Fund. However, when the accounts of revenue and expenditure for the 10th fiscal year were wound up, there proved to be an excess of revenue over expenditure amounting to 3,909,808 yen, a most gratifying result. Of this sum, 3,200,000 yen was employed in withdrawing paper money during the 11th fiscal year, in which time no less than the sum of 7,166,186 yen was cancelled, and 709,808 yen was transferred to the reserve fund. In addition to this, there were various payments on account of advances made in previous years. Including all these there was a great increase to the fund; owing, however, to our financial regulations for the reduction of the National Debt, a sum of over 1,622,000 yen was drawn for this very purpose: this being withdrawn makes the net increase what was mentioned before. A few years ago when the regulations for the reduction of the national debt were put into force, a special sum of 20,000,000 yen was drawn from the reserve fund and laid aside for that special purpose, but that sum is amalgamated with the reserve fund in this report.

The total Estimated Revenue for the current fiscal year is 59,933,507 yen, showing an increase of 4,282,127 yen over that of last year. The cause of the increase in various items is explained below.

*Customs' Import and Export Duties.*—From this source an increase is expected in consequence of the general progress and gradual development of our external commerce, in spite of the effect produced by Decree No. 29, published in the 6th month of this year, freeing the duties on some articles of exportation, and consequently diminishing a portion of the revenue.

*In the Land Tax.*—In consequence of the yearly approach towards the completion of the new assessment, more accurate calculations have become possible: the yearly increase of the number of title-deeds of lands transferred, which augments the receipts of the Stamp Office, and the sum of 517,000 yen from the income under this head derived from Okinawa; have been transferred to this class of revenue.

*In the Mining Tax.*—On account of some increase of mines already rented having been made.

*In the Tax on the development of the Hokkaido.*—Owing to the great increase in the fishing industry.

*In the Tax on Alcoholic Liquors.*—In consequence of the increase both of the manufactories and the outturn.

*In the Stamp Tax on legal documents.*—A more extensive use of stamps is expected. The use of postage stamps, money orders, and private boxes at the post office has greatly increased.

*In the Ship Tax.*—As the number of ships has proportionately augmented with the increase of trade.

*In the Vehicle Tax.*—In consequence of the increased employment of vehicles owing to the improved condition of the roads.

*In Horse and Cattle Dealers' Licenses.*—In consequence of the increased number of persons who follow these callings.

*In Passport and other License Fees.*—Although the regulations of the mercantile marine were abolished by Notification No. 16, issued in the 5th month of the 12th year of Meiji, which caused a diminution of registration fees, yet the number of passengers, and mariners who have applied for leave to pass as pilots has greatly increased.

*In the profits of Industrial Works, Buildings and Manufactories under the Home Department.*—The establishment of the Senji woollen manufactory is of so recent a date that no profits can be said to have accrued. The high price of material required for the Shinmachi spinning factory has also diminished its profits. The amount of drugs sold at the Tokio medical manufactory has, however, increased. The opening of two spinning manufactories at Aichi and Hiroshima, and the woollen trimming branch of the Senji manufactory are expected to take place during the year.

*In the Profits derived from Shipbuilding.*—In consequence of the progress of maritime enterprise, this branch of industry has greatly increased.

*In the Profits derived from Coal Mines under Public Works Department.*—The calculation is based upon the increasing amount of production.

*In the Profits from Mines under the control of the Public Works Department* an increase is expected chiefly on account of the high prices realized for the ores, although all mines are not equally prosperous.

*In the Profits from Railways.*—The increase of expense caused by completing the waiting-rooms for passengers, and making alterations in the cars on the Tokio-Yokohama line will, it is expected, be cancelled by a corresponding diminution of working expenses. Moreover, the Kyoto and Otsu railway will commence to run this year and should therefore bring in some return. Independent of this fact, the number of passengers, and amount of merchandize carried, is steadily increasing year by year.

*In the Profits of Telegraphs.*—Owing to the increase and extension of the number of telegraph offices, the number of telegrams sent has greatly increased.

*In the Profits on different Industries.*—Hitherto all proceeds from the sales of products of various industries have been placed under the heading of receipts from the sale of public properties, but in the present estimates this new heading has been adopted.

*The Receipts from Woods and Forests.*—This is also a new item. In the last financial year a sum of 10,000 yen, which had accrued from the sale of the products of Woods and Forests was credited to the account of different Industries under the control of the Home Department, and a sum of 54,000 yen included under the heads of *Sales of Government Property*, and *Rents from Government Property*. These two sums amount to a total of 64,000 yen. The reason why the receipts in question show such an increase is, that the expenses of these industries have been brought under the Expenditure of the Departments to which the works belong, and all receipts from the Woods and Forests are collected together under the new head.

*In the Rents of Government Land* an increase is expected in the open ports, in consequence of the extension of the premises of the Naval Hospital for English seamen situated in Yokohama, and of the Foreign Concession there, and in consequence of new leases of land in Tokio.

*Repayment of Advances.*—An increase under this heading is expected in consequence of the many repayments of loans made last year, that are expected to be repaid in this year, and also of some whose term expired last year. Although a diminution has been caused by the fact that some advances

have already been paid up entirely, repayment of others has been deferred to some future occasion, and some have been waived altogether.

**In the Sales of Government Property.**—In consequence of some increase in the proceeds of sales of wool produced at the Shimosa Farm, which is included under the head of *Profits from Industries* in the Estimates of last year, and also in the proceeds of sale of soldiers' discarded uniforms by the War Department. An increase is expected in spite of a diminution caused by a separate heading for the receipts from the Woods and Forests, and also on account of the transfer of the receipts from the *Industries under the control of the Colonization Department* to the profits of that bureau.

**Miscellaneous Receipts.**—After deducting the sum expended on the erection of the Imperial Palace from the amount donated by the people for this purpose during last year, the balance has been put under this head. This causes a decrease of 63,000 yen, but on the other hand a sum of 254,000 yen is to be transferred to this head from the interest of the Fund for the reduction of the National Debt. A further increase of about 161,000 yen is expected from various other sources.

The causes of diminution under the several heads of Revenue as compared with last year are as follows:—

**In the Tax on Companies.**—These calculations are based upon their probable condition in future.

**The Tax on Official Salaries** was abolished in the 12th month of last year by Decree No. 52.

**In the Profits of the Mint**, under the control of the Finance Department.—Owing to damage to the machinery, the manufacture of sulphuric acid has had to be suspended until repairs can be completed.

**In the Profits of Industries** under the control of the Public Works Department.—A decrease has taken place in the profits of the branch factory at Hiogo; those of Akabane, Fukawa, and Nagasaki have, however, somewhat increased.

**In the Profits of Woods and Forests** under the control of the Home Department.—The sum actually received under this head has been transferred to the new heading of *Receipts from Woods and Forests*.

**Rents of Government Property.**—Although there was some increase in the number of Government buildings and the renting of Government lands, yet a considerable sum has been transferred from this heading to the *Receipts from Woods and Forests*, and to the *Profits of Industry under the control of the Colonization Department*.

The total diminution in the above six headings, added to that in the duties on the sale of medicines, and to two other items, amounts in all to a sum of 454,070 yen.

If the amount of these items of decrease be deducted from the increase, the net increase in the estimated Revenue for the current fiscal year will be found to be 4,282,127,966 yen, as already mentioned. The estimated expenditure for the current financial year is 59,933,507 yen which, when compared with that of the last fiscal year shows an increase of 4,282,127,966 yen. The causes of such increase are explained below.

**Domestic Debt.**—In the estimates for the last year, the pensions to the Shinto priests amounting to less than twenty-five yen each and payable in cash were included. In the current fiscal year there are no such sums to be paid, but the repayment commences of the debt contracted for the advancement of industry, and the debt contracted for the payment of the before mentioned pensions to the Shinto priests.

**Foreign Debt.**—Although the amount estimated for the reduction of the old Foreign Debt is the same as that of last year, yet according to our financial regulations that for the New Foreign Debt is increased in proportion as a decrease takes place in the interest payable on the same.

**Interest on the Domestic Debts.**—During the last fiscal year some reduction was effected in the domestic debt, but a new issue of bonds payable in gold took place for the reduction of paper money, and a grant of capitalized pension bonds was made to Shotai, the ex-Governor of Riu-kiu.

**Expenditure for the Imperial Household and Families.**—An addition to this item has been rendered necessary in order to provide for the maintenance of His Imperial Highness Prince Haru-no-miya, and for some increase in the expenses of the

Imperial Princes. The item has also been augmented by the transfer to this heading of the cost of the Imperial Garden, which formerly was included in the estimates of the Home Department.

**Annuities for Meritorious Services.** The number of persons to whom rewards have been granted after due inquiry has been increased. **Capitalized Pension Bonds** for the Shizoku in Okinawa Ken, have been issued to them in lieu of their landed estates and the rice subsidy they formerly received. This expenditure was not taken into account in the estimates for last year.

**Council of State.**—The expenditure under this heading is expected to increase in consequence of some alteration in its constitution, together with the establishment of the office for auditing the Public Accounts.

**Foreign Department.**—Under this item the expenses allowed for International Transactions have been increased.

**Home Department.**—Some decrease is produced in the estimates for this department owing to the Laboratory of the Bureau for Agricultural improvement, which was established under its control, being transferred to the Imperial Garden; by the abolition of the office for regulating the affairs of the late Riu-kiu Han and by transferring the salaries of the police to the Police Bureau, yet the expenditure for Prison Inspection, and for the Shinjikan (a kind of house of correction) have been transferred to this Department, and also the expenses for managing the Woods and Forests, the sheep farm at Shimosa and, finally, the expenses for maintaining old Shrines and Temples and of the Central Sanitary Board. This has caused an increase in the item.

**The War Department.**—The increased expenditure under this heading is in consequence of the creation of a Transport corps in connection with the commissary Department, the augmentation of the commissariat and also by the purchase of provisions and clothing.

**The Navy Department.**—The increased expenditure under this heading is in consequence of a new levy for the naval forces, the establishment of torpedo practice and the necessary machines and apparatus, the supply of torpedoes to vessels of war, and the increasing cost of provisions and other necessities.

**The Educational Department.**—The expenditure of the Department is expected to increase by the establishment of another industrial school.

**The Judicial Department.**—The increased expenditure in this department is in consequence of the opinion being held that much labour will be entailed in carrying into operation the new Criminal Law and Criminal Procedure.

**Imperial Household Department.**—The increase in this Department has been caused by the transfer to this heading from Home Department of the expenditure for Imperial Gardens.

**Senate.**—In the expenditure under this heading an increase is observable in consequence of an addition having been made to the number of Senators.

**Colonization Department.**—Although the expense of constructing factories has been transferred to another heading, yet as the tax on products and other receipts increase the general increase has also been maintained.

**Post Office.**—In consequence of the growing business transacted the wages of carriers, the commission paid to those charged with the management of the Post Office, and the expense of making postage stamps has been increased.

**Legations and Consulates.**—This estimate has been increased by the amendment of the rules regulating the expense under this heading, by the appointment of additional diplomatic agents, and finally by the establishment of certain new legations.

**Supplementary Grants for Mines** under the control of the Public Works Department have been increased because no income accrues from the two mines of Kaunishi and Nakaozaka, owing to the short time which has elapsed since they were opened.

**Supplementary Grant for Industrial Undertakings** under the control of the Public Works Department. The increase under this heading has been incurred by the establishment of a window glass manufactory in the premises at Shinagawa.

**Cities and Prefectures.**—The increase under this heading is caused by the addition to official salaries under notifications No. 16 issued in the 2nd month of this year and No. 53 issued in the 12th month of last year, by appropriations for the service of the two new prefectures of Okinawa and Tokushima, by the establishment of the second national exhibition, by the Liquors Inspection Commission, by the Sanitary Board, and finally by the natural increase of expenses owing to the general enhancement of prices.

**Police of Cities and Prefectures.**—This estimate has been increased in consequence of the augmentation caused by the transfer to this item of the cost of the construction and maintenance of the central and branch Police Station from the item of *Expenses for Construction and Repairs in Cities and Prefectures*, and also in consequence of the additional expense incurred in assimilating the police system of the prefecture of Okinawa to that of the rest of the Empire. The increase has taken place, too, notwithstanding that a decrease has been made in the supplementary expenses allowed for the four prefectures of Kumamoto, Oita, Yamaguchi and Kagoshima.

**Promoting Industries under the Home Department.** Although the Senji woollen manufactory has been completed, and the weaving establishments at Aichi and Hiroshima are nearly finished, yet the expense of the combing department of the Senji factory has to be provided for, and also the cost of the Sugar factory at Hokkaido, and of manufacturing arms under the Army Department. The construction of the cartridge and gunpowder factory authorized last year has not yet been completed, and some expenditure in respect thereof will be required this year.

**Shipbuilding under the Navy Department.**—Expenditure under this heading has been going on since the 11th year of Meiji. This year an increase is expected as caissons for the new dockyard gates will be required.

**Gunpowder Manufacture under the Navy Department.** As in the case of the Army Department, the gunpowder mills have not yet been completed.

**Mining under the Public Works Department.**—Although the expense of making tunnels and drifts at Aui is to be drawn from the fund for promoting industries, yet new tunnels and drifts have been made at Ikuno and Miike, a new machine has been erected at Sado, and an amalgamation establishment has been constructed. At Kamaichi a branch line of railway and an iron foundry has been constructed, and at Osaka and Nakazaka furnaces have been erected.

**Expense of Railways under the Control of the Public Works Department.**—The railway line between Kyoto and Kobe has been finished, but a number of freight cars are yet required:

**Industrial Undertakings under the Public Works Department.**—The branch factories at Fukagawa, Akabane, and Hiogo have been completed or nearly so. In the branches at Shinagawa and Nagasaki, the extent of the works and machinery employed, have been greatly increased.

**Extraction of Petroleum under the auspices of the Public Works Department:** In Tôtôni and Echigo petroleum wells are to be opened during the present fiscal year.

**Industrial Undertakings under the Colonization Department.** The expenses incurred in respect of these undertakings appear this year under a separate heading.

**The National Exhibitions** intended for promoting native industries, show an increase in these estimates, as the current year is that in which they are held.

**The Melbourne Exhibition** is to be held during the current fiscal year as announced in June 1879.

**In Miscellaneous Expenditure** a considerable increase is expected, in consequence of the expenses incurred in repairing buildings for the Council of State, in commissions for drawing up the codes of Criminal Law and Law of Criminal Procedure, the Military Code, Rules of Admiralty proceedings, &c., and also of some increase in the Supplementary Grants for Land-tax Reform, necessitated by the completion of the same Reform this year. The estimate is, however, decreased by the entire abolition of the visits of police-officers abroad.

The total increase in the thirty-four items above mentioned, together with the expenditure in connection with Foreign Debts and one other item, is 5,655,867.09 yen.

The decreases under the different items of expenditure as compared with the last year are explained as follows:—

**Interest on Foreign Debts.**—Some deduction of the principal has been effected during the last financial year.

**Gratuities to the Military.**—There is no reason to anticipate any expense being incurred for the treatment of wounded soldiers, or for temporary grants to the military. The pension fund is also considerably diminished.

**Finance Department.**—Some decrease is expected in consequence of the general economy practised, notwithstanding some increase necessitated by the appointment of distillery inspectors, and the commission payable on the purchase of articles of foreign manufacture.

**Public Works Department.**—In consequence of the rigid economy which will be practised in the expenditure of the Department.

**In the Land Tax Reform Bureau** a decrease is expected, in consequence of the diminution of the number of officials employed now that the work approaches completion.

**In Grants in Aid of industrial undertakings** under the Home Department, owing to the income from the silk factory of Tomioka having increased, although the Senji woollen factory still requires some additional aid.

**In Grants in Aid of the sheep farm** under the Home Department, because this item has been transferred to the ordinary expenditure of the department.

**In Grants in Aid of the extension of telegraphs** under the Public Works Department, a decrease is expected owing to the circumstances mentioned when dealing with the profits received from the Department.

**In the Police Bureau** some decrease is expected in consequence of the transfer of the expenditure for Prisons to the Home Department, and of the general economy practised; although some increase has been caused by the Bureau becoming liable for the salaries of the police who guard the premises of the Home and Navy Departments.

**In Constructions and Repairs** a decrease is expected in consequence of the transfer of the cost of repairs of police stations under the head of Police expenditure, and also owing to fewer new buildings being now required, notwithstanding the increased expenditure caused by the establishment of the Okinawa Kencho.

**In Engineering Works**, because the cost of repairs to the Shino Basbi in the city of Tokio has decreased, although some augmentation will be incurred for the repairs of roads, woods, arsenals and the Imperial Residence.

**In the Estimate for the Extension of Telegraphs** under the Public Works Department, because the necessity for constructing new lines has decreased.

**In the Expenditure for the Sheep Farm** under the Home Department, because this expense has been transferred to the ordinary expenditure of the Department.

**In the Expenditure for the Mint** under the Finance Department, a diminution is expected owing to the carbonate of soda factory being completed.

**In Rewards to Soldiers of the old Imperial Guard**, as the term of their service expired in the 1st month of this year.

**In Expenditure for Building and repairing the Imperial Palaces** a diminution is expected in consequence of facts explained under the head of *Miscellaneous Revenue*.

**In Supplies to the Militia at Hokkaido**, because the term during which the supplies were to be furnished expired last year.

The total of decrease in the above seventeen items, together with the allowances to Shinto priests and Temples, and four other items, is 1,873,729,124 yen.

If the amount of decrease on these items be deducted from the amount of increase, the nett increase in the estimated expenditure for this fiscal year will be found to amount to 4,282,127,966 yen, as already mentioned.

TABLE I.—REVENUE.—COMPARATIVE TABLE SHOWING THE REVENUE AND EXPENDITURE FOR THE NINTH, TENTH, ELEVENTH AND TWELFTH YEARS OF MEIJI.

Revenue and Expenditure for the 10th and 11th fiscal years given in the above table show only the actual accounts as they stood in the 1st of the 7th month of this year (1st July, 1880). Some of the items in the same are not properly arranged and denominations for the same thing are not arranged in exactly the same manner in each year. For example, in the 9th year, every profit and proceeds derivable from the public industries and works is merely comprised under the name of profit, although there was no representation of such a heading as profit on account of the regulations for the public industries being not yet in effect during the year, and the expenditures in such works have been debited to the account of the Ordinary Expenditures of the Department to which the works happened to belong, therefore no amount of money is stated under the items of *Supplement to Deficiency of Capital for maintaining Public Works, Industries and Works, and Expenses of Creation of the Industries of Public Works*. The Excess of the Revenue over the Expenditure every year is to be transferred into the Reserve Fund as soon as the general account is arranged and balanced.

Loan for suppression of the south-western Rebellion at 5 per cent. ....	15,000,000	
		27,500,000.
Old Loan bearing no interest .....	9,211,776.	
Paper Money in Circulation .....	108,683,203.600	
		117,894,979.600
<b>Total of Domestic Debt</b>		<b>347,031,594.600</b>

#### FOREIGN DEBT.

Old Loan at 9 per cent. ....	976,000	
New " " 7 per cent. ....	10,036,696	
		11,012,696.
<b>Total of Domestic and Foreign Debt.....</b>		<b>358,047,290.600</b>

#### The Reduction in the Foreign Debt in addition to the amount stated in the Estimates for 1879-80 has been :—

Old Loan .....	488,000	
New " .....	328,424	
		816,424

Included in the above total is the increase of new Bonds by final arrangement, in excess of the amount stated in the estimates for the year 1879-80, as follows :—

Bonds payable in Gold .....	2,730,000	
Capitalized Pension Bonds .....	200,000	
" " " by settlement of final accounts included in preceding estimates .....	150,860	
A decrease has taken place owing to reductions of estimated liabilities for the year 1879-80, as follows :—		
New loans .....	164,000	
Bonds in exchange for Kinsaten .....	50,400	
Voluntarily capitalized Pension Bonds	2,346,960	
Old Loans .....	219,328	
		2,780,678.

#### Decrease of debt owing to final settlement of accounts :—

New Loan .....	11,025	
Old " .....	8,628	
		19,653.

#### Decrease in paper money :—

Withdrawn from circulation .....	4,730,000	
Lost .....	14,788,400	
		4,744,788.400
<b>Yen</b>		<b>7,545,119.400</b>

#### RESERVE FUND.

Actual Amounts .....	Yen 51,325,515.134	
Including :—		
Reserve Funds held by Government Departments .....	659,739.311	
Capital supplied for Industrial undertakings under control of Government Departments .....	4,430,261.155	
Sundry loans due to Government .....	7,506,811.830	

#### REUTER'S TELEGRAMS.

LONDON, 1st September, 1880.

The Chinese Government desires to substitute Kuldja in the treaty convention ceding Ili. The Russian Government requires a rectification of frontier and has decided to negotiate at Peking.

LONDON, 11th September, 1880.

In the engagement with General Roberts Ayub Khan fled. The enemy were defeated with great slaughter and a loss of thirty-two guns. The British loss is only two hundred and forty-eight. No prisoners were taken.

## The Japan Weekly Mail.

'FAIS CE QUE DOIS; ADVIENNE QUE POURRA.'

### NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the JAPAN WEEKLY MAIL must be authenticated by the name and address of the writer, not for publication but as a guarantee of good faith.

It is particularly requested that all letters on business, relating to Advertisements, Job-printing, or Accounts, be addressed to the MANAGER.

And that literary contributions of every description be addressed to the EDITOR.

YOKOHAMA: SATURDAY, SEPTEMBER 18TH, 1880.  
JAPANESE ERA 2540, MEIJI 13TH YEAR, 9TH MONTH, 18TH DAY,  
DO-YO-RI.

### NOTES OF THE WEEK.

The English mail of July 30th came to hand per the Mitsui Bishi steamer *Sumida Maru*, on Monday last. The *City of Peking* arrived from Hongkong on Wednesday, and is circulated to leave for San Francisco, at nine o'clock to-morrow morning. The home mails, via Hongkong, went forward in the M. M. steamer *Menzelsh*, on the 15th instant.

The s.s. *Benedi* arrived on Thursday night last. She made the passage from Singapore in the remarkably quick time of twelve days and half an hour.

The Ocean Steamship Company's steamer *Stentor*, from London, left Singapore on the morning of the 4th instant for Hongkong.

The Japanese corvette *Ili-Yei Kan*, Captain Ito, arrived at Singapore on the 25th ultimo, from Muscat, on the return voyage to Japan.

If the Singapore paper be correctly informed, there are several more vessels now en route for this station. The *Straits Times* says:—"The following Russian men-of-war, now on their way to Vladivostock will shortly pass through this port—The *Europa* cruiser; *Plocstun*, corvette; *Strelack* corvette; *Askold*, large corvette; *Shestchik*, corvette; *General-Admiral* ironclad frigate; *Duke of Edinburgh*, ironclad frigate; *Westnik* cruiser; *Opretschnuk*, cruiser."

We hear that the Chevalier Wittewaal von Stootwegen, the Dutch Minister, is about to return to Europe. The Chevalier's stay in this country has been of more limited duration than that of any other Minister within our recollection, and his sudden departure has excited considerable conjecture.

Sir Harry Parkes' return to Japan is still uncertain, for we regret to hear that the state of his health continues such as to necessitate a trip to Sweden and Norway for its benefit. It is not generally known that the Home Government, in recognition of Sir Harry's arduous labours in the East, was desirous of giving him relief, and offered to transfer him to the Legation at Stockholm, and it is possible that, during Sir Harry's present sojourn there, he may become so enamoured with the enchantments of that delightful country, as to decide on resting on his laurels in that peaceful retreat of European diplomats. The Ambassadorship at Stockholm is also promotion, and we shall rejoice if it contributes to Sir Harry's speedy restoration to health and a long life of happiness.

On Saturday last, the 11th instant, the foreign employés of the Mitsui Bishi Mail S. S. Co. gave a complimentary dinner to Mr. Frederick Krebs, the foreign director of the Company and Mrs. Krebs, at the Seiyoken. Ueno, on the occasion of their return from Europe. Mr. Iwasaki, the other Japanese directors and their wives, and about 35 guests were present. Mr. Bramsen occupied the chair and in proposing the toast of the evening expressed the gratification that the employés of the company felt in seeing Mr. Krebs back restored to health and ready to resume his former position. The speaker concluded with a complimentary allusion to the bride and called on the company to drink to the health, and happiness of Mr. and Mrs. Krebs, which met with a most enthusiastic response. Mr. Krebs made a suitable reply and other toasts followed. The Naval Band was in at-

tendance and after dinner an impromptu dance was got up, so that altogether a most agreeable evening was spent.

An absurd rumour was circulated in Yokohama on Sunday last of the death of His Excellency Sano Tsunetami. We have done all in our power to trace this vicious report to its source, but without avail.

The many friends of Mr. Masfen will be glad to learn from the advertisement in another column that he has returned to Japan, and resumed charge of the Yokohama branch of the Chartered Mercantile Bank.

We are informed that on the 16th of August the Honble. Mr. Seward presented his letters of recall, and the Honble. Mr. Angell his credentials, to the Tsung Li Yamen. Messrs. Swift and Trossett, the two commissioners, have by this time reached Peking, and a meeting of the commission taken place.

The Société Suisse de Tir held their first meeting of the new season on Saturday last, and are to be congratulated on its being a complete success. A better day for shooting as regards wind and weather could not have been chosen. The conditions of the match were ten shots at four, and ten at five hundred yards, three trial shots at each range being allowed. Prizes were given for the six highest scores, the first of which fell to Colonel Murata. Telescopic sights were not allowed.

### SCORE.

Names.	400 yards.	500 yards.	Total.
Colonel Murata .....	47	43.....	90
Mr. Mottu .....	41	36.....	77
" Gilbert .....	44	30.....	74
" Beretta .....	34	39.....	73
" A. Dare .....	32	37.....	69
" Guissani .....	34	34.....	68
" Grob .....	35	33.....	68
" Dubois .....	34	31.....	65
" Hurlimann .....	41	23.....	64
" Schinnc .....	36	26.....	62
Captain Suyekawa.....	37	24.....	61
Mr. Feyerabaud.....	30	25.....	55
" H. Abegg.....	31	23.....	54
Admiral Kawamura .....	43	10.....	53
Mr. Schoene .....	39	12.....	51
" Wienberger .....	24	25.....	49
" Wolff .....	31	15.....	46
" Stingelin .....	24	15.....	39
" Rohde .....	4	35.....	39
" Deck .....	8	25.....	33
" Stiebel .....	22	8.....	30
" Ziegler .....	23	5.....	28
" Grunwald .....	9	3.....	12
" Sagel .....	2	6.....	8

Messrs. Guissani and Grob shot off no less than five ties to decide their positions; it was not until the sixth shot that Mr. Guissani gained by one point. Owing to a misapprehension about the sights allowed, Admiral Kawamura made a far less score than was expected, as he had to alter the back sight of his rifle.

Shortly after two o'clock on last Saturday afternoon stumps were pitched and play commenced between the First Eleven c. Twenty-two other members of the Y. C. C. Milne having won the toss sent Stephens and D'Almeida to the wickets, Abbott and Strange bowling; the former was carelessly run out by D'Almeida, who tried by careful play to make amends for the mistake but only added six singles to the score. The next two wickets fell very quickly, Ritchie, being stumped while on a quiet walk over the crease. Davies followed and, after being let off by Dodds at long off, was clean bowled. The next bat, Litchfield, was more successful. After a single, he sent the ball clear over the pavilion. Hard hitting was the order of the day, and not before his partner was nearly "finished" was he bowled by Abbott for sixteen, the top score. Cope and Herbert batted very well, the latter being cleverly caught at point. Wheeler here took up the bowling and wickets fell rapidly, the innings closing for forty-eight runs, or one less than they scored in the former match. The twenty-two were quickly in the field, Dodds sending out his Tokio men first to the bat. Trevelthick scored one when Hearn held a ball that rose a little. Barrow took his place and runs came quickly till Stephens sent a ball under Strange's bat, and

then bowled both Wheeler and Mollison; five wickets for fifty-three runs. Abbott sent the ball all over the field, one hit for four over the fence, and the balance of his thirty-three runs in singles and twos, the fielding of the twenty-two, who were well generated, making it difficult to get many runs at a time. Sutter after two singles drove a hot one to point which was well held, and point on the opposite side closed the next bat's career. The three last wickets fell for four runs, Hutchison carrying his bat out for this number; total 72. The bowling and fielding on both sides were good. Stephens for the twenty-two bowling eighty-two balls, and taking eight wickets for thirty-four runs. Wheeler for the eleven bowled forty-seven balls, taking seven wickets and only ten runs.

The twenty-two winning by twelve runs will necessitate a return match. The following is the score:—

## THE TWENTY-TWO.

Stephens, run out	3
D'Almeida, b. Abbott	6
Hearne, b. Abbott	1
Hitchie, s. Cobden	0
Davies, b. Strange	7
C. D. Moss, b. Abbott	1
Litchfield, b. Abbott	16

The principal, and by far the most popular attraction among the shows in the quarter just over the Yoshida bashi, is the trained yamagara which are now being exhibited. The Japanese are famous for the patience and ingenuity they exhibit in teaching birds to perform various tricks, and the yamagara now on view are wonderful examples of what they can accomplish in that direction. "These birds, ladies and gentlemen," said the showman to his audience, who were packed close as sardines in the booth, "are perfectly acquainted with the Japanese language, and this one"—here he held up a cage with a yamagara in it—"will, when I order him to do so, take those coins from the table, place them in that box, and then go to the little temple on the edge of the table, and say his prayers." He then spoke to the bird who hopped out of the cage and went through the announced performance, returning to the cage at the word of command. Another very good trick was done by two birds: one mounted a small wooden horse, while the other seized the halter in its beak and dragged the horse round the table. The birds seem perfectly to understand what the showman says, and he impresses that fact upon the audience from time to time. A row of letters are placed on a piece of wood resting on the table, and the showman states that, although all his birds are well acquainted with the language, "still this one surpasses the others in knowledge, having been eight years at school. He will therefore spell any word I mention." Words are then named, and the bird knocks off the

wood the characters which represent them. There are several other tricks, pulling bells, shooting off an arrow, mounting and descending a ladder, walking—or rather hopping—the tight rope, &c. &c., all of which are very cleverly gone through. Altogether the performing birds are well worth a visit. That the natives think so is evident from the crowds who are unable to gain admittance at every representation.

The U. S. corvette *Ticonderoga* carrying the flag of Commodore Shufeldt has, we are told, received orders to leave this station, as the attempt to open relations with Corea has evidently failed. The *Ticonderoga* will, in the first instance, go to San Francisco. It is considered that to open Corea, if such a step be desirable, will require a land force of three or four thousand men to cooperate with a fleet.

The race between the two barges from the U.S.S. *Scotara* and *Richmond*, which came off yesterday, resulted in an easy victory for the former. The course was a straight run in past a boat moored near the American flagship, from a point four miles down the bay. There was a very rough sea on which must have tested the men's powers of endurance considerably. Owing to incessant shiftings of position and delays which seem to us inexplicable, the boats got away with a fair start at 6.38 p.m., so that in spite of the moon it was hard to see anything from a launch even, while the anxious friends on board the ships and ashore could have perceived nothing. The *Scotara*, pulling a steady stroke of 30 to the minute, at once forged ahead and gained more and more ground every moment. Off Treaty Point they were pulling 31 per minute and were at least 250 yards ahead. They then slowed down to 27 per minute, the *Richmond* crew pulling 29. Near home, the *Scotara* men put on a grand spurt of 33 to show that there was plenty left in them, and pulled past the goal, amid the enthusiastic shouts and hurrahs of their shipmates, winners by one minute and a half. The time was thirty-three minutes, which, considering the heavy sea, is remarkably good. Both crews pulled so well that it is a pity so few people could have seen the race.

We believe the following address was the cause of the race coming off:—

## OLLAPODRIDA.

Dedicated to the

RICHMOND'S RACING CREW.

We have heard of the Olga, the Dauntless, and Daring,  
The Magic, and all flying craft of their kind;  
How, in days past and gone, the good names they've been wearing,  
But we have the boat that could leave them behind.

She was built long ago, by a famous old builder,  
Named Rigby, her keel was first laid at the Hub;  
If I had the money, all over I'd gild her,  
Though some people call her a miserable tub.

She came on this station without fame or glory,  
Our craft is quite nameless, but we mean to try  
Before we go home to win her a story,  
And also a rooster on her bow to fly.

The "Richmond" has got one, but their bird's history  
To us is a problem, to tell whence he came,  
Whether he was won fairly, or bought is a mystery;  
Some say 'tis the latter, because he's not game.

We saw him but once, then his head, it looked drooping  
As if he'd caught pip, or a very bad cold.  
While after him came, on our saucy prow swooping,  
A broom, which had swept something—"Better untold."

We are not cast iron, and yet we are willing,  
To meet in a friendly bout all compeers.  
This waiting here now for the challenge is killing,  
So we hope soon to hear from the champion of years.

But if they should beat us, we will never grumble,  
As long as the rooster is under our flag.  
So hoping the "boys" over there will soon tumble,  
And challenge, to stop all the outsiders' brag.

"BOW OAR"—"SWATARA'S" CUTTER.

The *Hongkong Daily Press* states that "the Hongkong and Shanghai Banking Corporation has issued a notice warning the public against receiving certain notes of the Corporation which have been stolen. The notes are all of the value of five dollars, and are numbered consecutively from 122,001 to 122,500." As it is not improbable that attempts will be made to dispose of the notes elsewhere than in Hongkong, such of the public as have occasion to handle bank notes these hard times should be on their guard.

In the U.S. Consular-General Court on Wednesday last, charges of cruelty against the master and first mate of the American barque *Ellen Goodspeed* were dismissed, the Consul-General remarking that if he had thought fit he could have fined the complainants \$10 each for having failed to prove their cases.

According to the *Mainichi Shinbun* a merchant vessel has been recently built for some Russians, at the Hirano dockyard at Ishikawa, Osaka. The vessel has given such satisfaction on account of its fine model and the good workmanship displayed, that the purchasers have, it is reported, given orders for the construction of a man-of-war at the same place.

From the same source we learn that a telegram has been received to the effect that Kobe was visited by a heavy gale, which began suddenly at 9.30 a.m. on the 16th instant. Great anxiety was felt as to the safety of the shipping which were severely tried by the violence of the gale. A foreign barque is said to have gone ashore.

We learn from a vernacular journal that the *Chitose Maru*, with the Korean Embassy on board, arrived at Kobe on the 10th instant. The Embassy at once landed and H.E. Ambassador Kin visited the Kencho. Six members of the Embassy left for Kioto, and en route visited Osaka. On the following day, H. E. Vice Ambassador Ri went from Kioto to Osaka, where he inspected the Mint and Arsenal, and then paid a visit to the Fuchō.

The *Mainichi Shinbun* says that a well known private gentleman, recently interviewed a member of the Senate upon various political subjects, when the Senator expressed himself as follows:—"In compliance with the Imperial edict issued in 1876, the Senate has commenced the compilation of a constitution, but various questions having arisen the work was stood for a while. It is owing to the progress of the Empire and the general desire of the people for the establishment of a National Assembly, that political agitators have sprung up this year. The national finances are in a very critical condition, and there can be no better method of extricating them from their present state than that of establishing a National Assembly. It is therefore necessary to comply with the Imperial edict and compile the constitution as soon as possible: this is what has been communicated by the Senate to the Cabinet, who replied in terms of approval. Accordingly a private meeting of the Senate will be held about the 15th instant, and it is believed that their decisions will be forwarded to the Cabinet about the 20th instant. The constitution now being compiled will be after the French model."

The same paper says:—"We learn that two or three Senators who hold liberal views insisted that as constitutional laws were a matter of the greatest importance both to the Government and the people, they ought not to be revised carelessly; and that therefore it would be far better to choose able personages out of all the Government officials and to publicly establish a special bureau for the compilation of the work, than to leave it in the hands of a committee of five or six. The proposal was, however, rejected."

We read in a native journal, that large quantities of matches, manufactured in the prison of the Hiogo prefecture, are being exported to China.

The *Wall Street Daily News* says that "Jay Gould's winnings during the last year are variously estimated, but, on any reckoning, his capital has been rolling up like a snow-ball. A year ago he sold 100,000 shares of Union Pacific for about \$7,500,000. Then he bought a controlling interest in Kansas Pacific, which was at 12, for about \$600,000, and in the next six months the stock rose to 32, netting \$4,000,000. Wabash was at 18 when Gould bought, some say, two-thirds of the stock, and it rose to 68½. His profits on the consolidation of the St. Louis Northern (which he bought at 7½ and saw rise to 47) and Wabash are put up at \$4,850,000. In all by spending about \$3,850,000 for stocks, Gould has netted \$11,000,000, if he were to sell out."

The following description of the Herat troops appeared in the *Bombay Gazette*, and, as they were probably the most

formidable of General Burrows' opponents, it will be interesting at the present time:—"The Herat regular force was originally organized by Sultan Djan, and consists of five regiments of infantry of 500 men each, five detachments of cavalry—one in each district—of 450 men each, and eight guns. The whole forms a total of about 5,000. There is a Commander-in-Chief subject to the personal commands of the sovereign. The artillery is under the direction of a special commander, the Toptelio Bashi. The regiments are divided into companies; officers' titles are taken from the English army. The djernal, the koronel, and midjir answering respectively to the general, colonel, and major. Discipline is exceedingly strict, commanders have unlimited power, and may kill subordinates with impunity. The infantry are provided with flintlocks, modern rifles, the crooked Afghan sword, and kindjales from 1 foot to 1½ feet long. The cavalry are armed with pikes, matchlocks, kindjales and crooked swords. Drill, as a rule, is entrusted to Anglo-Indian deserters, and carried on in accordance with English rules. There is a great deal of regimental service going on with a fair degree of success in tactics and manœuvring capacity. The word of command is given in English."

Every one knows the voracious Captain Kearney's description to Mr. Peter Simple, of his uncle's kitchen where the salmon were pickled alive in strong brine, and killed when wanted. But *La Nature*, a French scientific publication, gives a still stranger—yet, according to the old proverb, a more truthful—account of a lacustrine volcano which has recently burst up from the bottom of Lake Ilopango, in the Republic of San Salvador, Central America. The new crater, which, seen from a distance as in the illustration, appears a small islet, rises above the surface of the water, however, about twenty metres. An attempt was made to approach it in a boat, but the waters were in a state of ebullition from contact with the burning rock, and gave off torrents of steam. An abundant column of smoke rose in the air, assuming the aspect of an immense cloud, which was seen from a great distance, and formed an imposing spectacle. The Consul of France in Guatemala, M. de Thiersant, states that Lake Ilopango has now a temperature of 38° C. on its shore, and is in complete ebullition round the volcano. All the fishes are cooked and float upon the surface, with a great number of shell-fish and other aquatic animals.

The *Hiogo News*, quoting the *Osaka Nippo*, says that "the gale of the 25th ultimo, has been severely felt throughout the whole Empire. A letter from Hakata states that the gale was very violent there, and on the sea off Hakata five junks disappeared from sight in a few minutes. Seven or eight days later, thirty-six bodies were washed up on the shore, and it is said that the bodies of a woman and a child of three years of age were found tied together; while the body of man lashed to a mast was also washed ashore."

The *Friend of India* mentions that "the Acting-Resident at Aden reports, under date July 13th, that the *President Troplong*, under French colours, went ashore near Ras Hafoon. She was at once boarded by hordes of Somalis, who proceeded, as usual, to help themselves to everything portable, including a box of specie. In the midst of their depredations the vessel gently glided off, and the Somalis at once leaped overboard with their booty. The captain, however, had some Winchester rifles ready loaded, and he is said to have succeeded in killing and wounding upwards of twenty Somalis whilst swimming ashore. The vessel eventually reached Aden in safety."

We read in another paper that the politicians of the seven Northern provinces recently held a meeting in the town of Kanazawa, to consider the advisability of establishing lecture halls in the towns of Niigata, Toyama, Nanao, Kanazawa, Fukui, Kohama and Aikawa.

The same paper mentions that the politicians of the whole province of Chikuzen in the Fukuoka prefecture met at the Muriaji temple, in the town of Kurume, on the 30th of last month, and established a society under the name of *Chikuzen Kiwai*. The members of this society are bound to observe the three following rules. 1st. To respect the Imperial House and do their duty as its faithful servants. 2nd. To use their best

efforts to develop the national resources and to promote the sovereign rights of the people. 3rd. To strive after the real interests of the community and endeavour to bring about the fair treatment of each individual.

The *San Francisco News-Letter* says that "there is to be a conference of American ship-owners very shortly in the east. The object of the conference is to inquire into the causes of the depression in, and to devise means, if possible, to improve the condition of our shipping interests. No nation on God's earth has a finer seaboard than we have, and yet we occupy but a fourth or fifth rate position with respect to our mercantile marine service. The law which forbids the transfer of foreign-built vessels to our own flag is out of date now and must be abolished. We have suffered enough from such a short-sighted system of 'protection.' If we cannot build vessels in this country as cheap as other countries can, by all means let us buy from them and, at least, get the profits out of the sailing and management of our own ships. Our mercantile interests have suffered enough through our dependence upon foreign flags for our steam and sail-ship service. It is high time that we should be able to walk upon our own legs. Why our shipping interests, limited as they are, should now be so depressed, as it is claimed they are, we do not quite understand. Freight is tolerably good all over the world, and the cost of running American vessels is decidedly much less than it was in former years. We can remember the time when to visit an American ship was a treat like visiting at the house of a hospitable man. The wine, the lunch and the cigar were always at our disposal. Now, when one visits an American ship, everything looks mean and poverty-stricken on it, and we hasten off to call at the nearest foreigner for a dram to wash away the chilly effects of the cool reception which we have received on the American. Extravagance, therefore, in the way of food and wine bills certainly does not add to the cost of running our mercantile marine. The cause lies deeper, and we hope that the members of the proposed conference will succeed in probing the matter to the bottom. Bright times for our own port seem to be in prospect for us. If the scheme of Messrs. Fair & Scott is carried out of starting large iron ship-building yards here, California will owe the gentlemen connected with the undertaking a debt of gratitude which we hope the people will remember. We must all sincerely wish them success in their efforts to obtain the Japanese contracts which they are looking for. Apart from this, there is commerce enough on this coast to support a very large fleet of American steamers and sailing vessels, and if our capitalists would only give a little more attention to ship-building and ship-owning, they would not only solidly and materially benefit themselves, but also their countrymen at large."

"Most people" says the *Pall Mall Gazette* "know the story of the mob of Irish rebels who made diligent search for the notes issued by a certain unpopular Orange banker, and solemnly burned the securities *coram publico*, with the avowed intent of 'ruining the blagyard's business entirely.' The banker, it may be assumed, was less ruined than refreshed by this wholesale extinction of his promises to pay. Almost as logical a mode of injuring the Saxon has been suggested by an angry 'Dublin Merchant of Forty-five Years' Standing,' who writes to a contemporary to complain that on arriving in London, and dining at the restaurant of the St. Pancras terminus, neither the young ladies behind the bar, nor the station-master himself would have anything to do with a note for £3 of the Bank of Ireland which he proffered for change. The angry merchant thinks this a poor compliment to Ireland, and announces his retaliatory determination, when he gets home, sternly to refuse any payments tendered to him in notes of the Bank of England. He also recommends every man, woman, and child in Ireland to do likewise. If the angry merchant, before penning his indignant letter, had taken counsel of any business man in London he would have been told that the grievance of which he complains is one to which every holder in the British metropolis of a Scotch or even an English provincial note is liable. Tavern-keepers, waitresses, and railway officials are not expected to know anything about the validity of these documents, and even an ordinarily intelligent shopkeeper might hesitate before he gave change for a 'country note' tendered by a total stranger. The only remedy for such an evidently inconvenient state of things would be a large increase in the number of money-changers. London is more poorly provided with 'bureaux de change' than any other metropolis in Europe."

## ECCLESIASTIC AND MISSIONARY NOTES.

ON SATURDAY the 11th of September instant, the American Methodist Episcopal Church Mission, dedicated their new Church, at No. 11, Akashi-cho, Tokio. There was a very large attendance of both Japanese and Foreigners, and among the visitors we noticed The Honble. J. A. Bingham, United States Minister. The sermon was delivered by the Rev. Dr. M. Donald, and the church formally dedicated by the Rev. Dr. MacLay, of Yokohama. Congratulatory addresses were delivered by the Pastor of the Congregational Church, the Rev. Mr. Kozaki, the Rev. Mr. Hirawa, of the Methodist Church of Canada Mission, and S. Tsuda Esq., who is President of an Agriculture School in Tokio, and also editor of two journals principal devoted to agricultural subjects. The services throughout were very interesting and profitable.

THE CHINESE RECORDER:—This Missionary Journal, now in its eleventh year, is a worthy successor of the *Chinese Repository*, and will no doubt in due time win much of the same enviable reputation. It has just passed under the editorship of Rev. A. P. Happer, D.D., the Presbyterian veteran of Canton—a fact that ensures its being conducted with vigor and special reference to missionary work. The "Open Letter to Max Müller," in the May-June number, regarding Dr. Legge's use of the word "God" in his revised translation of the Chinese Classics, is worth the subscription of the year, to any student of Oriental Religions. The number for July-August, just received, has several articles giving missionary news and statistics, and an interesting memorial of the late Mrs. Edkins of Peking, whom none knew but to love. We are glad to see in it a republication of "The Missionary's Call," from the pen of our veteran fellow townsman, the Rev. Nathan Brown, D.D., which stirred the heart of many, long before he became a Missionary to Japan.

THE REV. W. C. DAVISON, of the Methodist Episcopal Mission in Hakodate, has recently completed a new school-house in Hakodate, to take the place of the one destroyed by fire in October, 1879. He opened school in it on the 2nd of September instant with an attendance of twenty scholars and six more have recently entered the school. Mr. Davison has also completed a new Church edifice in Hakodate, on the site formerly occupied by the Church swept away by the disastrous conflagration of last October. He now conducts public religious service in the building. During the latter part of August, Mr. Davison visited the city of Fukuyama—or Matsumage, as it is sometimes called—in the island of Yesso, and was permitted to address large audiences comprising many persons who listened respectfully and apparently with considerable interest to the truth. Three adults, who had been under Christian instruction for some time were baptized.

OSAKA:—A General Convention of all native Protestant Churches was opened on the 13th of last July. At this meeting, a committee of five was appointed to draw up and present to the Government, a petition that the privilege of Christian Burial be allowed to such natives as desire it. The cemeteries are controlled by Buddhists, private burial places are forbidden, and it is annoying when burying our dead, to be obliged to wait and listen to repugnant heathen services. In the open ports we can usually avoid this by paying the priest a bribe larger than his fee, which leads him to have business in another place, or to be sick at the time of the burial.—*Chinese Recorder*, July-August.

THE METHODIST MISSION SEMINARY (Bi Kuwai Shin Gakko) opened for the second year's work on the 15th instant. The branches taught during the present term in the Theological Department are: Exegesis, Systematic Theology, Haven's Mental Philosophy, Wayland's Moral Science, and the Life of Christ. In the Academic Department; Algebra, Arithmetic, Physical Geography, Geography, History, English Grammar, Reading and Spelling, and also exercises in composition and speaking. All the students are expected to study Chinese, and no students are admitted under the age of thirteen years. The Seminary is designed for Japanese young men who desire to study Theology, or to pursue a course in English. In the Theological Department the students are taught, so far as is practicable, in the vernacular. The number of students at the present time is twenty-six, and there is accommodation for nearly forty boarders. Instruction is given by five foreign and two native teachers. A circular, containing further information, together with the rules of the Seminary, may be obtained by addressing the President, at No. 221 Bluff, Yokohama.

THE NUMBER of Christian CONVERTS connected with Protestant Missions in Japan, according to statistics reported towards the close of 1879, was 2701, being an increase of 1064 over the number given in the previous statistics reported in July, 1878.

THE REV. MR. SHESHADRI from north-western India, recently passed through Japan on his way to attend the Pan-Presbyterian Council, which meets next month in Philadelphia, U.S.A. Mr. Sheshadri is a native of India, of the Brahminical

caste, but many years since became a Christian, in connection with the work of the Free Church of Scotland. He is an active and efficient Missionary among his countrymen, and excited great interest in Great Britain and America in 1873, by his interesting speeches. He uses the English language with ease and power. His several addresses in Tokio and Yokohama, before native audiences during his short stay in Japan, were productive of much good. His expositions of the real nature of Brahminism and Buddhism, and his comparisons of them with Christianity were very telling.

THE CONTRIBUTIONS of Church members in Japan, for all purposes during the year 1879, amounted to \$3,189.36 making an average contribution of \$1.18 for each member.

MR. ROBERT F. KERR, of Indiana, U.S.S., has just completed a term of successful service as teacher in the High School of Hirotski, Awamori Ken, Hondo, and is now about to return to the United States. Mr. Kerr is a graduate of the Indiana Asbury University, Greencastle, Indiana.

SIXTY-SIX CHRISTIAN CHURCHES have been organized by Protestant Missionaries in Japan since 1872, making on an average, eight Churches a year. Of these Churches, thirteen are wholly self-supporting, others receive on account of pastor, salary, chapel rent, &c., &c., more or less help from the Missions with which they are connected.

THE LOCAL CORRESPONDENT of the *China Mail* writing from Canton on the 27th of last August says:—"After a stay of more than ten years in China and after treating about fifty thousand Chinese patients" (using thus his own words in his report upon the work in the Hospital, recently to hand)—the worthy Dr. D. W. Osgood, of the American Board of Foreign Missions, has died at Sharp Peak, near the mouth of the Min, of brain fever. Like Dr Brown, whose death in New England I noticed on the 3rd instant, Dr Osgood suffered severe injuries (some years ago) from native violence; and it was his purpose to retire from the scene of his arduous and constant ministrations to the needy,—spiritual and physical,—of the people of Foochow and its neighbourhood, for a visit to America, to regain his impaired strength. Dr Osgood was a much younger man than Dr Brown, and it is with great and general regret that our community learns that his career of eminent usefulness has thus been prematurely and suddenly ended."

THE RECEIPTS of the Church Missionary Society the past year attained the grand total of £221,723, a magnificent sum. Its expenses were £200,307; "this large expenditure" says the Report, "has compelled the Society with poignant regret to draw in its thin line and diminish the number of European Missionaries employed; notably in Oudh, in China, and in a part of America."

It further says, regarding this repressive policy which has been adopted in Peking, in Lucknow, in Calcutta, "as regards Peking, the importance of concentration has led the Committee to a decision to abandon it with every probability and hope that the work so abandoned will be taken up by others, and that where they have sown others may reap; the same reason has led to a decision to withdraw the European Missionaries from Oudh; as regards Calcutta, the Committee have resolved no longer to continue the Cathedral Mission College as an institution for training students for university degrees, but to utilize the buildings for holding Theological Classes."

It speaks also of an encouraging advance in Native Christian character "evidenced in Ceylon by Native Catechists voluntarily electing that their own salaries should be diminished rather than that any part of the work should be abandoned. In China, two Native Christians having been falsely imprisoned, impressed their jailor so much by their behaviour and words that before very long he openly embraced Christianity; one of their fellow-prisoners shortly following his example. The converts generally seem to have shown great firmness under trial. In India there are very bright exceptions to that unsatisfactory side of Native Christian character which we in Calcutta and Bengal generally have the misfortune to have more prominently brought to our notice."—*Lucknow Witness*.

THERE ARE SIXTY-THREE Sunday Schools conducted by the Christian Churches in Japan. The number of pupils in attendance during the year 1879, was 2511.

THE RANGOON correspondent of the *Friend of India* writing on the 23rd of last July says:—"We have just received the sad intelligence that the brave Baptist Missionaries at Bhimo have had their mission-house and almost the whole of their property destroyed by an accidental fire. A subscription is being got up here for them, and if any of your readers care to send their mite, I am sure it will be accepted by their confrères in Bhimo." The fire was so sudden and fierce that beyond the clothes they were in, and a few of the lighter articles in the house, the poor Missionaries were unable to save anything."

A CALCUTTA paper learns that the Church Missionary Society has received £1,000 from the Rev. E. H. Bickersteth to start a mission among the Bhils in the hills of Central India.

THE REV. J. HECTOR, speaking in Calcutta recently of the progress of Protestant Missions generally, pointed out that the number of Native Christians in India, Ceylon, and Burmah, had risen in the past 50 years, from 27,000 to 500,000. In India proper there were now at least 400,000, a number almost equal to the population of Calcutta; and it was increasing with every decade at the rate of over 50 per cent.

THE *Star in the East*, the new religious paper published at Calcutta, urges reform in funeral arrangements, observing that "the hideous incongruities, emblematical of sorrow that has no hope, and the tyranny of a custom that crushes bereaved and helpless survivors under the weight of a heavy debt, are felt by all alike; and no one could move in the matter more appropriately, or would have more general sympathy in his endeavours to secure a reform than the Bishop of Calcutta."

THE REV. J. A. Spurgeon, of Croydon, brother to Mr. C. H. Spurgeon, has just become entitled to a legacy amounting to about £15,000, bequeathed to him by a member of his former congregation at Notting Hill.

A MANUSCRIPT of the Gospels, written on purple parchment in silver ink, and adorned with miniatures, was recently discovered in Calabria by Messrs. O. von Gebhardt and A. Harnack. A set of reproductions of the miniatures has just been published at Leipzig, and a collation of the text is promised. The Ms. contains St. Matthew and St. Mark. The discoverers would fix as early a date as the end of the fifth century or beginning of the sixth for both the miniatures and the text.

THE FOLLOWING is the testimony of Sir Bartle Frere, given in an official communication to the Secretary of State, from Government House, Cape Town, December 1st, 1879, with regard to the character of the Missionaries in South Africa:

"Here, as everywhere else, there are many different types of Missionary; but the worst are more potent in their influence on native races than most men who are actuated by avowedly selfish and worldly aims. Christian Missionaries generally combine many qualities which make them not only acceptable to the untutored savage, but most influential in modelling his future. Among Missionaries in South Africa, as in every other profession, may be found unworthy professors, political busybodies, sordid traders, and idlers, but the great majority are, at their worst, superior in influence over savages, to their countrymen who, as hunters, or traders, may enter the country; and many are worthy to be ranked with the noblest of their profession, or of human kind, who in 2000 years have Christianised and civilised Europe. All, as a rule, are in favor of the nearest sovereign civilised power, in this case the English; all, in profession at least, are friends of the best interests of the native races, and a large proportion are their true friends, long tried and much trusted."

## PARIS LETTER.

PARIS, 24th July, 1880.

The revolution broke out partially on the 13th, but certainly the next day. It differed from preceding *émeutes* in continuing for a week instead of three days. It was devoted to rejoicings and love feasts, and bottles were cracked in place of skulls. Even children were placed, as usual, in the front rank of the happy *mêlée*. The reactionary journals are positively leaving insanity for insanity. At no period do I remember such an exhibition of party rage. No language is too coarse, no news too outlandish, no misstatement too gross, for their columns. And this frenzy is the best testimony that can be borne to the solidity and success of the Republic. To believe the Clerical and Monarchical journals, France has only a few days to live. This is the more regrettable, as never were her public funds so high and her surplus revenue so great. Two theatres have even had the audacity to bring out new pieces, and provincials, ordinarily cautious people, were so reckless as to arrive by thousands daily to witness the revels. Hotel-keepers cannot be approached except with hat in hand, and they have let apartments at fancy prices. At the railway not a single old maid is to be encountered scudding before the storm, and better proof still, never were so many pet pugs and Angora cats to be seen promenading tranquilly in the public squares and gardens, led by a string.

The truth is, the adversaries of the Republic cannot provoke a row, still less a division among the Republicans. All the scenic preparations made to invest the dispersed Jesuits with the halo of martyrdom have failed; the stones of Paris did not rise in mutiny; citizens only saw in the departure of that militant Order of the Church individuals who desired the monopoly of not subscribing to the law, but no case of tampering with individual right or personal creed. Then great expectations were built upon a conflict between the Senate and the Chamber of Deputies on the subject of the general amnesty. Incited by some cherished hates, Jules Simon led the Senators to throw out the bill, and he was openly and covertly sup-

ported by colleagues, who will never forgive the Republic for dispensing with their services. Gambetta, as usual, came to the rescue, and under his practical guidance the Deputies took up a conciliatory attitude towards the Senate, and as the differences were only needle points, matters of twocelledum and tweedledee, a satisfactory solution may be considered as effected, by which all the communists will be amnestied, without the measure bearing the name of amnesty. When the employment of the lion's skin is questionable, it is prudence itself to prefer that of the fox.

Public opinion is pleased at the unexpected voluntary purification of the judicial bench. Some magistrates have resigned rather than associate themselves with the legal proceedings against the Jesuits, and this movement is not unnaturally seized as evidence of the decadence of the institution of Justice itself, by allowing politics and religion to have connection with the scales. Simple-thinking people conclude that a judge's duty is to apply laws, not to discuss them, and that the last of his cares ought to be concerning popular sympathy. The resigned were Vicar of Bray republicans, so their departure will be a gain to the existing regime. However, the higher judges—there are six classes in all, and notorious—having unhappily given but too many proofs under poor old MacMahon's Presidency—of their anti-republican and ultramontane sympathies, hold on to office like limpets to a rock. It is to get rid of such tritons that the new law for recasting the bench is being prepared. The *Figaro*, ever foremost in matters farcical, proposes that the minnow Judges who have resigned, be presented with a gold medal to commemorate the most glorious day of their life. Why not a peacock's feather?

It will not be the fault of letter-press and engravings if any one in France henceforth remain ignorant of the building, the existence, and the destruction of the Bastille. The fly-sheet recitals appear by millions, and are rapidly bought up. Three journals have been specially founded to concentrate all particulars connected with the national holiday of the 14th. As if France were inadequate to meet the demands for tri-color or bunting, Belgium, and, it is said, even Germany, are supplying the demand. The latter having received a pretty considerable stock of tri-colors, thanks to Bazaine, might afford to sell cheaply. Costermongers apparently find it more profitable to trundle republican emblems—infinite in their variety, and as tasteful as ingenious—than vegetables, fruit, stale fish and fly-bitten meat. Every day brings out some new device, certain to sell. The favorite lantern in paper, is a model of the Bastille. The candle is placed in one of the towers, and windows of the latter then appear with white, red and blue panes. This is rather taking a liberty with historical glazing. Henry IV. boasted that his darling wish was, that every subject could have a fowl in the pot on Sundays; the Republic desires all citizens to have a tri-color for the fête, and to meet the leanest purses old newspapers have been dyed red and blue; these, with a white sheet, look as imposing at a distance as a stage painting. Pastry cooks sell a *panache* ice, as well as numerous cakes, in red, white and blue, and by muffling the street lamps with similarly colored paper, the expressive effect is secured. Toilet articles, of course, represent the fête; corsets and sleeves blue, scarf white, and flouncies red; not only are there tri-color parasols, hats and caps, but even stockings and garters. Shirts, too, are to be had in the same colors. Imitation jewelry is very extensively made to do duty in combinations of rubies, turquoises and diamonds. The shades of Linnaeus and Hooker might be excused for starting at the multitude of tri-color flowers; but it has been observed that after that Heaven, France is the nest kingdom. The pocket electric light is the size of a five-franc piece, is composed of magnesium wire, burns like a squib, but more slowly, and can be extinguished at will; an expectant nephew could puzzle an old uncle to death with the new invention. Shop-keepers patronized gas festoons liberally, and the trees along the boulevards had Venetian lamps hung among the branches. The Chinese Ambassador may be excused for believing himself at the fête of the lanterns.

The students had called a meeting of their Order to arrange for observing the national holiday. Three hundred put in an appearance, which is not many, when the total student colony in Paris is 6,000. One hoary-headed student proposed that their banner be veiled in crape as a sign of regret for the Senate's not voting the entire amnesty. Many students were surprised to learn their Order had a banner, and on being asked where it was, received for reply, "At my uncle's." One orator, a socialist, with a very German-looking name, took ground that there is no such thing as nationality. He was welcomed with a round of healthy hisses, and retired, with a dissecting book and a few human bones wrapped in a real newspaper, to his attic home.

Among the dispersed Jesuits of Paris was one named Forbes. This is also the name of the pastor of the church of the English Embassy, and who has just been presented with some silver souvenirs on his leaving for England. The subscribers indignantly inform a French journal, which made a confusion in the names, that their Forbes has no connection with the house over the way. Jesuit Forbes was once an officer in the Indian

army, who, during a serious illness, promised his mother, a Catholic, to become a Jesuit if he recovered.

The French publishers have followed the inauguration of their new Club by an exhibition of printing and binding. Books published recently are contrasted with the binding of former years, and the artistic effect is very striking. Perhaps the greatest curiosity is the catalogue. Every leaf is printed by a separate leading printer, in ink by a different manufacturer, and on different colored paper, supplied by a different fabricant of paper.

The Society for the Prevention of cruelty to Animals publishes a rare communication from the French Consul at Japan. The Japanese, he says, have great respect for animals, that almost live in common with the people. The fox is held in special respect, on account of being more cunning than his masters. Horses and bullocks wear straw shoes, in order not to hurt their feet; they only travel at a walking pace, so as to escape fatigue. On the other hand, men draw vehicles, and their pace is a grand trot. An ass is unknown; however, one had been imported by an Englishman, for nursery purposes. The natives were highly amused at Noddy; said its ears resembled those of their god, and its voice that of their popular singers. A rabbit is half sacred, and fetches a price varying from 5,000 to 10,000 francs each. The dogs are pets, and mostly associate with their young mistresses. The cat is a friend of the family, and thanks to its associations with the rabbit, escapes being stewed. All this will, perhaps, be new to your readers as they live in Japan itself!

In 1789, a member of one of the clubs proposed that Louis XVI. be styled "Emperor," as the designation King was commonplace. This was promotion at a moment when his Majesty was hardly certain of his crown. Other oddity: A Henri de Goyon proposed that Louis XVI. instead of expelling the Jesuits, ought to put himself at their head as "General."

A splendid bronze medal of Gambetta has appeared, representing him not as President of the Chamber, but as the energetic orator.

M. Challemeil-Lacour's discourse on "New France" has been as enthusiastically welcomed here as in England.

One editor challenged another; the staff of the journal replied that the former was "too great a blackguard, and was only to be approached with a kick." This is the only interlude in the duel season.

At a recent examination in history, a pupil wrote an answer: "Louis XVI. being decapitated, died from the wound."

A robber begged a policeman to go softly with him, as, were it for him and his pals, the bobbies would die of hunger.

"The events of 1870," observed a friend of a statesman, "have made him almost a fool." "Then he has improved," chimed in a friend, "as he was wholly one previously."

## JAPANESE NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as make them readable and intelligible.]

### COURT, POLITICAL AND OFFICIAL.

Mr. Adachi, Superintendent of the Mining Department on the island of Sado, who has recently been staying in Tokio on official business, left for his post on the 3rd instant.

Mr. Choyo, Superintendent of the Board of Health, returned to the capital on the 9th instant.

Mr. Yama-no-uchi, Chief Secretary of the Colonial Department, started for his post at Sapporo on Saturday last, the 4th instant.

The *Nichi Nichi Shinbun* says that "between the months of January and June, no less than ninety-eight petitions were presented to the Senate. Of these thirty were on the subject of the establishment of a National Assembly. Twenty-three of that number were forwarded to the Cabinet for consideration, and the remainder either rejected or sent back.

Shimadzu Hisayoshi, fifth son of the wellknown Shimadzu Saburo, was presented in audience to His Majesty the Emperor on the 11th instant.

Governor Iwamura, of the Miyo prefecture, has left on a tour of inspection for the Shimosa farm. After the completion of his visit he will return at once to his post.

The ex-sakan Nomura, who, as it was previously reported, accepted a large bribe in the Komme Mura case, was sentenced on the 11th instant to a year's imprisonment.

Governor Narazaki, of Nagano, returned to his prefecture on the 12th instant.

According to the native papers the special committee engaged on the revision of the land-tax is now very busily engaged, as its labours are rapidly drawing to an end.

Mr. Makino, sakan of the 1st class of the Banking Bureau of the Finance Department, who recently paid a visit of inspection to the various banks in the Ibaraki prefecture, returned to Tokio on the 11th instant.

The *Nichi Nichi Shinbun* states that His Majesty the Emperor attended the sitting of the Cabinet on the 13th instant at 10 a.m., and took a personal part in the discussion of the administration of political affairs.

The same paper states that the 23rd instant being the *Shinki-Korei-Sai* (a religious festival held in honour of the departed souls of the imperial family) will be observed as a general holiday. Their Majesties the Emperor, and two Emperesses, attended by the Princes of the Blood, the Prime Ministers, the Privy Councillors, nobles, and other dignitaries, will perform the customary religious rites.

A native journal states that H. E. General Yamagata, Privy Councillor, returned to the capital from Nikko on the 13th instant.

H. E. Admiral Enomoto, Minister of the Navy, resumed his office on the 13th instant, and Admiral Ito has therefore ceased to act in his place. On his return from his trip to Yesso, Admiral Enomoto was granted an audience with his Majesty the Emperor to report the result of his inspections.

The *Mainichi Shinbun* says that Mr. Iwamura, Superintendent of the Statistical Bureau, has been ordered to the Okinawa Ken (Loochoo.)

A native contemporary states that the revision of prison rules by the Senate has been completed, and the draft forwarded to the Daijo Kwan by H. E. President Oki.

The *Nichi Nichi Shinbun* reports that His Excellency Iwakura, Junior Prime Minister, paid a visit to His Excellency Privy Councillor Okuma, at about 2 p.m. on the 12th instant, and did not return until after midnight. His Excellency Saio, Finance Minister, accompanied by several secretaries, visited His Excellency Okuma on the 13th instant, when a secret conference was held. The *Mainichi Shinbun* commenting upon the subject suggests that the conference may have been respecting the proposed new foreign loan.

According to a native paper Mr. Kennedy, the British Chargé d'Affairs, paid a visit to the Foreign Department on the 11th instant, where he had a private interview with the Minister and Assistant Minister for Foreign Affairs. The subject of the discussion may, says the journal, have been treaty revision.

H. R. H. the Duke of Genoa visited the branch office of the Colonial Department on the 3rd instant, and was received by H.E. Admiral Enomoto, Minister of the Navy, Mr. Tokito, Secretary of the Colonization Department, and many others. His Royal Highness was entertained by them at the Asada-ro restaurant, and they were in return entertained by the Duke on the *Vettor Pisani* next day, on which occasion H. R. H. made a speech congratulating them on the peace and welfare of the Japanese Empire. This was suitably acknowledged by Admiral Enomoto in English.

Diplomas were distributed on Tuesday last among those successful students who have completed their education at the Agricultural College at Komaba, in the presence of H. E. Matsukata, Minister of Home Affairs, and H. E. Shinagawa, Superintendent of the Agricultural Bureau.

His Majesty the Emperor, according to a native paper, will attend a rifle match to be held at the Military College on the 16th and 17th of next month.

The *Nichi Nichi Shinbun* says that a few days ago three or four Ministers sent in to the Cabinet reports of the exact state of the official affairs of their respective Departments from which it is inferred that some changes are impending.

The *Nichi Nichi Shinbun* says that considerable correspondence has recently been forwarded by the Government to its Representatives at various Courts, but more especially to those at London, Paris and Washington. It is presumed they refer to the subject of treaty revision.

The *Hochi Shinbun* announces that Shimazu Tadayoshi, ex-daimio of Satsuma, and Moori Motonari, ex-daimio of Choshu, were presented in audience to His Majesty the Emperor, at 10 a.m. on the 14th instant.

H. E. Privy Councillor Ito Hirobumi will pay an official visit

of inspection to the Tomioka silk factory, about the middle of next month.

Judge Nagaoka, President of the Osaka Joto Saibansho, arrived in Tokio on the 14th instant.

A native journal states that at 3 p.m. on the 14th instant, H. E. Sano, Minister of Finance visited H. E. Okuma at his private residence and held a private conference which lasted until 11 p.m. On the following day H. E. Okuma visited H. E. Iwakura, Junior Prime Minister.

The *Nichi Nichi Shinbun* announces that His Majesty the Emperor will attend the military review, to take place on the Narashino plains in the middle of next month.

The same paper states that the German Minister, while staying at Hakone, received some very important news, which necessitated his immediate return to the capital.

A native paper says that the Civil Code has been completed, and a copy sent to each of the Japanese Legations abroad.

The *Nichi Nichi Shinbun* states that Their Excellencies Hoffer de Hoffenfels, Minister for Austro-Hungary, and K. von Eisen-decker, Minister for Germany, have applied to the Police Authorities for permission to inspect the Tsukuda prison.

The *Mainichi Shinbun* announces that on the 16th instant, H. E. Iwakura, Udaijin, celebrated his birthday by entertaining about twenty relations and friends at a banquet, followed by theatricals.

H. E. General Kuroda, Chief of the Colonial Department, has recovered from a recent indisposition.

#### NAVAL AND MILITARY.

According to a native paper the *Rinjo Kan*, with a number of naval cadets who have completed their course of instruction at the college, will leave shortly for India and Australia on a cruise for practical training.

The cadets of the Military Academy are to practise field manoeuvres on the Narashino plains after the 11th proximo. The Imperial Guard will commence a course of instruction at the same place on the 15th proximo.

The field artillery and mountain batteries of the Osaka Garrison, are to have two weeks practice at Nobuta in the province of Idzumi.

According to the *Mainichi Shinbun*, when the Korean Embassy witnessed the manoeuvres of the Tokio garrison, held in their honour on the Hibiya parade ground, on the 4th instant, they were greatly impressed by the completeness of the military system, and thus addressed one of the Generals:—"When we return home we shall report upon the state of the Japanese military system to our king, and will borrow military officers from you in order to introduce the same system into our own country." The General replied that any such request would be promptly complied with, and officers sent.

A native paper says that a torpedo boat, now in course of construction at the naval yard Yokosuka, will be completed by about the end of the month, and experiments will be made.

According to the *Mainichi Shinbun* H. E. Admiral Enomoto, Minister of the Navy, has addressed a memorial to the Daijo Kwan, suggesting the establishment of Admiralty stations at Otaru and Hakodate; in Yesso.

A telegram has been received that the *Fuso Kan* left Hakodate on the 7th instant for Nemuro, where she will remain for the next month.

There is a very current report that the revised military code will come into force next November.

A native paper states that the budget of the Military Academy is estimated at 138,696 yen; of which 54,465 yen is for the salaries of officers; 25,509 yen for employees; 23,080 yen for school expenses; 25,642 for cadets; and 10,000 yen for practising field manoeuvres.

A native journal writes:—"Recently we published a report that the War Department intended to re-organize the artillery of the whole Empire and established brigades of field and mountain artillery equipped with Krupp guns. This scheme was discussed at a meeting of artillery officers, with whose approval it met. It was resolved to save the time, trouble, and expense, of importing the ammunition from abroad, to manufacture it here. Some trials at Shimo-shitsu, with ammunition made according to the system adopted in the Austrian service, proved

very successful and orders to commence the manufacture have been given to the arsenals at Tokio and Osaka."

The *Settsu Kan*, belonging to the Naval college, is to be converted into a training ship.

The *Nichi Nichi Shinbun* states that the Translation Bureau of the War Department, has commenced the translation of the Swiss military system, on which it is proposed to reorganize of the Japanese army.

#### INDUSTRIES, TRADE AND FINANCE.

The *Nichi Nichi Shinbun* announces that the report of the actual amount of income and expenditure for the 9th year of Meiji (1876,) has been completed and forwarded to the Daijokwan by the Minister of Finance. It has now been published.

The same paper states that foreign merchants trading in silk-worm eggs are paying visits to all the producing districts in the interior to purchase direct from the dealers. It is reported that they have already bought 20,000 cartons, the price for Shimamura cartons being from 300 to 360 yen per hundred; for Midorins from 200 to 250 yen, for Kokurio about 300 yen. The Italian merchants who recently arrived here, it is said, brought bills of exchange amounting to \$700,000.

The silk trade in Yokohama is gradually getting worse and worse, no purchasers being found except at very low prices. In the producing districts, however, silk is very dear, and there is a difference of \$50 per picul between the price at the manufactory and the price obtained in Yokohama, which to native dealers is a serious state of affairs.

The *Choya Shinbun* says that as salt is very scarce in the prefecture of Okinawa (Loochoo), Mr. Murayama and other residents of Ako, in the province of Bausiu, a place celebrated for the good quality of its salt, intend to establish a salt company in that locality.

The *Mainichi Shinbun* states, in reference to the intention of the Government to raise a new foreign loan, that a special bureau for this purpose will shortly be established in the Finance Department.

On the subject of the financial estimates a native contemporary writes as follows:—"The actual expenditure of all the public departments was intended to be in accordance with the estimates, but additional grants were frequently required, owing to unforeseen circumstances. These were, as a rule, allowed after due consideration, but in future no such course will be adopted under any pretext whatever."

A native paper gives the following statistics of the imports and exports at the open ports of Japan for the month of July last:—

Imports .....	3,117,975.90 yen.
Exports .....	2,120,079.28 "
Excess of imports .....	997,895.62 yen.
Customs duties .....	214,815.39 yen.
Export of specie and bullion .....	999,427.24 yen.
Import " " " .....	27,853.33 "
Excess of exports .....	971,573.91 yen.

The *Nichi Nichi Shinbun* contains the following:—"Government is about to issue some regulations respecting the specie exchange banks, which will result in making Japan a veritable 'Golden Empire' in the space of twenty-two years."

The *Mainichi Shinbun* publishes a report that the Government has advanced 2,000,000 yen in paper to the Yokohama Specie Bank, and that the Bank will employ this sum in purchasing exportable goods in the producing districts, and send them to foreign markets where they will be paid for in specie. The truth of this rumour is not guaranteed.

#### MISCELLANEOUS.

The Tokio Facho Authorities intend to take a census of the population and number of houses of Mikura-jima, one of the seven islands off the coast of Izu.

The *Heiji Shinbun* states that before their departure, the Korean Embassy asked the Japanese Government to sell them arms and ammunition, and that the request was complied with.

It is stated in a native paper that the company of nobles who propose to purchase, if possible, the Government railways, is now in treaty for the purchase of the telegraph lines also.

The cultivation of land in Yesso by various purchasers has proved so very successful, that H. E. Iwakura, Udaijin, has recommended the further carrying out of the project to several of the nobles.

A school for the blind, deaf and dumb is shortly to be opened the prefecture of Tokushima, upon the model of that now existing in Kyoto.

The Japanese settlement at Fusan, Corea, is to be extended, and a new road constructed over the mountains in the neighborhood of the port.

A fire recently took place at the Shimayenobori sulphur mines, at a village in Kunishiri-gori, one of the Kurile isles. About 250 koku of sulphur, which had been dug out and stacked, was set on fire and not extinguished for ten days.

The *Mainichi Shinbun* publishes the following extract from a letter from Fusan (Corea): "Of late there has been a rumour of an impending visit of three French men-of-war in March or April next year; the rumour appears to have been confirmed, and is a source of great pleasure to those native Coreans who hold the tenets of Christianity.

The railway between Otaru and Sapporo, Yesso, now in course of construction, is expected to be completed before the coming winter. All necessary machinery and apparatus will be manufactured during the winter, so that the trains can be put in running order about March or April next year.

A native journal states that from the 1st of last June to the 31st of August, no less than 20,468 persons, of whom 411 were women, made the ascent of Fuji-yama.

The *Choya Shinbun* states that a proposal is being considered to establish a school for the blind, deaf, and dumb, at Kanazawa, in the Ishikawa prefecture.

The *Hochi Shinbun* says that an English firm in Yokohama is considering a proposal to start a line between here and Vladivostok with one or two steamers. The paper remarks that the near approach of the winter season would render any such project difficult to accomplish this year.

A native papers state that owing to the amount of tea, silk and cocoons now being brought into Yokohama from the producing districts, traffic on the railway has increased greatly, and the trains run eight or nine extra cars every day.

The *Nichi Nichi Shinbun* says that Professor and Mrs. Hennicks, now performing in Yokohama, have applied to be allowed to give a performance before His Majesty the Emperor. They produced the various medals and testimonials presented to them by different potentates.

Another native paper states that on the proposed line of railway between Nagahama and Tsuoka the country is very mountainous, and in several places high rocks will have to be levelled to the ground. There are four places where tunnels will have to be constructed of eighty, two, nine, and two chains long respectively. Owing to the extremely rocky character of the country, a large amount of labour will be required. At the construction of the Osaka-yama tunnel two hundred coolies were employed, who excavated an average of six feet per day. In the present tunnels it would require at least three hundred coolies to excavate a foot and a quarter per day.

## THE JAPANESE PRESS.

## THE FINANCIAL ESTIMATES OF THE 13TH FISCAL YEAR.

(Translated from the *Hochi Shimbun*)

THE estimates of the national revenue and expenditure for the 13th fiscal year, which the public have been anxiously expecting for some time, have been inspected by the Daijo Kwan and notified to all the Government departments by official notification No. 44 of the 30th August. From the beginning of the year the financial administration of the country has very much occupied public attention, and has greatly interested all those who think of the national welfare. The delay in issuing the report this year has consequently been strongly animadverted upon, and it is earnestly to be hoped that no further delay may occur. The finances of a country have such an important bearing upon its general welfare, that it is absolutely necessary for any one who reasons on political matters to take them into consideration. Most of the reforms and revolutions we read of in past history took their origin from the question of national finance, as this is the great boundary line between the Government and the people. The politicians of to-day demand the establishment of a National Assembly because they will thus gain the legislative power, which will enable them to control the income and expenditure of the country. This being a really patriotic motive, we must say that it is a matter of great congratulation for a country when the people turns their attention to such a topic. As long as the Government issues its financial report fully and openly, the people can form their opinions on the matter, and having once done so, will express them. We ourselves can criticize and make our remarks and queries on the annual estimates, but have no right to advise about it; so that whatever opinion we might express would have no weight with the financial administration. However, the public, by examining these estimates, will form the opinion that they can manage the national finances themselves. As it would be quite impossible to carry this feeling into practice it seems almost useless to pass our observations upon the report. However, if we wish to comment upon political matters, to express our regret at the critical condition of our finances, and to interfere actively with this subject, we must pay the greatest attention to the present financial administration, so that we may be enabled in the future to put our arguments into practice. It is therefore, as we said before, quite correct for any true patriot to investigate the financial administration and to comment on it accordingly.

The subjects of the administrative power, and popular rights have recently occupied the attention of our countrymen so much, that it was but seldom that we heard financial matters discussed; therefore we consider the fact of this question having now arisen to be a matter of great congratulation. At the present too, now that political ideas have taken such a strong hold upon the minds of the people, it is very necessary to bring about accurate habits of thought. However, we would deprecate such an occurrence as that the members of each local assembly in the different Fu and Ken should discuss the affairs of the nation as they would those of their own districts, because not only is the internal economy of a district different from that of a country, but the manner of conducting it is also entirely different. It is not a proper plan, for instance, to falsify the returns of the national revenue, as has been done before now in the case of local finances. The increase or decrease

of the revenue affects the progress of the country, so that in making our calculations for estimating the annual income and expenditure we must take the progress of the country into our most careful consideration. Thus when we examine the present estimates and consider how to administer the finances of a country with a revenue of over 56,616,000 yen, and make enquiries into the different items of revenue and expenditure with the same idea as if we had taken the actual administration into our own hands, we shall certainly be able to gain some practical skill with regard to fiscal operations. The establishment of a National Assembly is now close at hand, and it will not be long before legislative rights are put in the hands of the people. If this is then the case, it is most imperative that we should give the estimates a thorough examination to discover whether they are in order otherwise; we can then carry our theories into practice in the future. After having made this examination of the estimates, we shall venture to pass our humble opinion upon them.

## ON THE PROPOSED PAYMENT OF THE FOREIGN LOANS.

(Translated from the *Fuso Shinski*.)

“ACCORDING to statistics compiled in January 1879, the indebtedness of our Government on account of foreign loans amounted to 11,012,692 yen, of which 976,000 yen is the original loan, and 10,036,692 yen the new one. If the total amount be divided among the entire population, which numbers 35,768,584 souls, it shows an average of only 30 sen 7 rin 8 mo per head. Some patriotic people considering therefore that it would not be difficult to pay off the debt by such a system of division, if the nation were to imbibe a true patriotic feeling, are about to explain this idea and to enrol subscribers. Thus the whole population would pay off the loan on behalf of the Government, and could then ask in return the establishment of a National Assembly. There are 7,469,120 houses in Japan; this number, divided by the total of the foreign debt, would bring the amount to be subscribed to an average of 1 yen 47 sen 4 rin 4 mo per house.” This is what has been stated in one of the recent issues of the *Hochi Shimbun*. What good tidings! We congratulate those of our politicians who are agitating for the establishment of a National Assembly for their prudence, and careful method of considering the existing state of affairs. When they wished to form a league in their various places of abode they were prevented by the regulations controlling public meetings, and by the tyranny of the local officials. Did they come up to the capital with petitions to the Genro-In or the Daijo-Kwan, their requests were always refused. Still they were never wearied by all these slights, but the more they found obstacles placed in the way, the more their determination became fixed and the more they sought after new methods of compassing their wishes. They now propose to form an association for paying off the enormous foreign loan of over 10,000,000 yen, on behalf of the Government, and, in return for this, to urge the establishment of a National Assembly. How far preferable is this scheme for obtaining representative institutions to the manner in which both England and France shed blood like water to procure the same privileges! How happy is our lot as compared with theirs! The action of these true patriots cannot be too highly commended. It should not be forgotten, however, that the Japanese are human beings, and that patience and forbearance have their limits. When these are reached our hearts will be filled with uncontrollable anger, and violent measures might possibly be resorted to. Warnings of such a disaster should not be neglected.

## LAW REPORTS.

## IN THE U. S. CONSULAR-GENERAL COURT.

Before T. B. VAN BUREN Esq., Consul-General, Judge.

Messrs. P. HUSSEY and G. FARLEY, Jr., Assessors.

Tuesday, the 14th day of September, 1880.

THE MITSU BISHI MAIL STEAMSHIP COMPANY vs. THE PACIFIC MAIL STEAMSHIP COMPANY.

(Continued from the 11th instant)

This was an action to recover the sum of \$5000 for the carriage of the American mails between Shanghai and

Yokohama by the steamer *Nevada* in the month of January, 1878, and for the detention of the said vessel in Shanghai for the purpose of conveying the said mail. The plaintiffs also claimed interest on the said sum of \$5,000 at ten per cent.

Mr. Kirkwood again appeared for the plaintiffs and Mr. Hill for the defendants.

The Court opened at 10 a.m.,

His Honour said he supposed that the question this morning was the granting of the commission, unless either side had further evidence to produce.

Mr. Hill said respecting the copy of the original contract under the whole issue, that the contract, a copy of which he had offered to put in before, was a private one and that therefore under Rule 179 the Court could not help admitting the copy. A special Act of Congress provided that the contract between the United States Government and the Pacific Mail Company should be made. This was done and the document filed in the office of the proper public department. Rule 179 provides especially for such documents. The one he now held purported to be, as the seals show, a true copy of the original contract, which was not duplicated as it requires to be kept at a public office. He would ask the Court once more to examine the certificates as to its being genuine. The rule he quoted refers to the inspection of documents and writings, and the production of copies when (paragraph 3) the original is a record or other document in the custody of a public officer of the United States of America.

Mr. Kirkwood raised an objection; this was a contract between the Government and a private individual and no doubt was made in duplicate. He knew, of course, that public records are proved by copies, to save the risk of their being lost, and because they may be required in more than one place at the same time. The Court should remember that the contract expired a long time ago and could surely therefore be produced. If the Pacific Mail Company had a copy they ought to produce it.

Mr. Hill:—I am prepared to prove that only one copy existed.

His Honour:—I will hold this copy under advisement subject to proof that only one contract was made which is that filed in the office of the U. S. Postmaster-General. If this be proved the paper will be held in evidence.

Mr. Hill asked to have his most respectful objection noted.

His Honour:—Well, now let us take up the question of the commission, unless you have first of all any witnesses to call independent of the commission.

Mr. Hill:—We have some to call to show Mr. Center's intentions, from his correspondence and telegrams.

His Honour:—The Court decided to hear all legal evidence to save, if possible, the expense and trouble of a commission. The question is, was it intended to carry out the contract to its actual end, or, whether it was ended or not, to cease the service on December 31st. All evidence on these points the Court is anxious to hear, and it might result that it would be unnecessary to issue the commission.

Mr. Hill proposed to introduce Mr. Center's correspondence and telegrams on the subject.

Mr. Kirkwood objected on the grounds that as long as Mr. Center's actual testimony was available, the correspondence could not be brought in as evidence.

His Honour sustained the objection.

Mr. Hill:—I offer them not on the whole issue of the case, but on the ruling of the Court that all legal evidence should be produced. These are contemporaneous letters and telegrams from the agent of defendants in Yokohama to his superiors in New York, such agent being at the time Mr. Alexander Center, who was the agent to accomplish the sale of the steamers to plaintiffs, and made the contract as to the *Nevada*; and also telegrams and correspondence from defendants at New York to their agent Mr. Alexander Center, connected with his correspondence.

Mr. Kirkwood objected to the introduction of any correspondence between defendants and their agents.

Mr. Hill explained that he only adduced them to show by contemporaneous evidence the intentions of Mr. Center.

Mr. Kirkwood said that the Court could not take evidence as to intentions, but only as to what actually took place.

The objection was sustained.

His Honour asked if Mr. Hill had any further evidence.

Mr. Hill said he had one witness to call now, to give evidence as to when the mail contract began, and summoned

John W. Brown, sworn, stated:—In 1866-67 I lived in San Francisco. I remember well the first P. M. S. S. Co.'s ship leaving for Japan. It was on New Year's day, 1867. She was the *Colorado*. I was on the wharf myself. There was a number of people there. The ships left monthly after this. I came out on the next ship and have been acquainted with their sailing ever since.

Mr. Hill:—Counsel saw fit to make some remarks upon the way in which I examined his witness Mr. Iwasaki, but I did this only as it affected the subject of the commission. The legal maxim that a delegate cannot appoint a delegate applies to this point, and I ask that the little slip sworn to as a correct specimen of the manner in which Mr. Iwasaki Yataro wrote his official designation may be attached to the exhibit, I do not remember the mark, (the contract). Mr. Ness has no power to testify on a commission. Mr. Iwasaki is here and could be called. As to Mr. Center's evidence—well, it is perfectly clear that all parties were mistaken as to dates.

His Honour:—It may be possible that if you were to submit the correspondence to Mr. Kirkwood's inspection, it would be the means of saving both money and expense, and a commission might not be needed.

Mr. Kirkwood said that he could not agree to that. It was not proved that Mr. Center might not have told his superiors a different account from what he had told the Mitsui Bishi Company.

His Honour advised Mr. Kirkwood to look the papers over to which he eventually agreed. After inspection he said there was only one letter which he could consent to being put in. It was dated April 25th, 1876, and was from Mr. Center to his principals:

Mr. Hill read the letter which was as follows:

*Colorado*.—No. 1,473.

Office of Agency Pacific Mail Steamship Company.

Yokohama, April 25th, 1876.

J. B. Houstoun, Esq.,

Second Vice-President P. M. S. S. Co., New York.

Dear Sir,—By the City of Peking we received a letter from our San Francisco Agent quoting as follows:

"New York, March 29th, 1876.

"To A. P. Bacon, Agent, San Francisco.

"Write Agent at Yokohama by City of Peking that Japan Government at instance of Mitsui Bishi Co. have asserted to Post Master General Irwell the ownership of the steamer *Nevada*, which endangers our subsidy. We understood that the steamer *Nevada* is reserved as our steamer under the United States government flag, to perform mail service to satisfaction of Post Master General Irwell, and if not so satisfactory, we shall either not ratify contract as to *Nevada*, or shall put one of our other steamers on the Shanghai line to carry mail and to inform Mitsui Bishi Co.

(Signed.) J. B. Houstoun.

Second Vice-President."

The dispatch certainly caused us great surprise, but at the same time knowing that no ground existed for such a claim being put forward, we felt no uneasiness on the subject.

"On the 22nd inst. we replied as follows: "Bonfides"—(City of Peking arrived the 21st (should have been 22d, A. C.) *Nevada* under American register and flag until expiration charter January next as per contract. No question as to status. Mail service thoroughly protected."

By a reference to clauses 3 and 4 of the contract for transfer of line to the M. B. M. S. S. Co., it will be seen that the *Nevada* stands thus:

1st.—We let and hire her for a period of fifteen months from October 1st, 1875, (which carries her up to January 1st, 1877—or the day after expiration of our mail contract).

2nd.—That the M. B. Co. agree to run her exclusively between the ports of Yokohama and Shanghai and intermediate ports, and carry "all and carry the mails which the said Pacific Mail S. S. Co. is now bound to convey by its agreement with the United States Government at the time and between the places stipulated in the said contract between the said Pacific Mail S. S. Co. and the United States Government," &c., &c.

3rd.—The M. B. M. S. S. Co. agree to indemnify the P. M. S. S. Co. "against all loss they may sustain arising out of any claims brought against the said P. M. S. S. Co. in connection therewith after the said steamship has been chartered to the M. B. S. S. Co. as aforesaid, and in case the said S. S. *Nevada* shall be lost before the expiration of the said term of 15 months from the 1st of October current (1876), the said M. B. S. S. Co. will, at their own expense, provide another steamship, under the United States flag, for the proper carrying on of the said service for the remaining portion of the term of 15 months from 1st October current."

\* Explained by Mr. Foster, in Court, to mean, "P. M. S. S. Co., New York."

Section 4 sets forth that *subject to said charter* and at the expiration of it we agree to transfer the *Nerada* to the M. B. M. S. S. Co. without any further payment. This of course means that their getting the ship depends upon their carrying out of the charter as provided for in page 3 (of this letter) article 2, and that their doing so is one of the considerations, and that should they fail so to do, the steamer would revert to us, or rather no bill of sale would be executed.

The *Nerada* now carries her American register and American flag and will continue to do so until the expiration of our mail contract, and is in every way an American vessel.

In a personal interview with the managing Director of the M. B. S. S. Co. as to the contents of your dispatch, he expressed the greatest surprise and assured me that no such steps to a claim had been taken or even thought of by their Co., that when they chartered the *Nerada* they knew perfectly well what they were doing, and that they stood ready and anxious to carry out all their contracts and agreement with us to the letter.

Again, a reference to their advertisement will show that they always advertise the M. B. S. S. Co.'s chartered steamer *Nerada*—(advertisement enclosed). This is done at all ports.

To get their reply in writing a letter has been addressed to them, and should their reply reach us before departure of bearer it will be sent to you.

The M. B. M. Co.'s managing Director thinks (as does the writer) that any misunderstanding as to the status of the *Nerada* arises from the fact of the Japanese Post Office Department having requested the U. S. Post Office Department to allow the U. S. mails to be carried in Japanese vessels over the Shanghai Line. The great object of this was to save the expense entailed upon the M. B. Co. by running the *Nerada*, thereby compelling them to run five ships instead of four on the Shanghai Line. The U. S. Post Office Department properly would not allow it. Their action had a political significance to it, they looking to the future, to thwart (I think) us in any future subsidy for letters to Japan ports and Shanghai. It would never do to concede that principle to them.

From the very best information I have been able to gather from the best source in the short time I have had, I feel quite sure that a misunderstanding of instructions or dispatches exists somewhere.

Again the government enforces the head tax which has lately been imposed on foreign vessels or on passengers (native) who travel by them. Although the *Nerada* is run by the M. B. Co., the tax is rigidly enforced by her, and she is considered by them in all transactions the same as the *City of Peking* would be if put on the line. The enemies of the Co. may also have been at work at Washington, but I feel quite convinced that no alarm for any such claim to ownership can be attributed to the Japanese at this end.

As it is a matter of very great importance, I beg you will advise me fully on the subject, for if any underhand work is going on at this end, I desire to get at the bottom of it. Having heard nothing from you by telegraph since you sent the one in question to Mr. Bacon for transmission, I trust that all cause for alarm on the subject of the subsidy will have been removed.

Yours very respectfully,

ALEX. CENTER,  
General Agent.

His Honour:—Now as regards the commission only. Do you object to Mr. Ness's evidence?

Mr. Hill:—Yes. I object to a commission for the examination of Mr. Ness, as the parties for whom he was acting were delegates only, and because he was legal counsel to both plaintiff and defendant. That was the extent of his agency.

His Honour said he did not see how Mr. Ness's position was affected.

Mr. Hill:—The commission itself is to explain the question. Each individual was a delegated agent of a corporation, and as such had no power to delegate to any one else. This precludes Mr. Ness's evidence, and it is on this account that I was so particular about Mr. Iwasaki's evidence as to his actual status. As to Mr. Center, I hardly see the value of his evidence, as all the correspondence adduced shows his intentions and ideas fully. That is all I have to say on the subject.

Mr. Kirkwood:—The Court has before it plenty of evidence of the intentions of the parties, both of their actions and their conversations, from which their intentions can be judged. I called as a witness Mr. Irwin, who distinctly said that the contract was to be determined on the 31st December, 1877, and the *Nerada* to be handed over on the 1st January, 1878. It would have been useless to call Mr. Iwasaki Yntaro: he has once experienced the sweets of law and was so bullied and roughly handled, that he would rather lose any case than come into court again. Besides, he was simply present at the conversations. I next called Mr. Iwasaki Iwanosuke, who said that Messrs. Center and Irwin both promised that on the 1st January, 1878, the ship was to become the property of the Mitsu Bishi Company and that nothing was said about making fifteen round trips. If Mr. Center made a mistake, that did not concern the Mitsu Bishi Company. If they had not required the ship on a certain day

why was any mention made of the 31st of December? It was mentioned because Mr. Center said that the contract should determine on that day. If the agreement was for a mail service only to the 31st December, as I believe I have proved, and if the time fixed affected the mail service, that was the fault of the Pacific Mail Company, not of the Mitsu Bishi Company. If Mr. Center did not protect himself, his Company must suffer. If the Court does not find for me now on these points, I must still ask for a commission. The defendants have brought no evidence to contradict that of Messrs. Center and Irwin, and the course to pursue seems to me quite clear.

His Honour:—In the present state of affairs we must have all possible evidence as to the making of the contract, to see if it actually ended on the 31st December, or when the contract with the U. S. Government ended. I shall consequently grant the commission. It is ordered therefore that plaintiffs' counsel prepare interrogatories, and serve them on defendants' counsel naming the commissioners in each case; that said interrogations will be settled at chambers of this Court at a day fixed, at which time, not being more than five days after said service, the defendants' counsel is to serve the counsel for plaintiffs with his cross-interrogatories at least two days before the time of settlement and the interrogatories to be served within ten days from date.

Mr. Hill:—I should like to know about my offer about the contract.

His Honour:—You may examine the agent of the company in New York through the same commission. It is only necessary to ask if there is but one original in the office of the Postmaster General. The only objection there is to admitting this document is the question whether the Pacific Mail Company has no original. If that were proved the document would be at once admitted. If my advice was taken counsel would agree to it.

Mr. Hill:—We ask for nothing whatever from the plaintiffs' counsel. We consider we have proved all that is required.

His Honour:—I will make this further order that the commission to take the testimony of Mr. Center be also empowered to take the testimony of the President of the defendant company as to whether the contract between the United States Government and the defendants, as to the carriage of mails to and from China and Japan, was made in duplicate or only one original; and, if the latter, whether that original was filed in the office of the Postmaster General of the U. S. A. at Washington and defendants are not in possession of an original, if the document were made in duplicate.

The Court then adjourned to await the return of the commission.

#### M. RENAN ON MARCUS AURELIUS.

ON the 16th of last April, at the weekly evening meeting of the Royal Institution, held in its theatre, Albemarle-street, M. Renan delivered in his own language before a crowded audience a lecture on "Marcus Aurelius," in anticipation of the publication of his eagerly-looked-for monograph on that great Roman Emperor. He was warmly greeted on making his appearance, and was repeatedly applauded throughout. He said he had accepted with great joy the invitation to visit this country and exchange ideas with us. He also was a Briton, but from French-Brittany, and of all the races in France the Britons were, perhaps, the most seriously religious. Even when on reflection we find we have to make changes in articles of belief at first held certain, we never break with the symbol under which we have first tasted of the ideal. For faith is the work of the logic of the heart. Shunning, therefore, subtleties which divide, and looking out for a subject dear to the soul, he wished to speak to them about the book, sparkling with divine thought, which he held in his hand—the manual of Marcus Aurelius Antoninus. There had been men exerting a more profound and lasting influence, but none had been so perfect as he. It is the glory of Sovereigns that the most blameless model of virtue should be found in their ranks.

The hereditary descent of wisdom upon the Throne is ever very rare. I see, said M. Renan, but a couple of striking examples; in India, the succession of the three Mongol

Emperors, Baber, Humayoun, and Akbar; at Rome the two admirable reigns of Antoninus Pius and Marcus Aurelius. Of these last two, he thought Antoninus the greater. His goodness did not make him commit faults, he was untortured by the inward sore ever gnawing at the heart of his adopted son, who was the victim of unreasonable scrupulosity and feverish self-inspection. The finest thoughts are those left unwritten, and on this score Antoninus had the better of Marcus Aurelius, but it ought to be added that we should know nothing of Antoninus but for the exquisite portrait painted by his adopted son, as if his humility urged him to depict one better than himself. In the first book of his "Thoughts," we find the pure and noble figures of his father, of his mother, of his grandfather, of his masters. Thus we get an insight into those old Roman families which lived under the bad Emperors, but had kept their Republican virtues. They were admirers of Cato, Brutus, Thrasea, and the great Stoics whose souls had not bent under tyranny. Domitian's reign was hated in those circles. The sages who had passed through it without yielding were honoured as heroes. The accession of the Antonines was at bottom only the gaining of power by the league of indignant sages, described by Tacitus, whom the despotism of the first Cæsars had revolted. M. Renan observed that the wholesome principle of adoption had made the Imperial Court of the second century a nursery of virtue. The noble and able Nerva, by this device of his, gave mankind a hundred years of the greatest happiness and progress known to history. The working of the system was illustrated by the instance of Marcus Aurelius himself. The throne was reached without canvassing, but also without appeal to birth or to any kind of right divine; not, however, without the most elaborate and painful preparation. The Empire was a civil burden to be accepted when the hour struck, and without dreaming of hastening that hour. Marcus Aurelius was destined for it at so early an age that the idea of reigning had hardly any beginning with him so as to lead him astray for a moment. He was but eight, though already *præsul* of the Salian priesthood, when Hadrian noticed this sweet child of sad mien and loved him for his inborn goodness, his docility, his incapacity for lying. At 18 the Empire was assured to him. He waited patiently for it 22 years. The evening on which Antoninus, when he felt he was dying, after having given to the tribune on guard the watchword *Æquanimitas*, caused to be carried into his adopted son's room the golden statue of Fortune, whose proper place was always the Emperor's apartment, the new ruler was neither surprised nor rejoiced. He had long been surfeited with all delights without having tasted them, his profound philosophy had shown him their absolute vanity. The great drawback which makes practical life unbearable to the man of high principle is that if he brings to it his ideals, his best qualities are changed into such glaring defects that the egoist or the man of routine often succeeds better in that line. Three or four times the virtue of Marcus Aurelius was on the point of ruining him. It led him to make a first false step by persuading him to take as his partner in the Empire Lucius Verus, to whom he was under no obligation. Verus was a worthless frippler. Prodiges of kindness and address were needed to hinder him from committing disastrous acts of folly. The wise Emperor, serious and diligent himself, used to drag with him into his cell the doltish colleague he had chosen. He always persisted in treating the man as serious; he did not once mutiny against this tormenting partnership. Like people who have been very well brought up, Marcus Aurelius felt everlastingly listless; his manners were the result of a determination to be polite and dignified. Souls of this kind, whether for fear of paining others or through their respect for human nature, are not willing to own that they see the evil. Their life is a perpetual course of dissimulation. According to some, he was himself the victim of his own dissimulation, since in his intimate converse with the gods on the banks of the Gran, speaking of a spouse unworthy of him, he thanked them for having given him "a wife so compliant, so affectionate, so simple." M. Renan believed he had shown that the weakness of Marcus Aurelius as to Faustina had been somewhat exaggerated. He sketched the line of argument which had led him to this conclusion. Historians more or less imbued with that sort of statesmanship which plumes itself on its superiority because it is not suspected of any philosophical tinge have naturally sought to prove that a man so accomplished was a bad administrator and a middling Sovereign. It seems, in fact,

that Marcus Aurelius sinned more than once by being too indulgent. But never was reign more fruitful in reforms and in progress. The scheme of public succour founded by Nerva and Trajan he admirably developed. New colleges for gratuitous education were established; the alimentary procurators became functionaries of the first rank, and were chosen with the utmost care; provision was made for the education of poor women by an institution named after Faustina. The principle that the State has duties of a somewhat paternal kind towards its members was proclaimed for the first time by the Antonines. Neither the childish pomp of the Oriental monarchies nor the pedantic pride of the Mediæval kingdoms could give us any idea of the quite republican sovereignty of Nerva, Trajan, Hadrian, Antoninus, Marcus Aurelius. Nothing of the Prince by birth or by divine right, nothing of the military chief, it was a kind of grand civil magistracy, without anything which resembled a Court, or which stripped the Emperor of his private character. This was shown in detail to hold good of Marcus Aurelius especially, who was in no usual sense of the word a King, but whose fortune was industrial, consisting in brickfields, and whose aversion for "the Cæsars," whom he regards as debauchees of the Sardanapalus order, is always flaming forth. It was when encamped on the banks of the Gran in the middle of the monotonous plains of Hungary that he wrote the finest pages of the exquisite book which has revealed to us his whole soul. He seems to have kept when still very young a diary of his thoughts. He wrote down in it the maxims to which he had recourse to fortify his mind, reminiscences of his favourite authors, passages from the moralists who spoke most to his heart, the principles which had sustained him during the day, sometimes the self-reproaches prompted by his scrupulous conscience. M. Renan quoted numerous instances. One evening all the images of his pious youth came back again to his memory, and he passed some delicious hours in recounting what he owed to each of the good beings who had environed him. "Examples set by my grandfather Verus: sweetness of manners, immutable patience. Qualities found in my father, reminiscence which he has left me—modesty, manly disposition. To imitate my mother's piety, her kindness, to refrain as she did not only from doing evil, but even from thinking it, to lead her frugal life, which was so unlike the habitual luxury of the rich." Afterwards appeared to him in turn Diogenes, who inspired him with a taste for philosophy and rendered agreeable in his eyes the truckle-bed, the coverlid formed of a simple skin, and all the apparatus of the Hellenic discipline; Junius Rusticus, who taught him to avoid all affectation of elegance in style, and lent him the volume of Epictetus; Apollonius of Chalcedon, who realized the Stoic ideal of extreme firmness and of perfect gentleness; Sextus of Chersonese, so grave and so good; Alexander, the grammarian, who reproved with such refined politeness. As a prince he learnt from Fronto "what envy, duplicity, hypocrisy, can be found in a tyrant, and how hard can be the heart of a patrician;" from his brother Severus, "who made him acquainted with Thrasea, Helvidius, Cato, Brutus, who gave him the idea of what a free State is, whose rule is the natural equality of the citizens and the equality of their rights, and that of the realm which puts before everything else respect for the liberty of the citizen." Towering above the rest by reason of his immaculate grandeur was Antoninus, the father who had adopted him, whose image he traces with redoubled gratitude and love. He thanks the gods for these blessings and confesses his own shortcomings. This divine candour breathes in every page. Never did any man write with more simplicity of himself, with the single aim of unburdening his heart, with no other witness than God. There is not a shadow of any system. Properly speaking, Marcus Aurelius knows no philosophy; though he owed well-nigh everything to Stoicism, transformed by the Roman spirit, he is of no school. For our taste, he has too little curiosity, for he does not know all a contemporary of Ptolemy and Galen ought to know; he holds certain opinions as to the system of the world which did not rise to the highest science of his time. But his moral thinking, so emancipated from every fetter of system, thereby rises to a singular sublimity. Even the author of the "Imitation of Christ," although keeping very much aloof from the janglings of the schools, does not climb so high; for his manner of feeling is essentially Christian; take away the Christian dogmas and his book retains but a part of its charm. The book of Marcus Aurelius, having no dog-

matic base, will keep its freshness for ever. All men, from the atheist, or the man who fancies himself such, to the man most entangled in the particular beliefs of each mode of worship, may find in it fruits for edification. It is the most purely human book there is. It decides no controverted question. In theology, Marcus Aurelius floats between pure deism, polytheism interpreted physically in the Stoic manner, and a sort of cosmical pantheism. He does not adhere much more to one of these hypotheses than to the other, and he avails himself indifferently of the three appellations—deist, polytheist, pantheist. His thoughts have always two faces, according as God and the soul are real or not. It is the way we reason every hour; for if it be the most thorough-going materialism which is in the right, we who shall count among believers in truth and goodness shall be no more dupes than other folks. If idealism should turn out right, we shall be proved to have been the truly wise, and we shall be seen to have been so in the only way becoming us, that is, without being in the least biased by interest in the result, without having reckoned on any fee. We here touch on the great secret of moral philosophy and religion. Marcus Aurelius had no speculative philosophy; his theology was altogether made up of contradictions; he had no fixed idea as to the soul and immortality. How was it that he was a profoundly moral man without those beliefs which are now regarded as the foundations of morality? How came it that he was eminently religious without having professed any of the dogmas known as natural religion? That is the question we have to study. The doubts which from the point of view of speculative reason hover over the truths of natural religion are not, as Kant has admirably shown, accidental, susceptible of removal, incident, as is sometimes imagined, to certain moods of the human mind. These doubts are inherent in the very nature of these truths, and it might be said without paradox that if these doubts were removed the truths themselves which they attack would vanish by the same stroke of the pen. Let us suppose, in fact, future punishment and rewards to be proved directly, positively, in a manner evident to all; where would be the merit of well-doing? None but madmen would light heartedly hurry on to their damnation. A crowd of ignoble souls would win their salvation with the ears on the table; they would force, in a manner, the hand of the Deity. Who does not see that on such a system there is no longer any morality or religion? In the moral and religious order of things it is indispensable to believe without demonstration; there is no longer a question of certainty, but of faith. This, you see, is what Deism forgets with its way of rash affirmation. It forgets that too precise beliefs as to the destiny of man would sweep away all moral merit. As for ourselves, the moment anybody should tell us of a peremptory argument of this kind we should do as St. Louis did when somebody spoke to him about the miraculous wafer. We should refuse to go and see it. What need have we of these brutish proofs, which have no application save in the grosser order of facts, and which would cramp our freedom? We should be afraid of becoming like those speculators in the virtues or those vulgar weighers of scruples who carry into the affairs of the soul the coarse egoism of practical life. In the first days which followed the beginnings of faith in the resurrection of Jesus this came to light in the most touching manner. His true friends at heart, the tender souls, loved; belief without proof better than sight. "Blessed are they who have not seen and yet have believed" was the watchword of the situation. Charming watchword! Eternal symbol of tender and generous idealism, which feels a horror of touching with the hands what should be seen with the heart only! Our good Marcus Aurelius, in this as in all else, was in advance of the centuries. Never did he cease to put himself in harmony with himself as to God and the soul. As though he had read Kant's "Criticism of Practical Reason," he saw right well that when the Infinite is in question no formula is absolute, and that in matter of that kind we can only get a chance of having seen the truth once in one's life if one is much exposed to contradiction. He took the high ground of loosening the bond between moral beauty and all fixed theology; he did not grant the dependence of duty upon any metaphysical opinion as to the First Cause. Never was innocent union with the hidden God pushed to more unheard-of depths of tenderness. "Pay as tribute to the government of the god within thee a manly being, ripened by age, a friend of the public good, a Roman, an Emperor, a soldier at his post awaiting the trumpet's signal, a man ready

to quit life without regret. There are many grains of incense destined for the same altar; one falls into the fire sooner, the other later, but the difference is nothing. Man is bound to live according to nature the few days given him on earth, and when the moment for withdrawal is come, to render sweet submission, like the olive, which as it falls blesses the tree that has borne it, and gives thanks to the branch which has carried it. O man! thou hast been a citizen in the great city: what matters it whether thou hast been so five or three years? What is according to law is unequal for no man. What, then, is there to grieve over in being banished from the city, not by a tyrant, not by an inequitable judge, but by nature herself, who enrolled you therein? It is but the lot of a comedian, who is dismissed from the theatre by the same prætor who engaged him. But you will say, 'I have not played the five acts; I have played but three.' You say well, but in life three acts are enough to make the piece a whole. . . . Depart content, then, since He who dismisses thee is content." Is it to be said, then, that he did not sometimes revolt against the strange destiny which was pleased to leave alone face to face with one another man with his eternal needs of devotion, of sacrifice, of heroism, and nature with her transcendent immortality, her supreme disdain for virtue? No. Once at least the absurdity, the colossal unfairness of death strikes him. But soon his completely chastened and mortified temperament gets the upper hand, and he becomes calm. "How happens it that the gods, who have ordered all things so well and with so much love for men, have neglected one single point—to wit that men of approved virtue, who throughout life have held a kind of converse with the divinity, who have rendered themselves beloved by their pious deeds and their sacrifices, do not live again after death, but are extinguished for ever? Since the thing is so, know well that if it ought to have been otherwise they would not have failed so to order it; for had it been right it would have been possible; if such a thing had been conformable to nature, nature would have allowed it. Consequently, by the fact that it is not so, strengthen thyself in the view that there was no need it should be so. Thou thyself seest that to push speculation so far is to dispute with God about His right. But we should not thus dispute against the gods did we not hold them to be sovereignly good and sovereignly just; if they are that, they have allowed nothing in the ordering of the world which is contrary to justice and reason." Ah! that is carrying resignation too far, dear master. Were it in truth so, we have a right to complain. To say that if this world has no counterpart the man who sacrifices himself for goodness and truth ought to leave it contentedly and to absolve the gods is too naïve. No, he has a right to blaspheme them! For, why so cruelly abuse his credulity? Why implant within him deceptive instincts of which he has been the honest dupe? Why this premium granted to the fribble or the scoundrel? It is he, then, who is not cheated, who is the wise man? . . . But in that case, cursed be the gods who choose their favourites so ill! I want the future world to remain a riddle; but if there be no world to come, this world is a frightful ambushade. Remark, in fact, that our wish is not that of the coarse crowd. What we want is not to gloat over the chastisement of the culprit nor to draw the dividends on our virtue. What we want has nothing egoistical about it; it is simply to be and to stay connected with God, to carry on our thinking as we have begun, to get more knowledge out of it, to be rejoiced one day with the sight of that truth we are seeking with so much travail, the triumph of the goodness we have loved. Surely nothing could be more legitimate. The worthy Emperor, moreover, keenly felt so. "What! the light of a lamp shines brightly down to the moment when it is quenched and loses nothing of its brilliancy; and the truth, justice, temperance, which are within thee are to be quenched along with thee!" All his life he passed in this noble hesitation. If he sinned, it was through too much piety. Less resigned, he would have been more just; for surely to ask to have a friendly and sympathizing spectator of the battles we fight for goodness and truth is not to ask too much. It is also possible that if his philosophy had been less exclusively ethical, if it had comprised a more inquisitive study of history and of the universe; it would have avoided certain excesses on the side of rigour. Like the Christian ascetics, Marcus Aurelius now and then pushes self-denial to the extreme of dryness and subtlety.

One feels that the calm which never fails to come at last is obtained by an immense effort. Assuredly evil never had any attraction for him; he had not to wrestle with any passion: "Whatever men do or whatever men say, I must be a good man, just as the emerald may say, 'Whatever men do or whatever men say, I must be an emerald and keep my colour well.'" But to keep his footing always on the icy peak of Stoicism he was forced to inflict cruel acts of violence on his nature, and to cut away more than one of its nobler elements. This perpetual repetition of the same reasonings, these images by the thousand under which he seeks to represent to himself the vanity of all things, these proofs, often naïve enough, of universal frivolity, bear witness of the battles he had to fight to extinguish in himself all desire. Sometimes we are a little soured and saddened by this; the reading of Marcus is bracing, but not consolatory; it leaves in the soul a void which is at the same time delicious and cruel, which one would not give in exchange for complete satisfaction. Humility, abnegation, severe self-judgment, have never been pushed further. Glory, that last illusion of great souls, is annihilated. He must do good without troubling himself whether anybody will know of it. He sees clearly that history will speak of him; he sometimes dreams of men of the past with whom the future will associate him. "If," he says, "they have played the part of tragic actors only, nobody has condemned me to imitate them." The absolute mortification to which he had attained had extinguished self-love in him to the last fibre. The result of this austere philosophy might have been rigidity and hardness. It is here that the rare kindness of the nature of Marcus Aurelius breaks forth in all its lustre. His harshness is for himself only. The fruit of this great tension of soul is a boundless benevolence. All his life was a study how to return good for evil. After some sad experience of human perversity, all he finds to write in the evening is what follows:—"If thou canst do so, correct these people; in the contrary case, remember that it is for the purpose of exercising it towards them that benevolence has been given thee. The gods themselves are benevolent towards these beings; they help them, such is their kindness towards them, to acquire health, riches, and glory. It is permitted thee to do like the gods." On another day men were perverse, for this is what he wrote in his tablets: "Such is nature's order; people of this kind are impelled by necessity to act thus. To wish it were otherwise is the same thing as to wish that the fig-tree did not produce figs. Be mindful, in a word, of this; in a very short time thou and he will die; soon afterwards your very names will no longer survive." These reflections on universal pardon incessantly recur. Now and then an imperceptible smile hardly blends with this ravishing kindness: "The best way of avenging ourselves upon the bad is by not making ourselves like them;" or there is a slight accent of pride: "It is something kingly when we do good to hear ourselves spoken ill of." One day he has to reproach himself thus: "Thou hast forgotten what a sacred kindred unites every man with the human race; kindred not by blood and birth, but by sharing the same intelligence. Thou hast forgotten that the reasonable soul is a god, an emanation from the Supreme Being." In the intercourse of life he was wont to be refined, though a little simple, as very good men commonly are. The nine motives for indulgence which he impresses upon himself (Book xi, Art. 18) show us his charming *bonhomie* in presence of family difficulties which, perhaps, were chargeable to his unworthy son:—"If, under the circumstances," he says to himself, "thou wert to exhort him peaceably and to give him without anger, when he is working himself up to do the harm, lessons like this: 'No, my child, we are born for something else. It is not I who shall feel the evil, it is thou who art inflicting it on thyself.' Show him skillfully by a general consideration that such is the rule, that neither the bees act as he does, nor any of the animals whose nature it is to live banded together. Do not put into the lesson either mockery or insult, but let it breathe a true affection, springing from a heart stung by anger; do not speak like a pedant to invite the admiration of the bystanders, but keep in view him alone." Commodus (if it is he who is in question) was doubtless very little moved by this good, fatherly rhetoric. It was one of the maxims of the excellent Emperor that the bad are unfortunate, that nobody is bad save in spite of himself and from ignorance. He pitied those who were not like himself; he did not think he had the right to thrust himself upon them. He saw clearly men's baseness,

but he did not own it to himself. This habit of blinding themselves voluntarily is the defect of choice souls. The world not being all they could wish, they lie to their own hearts in order to see it otherwise than it is. Thence comes the slight conventionalism in their judgments. In the instance of Marcus Aurelius this conventionalism now and then sets our teeth a little on edge. If we chose to believe it, his teachers, several of whom were men of sufficiently middling abilities, must without exception have been superior men. One would have to say that everybody about him was virtuous. This sort of thing goes to such lengths that it might be asked whether the brother on whom he pronounces such a grand eulogium in his thanksgiving to the gods was not his brother by adoption, Lucius Verus. That is not very likely. But it is certain that the good Emperor was capable of great illusions when it was a question of lending another his own virtues. This quality, according to some criticisms written by the ancients, especially by the pen of the Emperor Julian, caused Marcus Aurelius to commit an enormous fault—that of not having disinherited Commodus. We see there are things which it is easy to speak of at a distance, when the hindrances are no longer there, and to reason far away from the facts. In the first place, it is forgotten that the Emperors, from Nerva downwards, who made adoption into so fruitful a political system had no sons. Adoption, with disinheritance of the son or grandson, is seen in the first century of the Empire, but has no good results. Marcus Aurelius was, on principle, evidently in favour of hereditary descent, in which he saw the advantage of preventing rivalries. From the birth of Commodus, in 161, he presented him alone to the legions, although he had a twin brother; often he took the little one in his arms and renewed the act, which was a kind of proclamation. In 166 it is Lucius Verus himself who demands that the two sons of Marcus, Commodus and Aonius Verus, shall be made Cæsars. In 172 Commodus shares with his father the title Germanicus; in 178, after the repression of the revolt of Avidius, the Senate, in order to recognize in some way the disinterestedness as to his family shown by Marcus Aurelius, demands by acclamation the Empire and the tribunitial power for Commodus. Already the bad natural disposition of the latter had been betrayed by more than one sign known to his tutors, but how could the future of a child of 12 be fairly prejudged on the strength of some bad marks? In 176 and 177 his father makes him Emperor, Consul, Augustus. This was certainly an imprudent course; but one was bound by anterior acts; besides, Commodus kept himself still under restraint. In the last years the evil quite threw off the cloak; on each page of the last books of the "Thoughts" we trace the inward martyrdom of the excellent father, of the accomplished Emperor, who sees a monster growing up at his side, ready to succeed him, and resolved to take in everything, by antipathy, the opposite course to that which he had seen followed by good men. The thought of disinheriting Commodus must then have occurred more than once to Marcus Aurelius. But it was too late. After having associated him with himself in the Empire, after having so many times proclaimed him perfect and accomplished before the legions, to go the length of declaring him unworthy in the face of the world would have been a scandal. Marcus was taken in the snare of his own phrases, caught in the formulas of a conventional benevolence but too habitual to him. At first Commodus evinced the intention of following the counsels of persons of merit with whom his father had surrounded him. The reproach, then, chargeable on Marcus Aurelius is not that of not having disinherited his son; it is that of having had a son. It was not his fault if the age was not capable of bearing so much wisdom. In philosophy the great Emperor had lifted so high the ideal of virtue that nobody felt bound to trouble himself about following it; in regard to policy, his benevolent optimism had enfeebled the public services, especially the army. In religion, through having been too much attached to a State religion whose weak points he was well aware of, he paved the way for the violent triumph of a worship not officially sanctioned, and he allowed a reproach to settle upon his memory, unjust it is true, but the shadow of which ought not to have been met with in a life so pure. We here touch on one of the most delicate points in the biography of Marcus Aurelius. It is, unhappily, certain that death-sentences against Christians were pronounced and executed during his reign. The policy of the Antonines was uniform in this respect. They saw in Christianity

a secret, anti-social sect, which dreamt of the overthrow of the Empire; like all men attached to the old Roman principles, they believed it necessary to put it down. No special edicts were needed for this: the laws against the *catus illiciti*, the *illicita collegia*, were numerous. The Christians fell in the most formal manner under the stroke of these laws. No doubt it would have been worthy of the wise Emperor, who introduced so many reforms inspired by humanity, to suppress the edicts which inflicted cruel and unrighteous penalties. But it must be remarked at the outset that the true spirit of liberty, as we understand it, was then comprehended by nobody, and that Christianity, when it got the upper hand, did not reduce it to practice better than the Pagan emperors. In the second place, the abrogation of the law against illicit societies would have been the ruin of the Empire, which was essentially based on the principle that the State ought not to receive into its bosom any heterogeneous society. The principle was a bad one according to our ideas, but it is none the less certain that it was the corner-stone of the Roman Constitution. Marcus Aurelius, far from exaggerating it, softened it down to the best of his ability, and one of the glories of his reign is the extension which he gave to the right of association. Meanwhile he did not go down to the root; he did not completely abolish the laws against the *collegia illicita*, and the result in the provinces was some applications of that law which are infinitely to be regretted. The reproach which can be brought against him is the same which might be addressed to the Sovereigns of our days who do not suppress with a stroke of the pen all the laws restrictive of the right of public meetings, of association, of the press. At this distance of time we see clearly that Marcus Aurelius would have been wiser had he been more thoroughly liberal. Perhaps Christianity, if left free, would have developed in a less disastrous fashion the theocratic and absolute principle inherent in it. But one ought not to reproach a statesman for not having evoked a radical revolution with a view to events which were not to happen until many centuries after his days. Trajan, Hadrian, Antoninus, Marcus Aurelius could not know the principles of general history and political economy which have not been perceived until our own times, and which our latest revolutions could alone have brought to light. In any case, the good Emperor's mildness was in this matter above all reproach. One has no right in this matter to be more morose than Tertullian. "Consult your annals," said he to the Roman magistrates, "you will see in them that the princes who have raged against us are those whom one holds it an honour to have had as persecutors. On the other hand, of all the princes who have been acquainted with the laws, divine and human, let a single one be named who has persecuted the Christians. We can even cite one of them who declared himself their protector, the wise Marcus Aurelius. If he did not openly repeal the edicts invoked against our brethren, he destroyed the effect of them by the establishment of severe penalties against their accusers." It must be remembered that the Roman Empire was ten or twelve times as large as France, and that the Emperor's responsibility for the judgments passed in the provinces was greatly attenuated. Above all, it must be remembered that Christianity did not simply claim freedom for the various forms of worship; all forms of worship which were tolerant towards others were left quite at their ease within the Empire; that which placed Christianity and Judaism in an altogether exceptional position was their intolerance, their exclusive spirit. Liberty of thought was absolute. From Nerva to Constantine, not a thinker, not a scholar, was disturbed. Men whom the Middle Ages would have burnt, such as Galen, Lucian, Plotinus, lived in peace, protected by the law.

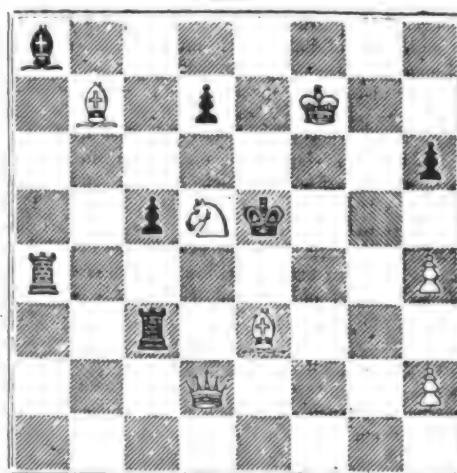

Behold the reason why we all lay to heart the mourning for Marcus Aurelius! In his person philosophy reigned. For a moment, thanks to him, the world was governed by the best and greatest man of his age. Frightful periods of decay followed, but the little casket which enclosed the thoughts which passed through his mind on the banks of the Gran and his philosophy were saved. There came forth from that casket this incomparable book, in which Epictetus has been surpassed, this Gospel of those who do not believe in the supernatural, which has not been understood save in our days. Veritably and everlasting Gospel, the book of the "Thoughts" of Marcus Aurelius will never grow old, for it affirms no dogma. The virtue of Marcus Aurelius, like our own, rests on reason, on nature. St.

Louis was a very virtuous man because he was a Christian; Marcus Aurelius was the most pious of men, not because he was a Pagan, but because he was a perfected man. He was the honour of human kind, and not of any determinate religion. Science would come to destroy seemingly God and the immortal soul, which the book of the "Thoughts" would give us back still young in life and truth. The religion of Marcus Aurelius is the absolute religion, that which results from the simple fact of a lofty moral conscience confronting the universe. It is of no race, of no country either. No revolution, no change, no discovery can alter it.

## METEOROLOGICAL REPORT

FOR WEEK BEGINNING FRIDAY, SEPTEMBER 10TH, 1880.  
Observatory of Daigaku, Moto-Fujicho, Hongō, Tokio, Japan.

## REMARKS.

Heavy line represents barometer.  
Light continuous line—max. & min. thermometers.  
.....represents velocity of wind  
.....percentage of humidity  
Max. velocity of wind 20.5 miles per hour on Thursday, at 8 a.m.  
The barometer is reduced to the freezing point and to the level of the sea.  
The highest reading of the barometer during the week was 30.113 inches on Monday, at 7 a.m., and the lowest was 29.690 inches on Thursday, at 2 p.m. The highest temperature for the week was 84°5 on Saturday, and the lowest was 65°5 on Monday. The maximum and the minimum for the corresponding week of last year were 82°9 and 61°3 respectively. The total amount of rain during the week was .604 inches, against a total amount of 4.00 inches for the corresponding week of last year.

## SHIPPING INTELLIGENCE.

## INWARDS.

Sept. 12, Japanese steamer *Kokonoye Maru*, P. Dithlefsen, 1133, from Hakodate, Mails and General, to M. B. Co.  
Sept. 13, Japanese barque *Kinokuni Maru*, Nicolle, 960, from Nagasaki, Coals, to M. B. Co.  
Sept. 13, Japanese steamer *Sumida Maru*, Hubenet, 896, from Hongkong via Kobe, Mails and General, to M. B. Co.  
Sept. 13, British barque *Vivid*, Petersen, 238, from Newcastle, N. S.W., Coals, to Walsh, Hall & Co.  
Sept. 14, Japanese steamer *Kuwamoto Maru*, Drummond, 1,240, from Hakodate, Mails and General, to M. B. Co.  
Sept. 15, American steamer *City of Peking*, Berry, 5,079, from Hongkong, Mails and General, to P. M. Co.  
Sept. 15, American ship *Samar*, O. Miller, 1,111, from Newcastle, N.S.W., Coals, to Walsh, Hall & Co.  
Sept. 15, British barque *Helen*, Imgieter, 433, from Takao, Sugar, to Chinese.  
Sept. 16, Japanese steamer *Hiroshima Maru*, Haswell, 1,200, from Shanghai and way ports, Mails and General, to M. B. Co.  
Sept. 16, British steamer *Benedi*, Rose, 1,006, from Singapore, General, to Smith Baker & Co.

## PASSENGERS.

Per Japanese steamer *Kokonoye Maru* from Hakodate:—Admiral Enomoto, Captain Taylor, Messrs. Lick and Schwette, and two Japanese.  
Per British barque *Vivid* from Newcastle, N.S.W.:—Mr. Ennos Bruce.  
Per American steamer *City of Peking* from Hongkong:—Captain Wodehouse, 27th Inniskillings, and 1 Chinaman. For San Francisco: Mrs. Kerr and daughter, Miss G. Brereton, Miss A. Brereton, Mr. H. M. Blanchard and 3 Chinese in cabin. 3 Europeans and 221 Chinese in steerage.  
Per Japanese steamer *Hiroshima Maru* from Shanghai & ports:—For Yokohama:—The Rev. and Mrs. Lambeth, Mrs. Lowder, Miss Winn, Captain and Mrs. Thomas, The Rev. and Mrs. Davis, Mrs. Delanque St. Colahan, Messrs. T. Walsh, P. Heinemann, Groom, Patterson, Beaton, Reimers, Hagart, Brinkworth, Kirby and Luman, Governor Kajitori and 9 Japanese in cabin; 4 Europeans 3 Chinese and 238 Japanese in steerage. For San Francisco:—The Rev. and Mrs. Stritmatter and Mrs. Ament. For Liverpool:—Mr. Taumeyer.

## OUTWARDS.

Sept. 11, British steamer *Cleveland*, Harvey, 769, for Nagasaki, Mails and General, despatched by Jardine, Matheson & Co.  
Sept. 11, Japanese steamer *Suminoe Maru*, Frahm, 852, for Hakodate, Mails and General, despatched by M. B. Co.  
Sept. 15, French steamer *Menzelch*, Homery, 1,273, for Hongkong, Mails and General, despatched by M. B. Co.  
Sept. 15, British barque *Parthia*, Patterson, 1,022, for Kobe, part of original cargo, despatched by A. Reimers & Co.  
Sept. 15, German barque *Jao*, Brorson, 244, for Nagasaki, Ballast, despatched by Jardine, Matheson & Co.  
Sept. 15, Japanese steamer *Genkai Maru*, Conner, 1,917, for Shanghai and ports, Mails and General, despatched by M. B. Co.  
Sept. 16, Japanese steamer *Kokonoye Maru*, Dithlefsen, 1,133, for Hakodate, Mails and General, despatched by M. B. Co.  
Sept. 17, German schooner *Auguste Reimers*, Thomson, 207, for Newchwang, Ballast, despatched by Jardine, Matheson & Co.  
Sept. 18, Danish schooner *Nacleshda*, Brodersen, 186, for Chefoo, Ballast, despatched by Jardine, Matheson & Co.  
Sept. 18, Japanese steamer *Sumida Maru*, Hubenet, 896, for Hongkong via Kobe, Mails and General, despatched by M. B. Co.  
Sept. 18, British steamer *Euphrates*, Mitchell, 1,299, for Kobe, part original cargo, despatched by Smith, Baker & Co.

## PASSENGERS.

Per French steamer *Menzelch* for Hongkong:—Rev. Power and Miss Power, Sisters Benjamin and St. Paul, Mr. Ellis and servant, Mr. Julius Ciseto, and one Chinaman.  
Per Japanese steamer *Genkai Maru* for Shanghai and ports:—Miss L. Clark, Lieut. W. H. M. Dougall R. N., Messrs. Tanaka, Ito, Kawara, Ishizaki, Naka, Garuier, Nakaguchi, Jijima, Miyabara, Minajima.  
Per Japanese steamer *Sumida Maru* for Hongkong via Kobe:—Major Palmers, Messrs. J. W. McCarthy, H. J. Hawkins, R. C. Kirby, Winkler, S. Bing and Matsuda.

## CARGOES.

Per French steamer *Menzelch* for Hongkong:—  
Silk for France ... .. 179 bales.  
" " London ... .. 23 "  
Total ... .. 202 bales.  
Per Japanese steamer *Genkai Maru* for Shanghai, and ports:—  
Treasure ... .. \$12,500.00

## REPORTS.

The Japanese steamer *Kokonoye Maru* reports:—Weather at first rainy and overcast, afterwards light winds.  
The British barque *Vivid* reports:—Left port on the 23rd July. Experienced strong westerly winds. Afterwards light south-east and north-east trades.  
The American steamer *City of Peking* reports:—Left Hongkong Sept. 6th, at 2.30 p.m.; Sept. 14th, exchanged signals with a Japanese ship. Had light easterly winds and smooth sea the entire trip. Arrived at Yokohama Sept. 15th, at 8.20 a.m. Passage, 5 days, 16 hours and 10 minutes.  
The British barque *Helen* reports:—Left Takao on the 3rd of September; had fine weather all the passage.  
The American ship *Samar* reports:—Left Newcastle on the 25th July.

## LIGHTSHIP SIGNALS.

The following are the signals made from the lightship to denote the approach of vessels:—  
Merchant steamer:—A black ball, with the national flag of the vessel below, at the yard arm.  
Mail steamer:—A black diamond, with the company's flag below, at the peak.  
Man-of-war:—National flag of the vessel at the peak.  
Sailing vessels:—For a ship: flag B. (red); barque, flag C. (red ball on white ground); brig, flag D. (white ball on blue ground); schooner, flag E. (white ball on red ground) all commercial code, with the vessel's national flag below as soon as it can be made out.

## NEW ADVERTISEMENTS.

## KILNER &amp; HANDEL.

THE interest and responsibility of Mr. W. KILNER in our firm ceases on the 20th instant.

KILNER & HANDEL.

Yokohama, 18th September, 1880.

## NOTICE.

IN reference to the above, the undersigned will continue to carry on the Business under the same style and title of

KILNER & HANDEL.

H. HANDEL.

Yokohama, 18th September, 1880.

## KILNER &amp; HANDEL,

No. 72, Main Street,

HAVE RECEIVED ex Mail steamer a large and well assorted stock of

## FELT HATS,

Of the newest shapes and designs, direct from CHRISTY & Co.

W. & A. GILBEY'S  
WINES AND SPIRITS.

W. & A. GILBEY have special facilities for carrying on an extensive Foreign Trade, having held for many years in their Excise Bonded Stores, for the purpose of their Home Trade, a stock of not less than 12,000 Casks of Wines and Spirits, which are equally available for Export. These stores are by far the largest private Duty Free Warehouses in the World, and are under the supervision of a staff of Excise Officers specially attached to these Warehouses.

THE EXTENT of W. & A. Gilbey's purchases enables them to give the best VALUE to the public, as a twentieth part of the Foreign Wines consumed in the United Kingdom is supplied from their stock. In the year 1876 W. & A. Gilbey paid duty on 1,881,049 gallons of Wines and Spirits, and the average quantity bottled and sent out by them daily was 3,050 dozens or 36,600 bottles.

QUALITY is guaranteed by W. & A. Gilbey, and is the same whether the Wines or Spirits are obtained direct from their Head Establishments or from any of their Agents. The purity and genuineness of every article in this list are guaranteed in accordance with Act of Parliament, 38 and 39 Vict., Cap. 63.

W. & A. Gilbey have always adhered to the standard of Bottle Measure recently recognised by the Government, namely—

6 bottles contain one gallon; 12 half-bottles contain one gallon.

SECURITY is ensured to the purchaser, each bottle bearing W. & A. Gilbey's seal and label guaranteeing quality and measure, and the strength also in the case of Spirits.

EDWARD FISCHER & Co.,  
Agents for Japan.

## THE SUMMARY OF TRADE FOR 1879.

THE Summary of trade at all the ports of Japan open to foreigners, prepared annually by the British Minister, has at length made its appearance. Although on this occasion no returns have been furnished from Niigata, we do not think the omission materially affects the results arrived at. As usual, the utmost care is observable in the preparation and compilation of this valuable official document, which is a natural outcome of the very efficient service maintained by the Government of Great Britain—a service which has proved itself not only of paramount importance in maintaining the commercial superiority of England, but also excited the admiration of other nations.

This summary is, of course, but dry reading to the ordinary public, but to those engaged in mercantile pursuits it is of very great value, showing as it does with the utmost accuracy, the course of the import and export trade of this Empire for the period embraced.

From the report we learn that the total import and export trade for the year 1879 reached \$59,976,814; divided between \$32,603,838 of imports and \$27,372,976 of exports; the former predominating by \$5,230,862. The total trade exceeded that of the year previous by \$383,003 when the figures were:—

Imports.....	\$33,334,392
Exports.....	26,359,419

It therefore appears that, during last year, the imports shew a decrease as compared with the year before of \$730,554, the exports on the other hand exhibit an increase of no less than \$1,113,557. This remarkable augmentation of home productions is a very encouraging feature and fully bears out the statement in the report that "the export trade for the year under review exhibits a very healthy development."

Excluding Niigata, from which as we have already remarked no returns were furnished, the trade for the year 1879 was distributed among the open ports as follows:—

	Imports.	Exports.	Total.
	Dols.	Dols.	Dols.
Kanagawa .....	23,826,010	13,880,273	42,206,283
Hio-go and Osaka ...	7,598,717	5,818,162	13,416,879
Nagasaki .....	1,674,052	1,982,027	3,656,079
Hankodate .....	4,459	692,515	696,974

Total ..... 32,603,838 27,372,976 59,976,814

It is strange that the trade of this port—Yokohama—should still appear under the heading of Kanagawa, but the explanation for the seeming anomaly is to be found in the mention of Kanagawa, and not Yokohama, in the treaties as an open port.

The decrease in the imports is allotted to the following items:—

Cotton Manufactures.....	\$627,838
Woollen do. ....	444,218
Metals.....	312,834
Arms and Ammunition .....	251,884
Miscellaneous Foreign .....	198,475

Total.....\$1,853,744

At the same time the report discloses that an increase in Mixed Cottons and Woollens and Eastern Produce, of \$150,572 and \$972,618 respectively, in all \$1,123,190, reduces the decrease to the sum of \$730,554 already mentioned.

On the subject of the large decrease observable in the item of Cotton Yarn the report says:—"In the year under review 235,702 piculs of yarn, valued at \$6,179,858, were imported, as against 273,943 piculs valued at \$7,560,963, in 1878. The decrease in value in this item alone is, therefore, no less than \$1,381,110, and is due not only to a decrease in the quantity imported, but to a decline in prices. It must, however, be borne in mind that the value of yarn imported in 1878 was, as pointed out in the summary for that year, more than 50 per cent, in excess of that of 1872, the highest previously known, and it will be seen, therefore, that the importation of yarn in 1879 is far above the average of previous years." In addition to this decrease which is thus accounted for by the excessive importations of the year before, we notice a diminution in the value of Velvets, which have fallen off to the extent of \$217,904. A large deficit has also taken place in Woollens, accounted for by the efforts of the Government to establish cloth and woollen factories in the country. The items affected and the decline are stated to be:

Cloth .....	\$523,863
Blankets .....	160,965
Flannel .....	142,752

The most noticeable increases are those under the headings of Shirtings, Mousselines de Laine, Kerosene, Machinery, and Eastern Produce. In the first named the increase is so great as almost to compensate for the

decline in Cotton Yarn of over a million and a quarter dollars. The imports of this article for 1879 and the previous year are given as :—

1879..... yards	70,761,018.....	\$9,649,223
1878..... „	41,057,514.....	2,548,621

Increase in 1879..... yards 29,703,499..... \$1,100,602  
Mousselines de Laine, again, still maintain the increased demand which was observed in former reports. In 1879 the importation showed an increase of 3,675,101, of the estimated value of \$346,059, over the import of the year before.

The great article of import from the United States—Kerosene—exhibited an enormous increase. On this and other items the report says “819,041 cases, valued at \$2,185,223, were imported in 1879, as against 518,572 cases, valued at \$1,850,881, in 1878. A decrease of \$198,475 is observable in the class of goods known as Miscellaneous Foreign. This is due to a falling off in most of the other principal items of this class of goods, as shown below :—

Leather .....	\$ 89,682
Drugs & Medicines .....	40,866
Cloth & Haberdashery .....	163,761
Watches .....	76,955
Sundries .....	289,387

Machinery, however, exhibits an increase of \$198,918 on the previous year. Taking simply the totals for 1879 and 1878, under the heading of Miscellaneous Foreign, it will be seen that the actual difference between the importations of the two years is nearly accounted for by the increase under the head of goods for Government use, which amounts to \$156,189. The large increase noticeable in these Returns under the heading of Miscellaneous Eastern, is due to the increased importation of Sugar to the extent of \$354,946, Rice to the extent of \$216,562, and Peas and Beans to the extent of no less than \$474,988. Raw Cotton, on the other hand, shews a decrease of \$227,604 in 1879, as compared with 1878. A reference to previous Returns will show that this trade, which consists almost entirely of produce from China, is liable to considerable fluctuation.”

Dealing with the question of exports from Japan, and the very gratifying increase which has taken place in the development of products of the country, the report states that this increase is observable in each of the following items :—

Raw silk .....	\$2,153,299
Tea .....	3,033,032
Tobacco .....	34,106
Vegetable Wax .....	223,607
Camphor .....	145,317
Dried Fish .....	163,295
While on the other hand a decrease is noted in :—	
Silkworms' Eggs.....	\$ 99,983
Copper .....	12,667
Coal .....	102,653
Rice .....	4,265,710
Miscellaneous .....	158,086

The first item of decrease we certainly consider matter for congratulation instead of regret, and we trust the day is not far distant when the suicidal policy of exporting cartons from the country will cease, and the item disappear altogether from trade reports. The large decrease under the head of Rice, is explained by the cessation of the Government operations in that cereal.

The results of the Silk and Tea trade for the year 1879 must be pleasing to Japanese producers, but the following

figures shew that the average price of silk was less in 1879 than in 1878 :—

1879.....piculs	82,545	\$11,148,040
1878..... „	25,708	8,995,341

Increase in 1879.....piculs 6,837 \$2,153,299

The disparity in price being accounted for by the export to America last year of large quantities of coarse silk for consumption in that country.

In the matter of other increases the report says :—“ In the case of Tea, higher prices have ruled throughout the year 1879. In the latter year there were exported piculs 286,016, valued at \$7,445,489 as against piculs 217,579 representing a value of \$4,412,457, in 1878. Vegetable Wax shows a tendency to recover the place it formerly held amongst exports. The exportation for 1879, amounting to \$329,974, is not far behind that of the years 1872 and 1873. For the last few years a steady improvement has taken place in the business done in Camphor. In reviewing the trade of 1878 it was pointed out that that year's exportation of camphor (\$309,972) was the highest yet known. The exportation in 1879 reached \$455,389, thus showing a further increase of \$145,317. The same may be said of Dried Fish, which exhibits an increase of \$163,295.”

The balance against Japan in the matter of coin and bullion is still maintained. During 1879 the importation amounted to only \$3,185,870, while the quantity which left the country was valued at no less than \$18,235,118, or a difference of over ten millions of dollars—about £2,000,000 sterling. This is no doubt a large amount, but the cost of the Government establishments abroad—Legations, Consulates, &c.,—and importations on Government account, now rapidly decreasing as the requirements of the new civilization are supplied, will go far to explain the reason of this exodus of specie.

The customary shipping return and census conclude the portion of the report already published. The particulars under these headings are :—

“ The return of tonnage shew a decrease in the total under all flags of 106,992 tons, the total in 1879 having been 641,880 tons as against 748,872 tons in 1878.

The decrease is distributed as follows :—

British Tonnage .....	76,662 Tons.
American „ .....	7,434 „
French „ .....	1,530 „
Swedish „ .....	15,469 „
Other Flags „ .....	5,897 „

Total..... 106,992 Tons.

German Tonnage shews an increase of 8,372 tons, and Dutch an increase of 1,746 tons.

The number of European and American residents in Japan in 1879 was 2,398, showing a decrease of 79 as compared with the return for the year 1878. At the port of Hiogo the principal difference occurs, the number of residents in 1879 being 64 less than the total of 1878. The number of Chinese residents increases steadily, the total for 1879 being 3,649, as against 3,028 in 1878, and 2,107 in 1877.”

#### BRITISH ORIENTAL POLICY, PAST AND PRESENT.

“ A CHRISTIAN dog craves audience,” was, in former times, the pleasant announcement when an Envoy from a Christian State sought an interview with the Sultan of Turkey. The Envoy was also clothed in a valuable fur robe which, together with sweetmeats, had been previously presented to him, thus symbolizing the above expression, and shewing that he had been clothed and fed by the condescension of the “ Father of the

Faithful." Such was the etiquette required to be observed by all Envoys to the Sultan's Court up to the time of Sir Stratford Canning's appointment. We are forcibly reminded of this fact by noticing that the veteran statesman has recently passed from among us, and reflections crowd upon the memory recalling the vast political changes which have occurred throughout the world during the period spanned by the lifetime of the late distinguished diplomatist. Lord Stratford de Redcliffe commenced his public career some few years before the late Lord John Russell, and though his first act at Constantinople was to break down with a firm hand this humiliating act of homage, he remained through life a consistent supporter of the Sublime Porte, in a fair and considerate spirit, in all such efforts as were directed towards progressive improvement, and he carried thereby a respect and esteem among the despised Turk which will not cease with his death.

We need not dwell now on the great political changes in Europe that he lived to witness, further than to remark in passing—in all that is comprised in the fact—that he saw the rise as well as probably the definite fall of the great Bonaparte dynasty; what is chiefly interesting to us is the political changes in Asia which have occurred during his lifetime, and which have a bearing on this part of that Continent. When the "Great Elchee" commenced his diplomatic career, the Ottoman rule was not only all-powerful in the south-east of Europe, but was likewise so throughout the greater part of Asia. Before he died he saw the authority of the Porte merely existing in Europe by sufferance and the jealousy or rivalry of the different European Powers, and its influence in Asia, as the chief centre of the Faith, reduced to little more than a name, although it is possible this may be but temporary.

Under the considerate but firm policy which characterized Sir Stratford Canning's long conduct of British affairs at Constantinople, Turkey progressed in no mean degree, and the Crimean war proved the capabilities and value of the Turk as a soldier.

The English people then had so high an appreciation of the Ottoman that, for some fifteen years afterwards, they treated the Turks like pampered children, and supplied them with money *ad libitum* to squander as they pleased. Unfortunately during this period, the veteran diplomatist had ceased to hold the reins of British interests at Constantinople, and the English people awoke suddenly to find their millions expended—principally in pandering to the vices of the Sultan and his Pachas. Then, as usual, their indignation carried them to the other extreme, and the Turk was considered unfit to remain in Europe. Not unfrequently of late years has the voice of the venerable statesman been raised in the cause of fairness and consideration for the abused Turk, but he must have recognized before he died, that the Ottoman Government had become hopelessly insolvent, and that there is little probability as things are now, of the Mahomedan people assimilating to the spirit of the age or progress of the times. On the Continent of Europe they are so surrounded and outnumbered by races differing completely in temperament, religion, and interests, that sooner or later they must be elbowed out of Europe by sheer competition, if not forced out sooner by some more active forces.

The advocates of that senseless "rod of iron" policy so popular in this part of the world, should remember that, if the time comes when the Turk ceases to exist as a power in Europe, it is quite possible for Islamism to become all-powerful again in Asia. The regions from which the race sprang, although partially depopulated,

still remain strange to say, the most fertile on this world's surface, requiring only man's handiwork under proper Government, to restore them to their old preëminence. Further, there is sufficient vitality among the disjointed Mahomedan Powers in Asia to indicate that, in combination again, in a less extended field, and influenced by the traditions of their sect, to make them again become powerful as well as formidable. Such considerations were those which evidently animated the Oriental policy of Sir Stratford Canning, and which it is surely worth while not to lose sight of now.

If Sir Stratford Canning has brushed away for ever an undignified and humiliating ceremony demanded by one Oriental Potentate, another British Envoy at the opposite extreme of Asia saw no indignity in complying with a far more degrading act in the "kowtow" required by a more eastern monarch. Although this veteran statesman lived to see the humiliating etiquette of the Chinese Imperial presence principally dissipated by the action of a Japanese official, and the mystery surrounding the Court of Japan removed by the enlightened action and will of the Mikado himself, still we fear it is only but too apparent that this antagonistic feature has since almost continuously characterized British diplomacy as followed in the east and west of Asia.

The British "Rod of Iron" policy has been proved to be as impotent as that of the "Iron Heel" policy still in vogue among some despotic nations. The present condition of India, let alone Afghanistan, is sufficient evidence of this to satisfy the most stubborn of its advocates. Neither can we find any crumbs of satisfaction in the impaired British influence and prevailing distrust apparent in China and, until lately, in this country as well.

We come to the conclusion that the just but firm policy by which Sir Stratford Canning during his long term of office led the Turk to influence, if not to moderate prosperity—which was afterwards sacrificed principally by the rash confidence of the English people—a policy which found warm followers in this part of Asia in such distinguished men as Lord Elgin, Sir Frederick Bruce, etc., etc., will be found to be more potent of good than the "iron rod" policy, so fondly adhered to by others of a different school. At all events, the one having failed, it would seem that the other might now be tried, and we have no uncertain opinion as to the beneficial results which must follow.

IT is somewhat amusing, to observe the excitement which the expected arrival at San Francisco of a small Chinese steamer has created throughout the United States. The steamer *Ho Chung*, which is the cause of all the commotion, is a vessel of about 1,000 tons capacity belonging to the China Merchants Steam Navigation Company, and left Canton about two months since with Chinese emigrants for Honolulu. There being little return cargo from that port, an experiment of letting the steamer return to China via San Francisco, with the hope of securing a paying homeward freight was determined upon, hence the origin of the appearance of the Dragon flag for the first time in the waters of the United States. The approach of this vessel was heralded by the American press as an evident proof of the desire of the Emperor of China to stimulate the commercial development of his Empire, and of the deliberate intention of the Chinese Government to make "a new departure." It is further intimated that the steamer is one of an enormous fleet which is ready to commence operations and compete to the detriment of the American mercantile marine. The

New York *Herald* thus expresses its opinion. "No doubt thousands of merchants along the densely-populated thousands of miles of seacoast, will avail themselves of their new born liberty, and that China will soon take rank among the maritime nations." We are sorry to detract from such an enthusiastically drawn and intensely exaggerated picture, but to prevent any unnecessary misapprehension we need only state that there is about as little probability of the Chinese in the present generation, extending their steamer enterprise in any perceptible degree so as to affect American shipping industry, as there is of seeing an American President at Peking. The Chinese are essentially a prudent race and rarely embark in any enterprise without thoroughly understanding it in all its bearings, and keeping the control of it themselves. The Chinese Government had a definite object in view in establishing the China Merchants Company. For they are endeavouring to recover the coast traffic which they have relinquished by Treaty—as they claim in ignorance—to foreign nations, and they will doubtless persistently follow this design up until it has been attained. It is, however, altogether beyond probability that the Chinese Government have any idea of favoring the extension of communications abroad, when so much remains to be done at home. Besides there are countries less remote which offer greater inducements for Chinese development and where Chinese are now better appreciated than apparently they are in the United States, and those places will be the first to enjoy the advantages of the development so confidently predicted by the American press. Apart from such premature considerations, it is well understood that the profitable working of the existing steamer lines across the Pacific, is mainly dependent on the Chinese passenger traffic. If this traffic is curtailed or suppressed, as seems likely to be the case, then there will result a proportionate curtailment in the existing direct steam communication with San Francisco, and the principal portion of the products of this part of Asia will find its way to the Eastern States by sailing vessels, or via the Suez Canal.

SOME very eulogistic accounts having appeared in an American paper of the superiority of a line of railway in course of construction in Yezo under the superintendence of American officials, a correspondent in Japan of *Iron* sent to that paper a correction of some alleged inaccuracies in the description which was supplied to the American journal. The statement in *Iron* is as follows:—

"One line of railway—eighteen miles—from Tokio to Yokohama was opened in 1872 and has been successfully and profitably worked ever since. The permanent way, material and all rolling stock, for this and the other line are English; and although the trains pass very close to small houses along the line about twenty-eight times daily, spark-arresters have not been found necessary. In Yezo, which is almost uninhabited, and where the proposed railway or mine tramway (if made) will not pass a single house, spark-arresters may be perhaps more needed and the Westinghouse brake will be useful on the coal trains, whenever they run. The fear of hostility through the destruction of whole villages by sparks have not been developed during the last eight years. A second line of railway open for several years between Kobo, Osaka, and Kioto (forty-seven miles long) has lately been extended, by the opening of ten miles more to the lake Biwa, to which previous remarks also apply. At present another section is being built from Nagabama (Longshore) on the lake, to Tsuruga on the west coast. The rails are being supplied by Charles Cammell & Co. Yezo, in the north,

is practically almost uninhabited and uncultivated. It is now said that a tramway is to be made from some future coal-mine to a shipping port: and this is the line which the paragraph (taken from an American paper) refers to in all the glory of 'spark-arresters.' I have heard, says our correspondent, 'that all the material, &c., for this tramway is to come from America. I hope I may see the two wonderful fast engines with the wonderful names. 'Benkie' by the way means check (pattern) in the vernacular. Is it prophetic of the fate of these engines? Inasmuch as upon the present open line the Japanese possess thirty-eight locomotives, there scarcely seems the ground for making such a fuss about these two wonderful productions. I should not be surprised if the first order should also be the last." *Iron's* correspondent will soon be in a position to realize his wish to see the engines, as the vessel by which they were shipped left New York for Otarunai, on the 17th of last May.

AN Indian correspondent of the *Times* relates a conversation with Daoud Shah, the commander-in-chief of the deposed Ameer Shere Ali's army, which tends to shew how susceptible to flattery was that potentate and how astutely the Russian envoy worked upon his weakness. The general was describing the first interview between his master and the emissary of the Czar:—

"After the usual compliments had passed and General Stoliéteff had thanked the Ameer for the kind treatment received on the journey, he begged to remark that there was one thing neither he nor any of his officers could understand. They had heard and read a great deal of the Ameer's excellent government and magnificent army; but neither what they had heard nor read had at all prepared them for what they had seen since entering His Highness's country. The management and ruling of everything were most perfect, and the army was splendid beyond description. 'How, then, was it that he, the head of such an army and kingdom, and a really more powerful monarch than the Shah-in-Shah of Persia, and quite the equal of the Sultan of Turkey, was content with the simple title of Ameer? This was more than he (Stoliéteff) and his officers could understand. The Ameer, who had up to this been cold and indifferent in his manner, lolling back on his seat, pulled himself up and, assuming a majestic and dignified air looked round on the assembled courtiers. 'We,' said Daoud Shah, 'seeing how flattered and pleased the Ameer was, exclaimed, 'Yes, yes; why are you contented with such a title when you are certainly greater than the King of Persia and quite the equal of the Sultan?' 'In less than five minutes,' Daoud Shah continued, 'this clever ambassador with his flattery so won over the Ameer that he was more pleased with him than he had ever been with any of us, his old servants, and we all felt sure that General Stoliéteff would get his own way with him.'"

APPLE-PIP KELLY," as the Lord Chief Baron was familiarly termed from the celebrated defence of Tawell the Quaker who poisoned his housekeeper with prussic acid, is thus mentioned in a recent number of the *Pall Mall Gazette*:—"The Lord Chief Baron has been propounding some very queer law at the Cambridge assizes. On a question affecting a tenant-farmer's right to game, the judge, having looked at the written lease, found that it contained no allusion to the game at all; and held that the tenant accordingly had failed to substantiate his right. Counsel urged in vain that in the absence of a special contract the game belongs to the occupier of the land, but the Lord Chief Baron was inexorable. The blunder will, of course, be set right in due course, but in the meantime many worthy squires will be delighted and misled by the judge's doctrine. It is not many weeks since the Lord Chief Baron, in an assize case, made some wild mistakes about the authority of a

police-constable to arrest on suspicion. It is absurd to suppose that so accomplished a lawyer as Sir Fitzroy Kelly, has all his life been ignorant of the most elementary principles of English law, and these amazing and repeated blunders can only be explained in one way. Sir F. Kelly is a very old man, and his warmest admirers must admit that age has greatly impaired his efficiency as a judge." The soubriquet which has been attached to the Lord Chief Baron arose from his trying to persuade the jury in Tawell's case that the traces of poisoning by hydrocyanic acid discovered in the murdered woman, were due to her having eaten an apple, the pips of which, in common with those of many other fruits, are known to contain a considerable amount of the deadly poison! This defence was naturally unavailing, but the anecdote shews that Sir Fitzroy Kelly's "angularities" are of no recent date. The *Pall Mall* certainly lays much stress upon the effect of time upon the Judge's former efficiency, an argument which might with equal propriety be used in connection with the author of the scandals in the Hongkong Supreme Court.

IN the numerous steamboat accidents which have recently occurred in the United States great loss was occasioned by the utter want of discipline in the crews, and the fact of there being no organized system adopted for utilizing the fire extinguishing and life saving apparatus on board. The lamentable results of this neglect were so very apparent that immediate improvement was imperative. The beneficial effect is thus described in the *New York Nautical Gazette* in an account of the crew drill on board one of the steamers plying from that port:—

"Hardly had the first tap of the gong rung out when the decks of the great steamer became suddenly animated with living forms. Men with axes, fire extinguishers, and buckets, sprang to their respective stations, hose pipes were thrust from the gangways, and within a few seconds water poured from the nozzles. There was no jostling in the hurried movements of the men, for every one of them seemed not only to know his place, but also the shortest cut thither. This portion of the drill having been most satisfactorily carried out, the signal to 'lower away the boats' was next given. It was responded to with equal alacrity with the first alarm, the first boat touching the water fully manned in forty-five seconds, being followed by the others in quick succession. All the boats reached the water 'right side up with care,' and thus were lowered from their davits literally 'with neatness and dispatch.'"

This presents a pleasing contrast to the accounts of confusion and disorder which prevailed in the disasters which occurred not long since. Similar preparations for emergency to those mentioned above should be made in every sea-going vessel.

#### A DAY AT THE HISAMATSUZA THEATRE.

IT is to be greatly regretted that financial difficulties have compelled the energetic proprietor of the Shintomiza theatre, to suspend the dramatic performances given in that admirable establishment ever since the representation of the play which we reviewed last July. In common with the public of Tokio and Yokohama we sincerely hope that he may soon be enabled to re-open his temple of Thespis with his former staff of able actors and, by the introduction of new plays, preserve the well-earned reputation of the establishment as the best theatre in Tokio and in fact in all Japan.

The next theatre in size and importance is the Hisamatsuza, in Hamacho. Although the present building—being a temporary structure erected after the destruction of the theatre in the disastrous fire at the beginning of the present year—is proportionately small, yet the actors are all good and, best of all, the characters they take are admirably adapted to them and consequently excellently played. All these attractions combined are now drawing—as they certainly deserve—so great

a crowd of visitors, that on Sunday last when the writer was present, there was not a seat to be found unoccupied by an early hour in the morning, notwithstanding the extreme heat of the weather.

The two pieces now being performed are entitled respectively *Okuni no matau kabuki no tchajimé*, and *Golairiki koi no fujimé*. The former of these is an old popular drama, and is the history of a peasant woman named Kasané, whose miserable and cruel end—through the influence of the names of her deceased sister—forms a subject for 'fire-side' stories, as well as for songs and poetry among the Japanese.

The first act introduces us to a tea-house in Yedo—as the capital was called at the date of the events represented—where a number of unscrupulous and ambitious retainers of the Prince of Daté (perhaps more popularly known as the lord of Sendai) are found discussing a plot to overthrow the reigning Prince. The dissolute behaviour of the Prince is made the excuse for the conspiracy, and the principle offence alleged against him is the violent affection he bears towards a celebrated member of the *demoi-moule* named Takao, who he is in the habit of visiting almost every day and, of course, squandering upon her enormous sums of money. It may well be imagined that this course of procedure—leaving on one side the moral view of the case—is serious misconduct on the part of a personage of the Prince's rank and dignity, at a time when a daimio never went outside the gate of their *yashiki*, unless attended by a large number of retainers. In fact they were seldom seen in the streets at all, except when paying a ceremonial visit to the reigning Shōgun, or some similar occasion.

In Act II. we find the Prince (impersonated by Gadō) seated in a large house-boat—specially built for the occasion—in the middle of the Sumida-gawa, retiring from his usual place of amusement. On this occasion, however, his beloved Takao (Takanojō) is seated by his side, for the Prince has now delivered her from the bondage in which she was previously held by an engagement with the proprietor of the house, with a view to her permanent residence in his *yashiki*. In connection with this incident we may here repeat a popular anecdote among the Japanese. It is said that, when the Prince of Sendai released Takao, her employer did not agree to cancel the bond for any specific sum of money, as she was so surpassingly beautiful and engaging in her manners. The offer made by the Prince and ultimately accepted was, that he should pay in gold coin her weight in full dress. When placed in the scales the extraordinary weight of Takao—which was altogether disproportionate to her size—surprised everyone; in fact she seemed almost as heavy as three fully-grown men put together! This surprise was, however, soon explained when it was discovered, that not only her master, but also every one of her friends and servants, had asked her to conceal about her clothes heavy articles, such as iron rods, mirrors, utensils, &c., &c., the equivalent weight of which she was subsequently to give them in gold! Takao is said to have willingly complied, and thus secured the kindly remembrances of her old friends.

To resume our description of Act II. A wrestler named Kinugawa (Kuzō) who, like most of the champion wrestlers of the time was in receipt of a pension from the house of Date, and therefore devoted to the head of the clan, arrives on the scene in a fast-boat from the *yashiki*, and delivers a message to the Prince which compels him to return with all speed to his residence, leaving Takao to follow more leisurely under the protection of the wrestler. Kinugawa had long since arrived at the conclusion, that his Prince's blind affection for Takao was the principal cause which had led to his perilous position and the plot for his overthrow. The wrestler can discover no other way out of the difficulty than the separation of Takao and his master, and he accordingly explains the circumstances to her and beseeches her to remain in concealment until the Prince has overcome his enemies and defeated the conspirators. Takao, however, feels, too enamoured of either the Prince or his wealth to consent, and meets all Kinugawa's pleading with a district and positive refusal. The wrestler sees no alternative if the house of Daté is to be saved, and he therefore kills Takao. With her last expiring breath she vows to the gods that her spirit shall haunt Kinugawa through life and take a fearful vengeance on her cruel murderer. This may be said to form the groundwork of the drama.

We are now introduced to the house of the slain girl's family. News of her death has reached the peasant home,

and Takao's brother Sabu (Gadô) and sister Kasanê (Takanojo) are offering up prayers for the repose of her soul. A hurried knocking at the door and Kinugawa enters travel-stained and weary. Not knowing, naturally, that he is in the house of his victim, he seeks refuge from the pursuit of soldiers despatched by his enraged Prince to effect his arrest, and who have already hunted him from the capital. Kinugawa relates the cause of his flight and throws himself upon Sabu's mercy for shelter. Sabu discloses his identity and challenges Kinugawa to mortal combat. Kinugawa offers no resistance to the threatened onslaught, but asks for a few minutes delay until he has opportunity to explain the reasons for his cruel deed. Sabu consents, and the wrestler then narrates the plot to overthrow the house of Daté, how only a few retainers in addition to himself remained faithful, and pleaded that it was only by the death of Takao that the impending evil could possibly be averted. He then prays for a reprieve until such time as order is restored in the clan, declaring that he will then cheerfully pay the penalty of his crime. Sabu is struck with the devotion of Kinugawa, and grants his prayer.

Complications now follow. Kasanê, Takao's sister, had fallen in love with the wrestler some time before at a great wrestling match in the capital. She now endeavours to obtain her brother's sanction to her marriage with Kinugawa; after much persuasion he consents. Kasanê retires to array herself for the nuptial ceremony and, just as she is putting the finishing touches to her toilette, the ghost of Takao appears. The spirit addresses Kasanê, accuses Kinugawa of the murder, and forbids the marriage, adding that its mission is to torment the wrestler through life. Kasanê's affection is proof against this fearful ordeal. She declares her intention of remaining faithful to her lover, whereupon the ghost makes a few rapid passes—thus exercising the malign influence possessed by the shades of all departed persons—and Kasanê from extreme beauty is changed to excessive ugliness. Notwithstanding this the wrestler marries her.

ACT. IV. discovers Kinugawa settled down into a family man. With his wife he has taken up his abode in his native village and, the better to conceal his identity, has changed his name to Yoyemon. His present occupation is that of a tiller of the soil. A serious disaster, however, now befalls him. Since the period mentioned in the former act, the conspirators have prevailed against the Prince of Daté and he finds himself compelled to flee from Yedo. The Prince directs his steps to the locality where he remembered hearing the faithful Kinugawa was born, and his betrothed wife, Utakata Hime (Shinzo), follows him. The lady, while wandering about inquiring for the dwelling of Kinugawa—now Yoyemon—is met and kidnapped by Kingorô (Danshō) a noted highwayman of the Ned Kelly type. This ruffian resides (when at home) near Yoyemon, and is perfectly acquainted with his former relations, under the name of Kinugawa, with the house of Daté. The robber then calls upon the ex-wrestler, tells him that he has captured the betrothed of his liege lord, and offers to ransom her for one hundred rios. Yoyemon recognizes Utakata Hime by the description given by the robber and proposes to buy her himself, alleging that he has been looking out for another wife for some time past, as Kasanê was so ugly that she excited only feelings of loathing, and he intended to divorce her. After a good deal of conversation it is arranged that they shall meet at a certain place the next evening, when Yoyemon shall hand over the money to the robber and receive the lady in exchange.

The next act (V.) is certainly the most interesting of the whole drama, and is brimful of stirring incident. On a lonely country road, at a spot where a desolate bridge crosses a river, we are introduced to the trysting place of Yoyemon and Kingorô, a fitting place for the completion of a nefarious transaction. To this dreary spot the robber drags the terrified and wearied Utakata Hime and commands her to accept as her husband his friend Yoyemon. The poor lady is so overcome with fear that she is unable to dissent, and her silence is accepted as proof of her willingness to comply, although her refusal would have mattered little. While this is in progress, Kasanê passes along the road, hears her husband's name mentioned, and either suspecting his fidelity, or perhaps impelled by the curiosity natural to her sex, conceals herself behind a bush and eagerly listens to the conversation between the robber and the lady. Yoyemon now arrives to keep his appointment, and finds as

he had anticipated that the captive lady was none other than the betrothed of his Prince. The robber demands the agreed ransom, but Yoyemon has not got it and threatens to rescue the lady by force. This had, in fact, been his intention from the very first, and he purposely appointed a lonely spot for the rendezvous with Kingorô, in order that nothing might hinder the accomplishment of his purpose. Of course Kingorô is not the man to yield up his prize to Yoyemon quietly, and accordingly a desperate combat takes place between the two; Kingorô is defeated and disappears from the scene with Yoyemon in fierce pursuit.

Kasanê, who had heard and seen all that passed from her hiding place, now appears. She is, of course, ignorant that Yoyemon's story of his wishing to divorce her and take another wife, was an invention to deceive the robber and procure the release of his Prince's betrothed. Kasanê is therefore inflamed with jealous anger against Utakata Hime and attempts to assassinate her. At this juncture the shade of Takao again appears and is seen to urge Kasanê to carry out her fell design, as the spirit of Takao is also incensed against the poor lady because she is the betrothed of the Lord of Sendai, whose fatal love had caused the cruel murder at the beginning of the drama. Yoyemon, however, returns in time to save the lady's life, but in disarming Kasanê he accidentally inflicts a fatal wound upon her with the knife which he is forcing from her grasp. As there is no hope of Kasanê's recovery, and as she persisted with her remaining strength in attempting to prevent the escape of Yoyemon and the lady to a place of refuge from the soldiers who are still in pursuit of the wrestler for the murder on the Sumida, Yoyemon is reluctantly compelled to give her the *coup-de-grace*. Two strangers appear just as Yoyemon despatches Kasanê, and all three engage in combat. The curtain falls while they are thus employed. The spectator is thus shown how one bad action, although arising from such a praiseworthy feeling as devotion to a feudal superior, inevitably brings in its train a series of further crimes and disasters.

The second piece is, as usual, much less interesting than the first. Moreover, as we have already exceeded our limits we must here conclude "A day at the Hisamatsuza theatre."

M.

## CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions or for the deductions they may choose to draw therefrom.]

### TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

SIR,—Were it even only for 'auld lang syne,' I would gladly make you any concession in my power. But I regret that it is wholly impossible for me to accept the contradiction given in your issue of the 29th May, to the statement made in my letter to *The Globe* regarding the division of the Shimouoseki Indemnity among the four Powers, namely:—England, France, Holland and the United States, to whom it was paid. The record is perfectly clear, and in order that all doubt on the subject may be dispelled, I enclose you an extract from the despatch of the Earl of Clarendon to Earl Cowley, dated 1st January, 1866—the former being then Minister for Foreign Affairs, and the latter English Ambassador in Paris. To this extract I beg the careful attention of your readers.

But even if we had no such proof that the proposal for the equal division of this indemnity originated with the American Minister, can any one suppose for an instant that it would have come from the English side? Is it probable, or consistent with the ordinary course of human affairs, that a division which so completely ignored the proportions of the efforts made, the assistance given, and the expenses incurred by the four Powers respectively, should have been proposed by the very Power to whom it would be the most disadvantageous arrangement possible? There can be but one answer to such a question.

France suggested what she might have been expected to suggest, an equitable, logical and reasonable principle of partition. But neither she nor Holland could affect to be seriously disappointed by a suggestion which awarded them far more than they were willing to accept, more than they were in justice and reason entitled to, and assuredly more than they would even have thought of claiming. When, however, there was a friendly hand ready to pull more chestnuts out of the fire for them than they hoped for, was it in human nature for them to decline the

offer? Man is a frail creature; none of us are as good as our principles; and nations, even more than individuals, are sometimes not unwilling to accept benefits from arrangements which a proper pride or a sense of justice would prevent their making or even proposing.

What is quite clear is this: That the proposal for equal division of the money came originally from the American Minister: that the French and Dutch Ministers did not, as they could not have been expected to do, actively oppose it; that the English Minister—whatever he may have thought of it—did not greatly care to dispute it (an attitude which is perfectly intelligible); and that the four Ministers agreed to recommend it to their respective Governments as on the whole the best practical solution of the question. A man must have but a small acquaintance with life who has not often submitted to claims which he would never have made himself, which never ought to have been made at all, but which he does not greatly care to dispute.

I applied the word "smartness" to the arrangement, brought about by the American Minister, and though you impugn its historical justice and propriety, I cannot withdraw it. There is no escape from the fact that the proposal ultimately adopted originated where I said it did originate; and if I required collateral and presumptive proof of the justice of the epithet in question, I should find it in the corresponding subtlety which made it appear to come from the English Minister. But Lord Clarendon's expressions forbid this—"The United States Minister, on the other hand, is understood to contend":—"Her Majesty's Government are not indisposed to concur," &c.:—"England alone would be required to make a sacrifice, &c."

Pray do not imagine, Sir, that I am actuated by any feeling that Great Britain ought to have contended for a larger share of the indemnity. The pages of your journal afford abundant evidence that I pleaded very earnestly for the direct or indirect return of the whole of the money to the Japanese; nor, as I believe, should I have pleaded in vain but for the ill-humour in which the Government, exasperated at not getting jurisdiction over foreigners conceded to them, flung the last instalment of the money down in such a manner that they became accessories to their own punishment. In spite, even of this, I still think that some ingenious method might and ought to have been found to save the four Treaty Powers from the humiliation of having to accept this money. The people of the United States may be congratulated that the adroitness of their Minister—I am now in no humour to use harsh words, however just—has given them an honourable excuse for returning their share of it to Japan. From the very first, this share was regarded by the Government at Washington as tainted with injustice. Mr. Seward, at that time Secretary of State, opened for it a special account which to this day stands by itself, and the money was never paid into the public treasury. In strange contrast to the fate of most ill-gotten gains in the hands of individuals, it increased at a wholly exceptional rate of increment, and the \$750,000 of which it once consisted, has now become over \$2,000,000 as if to protest even more and more loudly against the injustice of its origin. In writing, as I have so frequently done on this subject, I have never for one moment, or by direct or indirect reference, identified the people of the United States with this transaction; and, so far as I have seen or heard of the expression of public opinion in America on the point, it has invariably repudiated it, so far as it decently could, and urged the return of the money to the Japanese Government.

My entire conviction is that the Government of the United States will sooner or later return this money to the Japanese. The offer has already been made once or twice, but the conditions with which it was coupled were always unacceptable to the Mikado's Government, and which has acted with perfect propriety and self-respect in declining it on this account.

When the grave-digger in Hamlet casts up a skull, Hamlet says to Horatio,—“This might be the pate of a politician which this ass now o'er-reaches; one that would circumvent God, might it not?” But time is Heaven's instrument, and, by

\* By the way, you printed this word *ingenious* in my first letter, thus making pure nonsense of the passage in which it occurs. Your fair excuse is that the *London and China Express* made the same mistake.

irreversible law, this kind of Cagliostro diplomacy defeats itself.

In the corrupted currents of this world  
Offence's gilded hand may shore-by justice;  
And oft 'tis seen the wicked prize itself  
Buys out the law: but 'tis not so above;  
There is no shuffling,—there the action lies  
In his true nature; and we ourselves compelled,  
Even to the teeth and forehead of our faults,  
To give in evidence.

I am, Sir,

Your obedient Servant,

W. G. HOWELL.

London, 3rd August, 1880.

[Extract.]

Earl of Clarendon to Earl Cowley.

January 1st, 1866.

"Proceeding to the consideration of the manner in which the balance of the Indemnity, after providing for the special compensations, should be divided, M. Drouyn de Lhuys, in his despatch to which I referred, suggests that the division should be made according to the proportion the forces of each Power in Japan bore to the aggregate force of the four.

The United States Minister, on the other hand, is understood to contend that as the general co-operation of all the four Powers must necessarily have had great and equal weight if not in the actual operations at all events in the measures which preceded them, and afterwards in turning the result to good account, it would be fair to look upon the several Powers as contributing in an equal degree to the success of the common cause, and therefore as entitled to share equally in the indemnity which the Japanese Government agreed to pay.

Her Majesty's Government are not indisposed to concur in this view of the question. It cannot be doubted that the joint action of all the Powers collectively afforded, and still affords, the surest means of producing a most salutary effect on the Japanese Government, who would only be too glad to detect and would certainly take advantage of the slightest indication of the existence of a separate interest among them. The American principle of partition will secure to France a larger share of the indemnity than she would obtain under the principle of distribution suggested by M. Drouyn de Lhuys, while Holland and the United States would be benefited by it in a still greater degree. England alone would be required to make a sacrifice; but Her Majesty's Government will consent to do so, if only to mark their conviction, &c., &c."

#### REUTER'S TELEGRAMS.

LONDON, 14th September, 1880.

The war vessels forming the joint Naval Demonstration against Turkey, have arrived at Ragusa. Hostilities have commenced in South Africa with the Basutos, who resist disarmament. The Leger has been won by Robert the Devil; Cipolata second, Abbott third.

LONDON, 19th September, 1880.

Five thousand Montenegrin troops are marching on Dulcigno.

### The Japan Weekly Mail.

#### NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous communications. Whatever is intended for insertion in the JAPAN WEEKLY MAIL must be authenticated by the name and address of the writer, not for publication but as a guarantee of good faith.

It is particularly requested that all letters on business, relating to Advertisements, Job-printing, or Accounts, be addressed to the MANAGER.

And that literary contributions of every description be addressed to the EDITOR.

YOKOHAMA: SATURDAY, SEPTEMBER 25TH, 1880.

JAPANESE ERA 2540, MEIJI 13TH YEAR; 9TH MONTH, 25TH DAY, DO-YO-RI.

#### NOTES OF THE WEEK.

The French mail steamer arrived from Hongkong on Monday last. The P. & O. steamer *Oceanic* came into port from San Francisco on the day following, with American advices to the 30th ultimo. The English mail left to-day by the P. & O. steamer *Malacca*. The *City of Tokio* left San Francisco on the 20th, and the *Sunda*, Hongkong on the 22nd instant, both bound for Yokohama.

The very latest fashionable idiosyncrasy hails from London, and is known as the "baby stare." It is affected by the misses of the species, and consists in opening the eyes as widely as possible without raising the brows, and slightly turning the corners of the mouth upward. The correct position of the lips is obtained by repeating over for eight or ten thousand times the word "mouse" before a pier-glass. Swallowing a pin will also give the correct expression.

The *Hochi Shinbun* reports that Mr. Nomura, the present Governor of Kanagawa is to be promoted to the Senate. This elevation is doubtless well merited, and we trust that the great energy and consideration for Foreign interests show by him at this port will not be thrown away in the higher position to which he will be removed. Doubtless we shall hear of other local promotions to follow. We only hope our new Governor will not have his attention diverted from the condition of our roads, the frequent stoppages of the canal bridges, and the disgraceful, immoral and repellent condition, of the villages on Camp Hill and on the road to the Race Course.

The ten Olina subscription griffins arrived by the *Tokio Maru* on Thursday morning and, with the exception of a large grey, seem all in very good order. We shall be surprised if any one of them turns out a flyer, but it is impossible to say more as they have not yet appeared on the race course. They were drawn for by lot on Thursday afternoon, the most likely one (a strawberry grey) fell to the "Oyama" stable, the second choice, an iron grey, was drawn by a tyro in our racing circles and we wish him success. A fine, powerful, and likely-looking grey is, we regret to hear, condemned to the road without a trial; a weight carrying bay will make a poor companion for the *Chief*, he will doubtless prove *Lingerer* in more senses than one. A contributor informs us that the training is slightly more interesting as the quicker work comes on, *Admiral Rois* and *Warwick* are going better than ever, and should share the half-bred races pretty much as they like in the absence of *Bon Roma*. *Oyama* and *Jim Hills* are in high fettle, but the black griffin of the same stable is decidedly soft. *Gled* is in grand condition, as is also *Skeddadle*. *Chief Monyoluna* is as well as ever and will make it hot for some of them; *Daisy Chain* is going very strong indeed, and his stable companion *Eastlander* will probably repeat like Tientsin performances. *Black Velvet* is again upon the course, and was looking very well a week ago. *Katerfelto* enjoys his quiet work. There are three Japanese griffins in the K. stable, for which rumour says long prices have been paid, and they must be correspondingly good. The *Chion* is going short and the dan Japanese griffin has not yet recovered from the effects of the pack. *Annandale* retains his old pace and will make his mark for his new owner. The light bay half-bred has not been on the course for some time, and we trust no accident has happened to so likely a competitor; the black mare of this stable has been thrown out of training. Two magnificent bays make their appearance daily under the guidance of their owner, but we have not seen either of them extended yet. Much interest is taken in them, and *Oyama* will have to look to his laurels. The Tokio ponies have not yet been seen on this course. We can only hear of five griffins of great speed, a grey and a bay half-bred, and three native ponies, two large and one small blacks. *Nous verrons!* We cannot help noticing the singular absence of new half-bred ponies. We shall be glad to see the inner course thrown open on galloping days, and hope the committee will take the matter into consideration.

We take the following from the *Nichi Nichi Shinbun*:—A number of gentlemen in the province of Izu have formed a company to start a cattle-breeding farm under the management of Mr. Morita Tomozo, who lived in America for several years where he studied this branch of industry practically. It is proposed to establish a farm on the Nirayama plains first, as an experiment, and to extend it gradually, if successful. The company have applied to the Agricultural Department for a loan of two hundred sheep and twenty-nine kinds of agricultural implements: in consequence of which Mr. Hirano Kazuchika, a sakan of the 7th class of the Department, has been ordered to go and report upon the capabilities of the place chosen.

We learn from a native paper that five hundred cocoons arrived at Mr. Hoshino Sobei's office at Minami-Nakanori, Yokohama, on the 10th instant from Iwaki, and Fukushima. The price of the cards in the producing districts, ranges from 3.60 or 3.70 yen, to 4.00 yen each. There is not a single card this year that is worth less than three yen.

We notice the arrival by the last P. and O. steamer, of Mr. Joseph Arthur, who is well-known in India from his connection with Dave Carson's troupe in the rôle of delineator in crayons of public and local celebrities, each sketch being completed in less than a minute. Mr. Arthur intends giving a variety entertainment at the Gaiety Theatre on Thursday next, the 30th instant, when he will be assisted by Professor Hennicke and others.

Admiral Patterson, who has commanded the American squadron in these waters for the last few years, left on Sunday last by the s.s. *City of Peking*. As the vessel past the U.S. men-of-war now in harbour the customary salutes were fired, and the band of the *Richmond* played "Home Sweet Home," and afterwards "Auld Lang Syne."

The violent gale (writes the *Hiogo News*) which passed over this district at an early hour on Thursday morning (17th) was remarkable in its brief duration. On the previous evening the wind was gusty, and at midnight a sharp shower of rain fell, when the wind moderated for a while. Between two and three o'clock the gale was violent, and accompanied by vivid flashes of lightning, but very little rain. The gale came from the south-west, and we will probably hear in a few days, from shipping reports, of its effect on the south and west coasts. In the Concession and Native Town, very little damage is reported; a tree was blown down in the "Public Park," and in some of the houses on the hill the inmates felt the house getting a good shaking. Besides the stranding of the American ship *Matchless*, beyond the breakwater of the Eastern Camber, another shipping casualty occurred, a Japanese barque having gone ashore in Hiogo Bay. . . . . The *Matchless*, as we reported yesterday, is not damaged at all, as she lies on a fine, sandy bottom, with a heavy list to starboard. An attempt was made yesterday afternoon at four o'clock to tow her off by the American gunboat *Palos*, a powerful little boat. The attempt was unsuccessful, but it is expected that in two or three days, when all the cargo of the *Matchless* is discharged, and when there will be higher tides than yesterday's, that she will be easily towed off, and without damage. She lies broadside on, with about six feet of water between her and the shore at low tide. She does not appear to have suffered much damage, and there will be no great difficulty in towing her off, as the wind has dropped and the sea is now quite smooth.

The *Queen* has the following:—"The kind of furniture loved by Mr. Burges may be best understood by the exact description of one piece—say the washstand. Up to now a washstand has seemed an impertinent sort of affair, to be kept out of sight, but here we have a gem fit to splash at all day in poetic enjoyment. It is of gold, with fragments of bright stones and shells inlaid; those called 'Venus's Ears' have been largely used. Every blank space is carved minutely in flowers, beautifully tinted, and we discern a lizard or two and some butterflies among them. These crystals inclose small shelves, where a scent bottle, some hundreds of years old, and a tooth powder receptacle, some thousands, nestle and shine. Marble plates receive the soap. A fine bronze, which most of us would place on some table for ornament, here makes itself useful—a bull, from whose throat ajar the water pours into a Brescia basin, inlaid with silver fishes. How do you get the water in? See you that other bronze, a tortoise, which seems to creep beyond the bull's fell reach? It is a plug. Twist him round and the bull fills the basin. Such is the use which Aladdin makes of bronzes, and I beg to add that the lapis and amber and crystal and marble are not papier-mâché, and glazed chalk: they are the real thing. On one washstand we read the quaint inscription from Chaucer: 'This is the narrow perillous on which the proud Narcissus saw his faire face bright.' In unexpected places little taps and handles shine

forth, made of coral or silver, with uncut stones enfixed therein."

A correspondent of the New York *Herald* says:—"In the proposed general extermination of old maids (who as a class I have found to be the purest and most innocent people in the community) could there not also be an extermination of the married women flirts? These latter pests, whom one is sure to find at each of our summer resorts, no matter how quiet the place may be, lay themselves out to entrap any stray young man whom they may see, and on their miserable vanity or love of vicious excitement, sacrifice their reputations and those of their husbands and children, and make themselves highly offensive to all right thinking and properly behaved persons. If a place could be found to which this class of married women might be effectually banished, what a blessing as well as a salvation it would be to society. I am sure that there are many afflicted husbands who would gladly contribute toward the expense of exterminating the married women flirts." Similar expressions of feeling find vent from time to time in English and Indian papers. What a source of congratulation it should be to foreign residents in Japan, that the plague has not, as yet, reached these shores!

The authorities should take steps to put down with a firm hand the ruffianism of some of the boatmen plying from the hatobas. On Wednesday afternoon a Chinaman was landed in a sampan at the French hatoba from the *Tanais*, and paid the sendo eleven sen. The latter wanted more and created quite a disturbance, but seeing a policeman coming along, he struck the Chinaman on the head with a piece of wood, jumped into his sampan and sculled away. The "bloated official" and the crowd of sendos and coolies, had a merry time joking over this very creditable occurrence.

At four o'clock on Wednesday afternoon, an accident occurred which nearly effectually prevented two bettoes, at any rate, from galloping their masters' horses. One horse was being ridden from the bund and the other down to it; they came into violent collision, one horse being thrown. The riders were uninjured which is not, perhaps, a source of unalloyed satisfaction after the repeated warnings given to abstain from this discreditable practice.

The Base-ball match of Thursday last was not concluded, as at eight minutes past six the game was "called" on account of the increasing darkness. The shore team was then at the bat, and the latter half of the ninth innings being played. The score at the stoppage of the game was 17 for the Yokohama Club against 19 for the Navy. The game was not as interesting as some of the former ones have been; the large number of runs obtained on each side is a sufficient comment on the play.

A race between the catamarans of the U. S. ships *Sicutara* and *Richmond* came off on Thursday afternoon. The course was from the bows of the *Richmond* past the French flag-ship, round a buoy, and then back—passing alongside the *Sicutara*—to the starting point. Owing to various reasons the race was not started before eight minutes past six. Fortune on this occasion favoured the *Richmond*, whose three representatives pulled away from their antagonists, thus partially revenging the defeat of their barge, whose very handsome flag now occupies a prominent position in the wardroom of the *Sicutara*.

The New York *Nation* of the 19th of last August says that "the two principal 'campaign stories' of the week are that Mr. English has, during the past three or four years, foreclosed a considerable number of mortgages in Indiana to recover payment of small loans. This discovery was made by the Cincinnati *Commercial*, and many of our esteemed Republican contemporaries seem to think it a very valuable one. Some of them have given up nearly a whole page to the list of foreclosures. Mr. English seems, like many other men, to be in the habit of investing considerable sums on mortgage, which is usually considered a business transaction, the object of the mortgage being to enable the creditor to get his money back in case the interest is not paid. But the esteemed Republican contemporaries seem to think that the mortgage is something which is drawn

up either for fun or to save the debtor's dignity, and which no creditor fit to be Vice-President would think of taking seriously. So when Mr. English treats his as real security and enforces it, they denounce him as a humbug and hypocrite, and as 'no poor man's friend.' This is a sorry business for a paper like the Cincinnati *Commercial* to take up, and would be much better suited to Denis Kearney's organ. When the editor takes a mortgage we wonder what he does with it? The other 'story' is that General Arthur was really born in Ireland, and is therefore disqualified. He admits that his father was an Irishman, but says his mother was a New-Englander who never left her native country. But Mr. Hinman knows better, and says that he can prove that Mr. Arthur, senior, came to this country thirty-five years ago, when the son was about fourteen years old, which looks badly for the son, as, if he first crossed the ocean at the age of fourteen, he must have known he was not born in the United States, and must now be 'lying,' as Horace Greeley used to say, 'knowingly, wilfully, and with naked intent to deceive.' Nothing will satisfy Mr. Hinman, however, short of the calling of another Republican convention and the nomination of a native in place of Mr. Arthur. There seems to be a decline of interest in Hancock and Garfield on the part of the story-tellers, and it has even become fashionable to admit on the stump that they are both men of good character. In fact, the wretched way in which Hancock 'pans out' as a rascal, is a sore subject with many of our Republican contemporaries when they look at the piles of useless material about Tilden's atrocities which they had collected, in their expectation that the old villain would assuredly be nominated. Our advice to them would be to publish it all the same. It will show what kind of party the Democratic party must be to have such a person even as an adviser. We must not omit to mention, however, that it is found almost impossible to sell Hancock's campaign life to the Democratic farmers. These simple-minded but sagacious men say they 'have heard enough of Hancock,' and the Democratic book agents are greatly disheartened. It has also come out that a poor old soldier went to Garfield to ask for relief, and he brutally told him that 'he did nothing for soldiers,' and asked him why he did not go to the alms-house. Republican candidates almost always treat soldiers in this way. Schuyler Colfax once refused to see an old soldier because he could not send up a visiting card on a silver salver offered to him for that purpose by Colfax's pampered footman. The poor veteran thus refused by Garfield then wrote a letter to Hancock, and by return of mail came a fifty-dollar check and a kind note. There are rumors afloat also that Garfield has an unpaid tailor's bill at Troy, New York, and stole much furniture and bedding from a widow at the South."

We had a very pleasant evening in the Bluff Gardens on Wednesday; the sultry heat and gathering clouds which at sundown had given promise of bad weather all cleared away, and at nine o'clock the moon shone out upon a numerous audience waiting to hear the first dulcet strains of Auber's overture to "Les Diamants de la Couronne." With praiseworthy punctuality Bandmaster Meyrelles led off the concert with an admirable performance of this genial overture; the *Richmond* men supporting their well-earned fame in fine style. Indeed we think that this was the only piece in their programme worthy of their powers, the remaining four being simply conventional band-pieces of the waltz and polka order, played in the band's well-known good manner. Our Japanese friends were much more ambitious and had cut out for themselves some tough work, especially in the two numbers by Meyerbeer. Of these the "Huguenot" selection was undoubtedly the better played; the broad diatonic Choral being much better suited to the unusually slow time in which Mr Eckert takes all his numbers. Suppé's overture ran the risk of entire ruin from this cause; and the "Réveil du Lion" in the last part, was simply massacred from the fact of its being played at a dirge like pace—suggesting the idea that the name should have been altered to "Mort du Lion." Why is this? It cannot be that our native friends are unable to play in quick time, as witness the band's excellent performance (under the leadership of one of their own number) in the "Indigo Quadrille" of Strauss, and their effective coöperation

with the *Richmond* band in the later numbers of the evening. Perhaps it is that the conductor himself is unable to make his huge two-armed beats in quicker time? If so we would respectfully appeal to him in the interest of art, not to gesticulate quite so forcibly; it spoils the æsthetic effect of a good performance, to see two wildly-waving arms fly up or down between audience and performers, at every pulse of each measure. We are sure that the distinguished musician will pardon us for this plain speaking; could he but see himself "in action," and compare what he sees with the quiet precision of bâton in the hands of others, he would acknowledge the justice of our remarks. The most effective numbers were certainly the first overture, the "Indigo Quadrille"; the "Huguenot" selection; and the Galop, March, and *finale* by the combined bands; these last were played magnificently and brought an agreeable *soirée* to a glorious conclusion. We cannot refrain from complimenting most highly the Japanese gentleman (we have not the pleasure of his name and wish we had) who conducted three of the numbers. With admirable style, graceful action, and military precision, he kept his players well in hand, scoring perhaps the most legitimate success of the whole performance. We hope that ere the *Richmond* leaves us, we may again have the pleasure of hearing the consolidated bands in another afternoon or evening promenade. We must not omit to mention that the illuminations were very good. The strings and festoons of lanterns as arranged by Mr. Foote were really excellent, and far surpassed in effectiveness anything we have seen of the kind for a long time.

The *Rising Sun* and *Nagasaki Express* says that "the gale which suddenly sprung up in the harbour on Wednesday last, the 15th instant, although of comparatively short duration was sufficient to bring to remembrance, and to suggest a possibility of a repetition of the typhoon of '74. As the barometer had fallen during the day, a storm was not altogether unexpected, but the unusual rapidity which eventually characterised its coming took most people by surprise. About 4.30 p.m., a shower of rain set in, and shortly afterwards a strong breeze from the N.N.E. commenced to blow, which in a few minutes increased to a gale. The wind continued to increase until 7 p.m., when it reached its highest, and from that time an improvement was visible and fears of a dangerous typhoon were at an end. No damage was sustained by the shipping, as most of them held well to their anchorages, except the Japanese man-of-war, which dragged foul of the Mitsui Bishi Co.'s barge. The *Africa's* steam-launch was sent ashore with a boat in tow for the purpose of taking off some officers who were waiting at Boyd's Jetty, being on the lee shore, heavy seas rolled in accompanied by terrific squalls, which rendered her unmanageable by the occupants, and caused her to get into difficulties from which she was not extricated until the wind subsided. Messrs. Adams & Co.'s launch broke from her moorings, but, fortunately, she had steam up, which enabled her to run to Tomachi bay, where she lay until the following morning. Mr. Sutton had started for Takasima in his tow-luot just before the storm broke out, but considering it advisable to return, he did so, and sheltered in the Slip bay. Several dambies and sampans were destroyed, and others more or less damaged. Mr. Powers' sailing boat also received more chafing than was conducive of good. With the exception of the above, we have not heard of any serious damage or injury being sustained, or of any lives having been lost.

The *North China Herald* says that "lovers of the miraculous among the natives have just been entertained by an account of a 'find' at Yangchow. A thunderstorm lately passed over that district, and the lightning struck a tomb, from which smoke was immediately seen to issue. A man who effected entrance found by the side of a large coffin a gemmeous bowl which had been used for a lamp for the person of rank who was therein interred. Next the adventurous explorer broke open the coffin, and finding that it enclosed a smaller coffin, opened that also. The corpse was that of an aged man, for his beard reached to his knees. He had at his side a valuable sword, and a pearl under his chin. Of these treasures the finder took possession. Subsequently he returned to renew his search, but he then found that the corpse had

crumbled to ashes. This alarmed him, and he quitted the neighbourhood, not from fear of ghosts, but from an apprehension that he might be wanted at the yamen to give an account of his archaeological researches. An inscription on the coffin showed it to be a thousand years old."

The *Shanghai Courier* of the 11th of September instant says: "A suit was filed in H. B. M.'s Court here this morning against Mr. Giles, the British Consul at Amoy, in connection with Mr. Giles's action in stopping the steamer *Cheang-hock-kian* and fining her owners £5,000. The claim is for the return of the £5,000, and \$10,000 as damages." Consuls in the Far East too frequently imagine that they are irresponsible, and particularly magnificent specimens of human nature. The personal loss of a few thousand dollars occasionally will doubtless go far to correct existing false impressions, and put an end to high-handed proceedings.

We notice by the New York *Maritime Register*, that no sailing vessel left that port for either Japan, Hongkong, or Shanghai, between the 10th and the 26th of last August. When the mail left there was one vessel on the berth for Hongkong, one for Shanghai, but none for Japan. On the subject of the kerosene trade a New York commercial journal says:—"That gigantic octopus, the Standard Oil Company, is reported to have obtained control now of the Empire Oil Company. If that be so, merchants in the trade say it practically controls the entire oil business of the country. The powerful concentration of capital, in this as in some other lines of business, bids fair, for a season at least, to push the principle of competition to the wall." The meaning to be derived from this is that, with short shipments, monopoly, and the season of greatest consumption approaching, the price of kerosene will very probably rise considerably.

An interesting collection has been made by the Chamber of Commerce of Lyons, the great centre of the silk industry of Europe. We notice in the *Moniteur des Fils et Tissus* that "the Chamber has acquired a quantity of Japanese silk goods, numbering 400 pieces, which present the different styles in vogue from the end of the XVI. century to 1880. The same decorative designs have been in use for centuries past among the Japanese. Many of them recall the symbolical paintings on the Egyptian sarcophagi. Figured stuffs, armures, *broches*, sacerdotal, civil and theatrical costumes are represented."

The *Hochi Shinbun* says that in consequence of the unusual increase in the value of specie and the inconvenience caused thereby to the import trade, the native merchants of Tokio and Yokohama held a conference on the 20th instant, when it was resolved to sign the following agreement:—"The extraordinary rise in the price of silver has caused great inconvenience to the merchants connected with the import trade, and they have resolved as follows:—

Article I.—All purchases of goods from foreign firms shall be suspended for one week, to commence from the 20th instant.

Article II.—If, however, such goods are of such importance that the non-purchase would prove a public inconvenience, the matter shall be referred to a committee. If it is found that they are actually indispensable, the goods shall be bought by the committee, and sold to the buyer at a price agreed upon by all the dealers.

Article III.—Information must be sent to the office of the collector of commissions in a sealed envelope before the 21st instant, of all articles already contracted for before the 19th instant; the quality and quantity of the goods, and name of the foreign firm being required, and also the date when the goods are expected to arrive. This refers to all goods expected here up to the 31st of October.

Article IV.—These sealed envelopes are to be opened in the presence of all the members of the committee.

Article V.—In order to enforce this agreement the committee shall be chosen from all the merchants dealing in imports.

Article VI.—If anyone shall find himself unable to come to an agreement with a foreign merchant on the subject of paying the bargain money in paper, or respecting any other sti-

pulation, he shall at once report the matter to the committee who shall afford him their assistance.

Article VII.—If anyone shall violate this agreement and purchase goods secretly, he shall be fined thirty per cent of the value of the goods purchased.

The above agreement having been once entered upon, is to be strictly observed.

Our San Francisco correspondent writes:—"The steamer *Ho Chung*, Captain R. Petersen commanding, arrived in port yesterday afternoon after a passage of twelve days from Honolulu. Heralded as it was over two weeks ago, the arrival of the steamer—the first time that the Chinese Dragon flag has ever floated in the waters of the bay—created no little stir in commercial circles both here and in the East, where the question of the admission of Chinese bottoms was agitated by the press and the Cabinet. Here the matter is considered more in the light of an experiment and it is even said that the arrival of the *Ho Chung* is the first and last time that any steamer flying the Imperial flag will drop anchor, and that there is no probability that a line of steamers will be established, the attendant costs being too enormous. In referring to China's commercial departure the *New York Sun* of the 19th instant contends that "the advent of the Chinese in the field of trans-oceanic transport will result in a signal lowering of freights." Evidently the *Sun* did not take into consideration the power of the monopoly of the existing steamship companies. It had been understood that a letter had been addressed to the State Department at Washington informing the Chinese Minister that the President had been informed that the Chinese Government did not impose any discriminating duties on vessels, owned by citizens of the United States, or upon produce manufactured or merchandise imported in such vessels from this country, and if that were so the discriminating duties of tonnage and import within the United States would be discontinued, as far as they affected Chinese vessels introducing manufactures or importing merchandise into the United States from China or other foreign ports. But as months would elapse before such official assurances as are requisite could be given, the Government had no alternative but to impose the duties. On the 20th of last month the Cabinet met and considered at length the question of relieving this tax, and those present generally favoured removing these duties now levied against Chinese bottoms. No definite action was however taken, the Attorney General, who represents the State and Judicial Departments, desiring time to investigate the question. The day after, the following despatch from Washington was received:—"The draft of the President's proclamation, admitting the expected Chinese steamer on the terms of the most favored nations, is being prepared and will be submitted to the Cabinet on Tuesday. It has been shown by diplomatic correspondence and reports of the Treasury Department, that the authorities of the Imperial Maritime Customs have uniformly treated American vessels with all the consideration of the most favored nations, and that therefore the vessels of that Government are admitted to the same recognition. Perhaps this was only a ruse, it being understood that the President was anxious to conciliate the Imperial Government in regard to the admission of the *Ho Chung* in order to accelerate the operations of the commission to accomplish the desired treaty of modification, the administration believing that it met with but little encouragement. It was reported that the administration is not averse to straining a point in construing the Act of Congress governing the admission of Chinese bottoms. The technical point now is, does the Chinese Government discriminate against vessels of the United States in its tonnage tax or tariff duties? The question has been propounded to the Chinese Minister, but on the 24th the President decided not to issue the proclamation until the investigation with regard to discrimination against American vessels was concluded. Two days after, he left Washington without issuing the proclamation, it appearing that the Chinese Minister was unable to answer certain questions in regard to different duties without reference to the home authorities and this would consume some months. It remained then for the *Ho Chung* to pay the customary alien duties. As soon as the *Ho Chung* arrived in port she was besieged by a

very army of reporters from the various newspapers of the city. Tong Yong Sing, the Director of the Company, seemed unusually anxious to have the Press give out that, under no circumstances, would the line be induced to bring anything but freight to this port, and that no matter how much freight there was to be carried, only one steamer would be employed in the trade. With regard to passage rates, they would make the same charges as other companies on the same line, namely:—\$75 for the first class, and \$30 for the second. The steamer will leave for Honolulu and Canton again in about eight days. The *Ho Chung* arrived at Honolulu on the 13th instant, having made the passage from Canton in twenty-four days. She brought to the Islands 459 Chinese, of whom 38 were women. The merchants refuse to give her any freight and so she carries away only thirty tons of rice. The *Ho Chung* had to pay the regular tonnage tax of thirty cents per ton, and, under protest, paid the additional alien tax of one dollar per ton. The ten per cent additional duty on her cargo will also be paid under protest.

A telegram was received on last Tuesday stating that the American ship *Matchless*, which was driven ashore at Kobe during the recent gale there, has been successfully floated off. The *Matchless* was found to have suffered no damage from her involuntary acquaintance with terra firma.

Our correspondent writing from San Francisco under date of the 31st of August, says:—Dr. A. J. Younger, senior surgeon of the Occidental and Oriental line of steamers has been transferred from the *Gaelic* to the flagship *Oceanic*, owing to the resignation of Dr. Fisher. The departure of the steamers of this line has been changed from noon to two o'clock p.m. An unusually large number of missionaries departed by the *Oceanic* for China and Japan, destined for different cities in the countries named. The party came overland in a body to cross the ocean together and comprise; Rev. O. Z. Sheffield and wife, with four children; A. P. Peck, M. D., and wife, with two children. Rev. F. W. Chapin and wife; Rev. W. H. Shaw and wife; Miss Elsie M. Garretson of Philadelphia, and Miss E. Louisa Kellogg of St. Louis. The Women's Foreign Mission Society of the Presbyterian Church tendered them a reception on the day preceding their departure. The Brazilian man-of-war *Vital D'Oliveira*, which arrived in port about a week ago brought a tropical disease, known to medical men as *beri beri*. As fast as the members of the crew became affected, they were removed to the U. S. Marine Hospital, and up to date there have been eighteen cases, three of which only have resulted fatally. No fear is felt that the ailment, which is wholly unknown here, will spread beyond the crew of the ship, who have evidently in their systems the conditions for its development. Isolated cases of small-pox are yet being discovered in this city, here and there. The patients are all doing well, and there has been but one death from the disease.

The following effusion on the tactics of the Democratic party appears in a Republican paper:—

Sing a song of shotguns,  
Pockets full of knives,  
Four-and-twenty black men,  
Running for their lives;  
When the polls are open,  
Shut the nigger's mouth,  
Isn't that a bully way  
To make a solid South?  
Northern sympathizers  
Making speeches chaffy!  
Major-General Hancock  
Eating Rebel taffy;  
English in a quandary  
How to save his dollars!  
Along comes a Solid South  
And fits them all with collars.

According to the *Courier de Bretagne* the *Plongeur* (schooner), belonging to Messrs Guerin, of Brest, which vessel went to Lannion, with several divers, for the purpose of finding the place where was lost, in 1851, a vessel laden with ingots of silver and lead, has fallen in with the cargo in ten fathoms of water, quite close to the Triquet Rocks. The divers had already brought up several tons of these precious metals. Salvage was arranged at 75 per cent. on the value recovered.

We take the following statistics from a native journal:—The exports from Yokohama during the past month were as follows:—

Tea,	3,095,163.03 pounds.....valued at yen	885,423.86
Raw silk	147,899.75 " " " " "	828,770.68
Noshi "	14,700.00. " " " " "	15,500.00
Waste "	29,700.00 " " " " "	14,200.00

Total ..... yen 1,743,894.54

New Trade Dollars .....	yen	445,206.00
Old " " " " " " " " " "	"	2,854.00
Silver yen .....	"	155,672.00
Old ichibu silver-coin.....	pieces	580.00

Total ..... yen 720,233.42

The amount of specie imported was:—

Gold and silver coins .....	yen	4,329.30
Copper coins .....	"	1,000.01

Total ..... yen 5,329.31

The Custom House revenue was:—

Export duties .....	yen	76,282.41
Import " " " " " " " "	"	122,259.57
Miscellaneous duties .....	"	1,378.52

Total ..... yen 199,920.50

Another contest for a prize presented by a member took place on last Monday afternoon. The conditions were ten shots at 800 yards, one sighting shot being allowed. Messrs. A. H. Dare and Beretta tied for the prize, but on their shooting off the tie, the former made only a magpie (3) while the latter obtained a bulls-eye (5) and thus won the cup. Appended is the

#### TOTAL SCORE.

Dare } .....	39
Beretta } .....	37
Schiave .....	32
Guismani .....	29
Barnard .....	27
Mottu .....	26

Favre-Brandt .....	24

The winner used a Winchester rifle. Another prize has been presented for next Saturday.

The second annual gathering of the Société Suisse de Tir, will be held on Saturday, the 9th proximo or, in case of the weather proving unpropitious, on Sunday, the 10th proximo. Competitors on this occasion will be handicapped by a committee the members of which are Messrs. Beretta, Favre-Brandt, and Mottu.

#### ECCLIASTIC AND MISSIONARY NOTES.

THE SCRIPTURES IN JAPANESE:—A new edition of the Japanese New Testament—called the "Standard Edition"—is just being published by the three Bible Societies working in Japan, viz:—the American, the British, and the Scotch. This is the second edition of the Japanese New Testament, the first—from wooden blocks—having been completed in April last. This edition is printed from stereotype plates on paper manufactured here, after the foreign style. The entire work upon this valuable publication has been performed by native publishing houses. It is a duodecimo in size, of 757 pages, and is provided with two colored maps, making a very neat and portable volume.

IN A FEW DAYS, the American Bible Society will bring out another edition of the same translation, in Roman letters. The transliteration has been made by Dr. Hepburn, after his own system of Romanizing, which deservedly meets with such general acceptance. It is a 16 mo. of only about 660 pages. It is hoped that this edition will put the Japanese Testament within the reach of many from foreign lands who never can be expected to master the intricacies of Japanese kana.

THE BOOK OF PSALMS, in Chinese characters, with Japanese *kayariten* or *kunten*, prepared by the Rt. Rev. C. M. Williams, D.D.,

for the American Bible Society, will also soon be ready. Future editions of this book may be bound up with the *Kunten* New Testament prepared by the Rev. D. C. Greene, D.D., and published early this year.

ARRIVALS BY THE "OCEANIC":—A large number of Missionaries arrived on Wednesday from San Francisco, by the Occidental and Oriental Company's fine steamer *Oceanic*. For Japan.—The Rev. Mr. Woodward, of the American Episcopal Church, for Tokio; Miss Brittan, of the Protestant Methodist Church, for Yokohama; and Miss Kellogg of the A. B. C. F. M., for Kobe. For China.—Under the A. B. C. F. M., for North China, the Rev. Messrs. Sheffield, Chapin, and Shaw, A. P. Peck, M.D., and Miss Garrettsen; and in connection with the Methodist Episcopal Mission at Kiu-kiang, the Rev. Mr. Taft.

THE REGULAR WORK of the Sunday School at Union Church, will be resumed next Sunday afternoon at the usual hour of half-past three o'clock. The average attendance at this school is from sixty to seventy children—almost all of foreign parentage—and comprises the youngest capable of joining an infant class, up to elder boys and girls. There is a staff of about ten teachers. Any parents who may be desirous of this aid to imbuing the minds of their children with religious truth, will find that they are heartily welcomed there.

DR. PARSONS, an American Missionary, and his Armenian servant were murdered while on their road to distribute relief to the famished population, at a short distance from Iamikt. The *Daily Telegraph's* correspondent says that the murderers have been arrested. They are two clerks belonging to a nomad tribe. On being examined they fully confessed the crime.

CHURCH CONGRESS:—According to a preliminary programme, not yet completed, the Church Congress of 1880 is likely to be unusually interesting. Among the speakers will be the Archbishop of York and the Archdeacon of Warrington on "Existing Forms of Unbelief;" the Bishop of Liverpool on "Church and Dissent;" the Bishop of Durham and the Hon. C. L. Wood on "The Internal Unity of the Church;" the Bishop of Carlisle, who will address the working men's meeting; the Dean of York and Lord Brabazon on "The Influence of the Church over Young Men and Women;" the Dean of Manchester on "Marriage and Divorce;" the Rev. Canon Barry and the Rev. Berdmore Compton on "The Religious Condition of the Nation;" Earl Nelson on "Church and Dissent;" the Bishop of Winchester and the Bishop of the Valley of Mexico on "Reform in Foreign Churches;" the Bishop of Truro, Mr. Beresford-Hope, M.P., and Mr. Magniac, M.P., on "Cathedrals;" the Dean of Lichfield, Archdeacon Emery, and Mr. S. Leighton, M.P., on "The Internal Organization of the Church;" Mr. Albert Pell, M.P., on "The Church of the Poor;" Mr. Wilbraham Egerton and Lord John Manners, M.P., on "Church Finance;" Miss Ellice Hopkins on "Penitentiary Work of the Church;" "The Temperance Question," "Popular Recreations," "Home Missions," and "The Moral Dangers of Factory and Workshop Life" are among the subjects for discussion.—*John Bull*.

WE (*Celestial Empire*) regret to announce the death of the Rev. J. R. Race, which took place on the 30th of August ultimo, at Hankow. The Rev. gentleman was well known on the river, and was a member of the Wesleyan Mission.

MISS BRITTAN, who represents the Women's Foreign Missionary Society of the Methodist Protestant Church, U.S.A., arrived in Yokohama on the 21st instant, by the steamer *Oceanic* from San Francisco. Miss Brittan was formerly, and during a period of sixteen years, connected with what has been called the "Zenana" department of Missionary work in India; and consequently has acquired a large fund of practical experience which will doubtless prove highly serviceable to her in Japan. We believe that, for the present at least, it is Miss Brittan's intention to initiate, on behalf of her society, educational work in Yokohama.

A LARGE CONGREGATION, reports the *North China Herald*, attended the Cathedral on Sunday evening last, the 5th of September instant, to hear the Very Rev. Dean Butler preach his last sermon before leaving for England. The text was from II. Cor. xiii; 11. "Brethren farewell." He spoke of the place in which he had laboured, the people to whom he had been pastor, and the work in which he had been engaged, and named some of the reasons of his departure, expressing his sense of regret at leaving Shanghai, and his warm sentiments towards those to whom he had ministered for sixteen years.

THE *Foreign Missionary* tells anew the story of the burial of "Prairie Flower," the daughter of Standing Bear who died on her way to the Indian Territory, to show that Indians' hearts are touched by kindness the same as those of white people. Over the body of his child prepared in a Christian manner by noble women for the last sad rites, Standing Bear said to those around him at the grave, that this made him desirous of leaving off Indian ways and adopting those of white men. Since that time he has seemed greatly changed.

IN THE STATE OF NEW YORK the common school system has been extended to the fragmentary Indian tribes, and the Commissioners recommend that the same steps be taken in all States.

THE COMMITTEE of the Palestine Exploration Fund have in preparation a pamphlet on the gains to the knowledge and better understanding of the Bible resulting from the survey of Western Palestine.

MISS NORRIS'S REPORT of Woman's Work in the Mahratta Mission, in *Life and Light* says:—The whole number of persons who have visited the dispensary during the year, amounts to 16,420. There were 10,031 who received medicine and treatment in this dispensary, and 420 were treated at their homes and elsewhere, making a total of 10,451 patients. It is not by means of medicine alone that efforts are made to benefit the women physically. Instruction is given them in matters of social improvement, cleanliness, and the diet and care of children.

NATIVE CHRISTIANS on the islands of New Hebrides have just shipped 3,700 pounds of arrow-root to London, to pay for an edition of the Old Testament printed for them in their native tongue.

THE *Baptist Missionary Magazine* says of its Mission to the Telogoos:—"The reports from this Mission show that while a large number of converts have been baptized, the thousands received last year have, for the most part, continued steadfast in the faith. The activity of native Christians in Mission work is commendable; and the prospect in every department is most encouraging, if only our churches will be ready to send and sustain the Missionaries needed to train this vast army of recruits in the service of Christ."

THE PUBLICATION of the revised version of the New Testament will not, the *Athenaeum* says, take place until the spring of 1881, when the Greek texts which are being prepared for the Universities by Archdeacon Palmer and Prebendary Scrivener, will no doubt be completed. The editorial work, as regards the revised English version, has been entrusted by the Universities to the Rev. J. Trontbeck, the secretary of the New Testament Company.

SIXTY-FIVE YEARS AGO Christian work was begun in Turkey, with its population of 35,000,000. Now there are 225 Protestant Churches in that country, and 282 common schools.

#### PARIS LETTER.

PARIS, 31st July, 1880.

The Municipal Council, in presence of the vast extension which the science of adulterating food has taken, is about nominating a special corps of sanitary inspectors, to protect Parisian stomachs. It is concluded, that in the single matter of wine, over one-half of the total quantity consumed in the capital, is delivered to the retail trade falsified. Adulteration has its own chemists, just as has detection; the rôle of the former is simply to discover a substitute that resembles the original in appearance and taste, leaving to quasi-respectable, but wealthy firms, the task of disposing of the fraudulent products. It is thus that we have wine, innocent of the juice of the grape; cider, without apples; beer independent of hops and barley; jams, in which fruits are unknown; butter, made with suet; coffee, from carbonized bullock's blood, and preserved meats, in which not a particle of the animal they profess to be can be discovered. A large consumption of wine takes place made of a compound obtained from raisins; this is not a hanging offence, as bigamy once was, provided the vendor sells it as such. The law, however, is not indulgent to individuals who prepare current jelly from the pulp of seaweed; brew small beer from box leaves, and sell octopuses as cooked Labrador lobster. The penalties for adulterating food are not severe in this country; a hint might be taken from Germany, where falsification of a comestible entails a fine of 1,800 fr. and six days imprisonment; if the adulteration be of a toxic nature, the sentence is six years, and if the fraud entails death, the seller can be imprisoned for life.

The so-called "Congress of Working men," has cured France in general, and the working men in particular, of such congresses, where not a commonsense idea was expressed, not a practical conclusion formulated. All was paradox, violence and vituperation. The working men avoided the congress as a leprosy, and several trade guilds served it with a notice to quit. The congress had the effect of making socialism more incomprehensible than ever, and proved what Thiers asserted: "it has emigrated from France." The Congress was to promote unity and concord: but one has never seen—outside Bédlam—so much dissension and discord. It was not clearly established that the delegates were working men, still less French subjects; hence sagacious artisans remembered the old Picardian watchword:—*Garde à vous*. Some cloudy utopias were detailed, which resembled very much Voltaire's description of metaphysics—

one man speaking about a subject he does not understand, to another who does not comprehend. One view was favored, that of relying on incendiarism and muskets rather than legal agitation and a free ballot box. A weakness for rifles can lead to reprisals, and arson to transportation for life in New Caledonia—with amnesty after a nine years' residence there. In the Middle Ages, the scholastics published immense quarto volumes to expound the subject of their quarrels, or tweedledum and tweedle-dee differences: to-day, the socialists bring out newspapers by the score, in order to quarrel, but without explaining why. In fact the socialists have no solution for socialism: they speak incessantly, work like alchemists after the philosopher's stone, but take good care never to exhibit the most tiny morsel. When the augurs of Rome laughed over the entrails of a bird, the sacred rite of divination was at an end.

These observations apply to M. Rochefort, and the ultras who drive him, before demolishing his idolship—by-and-by. Strangers would do well to imitate the French, by viewing with indifference or good humor, the pranks of such eccentrics, who well know that the first attempt to put into practice their doctrines of spoliation and assassination, would result in their merciless stamping out by the Republic. Two of the leading ultras have been lodged in a lunatic asylum this week; *ad uno disce omnes*. The wild men can make no way in public opinion, and rational newspapers keep calling on Rochefort & Co. to define their programme. The latter has been stated: the abolition of permanent armies, the revision of the Senate, military service for three years, and the separation of Church from State. We hardly required ghosts from New Caledonia to propound problems agitated for years past, but the Rip Van Winkles may be excused for ignoring what occurred during their absence.

Time, and fresh elections, will remove or neutralize obstructive senators, whose mode of election is vicious. It is a monstrous inequality, for example, which allows an insignificant department to elect the same number of senators—two, as Paris. There is no constitutional means to revise the Upper Chamber unless it be itself a consenting party, and senators do not commit suicide. As for the connection between Church and State, this question is not yet fully ripe, and besides there is the concordat, binding alike on the Vatican and the French nation. However, if the clergy persist in systematically attacking the Republic which pays them, the grants to the Church might not be voted by the budget commission, thus involving the rupture of the concordat. The republicans may be entertaining angels unwares, but will not pay an enemy for firing upon them.

On the 29th of August the last division—those engaged in Public Schools—of the Jesuits will be dispersed. Some authentic papers have been discovered and published, exposing an organized *énée* for that day, by the partisans of the dispersed. "Try it"—as the Minister of War lately replied to Paul de Cassagnac, who threatened an uprising. Not only is the army thoroughly republican, but the generals in command also. Any disturbance of the peace, whether from clericals, royalists, or communists, would be at once crushed. Citizens may then sleep in peace—all the foes of the constitution, isolated or united, are impotent; they have only cries and threats, but if they proceed farther, and indulge in music—as Mazarin said of the Frondeurs—they must be prepared to pay for their dancing.

Beyond the natural sympathy for private sorrow, no marks of regret are extended to the pilgrimage of the Empress Eugénie, who will go down to impartial history as the instigator of the criminal war against Germany, to promote the selfish interests of her son, who fell a victim to his own imprudence and inexperience. But opinion not the less reproaches reducing the *Odyssey* of that noble lady to ridicule, as the *Figaro* does, by stating that she "remained nine days and nine nights at the memorial cross erected where her son fell, without tasting food; absorbed in prayer." One thinks of Dr. Tanner. It appears, also, the sun could not be more torrid, though the voyage was regulated for the cold season. As for the Prince, "he fought like a lion, after running after his horse and losing his sabre."

The Reformed or Protestant Church of France, has also its trials and tribulations, but they come from within. It represents perhaps a population of two millions, and is divided into the Calvinists or Orthodox, and Unitarians or Liberals. In 1872, the Synod under the pressure of old Guizot, carried, by rather a surprise vote; that no one could belong to the Orthodox church who did not believe in a Confession of Faith, whose articles recognised the truths of revealed religion, the Divinity of Jesus Christ, and the inspiration of the Old and New Testaments. The minority—forty-five against one hundred and six—declared they repudiated all creeds, as being test acts, and while believing in the Scriptures, &c., claimed the right, as Protestants, to exercise an untrammelled interpretation. A ministerial circular ratified the decision of the Synod, thus giving it the force of law, and depriving all Protestants who refused to sign the articles of the Confession, or avow an acceptance of them, of the right to vote for the election of pastor or elders, and all matters affecting presbyterial local govern-

ment. The minority appealed, stating that a ministerial decision could not over-rule an organic law, and after five years have won before the Privy Council. Thus the Orthodox and Liberals are now, as they were in 1872, in a state of open warfare. Separation is next to impossible, for the State will not endow two Protestantisms, and the right to local meetinghouses; manes, and the election of clergy, belongs to the party having the local majority.

Fugot, aged nineteen, had improper relations with his paternal aunt, aged thirty-one and good looking: he confessed his crime to his father, who sent him to a distant part of France. On his return, his guilty passion was unextinguished; the aunt—a laundress—refused to renew their intimacy; he waylaid her and plunged a sword into her breast. She courageously extracted the sword and was cured. On the trial, she begged to be considered as wholly responsible for what had occurred. The nephew was condemned to six months imprisonment, and he assured the jury he would do his best to die in prison.

The fashionable criminal is Menesclow, aged nineteen and the son of a clerk in the War office. He seems to be naturally depraved: he was sent to sea, as parents can do when their sons are incorrigible, as they can also incarcerate them, or their daughters, in a reformatory; he was dismissed after undergoing 117 punishments—for him pleasurable excitements. Returning to Paris, he declined to work, frequented dram shops, but never drinking; associating with thieves, but never thieving: his weakness was for unnatural crimes. In the house where he resided with his parents, dwelt a family having five children: one of these, Louise, he enticed last April to his chamber to receive a sprig of lilac; he violated and then killed her; placing the body between two mattresses, he slept on it during the night and next day, after his parents had left for their employment, he heated the stove red hot, cut up the body into forty pieces and commenced burning them. The odour and the hissing noise attracted the attention of the neighbours, and the mother suspecting something wrong, called in a police inspector. The door was burst open, the murderer found at full, foul work. At the station house, when searched, the little hands of his victim were found in his pocket. It was believed for a time he was mad; indeed sane people happily do not so act, but as he took in his cell to writing poetry, the alienists held he was responsible. Now Shakespeare says, the lunatic and the poet are of imagination all compact. He will likely be condemned to the guillotine, especially as he requested the judge to treat him as he did his victim, and so end the trial.

The thermometer registers 102° in the shade: this may account for the rather increasing crop of murders, but strange to say, few suicides or sun-strokes. The sun may be the source of life, but it is not less the cause of death.

When M. Gambetta held his first brief he appeared before the bench with beard and moustache: the judges reminded him that was not etiquette: he bowed, requested the suspension of his case for quarter of an hour, when he returned, closely shaven—save the orthodox mutton-chop whiskers. The beard has always been associated with the manners and customs of peoples: the gods are represented with beards as expressive as those of patriarchs. After the battle of Talbair, in 496, Clovis begged the conquered chief to come and touch his beard, as a token of peace: however, Alaric seized the ambassadors by the beards, and commanded them to depart. Clovis then swore by their beards: he would be revenged—hence the origin of that form of oath. From time to time the beard has been worn square, round, long, short, pointed and tressed. Popes welcomed and opposed the beard, and the Fathers—Saints Ambrose, Cyprian, Jerome, &c., wrote for and against it. Queen Eleanor was divorced from Louis VII. because after having shaved off his beard, he looked so hideous, that she declined to reside in the palace. The Renaissance restored the majesty of the beard, as it did other glories—thanks to the artists—but Louis XIV. did not cultivate it; his weakness was for bag-wigs to cover his wen. Under the First Republic the citizens shaved as clean as billiard balls, seeking in the folds of cravats, a substitute for the beard; under the Third Republic fashion concedes the liberty to be bearded like the Pard, or as close-shaven as a monk.

The decorated combatants of the revolution of July, 1830, have held their annual reunion—the day we celebrate. Among others the following youngsters were present.—“Dictionary Littré, aged seventy-six; Miguet, the historian, aged eighty; B. St. Hilaire, and Blauqui, who has never relinquished his love for a three days' free fight.”

The 5th, 6th, and 7th, volumes of Thiers' speeches have been published at last. They deal with the principal events which occurred from 1845 to 1854, and have a present actuality on polemical questions.

A rich young *parvenu*, whose father was the fashionable snip in Paris, belongs to a club. Recently, on the subject of admitting a stockjobbing broker, he expressed his opinions very strongly, saying—“We really must draw the line somewhere.” One of the members—a broker—replied in an ironical tone. “Certainly, *non cher*, let us draw it with a piece of blue chalk.”

A man coming out of a swimming bath was addressed thus—

“Sir, my watch has been stolen.” “You can search me if you like,” was the reply.

## JAPANESE NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as to make them readable and intelligible.]

### COURT, POLITICAL AND OFFICIAL.

The *Nichi Nichi Shinbun* says that for the last few days the Senate has sat from 9 a.m. to 3 p.m., and that the subject discussed was the proposed revision of the saké tax.

The *Mainichi Shinbun* states that “on the 14th instant an angry discussion took place in the Cabinet, on what subject we do not know. However, in the heat of the debate, one Privy Councillor made a most virulent attack upon the personal conduct of another. The latter on the following day feigned sickness, remained at his country seat, and excused himself from attending to his duties. A third Privy Councillor who is from the same province visited him on the 16th instant, at about 3 p.m., and attempted to reconcile him but without avail. He said that he intended to give up all worldly affairs and resign his office. These expressions combined with his object and downcast appearance so alarmed the third Privy Councillor, that he stopped at the house and conversed with his friend the whole night.”

The same paper states that Mr. Ando, ex-Vice Police Inspector, called upon Mr. Ishii, the present holder of that office at about 4 p.m. on the 16th instant, and had a long private conference, not returning home until late at night.

The *Nichi Nichi Shinbun* contains the following account of a conference:—“On the 17th instant His Majesty the Emperor attended the Cabinet. Eleven Prime Ministers and Privy Councillors dined with His Majesty in an upstairs apartment where refreshments contained in boxes were placed before each. Even the Imperial Chamberlains were not admitted and a private conference of over four hours duration took place, during which those outside heard some one cry out excitedly:—‘If this is supposed to be in the possession of the Government there can be no possible objection—’ nothing more could be distinguished, so what this exclamation referred to is unknown. When His Majesty the Emperor was about to return, His Excellency Sanjo called out loudly for the Imperial Chamberlains who must therefore have been posted some considerable distance from the chamber, which tends to prove that the conference was of the most secret nature.”

The *Mainichi Shinbun* states that His Imperial Highness the infant Prince Haru-no-Miya, has been indisposed for the last day or two.

His Excellency Privy Councillor Ito Hirobumi, paid an official visit to the Yokosuka dockyard on the 18th instant, and returned to the capital on the 20th instant. His Excellency Saigo visited the same place on the 20th instant.

The *Mainichi Shinbun* states that His Excellency Okuma, Privy Councillor, recently addressed a memorial to His Majesty the Emperor, on the subject of the financial administration and domestic debt.

The same paper states that “four or five days ago His Imperial Highness Prince Arisugawa, Sa-daijin, visited the Imperial Household Department, as he had a report to make direct to His Majesty the Emperor; being unable to do so, he applied to Mr. secretary Yamaoka, asking him to hand the report to His Majesty, and then returned home. One of the Imperial Chamberlains, however, to whose ears this news had come, thought it derogatory that a report of importance should reach the Emperor through the medium of a secretary, and at once hastened to the Daijo Kwan where he reported the matter to His Excellency Iwakura, U-daijin. The latter was much surprised and went at once to the office of the Household Department without waiting for his escort even, and stopped the secretary from handing in the report. It would be interesting to learn what the report was about.”

A native journal states that the Government proposes to issue bonds in exchange for *kinsatsu*. No interest will be paid on these bonds for two years, but after that interest will be

paid in specie at the rate of six per cent per annum. It is expected that by this step the total circulation of paper will become absorbed in twenty years. The scheme is said to be now under the consideration of the Senate.

A native paper says that a proposal is under consideration to establish a bureau connected with the agitation for a National Assembly, in the Daijokwan, under the supervision of a Privy Councillor and Secretaries.

General Kuroda, Privy Councillor and Head of the Colonization Department, is about to start for Yesso.

The *Mainichi Shinbun* learns that the Prime Ministers and Privy Councillors held a meeting on the 23rd instant in Yokohama.

A native paper states that Mr. Goto Shojiro, ex-Privy Councillor, paid a private visit to His Excellency Privy Councillor Okuma, at his residence, on the 21st instant.

The *Mainichi Shinbun* publishes a report that "Their Excellencies Iwakura, Junior Prime Minister, and Inouye, Minister of Foreign Affairs, have not attended their offices since the 20th inst. Partly on account of this, rumours are current that several leading officials have tendered their resignation and that great changes are to be made in the Cabinet."

The same paper states that if any of the Prime Ministers or Privy Councillors now forming the Cabinet does not attend his office, messages are repeatedly sent to procure his attendance.

The *Nichi Nichi Shinbun* says that the escorts of the Prime Ministers will in future consist of twenty men instead of thirty, and those of the Privy Councillors will be twelve instead of twenty as hitherto.

The *Hochi Shinbun* reports that Mr. Nomura, the present Governor of Kanagawa is to be transferred to the Senate.

The *Mainichi Shinbun* states that the Head Police Department is about to despatch eighteen or nineteen spies to various localities, and inquires what can be the motive for such a step.

#### NAVAL AND MILITARY.

The *Choya Shinbun* announces that a review of over 5000 troops was held on the Hibiya parade ground on Saturday last, in the presence of General Donovan of Hongkong, who afterwards paid a visit to the Military College and inspected the cavalry officers at riding exercise.

The *Hochi Shinbun* informs its readers that the thirty-five naval cadets who recently passed their final examination at the Imperial Naval College, left on the 17th instant for Yokosuka, to embark on the *Rinjo Kan*.

Another paper states that since the engagement of a German instructor, the naval band has made remarkable progress.

A native journal states that a regiment of cavalry and a battalion of infantry, are to leave Kioto-dan on the 26th instant for manoeuvres on the Narashino plains.

A native paper reports the arrival at Kobe of the *Fuso Kan* on the 18th instant.

The *Mainichi Shinbun* contradicts the report that His Majesty the Emperor will attend the manoeuvres on the Narashino Plains, and says that he will be represented by His Imperial Highness Field Marshal Prince Arisugawa.

The infantry of the Kumamoto garrison will leave about the middle of next month for a march through the surrounding prefectures, during which a series of manoeuvres will be practised.

The following military Inspectorships have been gazetted:—For the eastern district, General Miura; for the central, General Miyoshi, and for the western, General Tani.

Captain Bougain of the French Military Mission and four other officers, paid a visit to the Military Academy on the 20th instant.

According to the *Hochi Shinbun* the expenditure of the War Department, originally estimated at 9,149,906 yen, has been reduced to 8,000,000 yen, which will necessitate the greatest economy in the Department.

A rifle match will be held at the Toyama Military College on the 26th instant between members of the nobility.

#### TRADE, INDUSTRIES AND FINANCE.

According to a native paper the specie put on the money market since the middle of last April by the Finance Depart-

ment to try and stop the depreciation of the paper currency, amounts to 6,000,000 yen.

The following table from the *Hochi Shinbun* is intended to show the amount and average price of tea sold in Yokohama for the past five years from 1876 until August 1880:—

Year.	Amount.	Price per Hundred Pounds.
1876.....	12,500,000 lbs.	\$ 24.40
1877.....	11,500,000 "	\$ 20.70
1878.....	12,100,000 "	\$ 19.88
1879.....	16,800,000 "	\$ 25.50
From January to August 1880.....	10,030,000 "	\$ 25.35

There are at present 2,200,000 pounds of tea in Yokohama, from Suruga, Tôtômi, Mikawa, Mino, Musashi, Shimosu, and Hitachi. 2,000,000 lbs. of tea have been sold in Kobe, and there are still 1,300,000 lbs. remaining. In addition to this there are about 5,000,000 lbs. more distributed about the different provinces.

The same paper states that the leading native merchants of Yokohama who deal in imports recently held a conference at which it was agreed to suspend all business transactions for the space of one week, beginning from the 18th instant. It was agreed that in dealing with foreign merchants the native dealers shall insist upon the payment in kinsatsu for goods purchased, they paying the proper market discount according to the price of Mexican dollars; and if the foreign merchants do not agree to this to refuse to take delivery of goods already contracted for.

The *Bukka Shinpo* states that "from the beginning of the season up to date, about 44,800 cartons were brought into Yokohama. Of this amount 18,000 come from Akita and are said to be intended for Italy, where they were contracted for by the Akita merchants who are now abroad. It is also stated, however, that they will be sold in Yokohama, if a reasonable price is offered, so that they may, after all, be another lot. At present there is no fixed price, and business can scarcely be said to have commenced.

"As regards the money markets the price of silver suddenly rose ten per cent on the 17th instant, and eventually went to sixty per cent premium, in consequence of which the Bourse was closed in the afternoon. There are now no quotations, but the rise still continues.

"Owing to this great change in the money market, merchants who have recently contracted for import goods have unexpectedly suffered great losses, and are in a state of alarm. Whether such changes in the market are natural, or the result of manipulation, the annoyance to the merchants remains the same. Again, although the bad state of financial affairs is not a question of to-day, yet at present, upon one bale of silk which is worth about 380 yen, a loan of only 100 or 150 yen can be raised, and then the interest is from 7 or 8 rin to 1 sen per day per yen. This exorbitant rate of interest is due to the number of people anxious to borrow money."

The *Mainichi Shinbun* publishes the following news from Osaka:—"Owing to the recent bad weather only a few vessels have arrived at Kobe and Osaka of late. The rice merchants of Kiushiu and the neighbouring provinces having realized that the price of this commodity was unlikely to rise any higher, had determined on selling and were shipping it to Osaka with this intention. The late severe storms have, however, compelled all vessels to take refuge in various roadsteads, so that when they do arrive at Osaka a considerable fall in the price of rice may be expected."

The *Nichi Nichi Shinbun* publishes a telegram from Kobe stating that, owing to the extraordinary rise in the value of specie, all business transactions have been suspended there for ten days from the 20th instant.

Another paper informs us that over 4,000 koku of rice were sold at the Asakusa godowns on the 23rd instant.

The *Nichi Nichi Shinbun* announces that His Imperial Highness Prince Arisugawa has for a long time directed his attention to the encouragement of the mining industries, and has recently imported a puddling machine from England. His Imperial Highness intends to invite the Nobles to attend to the great work of opening up mines in various parts of the Empire. This he told to Lieutenant Satake of the Japanese

army; who is the ex-daimio of Kûboto; the latter of agreed with the proposal, and said that he would consult with other members of his order and do his utmost to promote the scheme.

#### MISCELLANEOUS.

The *Nichi Nichi Shinbun* says that Kimura Shinzaburo, who was sentenced to thirty days penal servitude for bringing a false accusation against Messrs. Fujita and Co., has completed his sentence and been released. Five other persons, who subsequently made a similar charge, for which they were put on trial at the Tokio Saibanho, were released on bail on the 16th instant.

A native paper states that about two hundred shizoku of the Awaji province have formed a society, and intend to petition the Government on some subject at present unknown.

A native journal states that there is a scheme under consideration to establish a ship-building yard at Kotaru harbour, Yesso.

The *Nichi Nichi Shinbun* states that the locality of Himeji, in the province of Harima, was visited by a very severe storm of wind and rain at about 2 p.m. on the 20th instant. The rivers overflowed their banks and the Kuchi and Inaka bridges were carried away. Many houses standing on the river banks were destroyed, and a number of persons drowned. No telegrams addressed to residents in Takagi and Awoyama can at present be forwarded. The above news was received by telegram from Himeji.

A native paper says:—"The severe gale which recently visited Kobe and Shimonoeki resulted in the wreck of several vessels. Among these the steamer *Wago Maru* which left Osaka on the 15th instant, struck on a sunken rock between Iwao-mura in the province of Awaji, and Akashi in that of Harima. She broke up completely. There were one hundred passengers on board of whom seventeen were drowned. Only eleven bodies have been recovered as yet. A Japanese junk, engaged in coaling a steamer belonging to the Kaikosha, came into collision with the British barque *Ontari*, and was completely destroyed, two of her crew being drowned."

A vernacular paper says that a new branch telegraph office is to be established at Miyako-no-jo, in the province of Hiuga, in the prefecture of Kagoehima.

The following is taken from the *Mainichi Shinbun*:—"We hear from our correspondent in Fusan, that the Korean Embassy arrived there in the *Chitose Maru* at 1 p.m. on the 15th instant. Upon landing they proceeded to the Japanese Consulate where they were entertained at tiffin at 2 p.m., and then left for the native town at 5 p.m. On the day of their arrival there was a very severe gale, and the *Chitose Maru* experienced such bad weather that she had to put in to the coast for shelter. The Ambassador's ideas seem to have undergone a complete revolution since his visit to Japan. For instance, on the evening of his arrival, he convened a meeting of all the Korean Naval officers and gave a lecture on the present condition of Asia, and explained about the Asiatic Society of Japan. He then informed his hearers that he intended to forward a memorial to the Government recommending them to follow the example of Japan in all political affairs. He also severely animadverted upon the conduct of the Governor of Tokinek Fu, for his rejection of the letter of thanks from H. R. H. the Duke of Genoa, and upon the arrogance of the Korean officials generally. In fact he seemed to acknowledge it to be his duty to redeem Corea from her present stagnant condition."

#### ARRIVAL OF THE AMERICAN MAIL.

##### TELEGRAMS.

Paris, August 17th.—The American objections to the Panama Canal are waived, and the neutralization of the canal, under the guardianship of the United States, accepted. De Lesseps wishes to issue 600,000,000 francs in shares here, in London, New York and Frankfurt.

Madrid, August 18th.—The event of the day in Spain is a great meeting of the leaders of the Liberal opposition at San Sebastian. General Martinez Campos was present. Very strong language was used against the Canovas del Castillo Cabinet, but no important decision was taken. The Liberal discontented Generals, led by Martinez Campos, are weary of waiting for the fall or resignation of a seven years' administration. Feeling that they cannot hope to attain their object with the Conservative Cortes elected in 1879, they will try to make an impression on the mind of the King.

Washington, August 20th.—On and after October 1st, the postage charge on newspapers addressed to countries or colonies included in the universal union, will be as on printed matter generally for the same destinations, viz., one cent for each two ounces, or each fraction of two ounces.

Havana, August 20th.—A slight earthquake was felt at Mariel, twenty miles west of this city.

A steam line is to be established between Cuba and China for the purpose of bringing emigrants.

Washington, August 21st.—During the year ended June 30th last, 457,243 immigrants arrived here. In the year of greatest immigration, 1873, there arrived 459,803 immigrants. During last July there were 49,992 immigrants, of whom 11,000 were from Germany, 6000 from Ireland and 5000 from England.

Panama, August 21st.—Since the departure of the last mail for New York there have been no arrivals here, either from South or Central America. Dates from Bogota to July 28th say that on the twentieth anniversary of Colombian independence, Mr. Deichman, United States Minister, in addressing the President, said that the conduct of the United States had been erroneously interpreted by the people of Colombia; that the desire of the United States was to forward the interests of all Spanish-American republics. President Nunez replied, thanking the Minister for the good intentions of his government toward Colombia.

The ship *Belle of Aron* has arrived at Buenaventura, from Cardiff, with 1,400 tons of material for railroad and wharf. The work of construction, both on railroad and wharf, is in active progress, and the first section of the road—that between Buenaventura and Cordova—will soon be opened to the public. This will do away forever with canoe navigation on the Atrato.

New York, August 23rd.—A number of Chinese students now in the United States will be sent back to China on account of offences they have committed. T. C. Chung, an excellent young man, who graduated in the class of 1879 at Norwich (Conn.) Free Academy, is dishonored for having cut off his queue. Woo, the new Commissioner at Hartford, is very strict in conducting Chinese schools under the rigid discipline of the Empire.

Havana, August 24th.—The Government decreed that within ten days all Chinese detained by the Government for being runaways, or for being without contracts for work, or for any other criminal causes, shall enjoy the same rights as individuals belonging to friendly nations.

New York, August 25th.—A Madrid correspondent telegraphs that Queen Christina has given much pleasure to the Catholics, especially in the lower classes, by visiting in

succession nine popular chapels and churches dedicated to the Virgin, and leaving \$200 for the poor at each shrine. At every chapel she knelt for more than one hour in prayer. The Queen and her mother, the Archduchess Isabella, constantly visit the churches, where Mass is offered for the happy delivery of Her Majesty. Apartments are now prepared in the palace for ex-Queen Isabella, who is expected on August 25th. Most of the foreign Ministers, State delegations, high functionaries, and Ministers, have arrived at Madrid in readiness for the event, which is expected during the last week in August. A royal decree has been issued abrogating the decree of May 16th, 1850, and declaring the sons of King Alfonso to be the direct heirs to the throne, with the title of Princes of the Asturias. The King's daughters will receive the title of Princesses of the Asturias, if so decreed.

New York, August 26th.—The *Herald's* Madrid correspondent sends the following: The Government has taken a decision which is much censured in social circles, and which will be energetically condemned in the Cortes by all the West Indian members and the adherents of Marshal Campos. Canovas and his colleagues, finding that General Blanco was sending over more of the rebel chiefs and of the rank and file who have lately surrendered than can conveniently be received at the penal settlements of North Africa, have determined to embark several hundred men, including some prominent chiefs, for the Marina islands, near the Philippines. These islands, half-deserted and desolate, are inhabited by savages and overrun by rats. Their climate is tropical and most unhealthy. The Cuban members contend that the insurgents surrendered on the express understanding that they would be set free when they had once reached Spain. The army in Cuba is to be reduced by the homeward return of 14,000 men whose time has expired. Eight thousand recruits, however, are to be sent out in October. It is possible that General Jovellar or General Ceballos may replace General Blanco if he returns to Spain.

From the Panama *Star and Herald* of July 29th we extract the following items:

The successful completion of the first section of the Guatemala Central Railroad, and the admirable condition in which that work was found by Government inspectors, encouraged the Government to carry the work on to the capital. The formal contract for that purpose was signed on the 13th instant.

Permission has been conceded by the Government of Colombia to the Central and South American Cable Company to lay a cable on the west coast of the State of Panama, connecting with the Central American coast, and thence with other lines to Mexico and the United States.

The telegraph between Costa Rica and Nicaragua was completed on the 24th of June, and opened to service.

Simla, August 27th.—The Government has no information of defection among Abdurrahman's troops at Cabul. The mutiny among the troops of the Khan of Khelat is confined to 144 men. A detachment of the Seventy-eighth Highlanders has gone to Khelat to restore confidence.

London, August 27th.—In the House of Lords to-day Earl Granville, Secretary of State for the Foreign Department, officially confirmed the report of the arrival of General Roberts at Khelat-i-Ghizai, and the withdrawal of Ayub Khan's army to Seenjivi.

London, August 27th.—Musurus, the Ottoman Ambassador at London, writes to the papers officially, denying that the Porte was trying to excite the Mussulmans in India and Afghanistan through seditious publications.

Bowling Green (Ky.) August 27th.—Green Ellis (colored) was lynched near Guthrie, Ky., last night. Mrs. Duncan, who lives three miles from Guthrie, went to town on Tuesday with chickens and vegetables. While returning home, after having disposed of the barter, Ellis met her in the road, knocked her from the horse, and after she fell struck her several times more. As she fell she drew a small pocket-knife and inflicted several cuts upon her assailant. She, however, by repeated blows was rendered insensible. Her pocket-book, containing \$12, was taken from her. Her body was dragged twenty-five or thirty yards from the road and placed behind a large log. Her family commenced the search for her, and when found, at dark, she was in the condition above stated. She told her story, identified Ellis as the party who attacked her, and described the flesh wounds she had made upon

him. Ellis was arrested, carried to Guthrie and placed in the calaboose. Intense excitement and indignation at the outrage was manifested everywhere, and although some citizens counselled moderation, and advised the friends and relations to let the law avenge the crime, a body of men, one hundred and over in number, quietly rode to Guthrie between midnight and day this morning and forcibly seized the accused, carried him back some three miles distant to the scene of the crime, and swung him from a tree only a few feet from where he struck the first blow. This is the second affair of a most horrible nature that has occurred in this county within the past year. The victim was a lady highly respected. The criminal was an idle and worthless negro.

Washington, August 27th.—Hereafter officers of the army, travelling or stopping in foreign countries, whether on duty or leave of absence, will be required to avail themselves of all the opportunities within their reach for obtaining information of value to the military service of the United States, especially that pertaining to their own arm or branch of the service. They will report fully in writing the result of their observations to the Adjutant-General on their return to duty in the United States, if unable to do so earlier.

New York, August 27th.—From Paris the following dispatch is received: The moment of the Queen's accouchement is so fast approaching that eighty halberdiers are ready night and day to summon the Ministers and other persons invited for the ceremony, to take place in the palace directly after the birth. The royal physicians have brought four wet nurses, carefully selected in the mountains of Santander in the district where the Spanish aristocracy usually get their nurses, who are famed for their health and robust appearance. Her Majesty wished to give the breast to her child, but state etiquette forbids. The representatives of the province of Asturias, from which the heir to the throne takes his title, arrived, bringing presents and offerings according to the traditional, time-honored custom. They alone, with the delegations of Parliament and Madrid, enjoy the right to be present at the birth, with the Ministers and diplomatic corps. In conservative and royalist circles the coming event is expected with much impatience, as likely to consolidate the dynasty and make the Queen more popular.

London, August 27th.—A letter from General Primrose, received at Rilla Abdulla, gives some particulars of the sortie from Candahar, August 6th. The British attacked the village of Delikhwajee and got through it, but finding it strongly occupied and reinforced by contingents from neighboring villages, they had to retire to the fortress. The enemy's loss is heavy. The British cavalry made two charges, cutting down many of the enemy.

In the House of Commons this evening the Marquis of Hartington, Secretary of State for India, said that the Viceroy of India has under consideration the advisability of maintaining the frontier prescribed by the Treaty of Gundannuck. Lord Hartington also stated that he had received no confirmation of the alarming Afghan news of this morning. He had a telegram from the Viceroy dated to-day which makes no reference to that news.

Lord Hartington continued by saying that the Viceroy's decision in regard to the frontier line would not be influenced by the mere fact of certain territory having been acquired by the treaty of Gundannuck. In the present consideration of the question, that treaty may be regarded as having ceased to exist. The Viceroy is taking the best advice he can get, and on his report the Government will act. Lord Hartington was not now prepared, therefore, to state what posts of the Afghan frontier Her Majesty's forces will occupy.

London, August 27th.—A dispatch from Bombay discussing the news of the dangerous state of affairs at Cabul, says: This early but striking proof of the impolicy of the hasty withdrawal of our forces from Cabul—a step most strongly condemned by nearly every military man in India—has created great excitement. Cholera, which is raging at Peshawur, daily increases in violence. The certainty of a severe loss among the retiring troops was one of the reasons most strongly urged against the policy of the withdrawal of the troops during the hottest and most unhealthy period of the year.

Quetta, August 27th.—General Roberts arrived at Khelat on the 24th instant. General Phayre will march from Chaman for Candahar on the 30th. The army of

Ayool Khan has retired to Seanjivi, eight miles east of Caudalar. All is well at Quettah and in the Bolan Pass. Troops are arriving here daily. The Murrer tribe is behaving well. No further outrage has been reported since the affair at Sibi, where the clansmen fell on a retiring party of British troops, inflicting a severe loss, as reported August 10th. This dispatch seems to disprove the report from Chaman that the troops of the Khan of Khelat had mutinied.

London, August 28th.—The House of Lords has fixed the third reading of the employers' liability bill for Tuesday, when it will probably pass, but in the form which the House of Commons will not be disposed to accept. The second reading of the hares and rabbits bill has been fixed for Monday. The Earl of Redesdale will move its rejection, but it is probable the majority will prefer to amend it by empowering the tenant to contract with the landlord regarding the respective ground game rights. Such an amendment the Government could not accept, as it would substantially destroy the bill.

It is stated that at the end of Autumn, a meeting of Conservatives will be held under the auspices of Lord Beaconsfield, and members of the late Government, to advise the various Conservative Associations throughout the country to affiliate with the London Central Associations, as to the propriety of holding meetings during the Winter with a view of obtaining the opinion of their constituencies upon current politics, including the continuance of the ballot act, or the advisability of returning to the system of open voting under the new enactments designed to prevent abuses. The Marquis of Salisbury, Sir Stafford Northcote, Sir Richard Ashton Crosbeck, Sir John Holker and Lord John Hamilton have promised to take part in the meeting.

Yesterday's struggle in the House of Commons resulted in a victory for the Government, after 21 hours' continuous sitting. A postponement of the Constabulary vote was only conceded by the Government upon Parnell's undertaking that it shall not be obstructed.

The whitebait dinner, which usually precedes the close of the session, will take place on Wednesday next.

Vienna, August 28th.—A dispatch from Janina, August 20th, states that the advance guard of the Albanian Irregulars, which the League decided to send to the frontier, has still much to do, for trustworthy news had reached Janina that three bodies of Greek volunteers were only waiting for a propitious movement to invade the Turkish territory. The Porte continues its armament in Thessaly and Epirus. In Turkish circles at Senna, it is affirmed that 30,000 men are already concentrated in Thessaly and Epirus. They have more arms than they require, and have accumulated much ammunition. There are large magazines of provisions, etc., at Iuta, Previsa, Metzovo and Larissa. The fortifications of the latter place are almost completed.

Paris, August 28th.—Lepere, ex-Minister of the Interior, and an intimate friend of Gambetta, speaking of Avillon in the Department of the Yonne, referred to De Freycinet, Premier, and his now religious bill, and said: "The decrees against illegal congregations will not remain a dead letter. The Chamber of Deputies is desirous that the existing laws be enforced, and pursuant thereto the decrees will be carried out to the very letter against all congregations."

St. Petersburg, August 28th.—The *Golos* has the following telegram from Krasnovodsk: Gen. Skobeloff's advance guard is quartered at the future base of operations. The offensive movement is temporarily suspended, but reconnaissance continues. A railway from Michael's Bay has been begun, but the material for it is somewhat delayed. Hospitals have been opened at Krasnovodsk, Fehjikislar and Michael's Bay. There are but few sick. Newspapers are asked for to relieve the monotony of inaction.

London, August 28th.—The Parliamentary Committee of the Trades Union Congress have sent to the Ministers a resolution deeply regretting the amendments to the Employers' Liability bill made by the House of Lords, and expressing the hope that the Government will either restore the bill to the shape in which it passed the House of Commons or withdraw it, and pass a more thoroughgoing measure next session.

Halifax, August 28th.—An express train for Georgetown from Charlottetown, Prince Edwards Island, was thrown from the track near Little York, and all the cars went down a small embankment. T. Stewart, a passenger, is

believed to be fatally injured. George M. McLeod, of the Union Bank, has his jaw broken and is otherwise disfigured. A dozen other passengers were more or less injured.

Berlin, August 28th.—Those who remember how King William discarded all right to interfere with the candidature of the Catholic Hohenzollern Prince for one Crown of Spain in 1870, can have little doubt that the proposal of Prince Charles of Roumania to make the hereditary Prince of the House of Hohenzollern his heir, will also be regarded from the same point of view by his Imperial kinsman.

Cork, August 28th.—Some time ago the constabulary received information of a Fenian plot to attack the powder mills and barracks at Ballincottig, five miles south-east of Cork. Extra precautions were taken, and are continued, against surprise. The *Constitution* newspaper alleges that men in positions of trust at the mills are Fenian officers.

St. Petersburg, August 28th.—It is reported that Grand Duke Nicholas will retire from the command of the Guard and St. Petersburg district, but is to remain Inspector-General of Cavalry, and that the Czarovitch will take command of St. Petersburg, and that Grand Duke Vladimir will command the Guards.

Rome, August 28th.—*Diritto*, the Ministerial organ, says: "If the Powers make a naval demonstration in Turkish waters, England, Italy, France and Russia, will each be represented by their ironclads, Austria by two, and Germany by one."

Paris, August 28th.—The newspapers announce that the police will to-morrow visit the Jesuit Scholastic Institutions throughout France, to execute the decrees against unauthorized congregations. At the Jesuit establishment at Dijon, to-day, the police found only one regular priest, who is now Director of the establishment, and one priest representing the society in its civil capacity as proprietor of the building. It is believed that the police will find all the establishments of the society similarly evacuated.

New York, August 29th.—George C. Harward, a young lawyer, was murdered in Brooklyn this morning. Harward and Peter J. Larkin were returning home between one and two o'clock in the morning, when their protection was requested by two women, who were being followed by three rough characters. After Harward and Larkin had walked with the women several blocks the strangers approached and an altercation ensued. Blows followed, and Harward was stabbed to the heart, while Larkin was cut about the neck, but his wounds are not serious. Walter J. Beat, a hottler, was subsequently arrested on a charge of murder, and Joseph H. Hurley and Thomas Tierney as accessories.

Cleveland (Ohio), August 29th.—A large aerolite passed over the city at about three o'clock this morning, brilliantly illuminating everything. When over the Lake it exploded with such force as to severely jar many buildings in the northern part of the city, fragments shooting off in different directions.

New York, August 29th.—A London cable says: The interest in Irish politics has been transferred to Westminster. The all-night debate on Thursday was not pre-arranged and was developed by an imprudent observation from the Government benches, although the Irish members desired to force attention during the present session to the employment of military under the guise of constabulary. It was suggested that the debate originated because the Irish members desired to display their tactics before the leading members of the Land League, who were present, while the debate gratified their vanity. English opinion is unanimous as to the sincere desire of the present Government to satisfy the Irish demands, if allowed a reasonable time. Mr. Forster's declaration of his intention to introduce a bill to prevent unjust landlords from taking advantage of machinery of repression is an unmistakable proof of the Government's sincerity, is also a warning to the worst class of landlords. The English Liberals and Radicals blame the Irish for refusing the olive branch; and while, in its ultimate effect, the twenty-one hours sitting may be disastrous to the Irish party, it has convinced the present Parliament, as similar circumstances did the last, of the necessity of new rules to prevent the minority from overawing the House. The members dislike curtailing their privileges, but the feeling is universal after Thursday's proceedings, that the conduct of the Irish party requires a sacrifice which, under ordinary circumstances, Radicals and Liberals alike would not concede. The Lords

are committing political suicide. A fortnight ago, the peers encouraged the general impression that they would not interfere further with the Government bills. Having rejected the Compensation bill, they thought it dangerous to attempt to throw out any more.

The rejection of the compensation bill has made them intensely unpopular in Ireland, and threatens to bring about a combination of English Radicals with the Irish party against the hereditary system in the House of Lords. The amendments to the Employés Liability bill have now roused the working classes into antagonism. The Peers desire, likewise, to reject the Harca and Rabbits bill. This step would create a conflict between themselves and the tenants. At a large meeting of the Conservative Peers, held yesterday, Lord Beaconsfield advised them to accept the bill, suggesting such alterations in committee as would not affect the main object of the measure, but would deprive the tenant of sporting rights, while conferring on him the authority to destroy ground game. The best method for the purpose, it was suggested, would be to limit the number of guns on the farm, and require a list to be recorded of the persons entitled to carry guns. It is probable that the House of Commons will accept this amendment.

London, August 29th.—The *Standard* has the following from Bombay:—There was a great scare at Kurrachee, Scinde, on Friday, in consequence of reports by natives that 15,000 Pathans had assembled on the hills and meditated an attack. Arms were distributed to the whites and reinforcements ordered up, but the night passed quietly. Pathan residents were disarmed on Saturday.

London, August 29th.—A correspondent of the *Times* at Bombay telegraphs that serious apprehensions are entertained at Kurrachee. A steamer conveying three companies of reinforcements to that place was ordered to go with full steam. Trouble is expected on the Scinde frontier.

London, August 29th.—The chiefs whom Risa Pasha wished to arrest have escaped from Scutari. The inhabitants of Dulcigno, with a body of Albanians, are encamped at Mozura, to oppose the cession of Dulcigno. It is said the Turkish regulars are fraternizing with them.

Madrid, August 29th.—Violent gales and thunder storms have done much damage around Madrid. All trains are delayed and the railway near the Escorial is destroyed. Similar accounts are received from the northern and western provinces.

Dublin, August 29th.—Mr. Gladstone arrived here on the steamer *Granville Castle*, and attended church to-day. He started for the Clyde in the afternoon.

Geneva, August 29th.—A waterspout at Zug to-day caused great destruction of property. Several persons were killed.

Lowell (Mass.), August 29th.—A shocking accident occurred on the Lowell and Lawrence Railroad last Saturday night, by which five youths of this city lost their lives. A Caledonian picnic was held during the day at Smith's Grove in the town of Andover, where these men had been participating. Either for lack of money or for sport they contrived to clamber on top of a passenger car of a train which left Lawrence at 7:30 p. m. When the train reached Sprague's Bridge, two miles from this city in the town of Tewksbury, all five were swept off and killed. There is a space of twenty-two inches between the cars and the bridge-roof. Therefore it is conjectured that the lads were sitting up when struck. Probably all but Shinnick died almost instantly, as their wounds on the head and back were terrible. The undertaker's room where the bodies lie has been thronged to-day.

London, August 30th.—In the House of Commons, to-night, the debate on the Constabulary vote was resumed. After a brief debate, it passed by 105 to 76. The House shortly after passed all the remaining votes of estimates.

St. Petersburg, August 30th.—It is confidently stated that Skobeloff has only 2500 men, and it may be presumed that offensive operations on a large scale are not likely for some time.

Constantinople, August 30th.—The Porte is preparing a fresh note to the Powers, making a distinct offer respecting the cession of territory to Greece, and declaring in firm language the impossibility of going further, and throwing upon the Powers the responsibility for the consequence of the rejection of this offer.

Vienna, August 30th.—It is probable that the Porte will

be able to cede Dulcigno in the course of the present week.

Berlin, August 30th.—Five Prussian officers of the General Staff, comprising representatives of infantry, cavalry, artillery, and gendarmerie, with the sanction of the General Government and War Office, have finally accepted appointments in the service of the Sultan of Turkey, and will leave soon for Constantinople. Some civil functionaries are expected to follow.

London, August 30th.—In the House of Commons, this evening, the Marquis of Hartington, Secretary for India, announced that he had a message from General Roberts, dated Khelat-i-Ghilzai, the 23rd, stating that he would start on the 24th, and, by easy stages, expected to be twenty miles from Candahar on the 29th. The troops were in good health and spirits.

Viscount Enfield is appointed Under Secretary for India.

Quetta, August 30th.—The news from Candahar is to the 16th inst. When Ayub Khan learned of General Roberts' approach, he abandoned the investment of Candahar, and took a position with his whole force on the Argandah River. General Phayre's advance has occupied Gatai. General Phayre himself will march for Candahar to-night. The troops are pushing forward with marvellous rapidity.

London, August 30th.—The garrisons of Khelat-i-Ghilzai, and Candahar, will increase General Roberts' force to 15,000 men, of these, 1000 will probably remain in the citadel of Candahar, leaving 14,000 available for an attack on Ayub.

Simla, August 30th.—The retirement of General Stewart's forces was practically completed without injury to the health of the troops and in perfect order.

London, August 30th.—General Roberts in his message to Lord Hartington, says he arrived at Khelat-i-Ghilzai on the 23d. He had abundant supplies and could make his forage last until September 1st. He would rest on the 24th and start on the 25th, and hoped to telegraph from Candahar by the 29th. General Roberts left Ghuznee on the 6th, and had marched 136 miles in 2 days. His march had been unopposed. He had obtained plenty of supplies and forage, and the cavalry and artillery horses were in good order. During the march one British soldier, four Sepoys and six camp followers died. Three Sepoys and five followers were missing, and it was feared they had been murdered.

Calcutta, August 30th.—Kurrachee is in a very unsettled state, but no danger is feared unless Candahar falls or General Roberts is defeated.

Paris, August 30th.—The Government, as soon as the Chambers resume, will introduce a bill for the sale of that portion of the Crown jewels not considered of artistic value and estimated to be worth 7,500,000 francs. The proceeds of the sale will be devoted to the purchase of works of art.

Paris, August 30th.—Since the beginning of the year there has been 140 duels in France.

Paris, August 30th.—Père Hyacinthe, on Saturday, solemnized the marriage of the Abbé Laue, until recently a priest of the diocese of Mans, with a Madame Wocher. Père Hyacinthe warned them that they must be prepared to encounter persecution.

London, August 30th.—A dispatch from Chamen, dated Sunday, says: General Roberts marched from Khelat-i-Ghilzai for Candahar on the 25th inst. He took with him all the British garrison and handed over the fort to the Ameers' officials. He expected to reach Candahar on Monday, and attack Ayub Khan on Tuesday. He has sent for plans of combined action with General Phayre, if the latter can be reached at Takht-i-Pul on Monday. This, however, is impossible, in consequence of the scarcity of food and forage, and the wholesale desertion of drivers. Takht-i-Pul is thirty-five miles south of Candahar.

Cape Town, August 30th.—Hon. Mr. Spreng, Premier of the Cape Ministry, telegraphs from Basutoland: "I have travelled through the disturbed district with an escort, and have had an interview with Leizer, the principal Chief. He has summoned the chiefs and head men to meet next week, when matters will be brought to an issue." The excitement has subsided.

Rome, August 30th.—The Pope has assented to the proposal that a portion of the French Jesuits should form a society for the propagation of the faith in Central Africa.

Phillipopolis, August 30th.—It is declared in well informed circles, that the announcement of the conclusion of an offensive and defensive alliance between Servia and Bulgaria, is unfounded.

Madrid, August 30th.—On the occasion of the expected birth of an heir to the Throne, the Government will grant amnesty to Cuban Insurgent leaders now imprisoned in Spain.

London, August 30th.—In the House of Lords, the Ground Game bill passed its second reading, by a vote of 68 to 20. The Lords acted on the advice of Lord Beaconsfield, who advocated considerable amendments. Though he objected to the bill, he thought the Lords would be taking a feeble position, when on the eve of a Constitutional struggle, in joining with the Commons on such a secondary question.

London, August 30th.—The United States steam frigate *Wyoming* arrived at Leghorn on the 27th instant.

Berlin, August 30th.—Prince Bismarck and the Prince of Roumania have discussed the advisability of making Roumania a Kingdom. Germany favors this step.

Madrid, August 30th.—Floods greatly damaged houses and lands in Guadalajara, Achuma, Catalayud, Almanza, Grauda, Tarea, Oureia and Alicante. No loss of life is reported.

London, August 30th.—In the House of Lords, this evening, Earl Granville, Foreign Secretary, said the Powers are considering a rejoinder to the Pope's last note about the Montenegrin question. In the meantime they have ordered a number of men-of-war to rendezvous at Ragusa. The Powers, he said, have informed the Porte that the decision of the Berlin Conference on the Greek question cannot be reopened and have presented a note to the Porte urging reform in Armenia.

Paris, August 31st.—Three large Jesuit schools in Paris have been entirely evacuated, and the authorities have walled up the doors of the establishments. New civil Directors have already been installed in the vacant posts. With regard to other schools affected by the March decrees it is rumored that the Government and the various religious confraternities have agreed upon the terms of a letter which is to take the place of the demand for the authorization hitherto required by law. By this letter the heads of schools will bind themselves to hold aloof from political questions, and not to take an attitude of hostility towards the present order of things. On the presentation of this letter to the authorities the Government will consider such congregations as legally authorized.

London, August 31st.—A British political officer at Candahar telegraphs on the 25th: "The country is quieting down. Ayub's force is reduced to regulars and a small number of Ghazis. It is reported that he wishes to retreat to Garhi and Girishk, but is prevented by the Cabul troops. The siege is practically raised. A large quantity of food was brought in yesterday."

London, August 31st.—The Viceroy of India telegraphs: A messenger who left Candahar on the 26th instant reports that Ayub Khan's force was in the Argand Ab, 23,000 strong.

Chinan, August 31st.—A large number of tribesmen are joining a detachment of Ayub Khan's force at Takhti Pat, to oppose General Phayre's advance.

St. Petersburg, August 31st.—The *Noroe Vremya* says: Russia has decided to transfer the New Kuldja negotiations to Peking, whither M. Buetzow, the Russian Minister, will shortly proceed. Marquis Tseng has informed Russia that China desires to substitute for the Livadia Treaty a convention ceding the whole Tei territory. Russia, while not refusing to lighten the conditions of the Livadia Treaty, demands rectification of the frontier for the purpose of ending disorder and also requires possession of a portion of Kuldja to establish a colony of Dringans, who would otherwise be left to the vengeance of the Chinese.

London, August 31st.—The House of Lords went into Committee to-night on the Ground Game bill. Amendments were carried against the Government, limiting the right to the occupier and one other person, and establishing the close time from March to August. An amendment for allowing landlords and tenants to make mutual arrangements concerning game was withdrawn, Lord Beaconsfield, as well as the Government, pointing out that it would make

the bill waste paper. The bill then passed the Committee.

Montreal, August 31st.—A fashionable milliner, Mrs. Hamburger, left here last week for New York, with eighteen trunks, which she told the American officers at the frontier port of Richford, Vermont, contained only indignant effects, to be passed free of duty. The United States officers opened them, because of private advices, and found \$12,000 worth of silks, velvets, laces, champagne and silverware. She has gone without the luggage.

Constantinople, August 31st.—The Albanian chiefs declare that when the ships appear, the Albanians will enter Montenegro and retake Podgoritza. Riza Pasha, the Turkish commander, reports that the state of affairs is very critical, and that the Albanians are much excited. Riza Pasha's house is guarded by 1,500 soldiers. A correspondent writes that the Albanians are arriving in Dulcigno in small numbers. About 2,500 are now there. He believes that the Powers will have to land troops to make a settlement.

Berlin, August 31st.—Twenty-eight members of the Reichstag and Landtag have published a declaration announcing their secession from the National Liberal Party. They declare it their intention to uphold the political liberties already achieved, and to combat oppressive indirect taxes. They also insist upon religious freedom being guaranteed by legislation.

Constantinople, August 31st.—A Council of Ministers has been discussing the Montenegrin frontier since Sunday. The result of the discussion has been forwarded to the Sultan. It is expected that an irade will be issued to-day finally settling the question. General Baker has commenced reorganizing the gendarmerie.

Ottawa, August 31st.—A gentleman from Upper Gatinsaw reports over one hundred deaths among the Indians from small-pox. Several bands have divided up into small parties and are travelling north, leaving their dead unburied.

Constantinople, August 31st.—In accordance with the demand of the American Consul, the Porte has ordered the authorities of Ismid to send the murderers of Dr. Parsons to the capital for judgment.

Vionna, August 31st.—The Turkish troops are still rapidly proceeding to the Greek frontier. Seventeen hundred arrived at Volo and Prevesa last week. A monitor has been towed to Prevesa to guard the harbor.

Athens, August 31st.—Official information has been received here that two leading Greeks at Janina have been arrested under the provisions of the state of siege. Their place of confinement is unknown. Greece has remonstrated.

Constantinople, August 31st.—The combined fleet of the European Powers is expected to arrive off Dulcigno about the end of next week.

London, August 31st.—The British corvette *Dido* intends to blockade the port of Brass, Guinea, on the 1st of September, unless the natives restore the oil recently plundered from a British vessel which went ashore in Brass River.

London, August 31st.—Right Hon. W. P. Adam has been appointed Governor of Madras, in place of the Duke of Buckingham.

Washington, August 31st.—Chief Brooks, of the Secret Service, received information to-day of a new scheme for swindling in vogue on the Mississippi. Some ingenious rascals have made photographs of greenbacks and circulated them in the back counties, among ignorant people, as new style Government checks. They discounted them, and then parties who took them circulated them a while, until they found their way into a local bank. The fraud not being detected they sent over \$19,000 worth to the Treasury for redemption, where the fraud was instantly discovered.

New York, August 31st.—There is good reason to believe that De Lesseps' Panama Canal stock will be placed on the market by a syndicate of American bankers in a few days, under the protection of the American Government.

The *Bulletin* says: Our private information confirms a cable dispatch announcing the definite formation of the De Lesseps Canal Company as imminent. It is probable, moreover, that the syndicate will embrace, that the syndicate will embrace the support of banking houses in this city and San Francisco. The bankers appear to have concluded that the prestige of De Lesseps as the successful promoter of the

Suez canal will insure sufficient subscriptions for the first issue of about 500,000,000 francs.

## HAWAII.

Honolulu, August 19th.—the island kingdom has passed through an important phase in its existence. The King executed a *coup d'état* in the interest of Celsus Caesar Moreno, a foreign adventurer and, under the pressure of the diplomatic corps, receded from his action. On Saturday the 14th inst., it pleased his Majesty to prorogue the Legislative Assembly which had been in session eighty-five days. Shortly after the prorogation each Minister received an order to resign his portfolio without delay. The excitement was very intense, more especially when it was found that the following had been selected as members of the Ministry: John E. Bush, Minister of the Interior, vice S. D. Wilder; Celsus Caesar Moreno, Minister of Foreign Relations, vice John M. Kapena; M. Kuna, Minister of Finance, vice S. K. Knai; W. C. Jones, Attorney-General, vice Edward Preston. The Ministers of the Interior and Finance were natives, the Attorney-General was an Ohioan, while the Minister of Foreign Affairs was a *chevalier d'industrie*. An indignation meeting was held on Monday evening, at which the following resolution was almost unanimously adopted:

Whereas, His Majesty Kalakana, King of the Hawaiian Islands, has arbitrarily and without cause dissolved the late Ministerial Cabinet while they had the confidence of the Legislative Assembly and of the country at large, and has appointed, in their stead, a Ministry including one Celsus C. Moreno, a stranger and foreign adventurer, who has identified himself with interests hostile to the prosperity of the Hawaiian Kingdom, and who has neither the confidence nor respect of the community, nor of the representatives of foreign Powers, as Minister of Foreign Affairs; be it

Resolved, That his Majesty has thereby acted inconsistently with the principles of the Hawaiian Government as a constitutional monarchy, as established and handed down by the Kamehamehas and their successor Lunalilo, and that his action therein is hostile to the permanence of Hawaiian independence, the perpetuity of the Hawaiian race and the security of life, liberty and property in the Hawaiian Islands.

About 1,500 persons were in attendance, of which number fully two-thirds were foreigners. The King, fearing trouble, had the palace grounds guarded with cannon, while the Hawaiian army slept for once a sleep that might awaken to war and bloodshed, something which this army has never experienced. The King was unwilling to give audience to any one, except through his Ministry, which was wholly under the control of Moreno. Committees appointed at various meetings would not recognize Moreno. There was at one time strong talk of placing Queen Emma on the throne. If any one who has the confidence of the natives had taken the lead, the present King Kalakana would not have remained on the throne. More than nine-tenths of the natives are against the King, but in favor of Queen Emma. The resident Ministers of the United States, France and England, held a conference, at which it was decided to request the King to appoint some one else than Moreno as Minister of Foreign Affairs. Yesterday the Ministers Resident notified his Majesty that they could not recognize his Minister of Foreign Affairs. At first the King was very stubborn, and declared that he would not recede if the affair cost him his crown. (The late Assembly voted \$10,000 to purchase him a new diadem.) However, after taking a nap, during which he had a dream, he ordered Moreno to hand over his portfolio, and notified the public of his action. Last night another meeting was held, when Celsus Caesar was requested to leave on the first vessel. There has been some talk of furnishing the ex-Minister with a free coat of tar and feathers. When Moreno heard of the threats he took leg bail, the Moreno Ministry favored, and those who could vote for, the Chinese subsidy, the \$10,000,000 loan and the Colonization, Free Rum and Free Opium bills. All these bills passed the Legislature except that for mortgaging the Hawaiian Island to China for a loan of \$10,000,000. The Legislative Assembly just prorogued also appropriated \$10,000 to purchase a crown for the King. The Chinese Subsidy bill pays \$24,000 to a China line of steamers and allows the importation of an unlimited number of Celestials. The total appropriation

made was \$2,500,000 for two years, which is a heavy burden when it is considered that the Kingdom has only 58,000 inhabitants.

## THE JAPANESE PRESS.

## GOVERNMENT RICE GODOWNS.

(Translated from the *Sei Dan*).

WE have been informed that as the farmers are at present the only wealthy class, owing to the high price of rice, it is proposed that one-fifth of the land tax shall be paid in rice in future, so that the wealth of the agricultural classes may be shared by others, and that the farmers will be compelled by this measure to sell their rice. We have been informed, also, that the Government contemplates establishing rice godowns in important centres, with the intention that when the price of rice goes up the stocks in these godowns are to be sold to counteract the rise. One of the Privy Council, we learn, strongly advocates this scheme, which is shortly to be considered. Mr. Godai is the originator and, if we are rightly informed, the supporter in the Privy Council is Mr. Inouye. This may be only rumour, but nevertheless we will make our comments on the report. Mr. Godai is the largest merchant in Osaka, well known in connection with the indigo trade, and Mr. Inouye was formerly a very influential merchant in Kioto, so that these two gentlemen should have some practical knowledge of the conditions of commerce and in foreseeing what will tend to further the interests of the community. Personally we understand nothing about the matter of rice speculation and so must be excused for any errors we may make when discussing the cause of a rise in the price of that commodity. We will, however, put before our readers the following points for their consideration.

Looking into the merits of the case, we find there are two questions to be asked, viz:—1st. Is the proposed remedy to benefit the Government or the nation? 2ndly. Would the proposed scheme, if put into effect, produce the desired result?

A man may have goods which he wishes to sell at a fair profit but, owing to pressure of circumstances, he is unable to wait and consequently is compelled to sell off at a loss. This tends to lower prices and other traders suffer. It appears to us that under the proposed scheme, when the farmers will have to pay in rice and are not allowed to tender paper currency, it will be decidedly disadvantageous to them, and will make the peasants also poorer, by destroying the market price of rice by the sales proposed. If they submit to such a measure, we pity them for their foolish and submissive character.

As far as the Government is concerned it is manifestly more to their interest to have the revenue paid in rice which is at a high value, than in paper which has depreciated so much. If, however, they establish these godowns and hold rice sales whenever the price rises (similarly to the line of action adopted by the Specie Bank) they may sometimes suffer loss, and will certainly incur the illwill of the farmers who might even resort to violence. Thus both the Government and the people would suffer, while the only persons who would benefit by the payment of the revenue in rice would be a few cunning traders. This is our opinion on the first question, let us now take the second and explain why the scheme would not succeed in checking the rise in the price of commodities.

It is a true and unalterable principle in political economy that the rise and fall in prices is a question of supply and demand. This applies to money equally as to other commodities. When money rises in price, and when it is scarce prices fall. The only difference is, that a change in the value of the currency affects other articles, while a similar alteration in the price of rice affects only that article. When money is plentiful, all commodities rise, as we said before; the community therefore suffer materially when the circulation of currency is not in good order, and we would direct the most careful attention of the Government to this important point.

After careful investigation, we find that this rise is not confined to specie and rice alone, but that there is not a single article of consumption the price of which has not gone up, a result evidently due to the large amount of paper on the market. An expert, who has been engaged recently in enquiring into the cause of the rise in the price of rice has, most erroneously, attributed it to the fact that the farmers have become wealthier and so do not hurry to sell their grain. This is, we consider, a one-sided view of the matter, the real reason

being that the depreciation of the paper currency compels the farmers to keep back stocks and wait for a rise. Rice, as is well known, if stored for any length of time becomes dry and breeds a kind of maggot which consumes it. With such a probability before them is it likely that holders wish to keep their stocks longer than necessary? It is a well known fact that as soon as the new crop is raised, the old rice is sold off, and it is therefore evident that should the paper currency regain its proper value, the price of rice would decline. Even when the new crop comes in we find rice advancing in value which can only be due to the depreciation of paper. When such depreciation exists, the price of an article to-day may differ materially from its value to-morrow; the more its market value falls, the greater is the correspondencing increase in the price of other commodities. This is the state of affairs in Japan to-day, but is it not truly deplorable!

From what we have said before, it is plain that the price of articles of daily consumption cannot resume their proper level, until steps are taken to remedy the present depreciation of the paper currency. The proposal to make the revenue payable in rice is short-sighted, and resembles an attempt to dry up a stream by baling it out instead of going to the source itself and stopping it up there.

Some time ago the Government, desirous of checking the rise in the value of specie, established a Specie Bank and supplied it with over 6,000,000 yen, but without any appreciable effect. Now it is proposed to open godowns at which rice will be sold whenever the market goes up. How can it be possible that even two or three million koku would be enough to meet the demand? Besides, other articles such as wheat, beans, salt, &c., &c., are subject to similar fluctuations, so that if the proposed scheme be carried out, we fail to see why Bean, Wheat, and such like Banks should not be eventually established, as we have already the Specie Bank and Rice Godowns!

### THE VERNACULAR NEWSPAPERS.

(Translated from the *Hochi Shinbun*.)

Any political centre always attracts men of education to it, and thus forms a source whence civilization springs. If political influence is equally distributed throughout the country, educated persons remain in their own homes, but if it is only found at the capital they all flock thither. Thus this centre of civilization rules the thoughts and ideas of the whole nation. In France, for instance, the capital is the centre of Government and so all men of learning are gathered there and civilization invariably spreads thence to the provinces; while in the United States of America on the other hand, the reverse is the case.

In the case of our own country we find that at the restoration, all the feudal princes were abolished, and the administrative power of the entire Empire vested in the hands of the Central Government, a course of events which drew all men of ability to the capital, as being probably the only place where they could obtain their political ends. Thus the capital has always exercised an influence over the thoughts and ideas of the people in the provinces.

Liberal opinions were first held, and the idea of the establishment of a National Assembly was first mooted in the capital, and afterwards discussed in the provinces where these ideas met with great approbation. The same has been the case with almost all the other affairs of the country.

When we take the statistics of the vernacular newspapers we find a similar state of affairs exists and the *Zu-Shio-Kioku* (Press Commissioner's Office) of the Home Department recently published the following:—

During the year 1879-80 there were no less than 192 newspapers existing, of which 80 were printed in the capital and 112 in the provinces. Between the 1st of July and the 31st of December 1879, 71 were started, of which 24 were printed in the capital and 47 in the provinces. Owing to various offences against the press laws. Forty-six publications were stopped during the same period, of which 17 were printed in the capital and 29 in the provinces. From January 1st to June 30th, 1880, there were published 71 the same period papers; 28 in the capital and 43 in the provinces, and in there were suspended 61 papers, 23 in the capital and 38 in the provinces.

The grand total amounted to 225 papers of which 92 were published in the capital and 134 in the provinces.

Arguing upon these figures we cannot assert that there are more papers in the capital than in the provinces, and on inquiry we find that periodicals prevail in number in the capital, while newspapers do in the provinces. According to the statistics published above, we see that at the end of last June there were 82 papers, of which 19 were published in the capital and 63 in the provinces. Considering the amount of the population, vernacular newspapers are not very numerous, although the present state of affairs is a vast improvement on the stagnation of former years. This march of intellect as before stated, started in the capital and thence reached the provinces.

It is a well-known fact that a follower takes his rôle from his leader. With a good leader the follower is good, and *vice versa*, so that a man's honour or shame depends on his choice of a leader. When we read the provincial newspapers we find some containing well-written and praise worthy articles, but others are full of disgraceful and immoral stories, and even, in some instances, of obscene pictures such as no parent or brother would care to introduce into the family circle. This has arisen from an attempt to emulate the papers published in the capital without first considering whether their line of conduct is correct.

However, there are newspapers and newspapers. We have some which treat of political matters, others which devote themselves to science and art, others again which deal with religion and such matters. Thus different journals are published with different intentions. A paper intended more especially for ladies differs greatly from a political, scientific, or religious paper, and rather resembles in style the French *Petit Journal*. It certainly publishes all official orders and notifications, but at the same time has no influence on politics. Its special line is matters connected with the human passions and worldly affairs, so that it is difficult to keep out such stories as we have instanced. We do not even blame a journal of this class for pursuing such a course of conduct, but we do regret greatly when we find even the political papers not free from the same bad habit.

Moreover, at the present time opinions on freedom and popular rights are being loudly ventilated. Taking into consideration the way in which our customs and manners have been altered, and how they are still to a certain extent in a state of transition, we consider it to be the duty of all editors of local newspapers to discuss fully, and weigh carefully, the merits of anything they may publish in their journals.

### LAW REPORTS.

IN THE U. S. CONSULAR GENERAL COURT.  
Before T. B. VAN BUREN, Esq., Consul-General, Judge.  
Messrs. A. S. FOBES and E. R. SMITH, Assessors.

*Tuesday, the 21st of September, 1880.*

SIDNEY M. SMITH, of San Francisco, by his Attorney F. C. SPOONER *versus* ISAAC BUSH and AUGUST LANDELFELD.

(Continued from the 7th instant.)

On the opening of the Court Mr. Hill asked for Midzutsune Takajiro who, however, did not appear. Mr. Hill then asked if some means could not be adopted to compel this man's attendance.

Mr. Litchfield said that this Takajiro was really not the man who did Mr. Bush's business, so that his non-attendance could not matter much.

His Honour said he considered that the man must certainly be produced. In the meantime Mr. Hill had better call any other witnesses he wished to examine.

Mr. Hill thereupon recalled

Morris Bieber, who stated:—I have been unable to find my books referring to kinsatsu transactions in December, January, and February last. I have been moving and they appear to have been mislaid. They were in the hands of Mr. Mendelsohn until about two months ago. When he gave them to me I put them in my desk. I don't know what has become of them. I do not think they were stolen.

His Honour:—I must tell you, Mr. Bieber, that this is the most silly, absurd, and marvellous statement I ever heard made in Court. I must have those books: such a story cannot pass credit here. I warn you again that those books must be produced. Your last search may have

proved unfortunate; please let the next one be more fortunate.

Witness continued:—The broker that I dealt with was named Itoya. He formerly lived in Benten Dori, but now resides near the gas-works.

Isaac Bush, recalled, said:—I don't know Itoya. I went to his place but don't know if I saw him or his banto. I went to ask about Mr. Takajiro because Mr. Itoya was a broker. I could get no information of any kind. I have known the Mr. Takajiro mentioned only since the suit began. I was looking for a Mr. Takajiro and was told to go to him. I asked him if he knew anyone else of the same name. Since that, I have bought about \$10 worth of kinsatsu from him. Since I was first examined I have received no money from anyone. I have gone in debt a little. These are the only dealings I have ever had with Mr. Takajiro. I went to his house as described; it was the first time I ever saw him. I am prepared to swear that I have done my best to find out the man with whom I speculated. When I went to Itoya's house they laughed at me; I don't know why. I asked him if he knew a Mr. Takajiro who was a commission broker, and he looked at me and laughed. I could get nothing out of them.

Cross-examined by Mr. Litchfield:—It was in consequence of your request that I made these inquiries. I was told that there was a man of the name of Takajiro in Otamachi, gochome, formerly. I asked when he left but could not find out.

By Mr. Hill:—It was an Otamachi broker who told me that there was such a man. The last time I saw the broker Takajiro with whom I dealt was about the 10th or 12th of March, in my own premises. There was no settlement; he threatened to sell me out if I didn't pay up what I owed. I asked him to wait a few days as I was in straitened circumstances.

His Honour here read the communication he had received from the Kenrei as to what had been the result of the investigations as to where the man Takajiro had been living.

Mr. Hill said this was undoubtedly the man who had done the transactions.

Examination continued:—I feared he would sell me out. I could not pay my margin and he threatened to sell out the bonds of the kinsatsu remaining. He wanted, on this occasion, an additional margin of 800 yen. Kinsatsu fluctuated then sometimes 3 and 4 per cent in the course of a day. I did sometimes three or four transactions in a day. I never dealt with him anywhere except in my house. I have never boasted among my friends of having a large sum of money which no one could take from me. I have put off Japanese who threatened to sue me by saying that I had some money coming from San Francisco.

Mr. Hill:—You remarked last night, I believe, with some triumph, that the man summoned by the prosecution was not the right man and that therefore the case would break down.

Defendant denied this, saying:—I have no one visiting my house at night to whom I could have made such a remark.

Imada Tei, the member of the shosha, recalled, said, through the medium of Mr. G. W. Elmer, who interpreted:—I have examined the books of the shosha and prepared the abstract required of me at the previous examination. The total transactions of Mr. Takajiro with the shosha in the three months mentioned were thirty-four: he bought thirty-four times and sold thirty. I have not added up the total of the amounts. (Abstract in Japanese prepared by the witness put in as evidence and marked plaintiff's Ex. Q). The witness here identified Midsutane Takajiro, who had just entered the Court.

Examination continued:—I do not know any other broker or jobber of the name of Takajiro. I never knew of a broker named Takajiro living in Otamachi gochome.

Mr. Litchfield asked no questions.

Midsutane Takajiro, warned said:—I lived formerly in Ai-oi-cho, gochome, but now I live in Benten-dori. I left Ai-oi-cho on the 2nd February. I lived previously in Minami-naka-dori at a confectioner's, and before that in Tokio. I never lived in Otamachi, gochome, but in the next street to it. I never knew any other man of my name living in Otamachi. Since my arrival from Tokio, I have always registered my place of abode with the authorities.

His Honour asked how it was that the Kenrei had informed the court that he lived in Otamachi, gochome.

Witness:—The Governor's statement as to my residence is in error. I know the shosha broker Imada Tei by sight but not to speak to. I have seen Mr. Bieber, when he looked in to ask the price of satzu. I don't know much of Mr. Bush, except that he has looked in similarly and sometimes changed \$5 of \$10. Mr. Bush and Mr. Bieber once came together to my house and bought \$1,000 paying in satzu. I got the dollars from the shosha. Mr. Bush paid me the money. I think the discount was about 37 or 38 then. It was in the hot weather; I think in May this year. I may have a record but don't know. Mr. Bush and the young man, his nephew, frequently came to my office. They sometimes bought \$10 or \$20. I don't recollect any transactions with them before I removed to Benten-dori. On the occasion of the transaction of the \$1,000 there was no one present but Messrs. Bush and Bieber and myself. I think now, instead of Mr. Bieber, it was Mr. Bush's nephew. At the time, Mr. Bush did not negotiate for the transaction of a larger amount. I do not know if I can tell from my book the exact rate of exchange. I think I could give the date.

Cross-examined by Mr. Litchfield:—I think it was Mr. Bush who paid the money. I know him and his nephew equally well. At the time of the transaction mentioned in May, there was some dispute about commission between myself and Mr. Bush's nephew. They were both there.

By His Honour:—I don't think I ever had any transactions with the defendant before. I have never been to Mr. Bush's house. I don't even know where it is. I never heard in the shosha of transactions in Mr. Bush's name, but I know he had some; they were done in the name of Iwaya, through the medium of his little servant boy. I do not know of Mr. Bush having any transactions in December, January, or February. Iwaya's address is at an exchange shop in Otamachi, Ichome. His full name is Shiga-shiyama Jubi. Iwaya is only the name of the house in accordance with Japanese custom. He has lived there for over ten years. I don't know of any broker or exchange in Otamachi, gochome, now; there was a broker living there last year but I don't know his name. It was close to the photographer's at the corner of Otamachi and Bashamichi. I think he was there until June this year, but am not certain.

Mr. Hill said he left it to the Court if it was not most important to call for this broker Iwaya, or his small servant.

His Honour:—I consider it of the utmost importance that the man Takajiro, through whom the defendant asserts he carried on his transactions, should be found: (to defendant's counsel) it is a truly marvellous thing that, considering the system of espionage and record that is in vogue among the police in Japan, this man cannot be found. It must leave a strong impression that such a man never existed.

Mr. Litchfield:—We find that a stockjobber of that name did lately live at Otamachi, gochome, who has recently disappeared and left no traces, as the circumstances of his flight were decidedly equivocal.

His Honour:—It seems to me to be marvellous, that transactions involving hundreds and thousands of dollars could have taken place without the defendant Bush knowing even the name of the party by whom he was doing these transactions. I can understand the fact of the books being badly kept, but the idea of dealing to such an extent with an utterly unknown man seems to me to be most strange. I do not say that the story is untrue, but it requires very great confirmation. A large sum of money disappears, and the defendant's only explanation is that he gambled it away in kinsatsu speculations. This excuse is reprehensible, but perhaps the act is not punishable by law. It must still, however, be shown that such kinsatsu transactions did occur, and every effort must be made to find out the man who did the defendant's business. I think it would be best to adjourn the case, and I will give the Kencho all the information that has come out in evidence to-day, and ask them to make further inquiries.

Mr. Hill said he would take the opportunity to say that he himself had spent three several half-days in looking up this man Takajiro who, however, had evidently been tampered with and would neither see him nor an employé of his, a Japanese, though he admitted that he had seen the

defendant and his nephew frequently of late, and it was evident, as he said before, that they had been tampering with him.

Mr. Litchfield said Mr. Hill had no right to make any such assertion.

His Honour adjourned the Court until Friday, the 24th instant at 10 a.m.

*Friday, the 24th day of September, 1880.*

Mr. Hill appeared for the plaintiff; Mr. Litchfield for the defendant Isaac Bush, and Mr. Langfeldt appeared in person.

On the reopening of the Court His Honour remarked that he had received information from the Kenrei, that they had not been able to find the three men applied for after the last sitting of the Court; the Otamachi broker, however, had been found, and was ordered to attend the Court; he apparently had not arrived.

Mr. Hill said that he believed that Mr. Bieber had not brought his books, but had prepared some notes on the subject of his kinsatsu transactions.

Morris Bieber, recalled said:—I could not find my books, so I have obtained some memoranda from my broker Itoyn, who has a place in Otamachi near the railway station. I copied my transactions from what his banto read from his books. He read it out in Japanese and I noted it down in English and now present it to the Court. I believe it to be correct.

Mr. Hill explained that he had called for this statement to establish a point. He wished to show from the transactions of Mr. Bieber, who was speculating in kinsatsu at the same time as Mr. Bush, how large an amount was necessary to cause such losses as were alleged.

The witness at counsel's request looked over his figures, and then stated that in December he had transactions to the extent of 75,000 yen and, in February, 45,000 yen, and continued:—My total losses on these transactions in December and February amounted to 8,800.50 yen, and the profits to 174.20 yen. These profits were paid to me when balances were struck so that my entire loss is 3,626.30 yen. I consider that 138 discount would be a fair average of the rate during the time. I have never dealt with anyone but my broker Itoyn.

Cross-examined by Mr. Litchfield:—When Mr. Mendelsohn wanted my original accounts I had to go to my broker for duplicates. I did most of my transactions in my own place. I relied on my broker's discretion as to the sales: for purchases I always made my own order.

Louis Seidenburg, recalled by the defendant's counsel, said:—I heard the testimony of Midsutane Takajiro as to the purchase from him of \$1,000. I can't give the exact date of that transaction, but as near as I can remember it was early in June. I myself and Mr. Bush's son were present, and the broker's family. As far as I know he went to the shosha for the dollars. I sent Mr. Bush's boy after him to see if he really went, and remained myself at the office. He wished to charge a commission because he had to buy the dollars at the shosha; I said it was none of my business where he got them. I wanted them at a certain rate. However, I agreed to the commission at last. I bought one thousand dollars worth of kinsatsu from a broker named Iwaya living in Otamachi, Ichome. I believe it was in the morning. The dollars I used were my own, that I had made in the last eighteen months, in the employ of Mr. Bush. My salary was \$75 per month and everything found.

Cross-examined by Mr. Hill:—There may have been four or five hours time between my buying and selling on that occasion. I had the \$1,000 in notes of both large and small denominations. I had some of them for a long time as I used to put money away to do a little business of my own when I got an opportunity. I did this just as a speculation on my own account, as I expected to make twenty or thirty yen. I speculated afterwards in smaller amounts. This was the only time I ever dealt in so large an amount. I made a profit of only two yen minus commission, which was 4/10 of one per cent, on the transaction. I never had any banker in Yokohama but have always kept my money myself. I never saw the Takajiro with whom Mr. Bush speculated.

By the Court:—I got part of my \$1,000 from Mr. Bush; it was my salary which had been accumulating. It was in March. I don't remember what bank the notes were on. When I bought the dollars from the broker he paid me in

notes, but I don't know if they were Japanese or foreign bank notes.

To Mr. Hill:—I have not got all that money now as I have lent part to Mr. Bush. I lent him \$650. Takajiro's evidence was false about Mr. Bush being present at the time of the \$1,000 transaction. Part of my money was a draft of \$200 which I received from San Francisco.

Shigashiyama Jubi, warned, said:—I am connected with the firm of Iwaya, in Otamachi, Ichome. The house has been established for over eleven years. I recognize the gentleman standing up as Mr. Bush. He first came to my house in the early part of the year with Mr. Bieber. Inquiries have been made at my house from the police court recently about foreigners' transactions in kinsatsu. I know Mr. Seidenburg too; he came to my place with Mr. Bush and Mr. Bieber. I never had any transactions with Mr. Bush except in changing small sums of \$5 or \$10. Sometimes all the three came to my place. I never had any large transactions with any of them. The greatest amount I ever did with them was one of \$1,000, which Mr. Bush and a young person not now in Court bought with notes issued by the Second National Bank. I am quite sure it was Mr. Bush who bought them. Only myself and my father were in the room at the time. Such a transaction would not be entered in our books. It is merely an exchange. I think it was the first time Mr. Bush ever came. I do not recollect the month but it might have been in March or April. I do not know Mr. Bush's house. I know him by sight only. I have not talked over this transaction since I was told to come to Court, with anyone.

His Honour:—The Kenrei has informed me that in time they will certainly be able to discover the broker who formerly lived in Otamachi. It is very important that the broker who executed Mr. Bush's kinsatsu transactions should be examined. It is in fact essential that he should be found.

Mr. Hill:—I have made the utmost exertions in my power to discover this man and have had several men engaged in the search. If there is any prospect of finding the man eventually, I am quite willing to agree to any delay, if it is requisite.

Mr. Litchfield said that his client did not wish any delay unless it was necessary.

His Honour recapitulated the facts of the case as follows:—The defendant, having incurred certain debts finds himself unable to pay, and consequently makes an assignment. When a suit is commenced, his creditors find a vast discrepancy between the money received and the goods purchased. The plea set up is, that the money was lost in kinsatsu speculations, but yet the defendant does not know the house of the broker, or even his name, beyond its being Takajiro, which is equivalent to our saying "I know Jack." This is a most unsatisfactory reply. Such transactions, involving as they did thousands and hundreds of thousands of dollars, must surely have been done through some man of responsibility. I know very well that people went off their heads during the time of the kinsatsu speculations, but I cannot believe any one could have been so crazy as to throw his money into the sea in such a manner. As the matter stands now, the creditors are entitled to a fair explanation, which has not yet been made.

Mr. Litchfield:—At the time when the assignment was made, Mr. Bush informed his creditors that he was in difficulties owing to kinsatsu speculations. The suit was based upon that very information. If Mr. Bush had a sum of \$10,000 hidden away, it would have been far more in the character of a rogue to pay up his debts, realize the goods, and then bolt to San Francisco.

His Honour:—It seems to me that that would be out of the frying pan into the fire. If, as is alleged in the petition, there was fraudulent dealing, what would be easier than to plead as the defendant actually has done—"I lost the money in kinsatsu speculations." I say once more, without referring to the merits of the case, that it is of the utmost importance to Mr. Bush to find out this man who conducted such enormous transactions for him. The knowledge of the Japanese officials about every single person in the Empire is so marvellous, that it is a very suspicious circumstance that this man, who is asserted to have done so much business in the shosha, should not be known and cannot be found.

Mr. Hill applied for a more strict surveillance of the defendant Bush. Without saying any more, he would ask for

an adjournment, and that Mr. Bush might be committed upon the evidence taken to-day.

Mr. Litchfield said that such a course was quite unnecessary, as Mr. Bush had no intention of leaving before the case was terminated.

The motion was not allowed, and the Court adjourned until Friday next, October 1st, at 10 a.m.

### LADY JOHN.

It was a very foolish habit of the noble lord's, but you know young men will be young men, even though the senatorial character attaches to them. Nearly every day during the session he made his way down to Westminster from his rooms on the north side of Kensington Gardens, going very regularly, and coming back very irregularly, like most of us. Sometimes he rode the chestnut down, sometimes he cabbed it, but in the soft summer weather he was wont to walk through the Gardens, down by the Row, and through St. James's Park. If he walked, his way always took him close to a very well-known mansion. It was certainly a very foolish habit of the noble lord's, and he so sensible too!—a man who had served creditably on Committees, and on one occasion had put some stiff questions to the Home Secretary.

Of course, there was a woman in the case. That goes without saying, naturally. She was a very pretty girl. In the warm soft summer evenings, in her well-fitting dress, with her glorious brown hair and eyes, and her perfect figure, she struck him as being very beautiful. Ah! why was he not content to look upon her as he did upon the flowers and the birds? He was, as it were, a Lord of Burleigh "and a village maiden she."

She was but a servant—in fact (I blush to record it) a lady's maid, and had come away from the lowly home down in Gloucestershire to take service with the Squire's wife in the Squire's town house. Now I have no wish to speak disparagingly of any near-handed Phillis. I do not forget how favourably Horace looked upon the class. Once in an ordinary London household there were two servant girls, and one became Mrs. Siddons and the other Lady Hamilton. Doubtless there are splendid possibilities dormant in such a class: but once more I must reiterate my opinion that it was a very foolish habit of the noble lord's, when he took his walks abroad, to go so persistently in this particular direction.

After a time he was always going that way! That artful lord got the key of the square, which any outsider might get. He came to know the time in the afternoon when there might be a chance of seeing her. Sometimes he would desert his public duties for the laurel groves of Baywater and the shady walks in Kensington Gardens. What was it that so completely fascinated his senatorial wisdom? Laura had a quick appreciative mind. She listened to him with an enthusiasm and devotion, which was certainly not the case when he talked to the men at the Club or on the rare occasions when he had caught the Speaker's eye. The value of that appreciation was certainly lessened in his mind when he found his young woman reading a "penny dreadful." He gave her a suitable book in exchange for the *Wendy Warbler*, and was delighted to find that the girl both read and understood it. Somehow she really liked this young man, with his big, gleaming eyes, his low voice, and his somewhat haughty looks for all but her. She had no idea who he was, and often wondered how he had so much time to spare at all hours of the day, and marvelled how he could be spared from his office, or warehouse, or shop, whichever it might be. She took it for granted that he had his work in the world, and rather put him down in her own mind as a commercial traveller. There were not wanting among the aspiring youth of the neighbourhood young "gents" of an amatory turn, sporting glossier hats and much louder trousers. But there was something about John that pleased her better than the would-be "followers," although one or two of them were no doubt better off in the matter of raiment. But Laura argued, with a simple feeling derived from her village school, and not appertaining to this wicked town, that money was not *everything* in a sweetheart, and that it was better to be "nice." In her way she played the part of a Marguerite, but Lord John was not a Faust, neither, as good luck had it, was he counselled by a Mephistopheles. Anyhow in the most artless way, or, if you prefer it, with the highest art, she exactly met the requirements of his self-love: and he was fooled and flattered, perhaps unconsciously on both sides, as the wisest men have been, to the top of his bent. And so it happened that sundry little familiarities passed between them.

And first a hand, and then a lip he kissed;  
For my part to such doings I'm a stranger.

Hot day "out" duly came, and our noble M. P., of unsettled mind and purpose, volunteered to make it a pleasant holiday for her. This rustic rose from Gloucestershire had seen nothing of our western suburbs. He told her that his engagements took him to the western part of London. He had not defined to himself what he was doing or whither he was going. Her own idea was that he was careering about for "orders," and it would have more than satisfied her ambition if he had driven to meet her with a flashy dog-cart and a broken-kneed horse. But they went in a hansom to the South Western Railway, and had a charming day at Kew, Bushey, Hampton Court, Richmond, and Twickenham. To Laura it was simply enchanting. Everything seemed to turn to golden pleasure as if at the touch of a magician. The only magic was that the young nobleman knew the localities perfectly well, and, of course, was not at all half-witted. He had planned all the details most carefully. At Kew he was staid; there was a carriage at hand, or the brougham was exchanged for a luxurious boat. But she liked quite as well to be leaning on his arm, wandering by the riverside, beneath tall arcades

of trees, or among fountains and flower-beds. Of course they went into the maze, with which piece of ingenuity the girl was vastly entertained. They had a modest luncheon, but there was a brilliant little dinner at the Star and Garter, ordered of Mr. Hunt by telegraph. In the grand sunset and twilight hours they wandered into the park, and from the terrace looked down on the windings of the magnificent river and the vast rich land beyond, overshadowed by the tender mysterious gloom of the summer night.

She had enjoyed that glorious day innocently and keenly. Her companion enjoyed it too, in his own quiet way. It was nice to be with this pretty, trusting, little pleb. But he had his anxieties and his pricks of conscience. What was he doing? and whither was he tending? He began to suspect that, with all his senatorial wisdom, he was a rather silly young man; which was perfectly true.

"Oh, this is too delicious—too lovely—too HEAVENLY!" she murmured, leaning her head on his shoulder. "I am happier to-day than I have been all the other days of my life put together!"

"Yes," he said, as he drew her to him; "but the mischief of it is, Laura, that such happiness doesn't last for ever, my girl."

"Oh, of course, my pet, when we are settled," she answered (his face was a study as she used that business-like, old-fashioned expression), "we shall only be able to afford such a holiday as this once or twice in a way. I am afraid, my own, that I have taken up so much of your time lately that you have been able to do very little business."

With all his faults he was as straight as you like, and had never acquired the sublime arts of using language to conceal his thoughts.

"What I mean, Laura, is that you and I must not trust ourselves any more to spend long days together. We are getting a great deal too fond of each other, little girl."

"John! what do you mean?" she asked, with sweet simplicity, her ideas of keeping company experiencing a frightful *boomerang*.

"What I mean," said the young noble, in a fit of desperate calmness, "is that I shall always like you, always care for you, will be your brother, your guardian; but there must be no more kissing and clasping like this," and he brushed her forehead with his moustache.

For a moment her maiden pride was touched and hurt; then she divined the full meaning of his words.

"Oh, John, you are never going to desert me!" she cried, and flung herself on his breast. "Why cannot we go on loving and walking out together for ever so long! We need not marry until we have saved ever so much money."

"My darling, I know what is best—what is best for both of us."

"John, if you don't marry me, I'll never marry any other man; I will never trust any human being in the world again. I will never even speak to a man, if I can help it, as long as I live!"

She burst into a passion of tears and expostulations which set off her real beauty. How does a young man wipe away such tears and console such sorrows? You know as well as I do. As they came back to town by the last train she was clinging closer to him than ever, and the conviction dawned upon his mind that he had really plighted himself to her for once and for all!

It so happened that the next day Laura was sent to do some shopping in Regent Street. As she was returning, seeing a crowd in front of a photographer's shop, she, too, went up to the windows where a good many new photographs were being exhibited. She could hardly trust her senses when a "photo" caught her eye bearing an astonishing resemblance to John. Going up very close and scrutinising it carefully, there could not be the slightest doubt about it. It was he, and underneath was written in pencil "Lord John Fitzhugh, M.P.!"

In the midst of his love affairs poor John had perpetrated another speech, and a much more clever one than he had ever made before. Perhaps it was all the love business. Anyhow, an enterprising photographer of a political turn of mind had reflected that it might be worth while to put him in the window for a day or two, merely "on spec."

Poor Laura! She was greatly perturbed. She had never suspected anything of this kind for a moment. She would have much preferred that her lover had been ever so far down in the opposite scale. There was a new significance in his words that happy night at Richmond.

"No, John," she said, crying very fast but very silently. "I see it all now. Of course, you must marry a lady. I should be doing you harm, not good, if I married you, and I would not do that for all the world. But, all the same, I know—oh! I know I shall break my heart. I shall never marry anyone else. I am only a poor village girl, and you are the son of a great lord."

"But I am not the eldest son," artfully pleaded John, in extenuation of his fault. "I have twin brothers (one of them with a whole lot of 'kids') before me, and I shall never be anything more than I am."

She had a true woman's generosity in her nature, and meant what she said. He also knew how to be generous. It was a tendency which he had inherited from a hundred generous ancestors since our history began. Under certain circumstances it was clear how a man of weak purpose and sensitive conscience would act. The fatal mistake was that he had weakly wandered into that out-of-bounds flirtation.

So they were married. There was a faint attempt to give her some varnish of education before that event came off. But the attempt did not last long. Of course, it was a great mistake. It is hardly possible to exaggerate the gravity of such a perfectly dreadful error. All the world soon knew of that blunder which was "worse than a crime." And having to live with an uneducated woman, the noble lord probably recognised the mistake more completely than anyone else did. It must be said, too, that those good qualities which she showed were genuine; never had man fairer or a more loving wife, or one who believed more thoroughly in

him. Which things were exactly suited to Lord John's temperament. Perhaps on the whole such companionship was better than if his conscience had been haunted by an ugly spectre of guilt and remorse.

The great world had, of course, made up its mind to cut Lady John Fitzhugh dead; but in nothing is the world more inconsistent and capricious than in such determinations. The Foreign Secretary sent Lord and Lady John an invitation to dinner; and a great duke, whose verdict was simply irresistible, declared that she was the only woman present who was worth looking at and talking to. She never became a great "swell," of course, with an immense number of fashionable friends; still she had her visiting book all the same, and more invitations in town and country than she could accept.

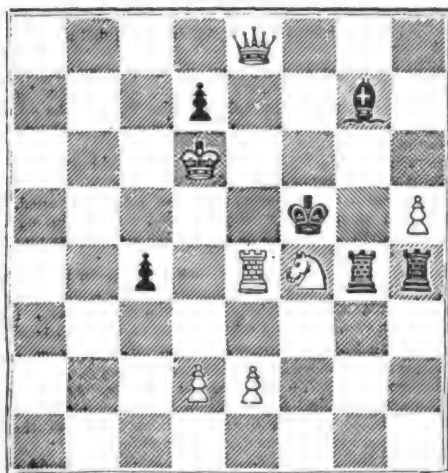

"And what did you think of my Lady John to-night?" asked Taper of Tadpole, as they were coming from a party in Park Lane, where her innocent loveliness had excited much admiration.

"Well," said Tadpole, "she may be good-looking enough, but I could hardly get a syllable out of her. I never met with anyone more scornful and reserved. Look here, Taper, my boy, I am a man of the people and, as Gladstone says, think we are all one flesh and blood, and hate all such d—d aristocratic, haughty ways!"—*Whitehall Review*.

## METEOROLOGICAL REPORT

FOR WEEK BEGINNING FRIDAY, SEPTEMBER 17TH, 1880.  
Observatory of Daigaku, Moto-Fujiicho, Hongō, Tokio, Japan.

## REMARKS.

Heavy line represents barometer.  
Light continuous line—max. & min. thermometers.  
.....represents velocity of wind  
.....percentage of humidity

Max. velocity of wind 19.0 miles per hour on Thursday, at 6 p.m.  
The barometer is reduced to the freezing point and to the level of the sea.

The highest reading of the barometer during the week was 30.080 inches on Friday, at 10 p.m., and the lowest was 29.646 inches on Thursday, at 2 p.m. The characteristic feature of the weather during the entire week, culminating in a maximum of 89° on Thursday. The lowest temperature was 60°-7° on Friday. The maximum and the minimum for the corresponding week of last year being 81°-8 and 59°-9 respectively. On only two days during this year has the temperature been higher than that of Thursday. Only a trace of rain is recorded against a total amount of .745 inches for the corresponding week of last year.

## SHIPPING INTELLIGENCE.

## INWARDS.

Sept. 19, Japanese steamer *Shinagawa Maru*, Walker, 908, from Hakodate, Mails and General, to M. B. Co.  
Sept. 20, French steamer *Volga*, Guirand, 1,502, from Hongkong, Mails and General, to M. M. Co.  
Sept. 20, Japanese steamer *Wakamatsu Maru*, Christensen, 1,343, from Kobe, Mails and General, to M. B. Co.  
Sept. 18, Russian corvette *Zabiaka*, Captain Lomon, 1,050, 6-guns, from Nagasaki.  
Sept. 21, British steamer *Oceanic*, Metcalf, 2,440, from San Francisco, Mails and General, to O. & O. Co.  
Sept. 22, British steamer *Malacca*, Seaton, 1,046, from Hongkong, Mails and General, to P. & O. Co.  
Sept. 22, German schooner *Solide*, Weise, 162, from Takao, Sugar, to Sung Ho & Co.  
Sept. 23, Japanese steamer *Tokio Maru*, Swain, 1,146, from Shanghai and ports, Mails and General, to M. B. Co.  
Sept. 23, British steamer *Stentor*, Kirkpatrick, 1,350, from London via Hongkong, General, to Butterfield & Swire.

Sept. 23, British steamer *Escambia*, Wildgoose, 1,401, from Kobe, Tea, to Mourilyan, Heimaun & Co.  
 Sept. 24, Japanese steamer *Tokai Maru*, Hogg, 1,042, from Kobe, Mails and General, to M. B. Co.  
 Sept. 24, Japanese steamer *Kokonoye Maru*, P. Dithlelsen, 1133, from Hakodate, Mails and General, to M. B. Co.  
 Sept. 24, German 3-masted schooner *Hecht*, Ploetz, 358, from Takao, Sugar, to Jardine, Matheson & Co.

## PASSENGERS.

Per French steamer *Volga* from Hongkong:—From Marseilles:—Messrs. Takaki, Matsubashi, Amati and Tonache. From Naples:—Messrs. Imberti, Vignano, Moretti, Guidotti, and Gerosa. From Singapore:—Mr. Teale. From Hongkong:—Mr. Otto.

Per Japanese steamer *Wakanoura Maru* from Kobe:—(General Stahel and 4 Japanese in cabin, and 100 Japanese in steerage.

Per British steamer *Oceanic* from San Francisco:—Rev. and Mrs. F. W. Chapin, Rev. and Mrs. W. H. Shaw, Mr. and Mrs. D. H. Marshall, Mr. and Mrs. Ludwig, Mr. and Mrs. E. R. Woodway, Rev. Dr. Sheffield and family, Dr. H. R. Peck and family, Miss Brittan, Miss Jackson, Miss E. Louisa Kellogg, Miss E. W. Garrelson, Miss Smith, Messrs. J. B. Jackson, Marcus L. Paft, J. J. Meyer, C. F. Maude, Morris Gray, E. Cozens, Smith, and 6 Chinese in cabin. For Hongkong:—Miss N. Egerton, Dr. J. C. Fisher, and Mr. H. Gaust in cabin; 251 Chinese in steerage.

Per British steamer *Malacca* from Hongkong:—From Bombay, Mr. J. Arthur in cabin. From Hongkong, 11 Chinese in steerage.

Per Japanese steamer *Tokio Maru* from Shanghai and way ports:—Mr. and Mrs. Rodewald and two children, Mrs. Minami, Mrs. Viele, Miss Tillson, Messrs. Deville, F. Meyerdircks, and Prichard, and 18 Japanese in cabin; 2 Europeans, 6 Chinese and 215 Japanese in steerage.

Per British steamer *Stentor* from London via Hongkong:—Messrs. Edger and Fachmann

Per Japanese steamer *Escambia* from Kobe:—18 Japanese in steerage.

## O U T W A R D S .

Sept. 19, American steamer *City of Peking*, Berry, 5,079, for San Francisco, Mails and General, despatched by P. M. S. S. Co.

Sept. 20, German Brigantine *Julianur*, Acostmann, 196, for Takao, Ballast, despatched by Chinese.

Sept. 20, Japanese barque *Sumanoura Maru*, Spiegenthal, 925, for Nagasaki, Ballast, despatched by M. B. Co.

Sept. 19, Japanese steamer *Kumamoto Maru*, Drummond, 1,240, for Hakodate, Mails and General, despatched by M. B. Co.

Sept. 20, Russian corvette *Zahiake*, Captain Lomon, 1,050, 6-guns, for Nagasaki.

Sept. 21, French corvette *La Rance*, Captain Dange, 1,326, 6-guns, for Saigon.

Sept. 22, Japanese steamer *Hiogo Maru*, Moore, 896, for Hakodate, Mails and General, despatched by M. B. Co.

Sept. 22, British barque *Irvid*, Petersen, 238, for Nagasaki, Ballast, despatched by P. Bohm.

Sept. 22, Japanese steamer *Hiroshima Maru*, Haswell, 1,200, for Shanghai and ports, Mails and General, despatched by M. B. Co.

### THE APPEARANCE OF KAKKE IN SINGAPORE AND SAN FRANCISCO.

**M**OST of our older residents are familiar, at least by name, with the disease known to the Japanese as Kakke, and generally believed to be identical with the Beri-beri or "bad sickness" of Ceylon, India and the Malay archipelago. Up to 1866 this disease, though recognized and described many years ago by English, French, and Dutch writers on the diseases of the East, was believed to be strictly confined to the Orient. In the year mentioned, Dr. Da Silva Lima, of Bahia, called attention to its appearance in certain districts of Brazil. His papers having been published, however, in a local and little known journal attracted no attention until republished in book form in 1872. It is now known that Beri-beri is endemic in Brazil where, as in Japan, it sometimes prevails as an epidemic with a high rate of mortality, as has been the case during the past year in several districts of the South American Empire. Fifty years ago the disease in question was the curse of the European soldier serving in certain parts of India and the Malay archipelago, while it often raged on shipboard to such an extent as to disable entire crews. At the present day, however, Europeans are but rarely attacked, an improvement probably due to the increased and more intelligent attention paid to hygiene both in camp and on shipboard. Where within the habitat of the disease, but of insufficient food, impure water and a crowded prison are thrown into the scale, there we may anticipate its appearance even in the European. Such seems to have been the origin of the recent outbreaks in the gaols of Penang and Singapore,

which have been dealt with at length in the report of Major Grey who is in charge of the penal establishments referred to.

In this report Major Grey gives a return of the death-rate in Singapore gaol, and announces that Beri-beri has broken out in the Penang gaol. The disease is said to have appeared shortly after the arrival of 200 prisoners from Singapore, and as it had never manifested itself in Penang before, there can hardly be any doubt that it was imported from the sister settlement, where it has existed for some time. This mysterious ailment has up to the present baffled all medical skill, and the deaths from it have been woefully numerous. According to the report of Major Grey, the prisoners in the Singapore gaol died at the rate of 18 per 100; a very large mortality, and one sufficient to cause considerable excitement among the public. A large proportion of the deaths resulted from Beri-beri, and it is surprising to find the local authorities transferring prisoners from an affected place to one which, up to the advent of the prisoners from Singapore, had enjoyed perfect immunity from this last of prison diseases. The Penang gaol has had enough troubles of its own without being subjected to others from outside. The outbreak of cholera in 1877 is not yet forgotten. At that time the epidemic raging in the town spread to the prison, and was so fatal that the Government decided on releasing all the short term prisoners, and moving the rest into the new gaol, notwithstanding the fact that it was not finished. Over 200 criminals were marched from Chow Rasta, almost at a moment's notice, and lodged safely in the prison erected on the old burial ground adjoining the hospital. It was a dangerous experiment, but fortunately ended well, owing to the strict guard kept by the European sentries detached for that duty. Since the transfer there has been little or no disease, and the separate cell system adopted in Penang worked well, after the first excitement among the prisoners at being located on the site of a graveyard had subsided. In Singapore things were not so pleasant. The prison authorities had to contend with the disadvantage of an unsuitable style of building and the bad system of association. Constantly plots were discovered, the natural outcome of massing prisoners in one room, and the fœtid atmosphere of the crowded apartments led to serious outbreaks of disease. At last Beri-beri appeared on the scene, and something more than decimation has resulted.

The pathology of this insidious disease is but little understood. Earlier investigations at the time when Europeans were its frequent victims, were roughly conducted and sterile of results; while, at the present day, opportunities of thorough postmortem examination are but rarely and with great difficulty obtained. Certain facts are, however, well established:—

1st.—That the disease is not only limited to certain countries but, within those countries, to well defined and often very small districts, removal outside of which affords the best treatment of ordinary cases of the malady, recovery

under these circumstances often taking place with astonishing rapidity.

2nd.—That the disease depends on some peculiar poison analogous to, but not identical with, that of malarin; probably originating in the soil, but diffusible either by the atmosphere or by water. Bad food or water, and other depressing causes acting merely in predisposing to its attack.

3rd.—That, at the present day, the European in the East has little tendency to contract the disease.\*

4th.—That, once contracted, the disease under favourable circumstances, tends to reappear year after year, should the patient survive its first outset.

The recent appearance of Beri-beri among the crew of the Brazilian man-of-war *Vital d'Oliveira*, during her voyage from Yokohama to San Francisco, is a most interesting fact in the history of the disease. Were the eighteen men suffering from Beri-beri sent to hospital on the arrival of the ship, relapsed cases of disease, originally contracted in Brazil, and stimulated to active manifestation by fresh infection while in Yokohama? or are the cases new ones, indicating that certain races only have a susceptibility to the disease—the Brazilian being of the number—and contracted while in Yokohama, or from infected water shipped at that port?

While the disease is not contagious in any sense, it is no doubt infectious in the wider meaning of the term, and there are facts tending to prove that it may be transported from one country to a second where it was previously unknown; and, finding favorable circumstances in the latter, there become endemic. It is to be hoped that the Beri-beri will fail to find in the United States the necessary condition for its progressive development. Should it do so, an important and lamentable addition will be made to the list of endemic maladies in the next census report of the Great Republic. We believe that during the voyage of a Japanese man-of-war to San Francisco a year or two ago, there was an outbreak of *Kakke* on board: these cases, however, do not appear to have come under the observation of the resident physicians of San Francisco and, it is probable, were not landed at that port.

#### A VICEROY'S PROJECT.

NO trustworthy accounts have been received from China concerning Admiral Lessoffsky's mission to Peking and its objects.

That China can do aught but submit, is improbable; and it is said that the majority of high officials, whether Manchu or Chinese, counsel immediate acquiescence in the Czar's demands. The official agreement ends at this, as there is reason to believe, that after the quarrel with Russia has been arranged, if territory claimed by Russia is ceded by China, and if an indemnity to Russia is agreed upon, the Chinese nation will probably enter upon a new phase of existence, for which end the high officials are now silently and quickly taking sides. Li has again become the leader of a great national party.

\* In Yokohama, where the disease is somewhat exceptionally frequent among the natives, but two cases have been reported as occurring among the Foreign population since the settlement of the place, and these are somewhat doubtful. "Eldridge's Diseases of Foreigners in Japan; Customs Report Shanghai, 1878."

What is reported at the present time is: that after many intrigues and various alternations of discredit and ascendancy, the Viceroy Li has excited the determined hostility of the Emperor's father, who represents the Palace party. It is also possible that the old jealousy of the two living leaders of Chinese opinion, Tso and Li, has been re-awakened, so that Li's position was not only precarious, but actually dangerous. Li is reported to have been summoned to Peking to answer grave charges. At this time, it is also surmised that suggestions were made to him that he should subvert the dynasty, but he rejected the temptation. However, he lost no time in strengthening his position. The forts at Taku, Pehtang, on the Peiho, and round Tientsin, were garrisoned, stored and provisioned. Against outside attack these defences are strong and perhaps adequate. Against Chinese attack they must be reckoned inexpugnable. If his troops do not fail him the Viceroy is at least secure, and he is drawing from Hupeh, his brother's government, about eight thousand soldiers who can, being of a fine race, be made into good troops in a few months. The latest report is the demand upon him for the repayment of Tls. 1,600,000, the amount of an advance to the China Merchants Steam Navigation Company, decreed in September or October, 1876. The decree was we believe never published, but its purport was pretty well known. The advance—which included Tls. 1,800,000 from Customs revenues,—was made at the instigation of Li, and it may be presumed, judging from the course of events, that Li is, or will be, made responsible in case the refund should be attended by inconvenience to Mr. Tong King Sing.

It is generally supposed that the China Merchants Company had original analogies to the Mitsui Bishi Company, but this is not the case. In our paper of the 11th ultimo we made an incidental reference to Li's ostensible design, which was for bringing all Chinese river and coast carrying trade under the Chinese flag. The real design, which was wise; patriotic and practical was, however, of much wider range. The company was to have been the first training school, self-supported, of a mercantile marine in which, at no great cost to the State, officers, engineers and seamen could be reared in large numbers, from whose ranks China would obtain crews for the ships of war that were to be built. For this end large sums of money were advanced; privileges, immunities, and monopolies were accorded; and a postal contract with subventions was promised, to be given whenever the company was in a position to carry out a working agreement. We believe that at one time the official advance to the company amounted to 2½ millions of Haekwan taels, and the receipts from the Government, for rice freight, transport, &c., were very large.

The political design is still extant and although the Chinese company is now to a great extent a commercial enterprise, it has the benefit of official support and Government advances at a nominal interest. The first plan was found to be difficult of accomplishment, but we believe that as an enterprise managed on commercial principles, the China Merchants Company thrives, benefits native trade, and renders good service to the State.

The Viceroy's first conception was able and prescient, but his desires that China should possess as soon as possible a merchant fleet manned, engineered and navigated, by well-trained and competent natives, and that at a later but not remote time the ships, their engines and fittings should be constructed in China by Chinese artificers, and, as far as possible, from Chinese metals and materials, have been found to be, for the present at least, impracticable.

Thus, so far, a portion of the programme, in an Imperial or national sense, has been carried out. Though the managers of the large fleet are natives, the vessels are commanded and engineered by foreigners. The State support has possibly been unrequited, to the fullest extent intended, and China is at this moment in possession of a training school for a national marine service hardly equal to her requirements.

We do not know what Japan may be doing, to establish a well-trained mercantile marine. It is not necessary that we should show how valuable, in peace or war, is a well ordered mercantile fleet. It is obvious that a navy will be enormously strengthened, if it has large numbers of officers, engineers and trained seamen, ready to be drawn from a merchant service.

We will not print the curriculum proposed for the Chinese mercantile marine, as the document is long and partly technical in its terms, but we would recommend the Government of Japan to take warning by the insufficient manner in which the Viceroy Li's plans of 1876 have been followed. China might now have a well-trained commercial marine, sufficient, as regards education and efficiency, for all purposes. Each succeeding year would have more and more rendered the Empire able to carry on with its own sons, all services that should be performed by a sea-going, coast or river fleet. There is no reason why the Mitsu Bishi Company should not carry out the work for Japan. Although a mercantile marine would be, in case of war, a valuable resource and auxiliary for a navy, yet the training required for a purely naval service is different to that necessary for a mercantile service, and the two schools may, with advantage, be kept apart.

If the Mitsu Bishi Company could accomplish this work, it would soon be in a position to encourage the formation of subordinate enterprises for securing and developing the traffic of the coast ports. By suitable, well organized, local lines of steamers, internal trade would be increased, the main steam lines would be fed by valuable contributions, and the Japanese Empire would be greatly enriched by the improved means of communication and interchange. Thus, the Mitsu Bishi Company would render invaluable services to Japan in developing trade, in transport, postal and official service, and the good work would be powerfully helped by allied and coöperating companies. We refer chiefly to the coast trade. They have already extended their branch line to Hongkong, which no doubt has proved fairly successful from a pecuniary point of view. It is, however, necessary to maintain as well as establish an efficient service, and to render this line permanently prosperous, it appears desirable that they should coöperate also with foreign lines of steamers, of which there are many that control the principal traffic between Europe and the Far East, and thus they would escape the necessity the larger ocean steamers are under of running through to Japan, and interfering materially with the local coast traffic of these islands.

Japan, with her hosts of hardy seafaring men, has all the raw material ready to be converted into a well trained mercantile marine, but as up to the present nothing, or nothing adequate, has been done, we may be doing the State some service in calling attention to the wise but yet only partly fulfilled plans of the Viceroy Li Hung-chang.

THE most recent disaster suffered by the British arms has been swiftly retrieved by General Roberts, still we shall be mistaken if this victory altogether removes the anxiety felt in England as to the general efficiency of the

British army. Disasters like those of Isandhlwana and Candahar serve we fear to show how serious is the occasion for such solicitude. Neither is this anxiety likely to be lessened by the action of the Indian press which openly charges Generals Primrose and Burrows with incompetence. The Indian, as well as the Military problems are as difficult as any the Government have to deal with. Considering the impressionable disposition of the natives of Hindostan, the effect of the defeat of General Burrows is likely to have a more lasting effect on the native mind in India, than the overwhelming victory of General Roberts. But the disaster at Candahar, independently of the defects in our Military system which it has again exposed, tends to show conclusively to the Continental Powers, our weakness as a Military power in Europe. The glamour thrown over the "stalking of the Black Horse" by Lord Beaconsfield's famous move will have proved to be of little avail, and no doubt be properly estimated by the European Powers. We are too apt to console ourselves with the idea that we enjoy an immunity of blundering out of our difficulties, as certainly as we blunder into them. But it is high time we realized, apart from the other elements of danger they involve, the costliness and consequences of these blunders, and the additional burden we are allowing to accumulate for our descendants. Surely it is sufficiently appalling to contemplate, that some forty-five million pounds sterling and heavy loss of valuable lives have been expended in late-years on "little wars" without any equivalent advantage accruing. These facts alone should be ample warning to the Government and cause it to refrain in future from rashly undertaking similar enterprises. There is a somewhat ominous fact in relation to the recent victory before Candahar which calls for passing notice. Reuter first telegraphs that ten thousand prisoners were taken by General Roberts, and subsequently he flashes the bald fact that no prisoners were taken at all. This seems strange, for Ayub Khan had already commenced his retreat on the approach of General Roberts, and it is evident that he was attacked and routed while retiring, and it is also remarkable that our own casualties—248—are given with precision. No doubt this extraordinary circumstance may be due to an omission in the message, or the forces of Ayub may have dissolved with that facility for which the Afghans are famous—to emerge again at some favorable opportunity from their mountain fastnesses; but if it should turn out that any needless slaughter of the enemy accompanied his great victory, General Roberts will assuredly be called to strict account. For ourselves we have every confidence that no such accusation can be sustained, when we bear in mind how triumphantly similar charges were refuted after the second capture of Cabul during the present campaign. We are of opinion, however, that we have much to learn from the military systems of France and Germany in more senses than one. Red tapeism did much to contribute to the disorganization of the French army under the third Napoleon, and it exists in full force and fetters the whole military polity of England. We are not unmindful of the glorious deeds of our army during the present century, and the laurels earned by it in India will fill a bright page in history, but we are confident that the day will soon be past for the military rule which virtually prevails in India, however much that rule may have been a necessity in the early days of the conquest of the country. The Press, Railways, Telegraphs and other civilizing agencies are doing their natural work; the natives are awakening to a sense of their individual rights; and it is a bitter reflection to know what is really the case that, af-

ter all the sacrifices made, the line between the natives and their rulers is being widened every year.

**A**PPARENTLY the pending negotiations between Great Britain and France for a new commercial treaty do not make altogether satisfactory progress, and we fear that the recent change of Ministry in the latter country will not be conducive to a speedy settlement of the points in issue. The delay cannot, however, be considered surprising, when we remember how many conflicting interests have to be consulted, and how many prejudices must be in some way conciliated. When M. Léon Say not long since visited London, his high reputation as a Free-trader justified the hope that some steps would be taken by him to settle the terms of the treaty. M. Say, no doubt, did what he could at the time, but since his return to France it would appear matters have not progressed so satisfactorily as might be desired by the well-wishers of both the countries principally interested. The steps taken by M. Say have aroused the jealousy and opposition of the Protectionist classes in France, and his efforts in the direction of extending and improving the conditions of the Treaty of 1860 in this way, have been to a great extent interfered with. The precise position of the negotiations, as far as we can glean it, is this:—No fewer than four separate schedules have been adopted by the Chamber of Deputies, and these in turn have been sent to a committee of the Senate, which is charged with the duty of digesting them and finally presenting them to that body. The Protectionists exercise a great influence in the Senate. For that matter, it is believed that they have a majority; a circumstance which renders the success of a treaty on principles as liberal as has been anticipated extremely problematical. Meanwhile, the policy of the Protectionists is to delay action until the re-assembling of the Chambers again in November. However, the British Government is represented to be exerting its utmost influence to bring the negotiations to a conclusion on the best attainable terms. The French having expressed some dissatisfaction with the proposed duty on bottled wines, we read that this was promptly met by such a revision as at once removed the dissatisfaction. It is very plain that while such an excellent disposition prevails on the part of the representatives of the two Governments, there should be no difficulty in speedily arriving at an understanding, which would be mutually satisfactory and beneficial to both parties. As a matter of fact, however, the Protectionists stand as a bar in the way, having it in their power to veto anything that the less illiberal and more progressive Chamber of Deputies may agree to, and it is therefore utterly impossible to predict the result with any reasonable degree of certainty.

**W**HILE we acknowledge the utmost admiration for the heroic devotion and self-denying efforts in the cause of Christianity shown by the missionaries of the Church of Rome in various parts of the world, we cannot refrain from taking exception to the system under which their proselytism is carried on, by which violence is but too frequently done to the prejudices of the people in China as well as Japan, thus leading to incessant strife between the missionaries and people, more especially in the former country. These oft-renewed disturbances, not only interfere with trade as well as endanger the whole foreign commercial and political interests, but, as we view it, the interests which the missionaries should have most at heart are likewise injuriously affected. The threatened attack on the foreign community of Canton is the

last unfortunate example most in point; but at the same time comes news of the destruction of a Roman Catholic Church in Kwangsu. The treaty concessions by which the French Government arranged with the Chinese authorities for the recognition of Chinese converts as under French protection, has proved a very thorn in the sides of both Governments, and to this alone must be attributed much of the opposition so determinedly displayed by the Chinese towards foreign intercourse and commerce. Not satisfied with the concession mentioned above, there were also secured for ecclesiastical purposes prominent building sites in various parts of China. The site selected for the church at Tientsin was in close proximity to the Yamen of the Viceroy; in the most conspicuous situation, commanding and overlooking the river and city. At Canton an even more conspicuous position was chosen, and the Yamen of one of the Chief Provincial officials was pulled down to yield to the towering building which constitutes the Cathedral, and is the most remarkable object in the country for miles around. Superstitious as the Chinese are—and clinging obstinately to all kinds of belief in evil spirits and spiritual influences and to what they term "Fêng-shuey,"—it is a matter of regret more than of wonder that they look with jealousy on the prodigious buildings erected with the declared purpose of supplanting their most cherished beliefs, and that occasionally their feelings find vent in such fearful exhibitions as that at Tientsin some ten years ago. Besides, they are apt to associate all foreigners with the injury they imagine is being done them. If France had not already been engaged in a European war when the news of the Tientsin massacre reached Europe, most assuredly China would have had to suffer a severe and well-merited punishment at her hands, and foreign commerce must then have suffered. In the same way, the probable results of an outbreak at Canton, if coercive measures are resorted to against the Chinese Government, will assuredly lead to the formulation of demands engendering bad feelings—all having a tendency to interfere with the free course of trade. Is this course of action, which undoubtedly contributes to strife and animosity, in perfect keeping with the precepts laid down by the great founder of Christianity? We willingly concede that in some parts of the interior of China the labours of the Romanist missionaries are conducted without exciting the animosities of the people, but such instances are not common, and we are informed that considerable work has been entailed upon the French Legation at Peking, in settling missionary disputes and wrangles with the natives. So inconvenient has this become that some alteration of the system is considered imperative, and the Catholic missionaries by their own excess of zeal, may even lose that support of the French Government which they have enjoyed for so long a period—detrimentally as we think to their true interests and welfare. It seems clear that the whole foreign relations of the Chinese Empire should not be liable to be endangered by any sect however deserving, and the question arises, why the Roman Catholic missionaries in China should not carry on their labours under the same obligations as those of other Churches? This is a question of great import and deserves serious attention, in order to prevent a recurrence of the untoward events which have so often happened in previous years. We do not wish to be misunderstood on one point, and that is our admiration for the spirit of piety and self-abnegation which leads the Roman Catholic missionaries to cheerfully sacrifice their lives and encounter death in its most horrible forms, in the performance of the duty to which they have devoted all their energies and existence. We do not forget that it was to the Abbé Hue and his successors the world became indebted for the first authentic glimpses

of the mysterious "Flowery Land," and that, ever since, the soil of China has been freely watered with the blood of martyrs furnished by the Church of Rome. But we feel convinced any excess of that zeal which in many respects is so marvellous and so praiseworthy will now, as ever, tend to defeat its own object, produce violent reaction, and an attendant train of miseries and complications unpleasant even to contemplate.

THE enormous consumption of timber annually required for railroad and telegraph purposes can only be adequately comprehended by reference to statistics. This continually increasing absorption forms one of the great causes which is forcing the question of afforestation upon every civilized State, and is well worthy of careful consideration by the authorities of this Empire, in which the subject of railway extension is occupying increased attention. According to a leading American journal it yearly takes *two hundred thousand acres* of forest to supply cross-ties—or as they are termed in England sleepers—for the railways of the United States. "It takes 15,000,000 ties to supply the demand, for which on an average the contractors get thirty-five cents apiece, making in the aggregate \$5,250,000. In building a new road the contractors figure on 2,700 ties to the mile, while it takes 300 ties to the mile to keep a constructed road in repair. The average of a good piece of timber land is 200 ties to the acre and 12 ties to the tree. White or burr oak is considered the best timber for the purpose, although cherry, maple, ash and even locust have been used. The business gives employment to an army of choppers, who are paid ten cents apiece for each tie. Continued practice makes the choppers expert in the use of the axe, and a single man has been known to get out thirty-five ties in a day, yet the average is only ten, while an expert will probably get out twenty."

THE benefits derived from British rule when properly administered are amply manifested by the interesting and valuable report recently furnished by Major-General Sir Robert Biddulph, on the finances of Cyprus. From a resumé of this document, we learn that during the last fiscal year 98.6 per cent. of the tithes have been collected, a fact almost unprecedented in modern Turkish history. An experienced taxfarmer was placed in charge of the business under European supervision, and his subordinates, similarly selected, were used as permanent tax collectors for each tax. The cost of collection has been reduced from 15 per cent. to 9. The revenue, though the year was not a favourable one, has only twice been exceeded—in 1874 and 1875, seasons of unprecedented plenty. For the five years 1873–7 inclusive, the receipts of the Porte in Cyprus exceeded the expenditure by 11,121,952 piastres; in 1878–9 England paid Turkey 7,402,528 piastres, and in 1879–80, 11,092,377, plus £5,000. Sir Robert looks for an income next year of £190,000, which will pay expenses, but not leave much to the good against a bad year. With all this the burden on the tax-payer has really been reduced, since there is no longer any indirect extortion, nor do officials and the police quarter themselves on the villagers. Officials are fairly paid, public works are in progress, trade has revived "enormously," and a still more rapid development of the resources of Cyprus is only prevented by the uncertain tenure of the island, which—not unnaturally—deters capitalists from making investments. Sir Robert recommends the reduction or abolition of some annoying and retarding taxes, and adds:—"All this has raised the

expenditure from £30,000 to £90,000 although I venture to indulge in the prophesy that in a few years this apparent addition to the burdens of the people will seem as nothing in comparison with a revenue of a still more rapid growth, yet it is obvious that it is unreasonable to suppose that the revenue will at present admit of such an enormous subsidy as we are paying to Turkey, and that it is hard on a country which has a revenue that is double its expenditure, to be compelled to postpone necessary public works and to continue a number of taxes which press heavily on the people, and to be absolutely obliged to borrow money (for that is what we shall come to) in order to continue the annual payment to Turkey of the average sum which was only raised to its present high figure by the total neglect of all local necessities."

IT would almost seem that the Boers of South Africa have taken a lesson from some of the Japanese politicians who fancy that "direct trade" will effectually remedy the financial position of the Empire, or it may perhaps be another example of how great intellects occasionally run in the same groove. The Boers have, we learn, issued a circular in which they announce:—"We have tried every constitutional means for recovering the country and independence of which we were robbed by the English, and as we are not strong enough in numbers to fight the British nation, we have determined to take another method of bringing them to their senses." The other method it appears, consists in the organization of a trading association with a capital—at the commencement—of £50,000, to import the various descriptions of goods required in the Transvaal from the cheapest markets, *England excepted*. We believe that American manufacturers of soft and hard goods have been communicated with, and requested to forward catalogues and price-lists to the Chairman of the National Boer Trading Company (Limited) Potchefstroom, Transvaal, South Africa. What a brilliant device for "taking it out" of the British Lion, always supposing that a cheaper market to import from can be found. If this is not forthcoming the fate of the "National" company may easily be anticipated, as the Boers are much too shrewd to continue the juvenile amusement of cutting off the nose to spite the face, for any length of time.

#### THE REVENUE AND EXPENDITURE FOR THE 9TH FISCAL YEAR, 1876-77.

NOTIFICATION No. 43.

TO THE COUNCIL OF STATE, MINISTRIES, SENATE, COLONIZATION COMMISSION, CITIES AND PREFECTURES.

It is hereby notified that the following report upon the definitive accounts of the Revenue and Expenditure for the ninth fiscal year, beginning with the seventh month of the ninth year of Meiji (July, 1876), and ending with the sixth month of the tenth year of Meiji (June, 1877), was presented to me by Okuma Shigenobu, the ex-Finance Minister, while he was in office, and has been examined and verified by the Board of Auditors.

(Signed) SANJO SANESYOSHI,  
Daijo Dai Jin  
(Prime Minister.)

Tokio, 13th Meiji, 8th month, 30th day (30th Aug., 1880).

#### REPORT ON THE DEFINITIVE ACCOUNTS FOR THE 9TH FISCAL YEAR.

The definitive accounts of the revenue and expenditure for the 9th fiscal year, beginning with the 7th month of the 9th

year of Meiji, and ending with the 6th month of the 10th year of Meiji, have been made up from the sums actually received and disbursed during that period, on the basis of the estimated revenue and expenditure for the same year, which was made public on the 29th day of the 1st month of the 10th year of Meiji, and by closing all accounts for the said fiscal year by the 29th day of the 1st month of the 12th year of Meiji, in accordance with Notification No. 53, issued by the Finance Department. In this matter the Bureau of Inspection has taken every possible precaution to ensure these accounts being a faithful and accurate statement of the receipts and disbursements, according to the laws and regulations. Before we proceed to draw any comparison between these definitive accounts, and the estimated revenue and expenditure for the period embraced, or to compare them with the definitive accounts of the 8th fiscal year, and specify the causes of increase and decrease in the various items, it is important to mention what was the course adopted in making up the account. Accordingly we will state below what matters seem most important.

#### I.—INSPECTION OF REVENUE.

The revenues are classified into the several items according to the sums appropriated in the estimates, and are recorded in the Kuwaikei Genbo (books of original accounts which are kept by the Inspection Bureau in the Finance Department). Taxes are treated according to Notification No. 47, issued in the 12th month of the 7th year of Meiji by the Finance Department, Notification No. 12 issued by the same authority, and Notification No. 3 issued in the 1st month of the 9th year of Meiji. Receipts produced by taxation fall under Notifications Nos. 427 and 428 issued in the 12th month of the 6th year of Meiji. Repayments of various advances made by the Government, are treated according to Notifications Nos. 118 and 120 issued by the Finance Department in the 9th month of the 8th year of Meiji, and Notification No. 56 issued by the same authority in the 7th month of the 9th year of Meiji. The method pursued is as follows:—On every occasion when a repayment is made, the sum received is first carefully compared with the estimated sum corresponding to it, and the amount actually received is entered in the book devoted to that purpose. The receipt of the money having been duly authorized by the issue of a warrant (order to the Treasurer from the Finance Minister) the sum in question is accepted. After all the Kanjio-cho (books of detail sent in by the various Government Departments) have been presented,\* the amounts therein specified are compared with the corresponding items already entered in the Kuwaikei Genbo and their accuracy and conformity with the regulations for keeping accounts having been ascertained, certificates to be used in the compilation of definitive accounts are issued in accordance with Notification No. 41 issued by the Finance Department. Speaking briefly this is the procedure which has been observed in the preparation of the definitive accounts of the revenue.

#### II.—INSPECTION OF EXPENDITURE.

The Expenditures are classified under the several headings according to the sums appropriated in the Estimates, and are recorded in the Kuwaikei Genbo (Books of Original Accounts). According to Notifications Nos. 36, and 46 issued in the 3rd and 4th months of the 7th and 8th years of Meiji respectively; by another Notification issued on the 18th of day the 5th month of the 8th year of Meiji; by Notifications Nos. 64 and 8 issued by the Finance Department in the 7th month of the 9th year of Meiji, and in the 2nd month of the 10th year of Meiji respectively, and Notification No. 69, issued by the joint authority of the Finance and Home Departments in the 8th month of the 9th year of Meiji, whenever a disbursement is necessary, the sum required to be disbursed is compared with the corresponding estimate, and the amount is entered in the book especially devoted to the purpose, the disbursement having been duly authorized by the issue of a

\* Kanjio-cho for taxes and duties should be made up according to Notification No. 5, issued by the Finance Department in the 10th month of the 7th year of Meiji; that for the receipts from taxes, according to Notification No. 86, issued in the 5th month of the 8th year of Meiji; that for the repayment of various advances, according to Notification just mentioned and Notification No. 163, issued by the Finance Department in the 12th month of the 8th year of Meiji, and Notifications Nos. 56 and 94, issued respectively by the same authority in the 7th and 11th months of the 9th year of Meiji.

warrant, actual payment takes place. The Kanjio-cho for various items of disbursement are then made up according to Notification No. 159 issued in the 8th month of the 8th year of Meiji; Notifications Nos. 56, 94, and 20 issued by the Finance Department in the 7th and 11th months of the 9th year, and in the 5th month of the 10th year respectively. This statement is then submitted and, after the amounts in the Kanjio-cho have been compared with the corresponding sums already entered in the Kuwai Kei Genbo when the disbursements were first made and their accuracy ascertained, certificates are issued for the purpose of compiling the definitive accounts in accordance with Notification No. 154, issued by the Finance Department in the 10th month of the 6th year of Meiji. This is a brief statement of the procedure which has been observed in the preparation of the definitive accounts of the expenditure.

#### III.—INSPECTION OF THE VARIOUS ITEMS OF REVENUE AND EXPENDITURE.

After having gone through the forms above mentioned and closing all accounts of revenue and expenditure, the corresponding sums in the Kuwaikei Genbo, the Kanjio-cho, and the Kokuko Nashitsu Genkeibo (books in which the sums actually received and disbursed from the National Treasury are entered) are compared and, on it being found that the three correspond with each other, the accounts are recognized as definitive.

#### IV.—TREATMENT OF SUMS OVER-RECEIVED OR OVER-PAID.

This is a mere matter of book-keeping. What has been over-received is entered in a special book, but the payments in excess must be refunded. However, the sum thus paid back is not outlay and cannot be treated as such. What is over-paid is returned to the National Treasury, but is not revenue or included under that heading.

#### V.—THE COST OF SUPPRESSING THE SATSUMA REBELLION NOT INCLUDED.

By Notification No. 86, issued in the 11th month of the 10th year of Meiji, it was ordered that the expenses of the suppression of the Satsuma rebellion should be kept separate from the ordinary expenditure. The definitive accounts for the outlay incurred in connection with that event were published as early as the second month of the present year. In those accounts revenue which properly belonged to the Government but which was appropriated by the rebels, has been treated as a loss to the National Treasury and dealt with accordingly.

Having already mentioned the manner in which actual receipts and disbursements are ascertained for the purpose of making up the definitive accounts, we will now proceed to detail the principal items of estimated and actual Revenue and Expenditure.

The following tables shew the estimated revenue and expenditure for the 9th fiscal year of Meiji.

REVENUE.	
	Yen.
Customs.....	1,762,554.000
Land Tax.....	46,556,743.000
Miscellaneous Taxes .....	8,135,587.000
Income from Public Works .....	2,453,360.000
Miscellaneous Receipts .....	4,085,399.000
Total... ..	62,995,643.000
EXPENDITURE.	
	Yen.
Principal and Interest on Foreign Loans ...	5,551,447.000
Civil List and Appanages .....	827,500.000
Pensions for Meritorious Services, Hereditary Pensions, Shrines and Temples.....	17,705,377.000
Expenditure of Council of State, Ministries, Senate, and Bureaux.....	26,100,012.000
Expenditure of Colonization Department, Police office, Cities and Prefectures.....	7,263,160.000
Miscellaneous Expenses .....	5,546,351.000
Total.....	62,993,847.000

The total amount of the estimated revenue given above, when compared with the estimated expenditure, shews a surplus of 1,796 yen

The definitive account of the revenue and expenditure for the 9th fiscal year of Meiji, is shewn as follows :

## REVENUE.

	Yen.
Customs .....	1,988,667.665
Land Tax .....	43,023,425.704
Miscellaneous Taxes .....	6,718,540.260
Income from Public Works .....	2,549,997.439
Miscellaneous Receipts .....	5,200,405.116
<b>Total.....</b>	<b>59,481,036.184</b>

## EXPENDITURE.

	Yen.
Principal and Interest on Foreign Loans ...	4,950,797.147
Civil List and Appanages .....	827,500.000
Pensions for Meritorious Services, Hereditary Pensions, Shrines and Temples ...	17,736,906.644
Expenditure of Council of State, Ministries, Senate, and Bureaux .....	23,486,608.546
Expenditure of Colonization Department, Police office, Cities and Prefectures .....	6,859,965.042
Miscellaneous Expenses.....	5,447,184.089
<b>Total.....</b>	<b>59,308,956.468</b>

The total amount in the definitive account of revenue given above, as compared with that of the expenditure, shews a surplus of 172,079.715 yen, and this surplus has been transferred into the Reserve Fund according to the Financial Regulations approved on the 13th day of the 9th month of the 7th year of Meiji, so that all the accounts of the fiscal year dealt with have been entirely closed.

It is of great importance as a matter of due financial administration, that the distinction between ordinary and extraordinary revenue and expenditure in the present definitive accounts shall be clearly preserved, we will therefore here specify those items :—

## ORDINARY REVENUE.

	Yen.
Customs .....	1,988,667.665
Land Tax .....	43,023,425.704
Miscellaneous Taxes .....	6,718,540.260
Income from Public Works .....	2,549,997.439
Income from the Mint.....	1,152,087.245
Rents of Government Lands and Buildings, etc. ....	157,825.595
Income from Woods and Forests.....	94,502.802
<b>Total.....</b>	<b>55,664,996.710</b>

## ORDINARY EXPENDITURE.

	Yen.
Principal and Interest of National Debt ...	4,950,797.147
Civil List and Appanages.....	827,500.000
Pensions for Meritorious Services, Hereditary Pensions, Shrines and Temples ...	17,736,906.644
Expenditure of Council of State, Ministries, Senate, Colonization Department, Bureaux, Cities and Prefectures .....	28,359,924.726
Miscellaneous Expenses.....	3,112,846.744
<b>Total.....</b>	<b>54,987,975.261</b>

## EXTRAORDINARY REVENUE.

	Yen.
Sales of Government Property.....	849,253.762
Miscellaneous Receipts .....	1,903,957.552
Repayment of Debts due to Government...	1,042,628.160
<b>Total.....</b>	<b>3,796,039.474</b>

## EXTRAORDINARY EXPENDITURE.

	Yen.
Expenses for promoting Industries.....	1,986,643.862
Sundry Loans .....	1,173,940.769
Expenses of the Imperial Progress to Yamato and Kioto.....	119,962.451
Miscellaneous Expenses .....	1,040,434.125
<b>Total .....</b>	<b>4,320,981.207</b>

In the definitive accounts, the ordinary revenue as compared with the ordinary expenditure, shews a surplus of 697,021.449 yen. However, the extraordinary revenue as compared with the extraordinary expenditure, presents a deficit of 524,941.733 yen.

The ordinary and extraordinary accounts having been respectively kept separate and compared as seen above, a deficit was found in the receipts from the extraordinary revenue. But as the extraordinary expenditure could be drawn out of the aggregate of the whole revenue, we still have an actual surplus of 172,079.716 yen as already mentioned.

The amounts of the revenue and expenditure in this definitive account, comprise all the moneys which were destined to be received or paid in the 9th fiscal year. Allowing that these receipts and disbursements have actually taken place before the expiration of the fiscal term, or—owing to the delay occasioned by complying with the formalities of the finance regulations—shortly afterwards, we may, for the sake of convenience, append a table dividing the receipts and expenditure for the financial year into three periods :—

PERIODS.	REVENUE. Yen.	EXPENDITURE. Yen.
Previous to the 6th month of the 9th year .....	50,916.021	1,536,410.779
Till the end of the 6th month of the 10th year .....	45,839,800.096	52,767,212.598
Since the 7th month of the 10th year.....	13,590,320.067	5,005,333.091
<b>Total.....</b>	<b>59,481,036.184</b>	<b>59,308,956.468</b>

From an examination of this table it will be observed that the amount received before the 6th month of the 9th year was very small, as compared with the disbursements during the same period. The cause of this excess of expenditure is owing to the fact, that considerable sums of money were advanced previous to the 9th fiscal year for the expenses of the Legations, &c., abroad, and the Local Governments at home. It must be stated here, that such advances were temporarily made out of the revenues which had belonged to the fiscal year previous to that now under review.

Now when we have examined the receipts and payments during the periods mentioned in the table, and noticed the differences which have actually taken place in the receipts and payments of the ordinary and extraordinary revenue and expenditure, as well as the estimated and definitive accounts, the general outline of the finances for the fiscal year we are now dealing with should be readily understood. We will now proceed to still further explain the various circumstances to which may be attributed the increases and decreases in the estimated, as compared with definitive accounts. This we shall do by a division into three sections, as follows :—

## I.—REVENUE.

## II.—EXPENDITURE.

## III.—NATIONAL DEBT, RESERVES, AND ADVANCES.

## I.—THE DEFINITIVE ACCOUNT OF THE REVENUE.

The total estimated revenue for the 9th fiscal year, amounted to 62,995,643 yen, while the actual revenue was found to be 59,481,036.184 yen. This shews a deficiency in the actual receipts of 3,514,606.816 yen.

Again, the amount of the revenue in the definitive account for the fiscal year under consideration when compared with that of the year previous, which amounted to 69,482,676.560 yen, exhibits a decrease of 10,001,640.376 yen.

The following table shews increases and decreases in the various items of revenue in the definitive account for the 9th fiscal year, as compared with the amounts in the estimates for the same period, and the receipts in the definitive account for the year previous.

TABLE I.—COMPARATIVE TABLE OF THE ESTIMATED AND THE DEFINITIVE ACCOUNTS OF THE REVENUES FOR THE FISCAL YEAR, COMMENCING WITH THE 7TH MONTH OF THE 9TH, AND ENDING WITH THE 6TH MONTH OF THE 10TH YEAR OF MEIJI, SHEWING THE INCREASE AND DECREASE IN THE SEVERAL SOURCES.

			3,514,606.816	Dec.	Dec.
			10,001,640.376	Dec.	Dec.

We will now proceed to give the causes of the variations shewn by the foregoing table :—

1.—CUSTOMS, IMPORT, AND EXPORT DUTIES :—This amount in the definitive accounts, when compared with that in the estimates, exhibits an excess of 226,113.665 yen.

The condition of commercial transactions in every open port differed to some extent, but the increase is principally accounted for thus :—The export duties exceeded the estimate by about the sum of 103,600 yen, on account of the augmented export of Konbu (a species of seaweed) and other articles, and owing to a great demand for silkworm egg cards, caused by a great scarcity of the production in foreign countries during the year. The import duties also exceeded the estimate by about the sum of 133,600 yen, on account of the increased importations of cotton fabrics, woollens, yarn, etc. Miscellaneous receipts, on the other hand, decreased by the sum of 11,200 yen, owing to the smaller number of vessels which arrived from abroad, and the consequent decrease in warehouse fees, etc. Now by deducting the amount of decrease on the estimate from the excess, the net increase already mentioned will be arrived at.

Again, the amount of duties appearing in the definitive account for the 9th fiscal year, when compared with the similar item in the definitive account for the year previous, shews an excess of 269,934.841 yen. This was caused by an increase of 202,700 yen in the export duties, and 67,100 yen in the import duties; this increment we attribute, as we have already mentioned, to the commercial progress made by the Empire. The following table exhibits the increase or decrease of the amount of the duties in the definitive accounts as compared with the same in the estimates :—

LOCALITIES.	DEFINITIVE ACCOUNTS.	ESTIMATES.	INCREASE OR DECREASE IN THE DEFINITIVE AC- COUNTS COMPARED WITH THE ESTIMATES.

<b>Grand total.....</b>	<b>1,988,667.665</b>	<b>1,762,554.000</b>	<b>Inc. 226,113.665</b>

**LAND TAX :—**The amount of the land tax in this definitive account as compared with the estimate, shews a decrease of 3,533,317.296 yen.

The cause of this decrease is as follows :—Notwithstanding an increase of about 55,600 yen occasioned by the payment of arrears, there has been a decrease since before the 7th year of Meiji, of about 256,400 yen which were appropriated by the rebels during the time of the Satsuma outbreak in Kagoshima Ken and other places. There was also a decrease of some 3,332,500 yen in the actual receipts, owing to the fact that, although some increase was obtained as a result of the progress of the land tax revision, and an increase over the estimates was apparent, yet this increment could not be included, and actual payment was deferred to some future time by extending the term of liquidation, or granting the privilege of paying off the arrears by yearly instalments, &c.

Taking this sum in addition to the decrease of about 256,400 yen, the whole decrease is found to be a little over 3,588,900 yen. Deducting from this sum the increase above given, we obtain the net decrease already mentioned.

Again, this amount when compared with the corresponding

item in the definitive accounts for the year previous, shews a decrease of 7,321,902.076 yen.

The cause of such last mentioned decrease is owing to the fact that, notwithstanding an increase of some 55,600 yen by the collection of arrears owing before the 7th year of Meiji, there has been a decrease consequent upon the ravages committed by the rebels during the Satsuma insurrection already referred to, by the progress of the land tax revision, and other items caused by delay in the collection of taxes, either through allowing a renewal of the term of payment or by some similar concession. The total of this decrease amounts to about 7,377,500 yen, which being set against the increase given above, gives an ultimate decrease of the sum already stated.

The increase and decrease respectively of the estimated definitive accounts under the subdivisions of this heading, are shewn in the following table :—

	DEFINITIVE Yen.	ESTIMATED Yen.	INCREASE OR DECREASE. Yen.
Land-tax .....	42,944,135.343	46,485,577.000	Dec. 3,541,441.657
Stamps on Title Deeds .....	79,290.361	71,166.000	Inc. 8,124.361
<b>Total .....</b>	<b>43,023,425.704</b>	<b>46,556,743.000</b>	<b>Dec. 3,533,317.296</b>

**MINING TAX :—**The amount of the definitive account as compared with the estimate shews a decrease of 2,151.654 yen.

Such decrease is accounted for by the fact that the estimates were drawn up in accordance with the condition of the mining industry at that time, which, however, when the definitive accounts came to be made up, actually turned out to be much less active than had been calculated.

Again, the amount of the tax in this definitive account, as compared with that in the same account for the previous year, shews an increase of 1,472.552 yen. The cause of this augmentation was the larger number of mining leases issued.

**TAX ON OFFICIAL INCOMES :—**The definitive account of this tax shows a decrease of 16,693.702 yen as compared with the estimate. This decrease was caused by the revision of the Official System which took place in the first month of the 10th year of Meiji, followed by Notification No. III, issued in the same month. Under these regulations the salaries of the subordinate Government officers were generally reduced, thus producing a decreased return, notwithstanding the increase of income tax upon the salaries of officers in higher positions.

The amount of this tax in the definitive account as compared with that for the previous year shows a decrease of 15,739.273 yen. The cause of this decrease is similar to that already mentioned.

**TAX ON HEREDITARY PENSIONS, AND MERITORIOUS SERVICE PENSIONS :—**The amount of this tax in the definitive account as compared with the estimate, shews a decrease of 68,726.748 yen.

This decrease is owing to the loss of some 82,200 yen, appropriated by the rebels during the Satsuma rebellion in the prefecture of Kagoshima, and has arisen notwithstanding an increase of some 13,500 yen derived from the final adjustment of pensions.

The amount of this tax in the definitive account, as compared with the similar account for the previous year, shews an increase of 55,069.213 yen.

The cause of such increase is, that the losses by the depredations of the rebels in the prefecture of Kagoshima and other places were not so great as in the previous year, although a certain diminution was occasioned by escheating the pensions payable to those Shizoku who were deprived of their *Zoku* (caste) and by arrangements which resulted in the separation of family pensions by altering the constituents of Shizoku families.

**TAX ON PRODUCTS OF THE HOKKAIDO :—**The amount of the tax in the present definitive account as compared with the estimate, shews an increase of 13,991.975 yen.

The cause of the augmentation is an increment of more than 16,100 yen from the gradually increasing development of the industries in the locality, and the general rise in the value of the productions, notwithstanding a decrease of upwards of 2,100 yen, caused by transferring the duties on the horns and skins of deer, and the duties on the ice-mono-poly into the account of Local Taxes.

The amount of the tax in this definitive account as com-

pared with that for the year previous, shews an increase of 42,057.713 yen.

The cause of such increment is the fact that the value of the products of the district have risen and the industries have been very considerably extended.

**TRIBUTE FROM LIU KIU HAN** :—The receipts in the present definitive account as compared with the estimate, shews an increase of 2,019.936 yen.

The cause of the expansion is to be found in the general rise in the price of rice, which stood at about 4.505 yen per koku when the tribute was actually received, while at the time of the estimate the value was taken at an average of the three preceding years which gave 5.259 per koku. It must be remembered that this tribute used to be received in money, the amount of which was calculated at the current price of rice at the time of payment.

Again, the sum mentioned in this definitive account as compared with that for the year previous, shews a decrease of 11,244.578 yen.

This diminution is owing to the fact that in the last mentioned year, the price of rice reached as high as 5.876 yen per koku, while during the year embraced in the present account the price fell as low as 4.505 yen.

**TAX ON SAKÉ, &c** :—The amount of the tax in this definitive account as compared with the estimate, shews a decrease of 462,219.735 yen.

The decrease is due to the fact that, while the estimate was based upon the amount received from this source during the year previous, and after taking into consideration the conditions of the current year, it turned out that the price of saké became lower, the quantity manufactured was less, and the number of manufacturers fewer than was anticipated. For example, in the case of *Seishu* (pure saké) the income from which is usually the largest, the average price per koku throughout the country during the previous year was more than 6.712 yen, while in the period embraced in the present account it was only a little more than 5.573 yen, which is equivalent to a reduction of nearly seventeen per cent. The quantity manufactured in the year preceding was about 3,002,900 koku, while during the present year it was about 2,491,700 koku, which shews a reduction of something over seventeen per cent. And finally, the number of manufacturers in the year preceding was about 28,300, while during the year in question there were about 26,900, which is a reduction of over one-half per cent.

Again, the amount of the tax in this definitive account as compared with the year before, shews a decrease of 643,955.675 yen.

The causes of such decrease are to be found in the particulars already given.

The increase and decrease in the estimated and definitive accounts for the tax on saké, etc., is shewn in the following table, but we may observe here, that in the column of the estimated account no figures are given, because at the time the estimates were prepared, separate calculations for each specific item were not made. The same remark will also apply to other tables contained in succeeding portions of this statement.

	DEFINITIVE. Yen.	ESTIMATED. Yen.	INCREASE OR DECREASE. Yen.
Tax on the quantity manufactured ...	1,318,356.665	...	...
Tax on Dealers.....	287,646.200	...	...
Duties payable by Manufacturers...	305,636.400	...	...
Total .....	1,911,639.265	2,373,859.000	Dec. 462,219.735

**TAX ON TOBACCO** :—The amount of the tax in this definitive account as compared with the estimate, shews a decrease of 295,799.823 yen.

The cause of the decrease is the fact that this impost only began to be collected after the first month of the 9th year of Meiji, and the consequent want of experience in respect of the amount to be received.

Again, the amount of the tax in the present definitive account as compared with that for the year preceding, shews an increase of 37,400.280 yen.

This increase is owing to the circumstance that the duty on tobacco only commenced on the first month of the 9th year of Meiji, and therefore the receipts for the fiscal year preceding that now under review only included six months

collections, while the present account shews, of course, the revenue for a whole year.

The increase and decrease in the estimated and definitive accounts are shewn in the following table :—

	DEFINITIVE. Yen.	ESTIMATED. Yen.	INCREASE OR DECREASE. Yen.
Tax on Wholesale Dealers .....	63,545.000	...	...
Tax on Retail Dealers .....	141,250.400	...	...
Licenses of various kinds .....	3,490.500	...	...
Stamps .....	35,862.777	...	...
Total .....	244,148.677	539,948.000	Dec. 295,799.323

**STAMP TAX ON LEGAL DOCUMENTS** :—The amount of this tax in the definitive account as compared with the estimate, presents a decrease of 97,725.758 yen.

The cause of the decrease is the diminution in the number and value of the stamps sold during the year.

Again, the amount of this tax in the present definitive account as compared with that for the year preceding, exhibits a decrease of 64,073.196 yen, which is accounted for by the diminution already mentioned.

The increase and decrease in the various items mentioned in the estimated and definitive accounts are shewn in the following table :—

	DEFINITIVE. Yen.	ESTIMATED. Yen.	INCREASE OR DECREASE. Yen.
Stamps .....	370,604.294	462,991.000	Dec. 92,386.706
Stamps on Ruled paper ...	63,550.948	68,890.000	Dec. 5,339.052
Total .....	434,155.242	531,881.000	Dec. 97,725.758

(To be continued.)

## The Japan Weekly Mail.

'FAIS CE QUE DOIS; ADVIENNE QUE POURRA.'

### NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the JAPAN WEEKLY MAIL must be authenticated by the name and address of the writer, not for publication but as a guarantee of good faith.

It is particularly requested that all letters on business, relating to Advertisements, Job-printing, or Accounts, be addressed to the MANAGER.

And that literary contributions of every description be addressed to the EDITOR.

YOKOHAMA: SATURDAY, 2ND OCTOBER, 1880.

JAPANESE ERA 2540, MEIJI 13TH YEAR, 10TH MONTH, 2ND DAY,  
DO-YO-NI.

### NOTES OF THE WEEK.

The English mail of August the 13th came to hand per the Mitsu Bishi steamer *Niigata Maru* on Wednesday last. The M. M. steamer *Tanais* leaves for Hongkong to-morrow morning.

We have been requested to called attention to an alteration in the hour of departure of the Mitsu Bishi Company's Hongkong and Shanghai steamers. Commencing with the *Niigata Maru*, which left to-day, the steamers will, as usual during the winter season, sail at four o'clock in the afternoon instead of six o'clock. Freight will not be received on board after two o'clock.

Telegraphic communication between Europe and America is apparently cheap enough at present to satisfy any reasonable being. The *Parisian*, of the 22nd of last July says that "a gentleman in Paris sent a message which cost only three francs to a friend in New York last Sunday. He was much surprised a few hours after he had sent the dispatch to receive the visit of a messenger, who politely said: 'We were unable to deliver your message in New York because your friend has gone to the country and left no address.' And all this without any extra charge! Verily, great is competition."

We learn that the club races, which take the place of the Regatta this year, will be held on Wednesday the 6th, and Saturday the 9th instant. The trial heats for the pairs and

sculls will take place on the first day at 4.30 p.m., and the finals at 2.30 p.m. on Saturday, when we trust that something better than the usual Yokohama punctuality will be observed. Now that the Committee has succeeded in obtaining a site whence the races from start to finish can be watched, we hope that the ladies of the settlement will encourage the club by their presence. We are glad to notice a great improvement of late in the rowing of the various crews we see practising; there seems to be a thorough desire to show more honest rowing and less "style" than when training commenced.

It is extraordinary how people will persist in sending money through post offices in the face of the numerous cases which yearly occur, where the money never reaches its destination. We are informed that an instance happened here lately, in which a gentleman sent a considerable sum in kinsatsu to a friend in a registered letter. When delivered the money was found to have been abstracted and a piece of newspaper substituted. No legal remedy exists against the post office for a loss of the kind and therefore the amount of satisfaction likely to be obtained may be very easily imagined. It cannot be too widely known that registration does not render the office liable, the only effect it has is, or at least ought to be, that the registered letters receive special attention and can be easily followed from hand to hand.

There was a rather smart shock of earthquake on Monday morning at about five minutes to three o'clock.

An inquiry was held on Friday at the British Consulate into the circumstances attending the death at sea of Millar Irven, the master of the ship *Lupata*. The Acting-Consul, after hearing the evidence of the mate and several of the crew of the vessel, returned the following finding:—"I find that Millar Irven, master of the British ship *Lupata*, of London, official number 70,704, died at sea, on board that ship, on the 9th day of June, 1880, in lat. 50°55' N., long. 24°15' W., from natural causes."

The secretary of the institution informs us that "at a meeting of the Tokio Christian Association held in their Rooms, 12, San Chomo, Ginza, on Monday last, it was agreed that the present constitution and working of the Association be carried on henceforth on a new and simpler basis. So large a number of the members have left, and are leaving Tokio, that it was felt to be impossible to continue the Association on the old footing."

An auction sale of Bluff lots took place on Tuesday last. Undernoted is the result:—

Lot.	Tauho.	Upset Price.	Price realized.	Purchasers.
121	607	26 cents	\$0.26	P. Osborne
262	1,042	51 "	\$0.60	W.L. Clarke
263	1,322	51 "	\$3.35	John Middleton

The unsold plots of land on the Swamp Concession, were disposed of by the Japanese Government at public auction last Wednesday afternoon. The following prices were obtained:—

Lot.	Tauho.	Upset Price.	Price realized.	Purchasers.
221	205	\$2.01	\$4.36	Achoeng
219	205	"	4.16	F. Grosser
240	205	"	3.25	E. Bonneau
242	205	"	2.28	— Pouleur
244	205	"	3.85	Achoeng

273	341	"	3.41	G. Nachtigal
274	251	"	3.50	J. de Boer
275	254	"	2.02	F. Kingsell
253	436	"	2.88	R. Clark
226	289	"	3.25	Smith, Baker & Co.
224	289	"	2.86	Achoeng

As the American mail by the *Oceanic* brought European dates to the 30th of August, we have refrained from republishing the summary of news by the *Niigata Maru*, as it has been anticipated by the other route. From Afghanistan there is nothing of interest; only the usual routine of marches

and counter-marches. We do not expect any intelligence worth mention from that quarter, until the details reach us of the action fought between General Roberts and Ayub Khan, the fortunate result of which we know already. The Reuter's telegram announcing the appointment of General Roberts to the Madras command, almost looks as if the war was now over.

We had the pleasure of attending Mr. Iburg's farewell concert in the Gaiety Theatre on Monday evening, and much regret that so excellent an entertainment should not have secured a full house. It is but scant encouragement to the artists who occasionally visit us, when they find their best efforts met by such lukewarm feeling on the part of the public here. The chief interest of the concert centred in the violin playing of Mr. Iburg. This gentleman was heard first in a fragment of Mendelssohn's Violin concerto with orchestral (!) accompaniment. We have before written so much about the injustice done (both to composer and audience) by performers striving to render great classical compositions with inadequate instruments, that we forbear any further remark. In No. 3, "Fantaisie by Vieuxtemps" came the success of the evening; Mr. Iburg played this in magnificent style, and was deservedly applauded. He also showed to great advantage in the "Duo concertante" by Osborne and De Beriot, while his neat and beautiful phrasing in No. 8, was spoiled by the hard and over loud accompaniment. These pieces are admirably calculated to display the art of the violinist, they are especially suited to Mr. Iburg's school of play, and were one and all performed with great success. We must not close without thanking those gentlemen who so kindly assisted in the performance. If it be true that "one swallow does not make a summer" it is equally true that one artist cannot make a concert; and without the ready self-denying labours of some of our gifted fellow-citizens, we poor isolated lovers of the "divine art" would never hear any music at all. Not only to the amateur instrumentalists who accompanied Mr. Iburg in his various numbers, but also to the vocalists who relieved the prevailing instrumental colour of the evening, our best thanks are heartily offered.

We learn from a native contemporary that on the 24th ultimo the Foreign Department gave an entertainment at the Enriokwan, in honor of General Donovan of Hongkong.

A native paper states that a meeting was held at the office of the Central Board of Health, the day before yesterday.

A match was played on Thursday afternoon between teams from the U. S. S. *Richmond* and *Sinataru*, and resulted in a victory for the latter by seven runs. It was remarked by more than one spectator that the *Richmond* team did not seem up to their usual form. At the end of the 6th innings one of the *Sinataru* team—Hodges—was hurt and had to retire, so that for the remainder of the game they played with a man short.

The following is the score:—

The larger of the two elephants recently brought to Yokohama by the *Sumida Maru*, died yesterday of a disease too well known to owners of dogs in Yokohama, namely, worms in the heart. Only the day before the animals were put up to auction but had to be withdrawn, as the reserve price was not reached.

A match was held on Saturday last for a cup presented by a member of the rifle club. In spite of the favourable state of the weather, all the competitors shot badly, as the score will show. There may have been something peculiar in the light,

however, at the time of the competition, as later on when some members were firing for practise the shooting greatly improved. The conditions were ten shots at 800 yards, one sighting shot allowed. Mr. Douglas, using a Peabody-Martini rifle, for the third time carried off the prize. We append the :—

A scratch match was played last Saturday afternoon between Dr. Wheeler's eleven of "Foreigners" and seventeen Englishmen. Play commenced at two o'clock, and Abbott, winning the toss, sent the Foreigners to the field. The game was won by the Englishmen, the captains of the respective sides securing the highest scores. Nearly all of the batsmen on either side were caught out, several of the catches being hot and difficult. The band of the *Richmond* again enlivened the proceedings. We trust that the members of the cricket club will take advantage of the few more afternoons left before the beginning of the football season.

The following is the score :—

Our readers will recollect the note we published sometime since stating that Sir Thomas Hesketh had sent his yacht the *Lancashire Witch*, in aid of the captain, his wife, and some of the crew, of the ship *Mathilde*, who were supposed to be cast away on the island of Socorro. The mission of the *Lancashire Witch* was, however, unsuccessful, as we learn from the *San Francisco Bulletin* of the 1st September instant, that "the British steam-yacht *Lancashire Witch*, owned by Sir Thomas Hesketh, Bart., returned to port at half-past 4 o'clock Thursday afternoon from her mission of mercy to Socorro Island in search of the missing castaways of the ill-fated ship *Mathilde*. The *Witch* was sighted coming in by the lookout at Point Lobos a little before 4 o'clock. She signalled to the station the result of her mission, in accordance with arrangements made before leaving on her merciful cruise. Unfortunately it was not the

glad tidings of the rescue of the missing people, but the sad announcement of unsuccess. The cruise of the *Witch*, briefly stated, consisted of a careful survey of Socorro Island, which was reached seven days out from this port; the discovery of a relic of the schooner *Laura* at the point of landing; the erection there of a monument with a report of the visit and its object, which monument it appears, the *Freda* failed to discover; the circumnavigation of Benedicto Island, another of the Socorro group, and the examination of Clarion Island, on which the two St. Bernard dogs, cast adrift by the *Mathilde's* boats, were found alive and taken on board. All the islands in the group having been visited, the *Witch* was headed for port. Captain Edelfsen fears that the missing castaways foundered in the gale which separated their boat from that of chief mate Steeves. The missing boat was an iron life-boat, and contained Captain Jones and wife and ten men, and some stores. Notwithstanding that the fears of Captain Edelfsen are pretty generally shared by seafaring men, it is possible that the life-boat not only survived the gale in question, but has also reached a place of safety on the mainland, or been picked up at sea by a passing vessel. There are many cases on record where shipwrecked crews have been missing much longer than the *Mathilde* castaways who have been finally rescued."

We learn from the *Mainichi Shinbun* that Shimadzu Tadayoshi (ex-daimio of Satsuma) intends to give a repetition of his entertainment of Inn-o-mono (shooting at dogs with bows and arrows from horseback while at full gallop) in the beginning of next month before His Majesty the Emperor, in the Fukiage Park.

The *New York World* has a sarcastic reference to the recent meeting between the Emperors of Germany and Austria-Hungary. It says that "the imperial interview at Ischl must have been singularly interesting to the medical fraternity and to people who are investigating the doctrine of chances. The Emperor of Germany was troubled with acute dysentery of the diphtheria and was advised to try the air of Ischl. Simultaneously the Emperor of Austria was attacked with pericardiac pipay-wipsy, and the doctors declared that if he did not try the air of Ischl they would not answer for the consequence. The two august invalids arrived there on the same day. Next day Von Moltke turned up at Ischl with a military map of the Russia frontier and a severe paralysis of the Procrustean phalanges, relief for which, his physicians declared, could only be found in the bracing atmosphere of Ischl. And by the next train came Prince Milan of Servia and Prince Charles of Roumania, the former threatened with fatty degeneration of the elbow-joint and the latter with inflammation of the maxillary processes, and each having a prescription (written on the back of the muster-roll of his national forces) to try the air of Ischl. All the distinguished patients left Ischl next day thoroughly restored, but, despite this encouraging fact, there are fears of a largely increased death-rate in Eastern Europe next year."

*Iron* says that the Durham county police have done perhaps the latest thing possible to brighten the lot of the prisoner. The Plating Company at Stockton-on-Tees are nickel-plating five hundred pairs of handcuffs, which are intended to adorn the wrists of malefactors in the North Country. They are said to be "very beautiful in appearance and may, perhaps, be allowed to have a certain effect of silver guilt."

A correspondent of a London journal sends to its editor the following circular received "by this morning's post." The practice which the document discloses, namely, the preaching of other men's sermons, is by no means a new one in England :—

"Established 1878.

"REV. SIR: We have a limited number of subscribers to a Weekly Sermon Publication, instituted by desire, for clergymen, and shall be happy if you will allow us to add your name to our list of subscribers which you can withdraw at any time. The sermons (edited by a celebrated author) are written expressly for us every week by preachers of renown, and are not advertised.

Quarterly subscriptions payable in advance, commencing any date:

	£	s.	d.
For 13 morning or evening sermons .....	0	13	6
Postage .....	0	2	6
For 26 morning and evening sermons .....	1	5	0
Postage .....	0	5	0
Sermons for Good Friday, Ascension Day and Christmas Day, 2s. each extra.			
Single specimen sermon, with postage, 2s. Confirmation and harvest sermons, 5s. each.			
Special sermons on any subject can be supplied— With copyright, £1 10s each Without „ 15s each.			
All names and communications received in strict confidence.			
Post office orders payable to Messrs. —, at Charing Cross Post office.			
Livings purchased or sold for clients. Exchanges negotiated.			
Locum Tenens obtained. Scholastic appointments of all kinds, together with the transfer of schools, and all other branches of a scholastic agency.			
Address, Messrs. —, Clerical and Scholastic Agents, Charing Cross.			

The *Carson Times* states that on the 19th of last July, a desperate encounter took place at a point fourteen miles south-west of Bridgeport, Cal., between a man named White and another called "Bullet-Eye," but whose real name was John Anderson. "Bullet-Eye" bore the reputation of being a desperado of the most reckless type, and is also said to have been a prominent member of a band of outlaws and horse-thieves who have long been a terror to that section of country near Bridgeport. The details of the affair are as follows:—White was riding along the road on horseback, in company with the Hodges brothers—old friends of his, and whose lives he was instrumental in saving on the Plains (so they state) in 1875, when attacked by a band of Sioux Indians—when "Bullet-Eye," also on horseback, met them. Reining up at a distance of about fifteen paces from White, he said:—

"You are the son of a—who tried to get the Bodie stage robbers, and I'm going to kill you."

"Guess you won't hurt any one very bad," White replied laughing.

"Bullet-Eye" then drew his revolver and fired four shots at White, none of which, strange to say, took effect, though one grazed the top of White's left ear—dismounted from his horse and rushed on White with a knife. Bob warned him, "Look out, or I'll shoot;" but his would-be murderer pressed on and made a fierce lunge at White, cutting a gash on his forehead. Bob immediately drew a six-shooter and fired, the ball penetrating the breast of his assailant, who fell to the ground and immediately expired. The Hodges brothers and White then rode on, and when they returned next morning found the body gone, undoubtedly taken away by the friends of the man who lost his life in the effort to take that of another.

An American paper writes thus on the subject of swearing:—Young men, don't swear. There is no occasion for swearing outside of a newspaper-office, where it is useful in proof-reading and indispensably necessary in getting forms to press. It has been known also materially to assist an editor in looking over the paper after it is printed. But otherwise it is a foolish habit.

A commercial circular published by Messrs. Malherbe, Julien & Co. of Bangkok, on the 31st ultimo, has the following remarks respecting the business in rice in that port:—

Our last review was dated the 31st March. The great inactivity in business has been the cause of our prolonged silence. In fact, since the last season for Europe closed, the shipments for any destination have been on so small a scale that the bulk of the crop remains for export; this makes us suppose that future reports may advise an improvement on the existing state of things. China has taken very little rice from here this year, but Singapore continues a regular consumer, each day growing in importance. For Java, a small demand has latterly been felt, while for the Philippines there has not been a single shipment up to the present. On the other hand, business for Europe appears to be reviving, two ships having already left, and another being on the berth. The extension of these shipments depends on the rate of freights for grain, and especially Namsung (field)

which is principally in demand for this destination, will not fail to arrive in abundance shortly, the weather being as favorable as one could wish for the coming crop, and the annual inundation will force the natives to dispose of their stocks, which they usually hold until the crop in the ground is assured. We quote to-day, Namsung (field) \$1.50 per picul, Namsung (garden) \$1.85. Qualities of the same descriptions suitable for the China and Singapore market are worth \$1.40 and \$1.65 respectively, with about twenty per cent. of paddy.

"Probably few persons," says *Truth*, "have had so many proposals of marriage as Lady Burdett-Coutts. I was talking a day or two ago with an eminent widower. 'I myself,' he said, 'have proposed to her, for I regard this as a duty that every man owes to his family.' As the Baroness never accepted anyone who proposed for her, it is only reasonable to suppose that she proposed to Mr. Bartlett, and thus exercised the feminine privilege of the year. It is well Lady Burdett-Coutts took advantage of 1880 being leap-year, otherwise she might have had to wait for her "Barty" until 1884, which would have landed her among the seventies.

An incident of note has recently occurred at Neuilly, termed by the Parisian papers "a romance of love." It would seem that last winter a wealthy widow lady, when in the south of France with her only daughter, a charming girl of seventeen, made the acquaintance of a young Dutchman, bearing the title of count, and supposed to be possessed of a large fortune. The young people having fallen in love with each other, the girl's mother was apprized of the fact, and she at once wrote to her friends for information concerning the young Dutch count. She discovered, to her amazement, that he was not a count at all, and that he had no fortune whatever. Accordingly she immediately broke off the acquaintance, and took her daughter back to Paris. Meanwhile, however, the young folks engaged in a clandestine correspondence, and some of the letters being intercepted, the mother had reason to fear that the pseudo count and her daughter were on the point of eloping together. She informed the police of her suspicions, and two mornings ago the young couple were surprised at the door of the girl's residence—the "count" seated in a vehicle into which the young lady was about to spring. She had already handed him a valise, in which were found a large quantity of jewelry, and upwards of £1,000 in gold, bank notes, and shares—property which the girl had stolen from her mother. While the police were busy securing the "count" and the precious valise, the girl escaped. Seeing that her lover was arrested, she at once darted through the Bois de Boulogne, and on reaching the bridge at Suresnes, sprang into the Seine. A couple of men were fortunately at hand, and after some difficulty they were able to rescue her against her will. She was carried to the nearest police station, and afterwards sent home, where, it would appear, she has since been seized with an attack of fever, her life being seriously endangered. As for her lover, he remains a prisoner, at the depot the authorities intending to prosecute him on the charge of would-be abduction.

A Paris paper has the following anecdote:—"You are very fond of novel reading?" said a Parisian novelist the other day, as he saw the coachman he had engaged stow away a formidable volume of romances beneath his seat. "Yes, sir, I have read a great many novels, and I am disgusted to observe the uniform ignorance of their authors in the commonest affairs of everyday life. For instance, here is one story in which I read. 'The prince appeared agitated on hearing these words, and, hailing a carriage, flung himself into it, cast his purse to the driver, and cried: 'Drive me to the Faubourg St. Honoré!'" Then a few lines further on I see this: 'Valentine resolved once for all to solve the mystery, and hurrying to the stand, sprang into the first vehicle that presented itself and, flinging her pocket-book to the coachman, said: "Follow yon carriage!"' Now, sir, I have been driving a hack in Paris for forty years, and I have driven thousands of people—all sorts of people, under all imaginable conditions, eloping lovers, jealous wives, levitating cashiers, and so on—and never in the course of my long professional career has a fare thrown me his or her purse or pocket-book. No sir; they have just given me 35 sous; sometimes it was the round two francs, but very rarely."

As we had occasion to mention not long ago no living journalists can hope to rival the Central Asian specimens for imaginative romancing, combining at the same time a comprehensiveness and solidity truly remarkable. We recently came across the following translation of a paragraph which appeared in the *Turkistan's Ki Vedomosti*, giving a striking and entirely new version of the rising at Cabul in which Major Cavagnari lost his life. The *Vedomosti* says that "on the day of the catastrophe General Abdul Karim Khan summoned three battalions of rifles (serdali) to the Bala Hissar to give them their monthly pay. The soldiers refused the one month's salary proffered them by the Assistant Minister of War, and demanded money for two, as had been given to the battalions already sent to the Tchar vilayet. Abdul Karim refused, on the grounds that the latter had been sent on active service. The troops continued their clamor, and at last threatened to break out into revolt. Abdul thereupon laughed at them, and told them they did not dare to do so, adding that if they had been brave men in wartime the English would have never been sitting that day in Cabul their conquerors. These words were hardly uttered when the whole of the soldiers with cries of 'Hazavat,' rushed off to the Residency. Major Cavagnari alarmed at the noise, and hearing the cry of 'Hazavat,' immediately ordered the English to fire on the mob. This was done, and ten Afghans fell dead. The troops, until then unarmed, rushed off to the barracks, and, returning at the end of a few minutes, opened fire upon the house. The English maintained a desperate defence, firing from every cranny upon the Afghans. Seeing that they could not force the Residency the Afghans fired it, and when the defenders dashed out they killed them to a man. Up to this moment the Afghans' loss was thirty-five. The burnt body of Major Cavagnari was found in a box; 400 bodies of the English were counted among the slain. The English, on occupying Cabul, razed to the ground the Residency and then commenced to investigate the massacre. Desiring to punish the culprits and prevent similar deeds in the future, the English had recourse to terrible atrocities. In an open space in Bala Hissar they built an immense scaffold and hanged on it in chains ten to twenty men at a time, first drenching them with inflammable oils, and then setting light to a bonfire under their feet. In this manner many Afghans were slowly burnt alive. Upwards of 200 were thus treated, among them three holy personages of great sanctity, not only in Afghanistan, but also throughout the whole Mussulman world."

We take the following items from the columns of the *Shanghai Courier*:—A private letter from Hankow, dated the 16th of September, informs us that at 2.45 a.m. on that day, a fire broke out in the native city, and the conflagration spread so rapidly that in a short time over 1,000 houses of the poorer classes were destroyed. Owing to the difficulty experienced in getting at the fire, the Hankow Fire Engine was not used.

The *Foochow Express* of the 7th of September gives three startling items of intelligence which ought to be made known to the wide world, so we reproduce them. The first is this:—"We learn that an enterprising firm have imported a large quantity of wretched waters." The second, a telegram dated London, 1st September, 1880:—"Mr. Gladstone is given up by his medical men." And the third:—"Fashionable young ladies of London blow soap bubbles in drawing-rooms in the afternoon as a remedy for ennui."

It is said that Li Hung-chang has written a letter, to the King of Corea, advising him strongly to throw open at once his country to all foreigners, as the only chance of preventing its being absorbed by Russia.

The cry is still they come! His Imperial Russian Majesty's steam cruiser *Europa*, Captain Gripenberg, from Cronstadt, via Aden, arrived at Singapore on the morning of the 4th September en route to the China and Japan stations. The *Europa* is a vessel of 3,000 tons, and carries 260 men and 12 guns.

A good deal of fast work has been going on, but nothing remarkable has yet been done in the way of time. Amongst the gallops the following may be noted:—*Rolling Stone* went one mile and a half, with 11 stone up, time 3.88½, beating easily *Conductor*.

*Strathaird* and *Earl Harold*, one mile and a half, time 3.44, *Strathaird* going easy, *Earl Harold* very much distressed. I think the latter pony's racing career has come to an end, and he should be thrown out of training.

Mr. Fearon's black griffin was going remarkably well, owner up, and won a half mile gallop hard held in 1.03; this is one of the best ponies purchased this season, and I feel sure will shine at the coming meeting. I hope so, as a reward for *Ricochet's* defeat in the spring by *Strathaird*, whose equal I have not yet discovered amongst the Autumn griffins.

There still seems some doubt about the "Trial Stakes" coming off to-morrow morning, many owners being too dissatisfied with the condition of their late purchases to risk an issue with Mr. Tell's stable. Perhaps to-morrow week would be more convenient to all interested in the event, and if the Clerk of the Course would definitely notify it for that date, no doubt a lot of entries could be secured.

The course is in very good order, thanks to the continuous care of Mr. Dallas, who has of late been much more liberal in allowing its use for training than formerly. *Strathavon* is going and looking remarkably well, but we must not forget this is his ninth meeting. The general opinion is, that the old pony is not as good as he was formerly, and will be beaten at the coming meeting by ponies whose racing career is of a more recent date. This famous animal will be a certain favourite before the races, but I warn those interested. Even *Black Salin* had to succumb to new and younger ponies. *Strathavon* is by no means the certainty a few old admirers would wish to make him, but we will all naturally regret to see him in the rear for those events which he will undoubtedly contend with honour at the autumn meeting. I am informed that the Anglo-American stable has dissolved partnership, owing to the dissatisfaction of the American partner with the condition of the pony. The English partner wishes the pony fine in his legs but stout in the body; the American partner insisted that he ought to be fatter in the legs below the knee and finer in the body; under such circumstances, no doubt a separation of interests is desirable.

## ECCLESIASTIC AND MISSIONARY NOTES.

WE LEARN that the American Presbyterian Mission, the American Reformed Church Mission, and the Mission of the United Presbyterian Church of Scotland, who have been working in unison for the past three years, have just completed their new Theological School building at No. 17, Akashi-cho, Tsukiji, Tokio. By the kind help of friends a considerable library, containing several very valuable books, has been got together. It is intended to add to the library such critical works as may prove of most assistance to those engaged in translating the Scriptures. A reading-room has also been opened in connection with this library under the control of the trustees of the school, the advantages of which are offered to all Missionaries in Tokio and Yokohama.

MISSIONARY WORK IN OKAYAMA, BIZEN:—For a little more than a year Missionaries of the American Board have resided in the city of Okayama. Though this city is comparatively small, having a population of about 33,000, it occupies a good position for work in Okayama Ken, which has a population of nearly a million. The Missionaries at present stationed there are J. C. Berry, M.D., and the Revs. Jas. H. Pette and Otis Cary, Jr. The former acts as Medical Adviser to the Ken hospital; the others are employed as teachers in a private school. It is perfectly understood that all are at liberty to engage in Christian work. The report of the labours of Dr. Berry for the year ending on the 1st of May, 1880, will show something of the opportunities for work afforded to a Medical Missionary.

Patients prescribed for in Okayama .....	4,837
" " " " outstations .....	935
" " " " summer vacation ....	162
Total .....	5,934

In addition to the relief of suffering, the medical work has been of great value in gaining the good-will of the people, creating a favourable impression of Christianity, and opening a way for the preaching of the Gospel. The directly religious work has greatly prospered. A Church will probably be organized during the present month at Okayama, while in some of the neighbouring villages there are Christians and persons interested in the truth.

AN EVIDENCE OF THE EFFECT of Mission work in this Empire is afforded by the *Hochi Shinbun*—a vernacular journal—which says that the Chief Priest of the Chioin temple at Kioto is so distressed and alarmed at the spread of the doctrines of Christianity among his countrymen, that he has drawn up a memoir containing his arguments (!) against the Christian religion and transmitted it to the Department of Education.

THE COUNCIL OF THE EVANGELICAL ALLIANCE have received a cordial invitation from Nottingham to hold the annual conference this year in that town. The meetings will commence on the 19th of October instant, and continue during the two following days.

A CHRISTIAN WOMEN'S UNION, in connexion with all the Protestant societies, has been formed to help on the work of carrying the Gospel of Christ to the 100,000,000 women in India, by prayer, work, and influence. Particulars may be obtained from the Hon. Sec., Miss M. A. Spiller, 7, Thurlow-road, Hampstead, N.W.

THE SALE OF CHURCH LIVINGS:—It seems difficult to arrive with certainty at the number of livings advertised for sale, actual or virtual, every year; and the estimates given by different witnesses vary rather surprisingly. A well-known agent (Mr. Stark) estimates the livings annually offered for actual sale at 200; another witness, who has given careful attention to the subject from without, goes so far as to surmise that "10 per cent. of the entire livings in the Church"—about 13,000, if all be taken: about 7,000, if only those in private patronage be referred to—are in some way sold or bartered every year. The truth probably lies between these two extreme estimates. If those exchanges which are really sales in disguise be included, perhaps the actual average will not be far from one every day in the year. But even the lowest estimate will probably startle churchmen generally, and will certainly convince all who think on the subject that the matter is one of very serious extent—the more so, because evidence seems to show that it is increasing, and that, especially, the number of clerical patrons who in some way traffic in livings grows larger every year. When we consider the spiritual harm, and the far wider scandal, which one manifestly improper sale must cause, we shall surely do well to turn a deaf ear to those who tell us that the evil, if it exists, is so exceptional that it may be neglected without serious risk.—*The Guardian*.

JEWISH POPULATION OF THE WORLD:—In the new Jewish Calendar for 5,641, the editor, Grand Rabbi Servi, Director of the *Yessillo Israelitico*, divides the Jewish population of the world as follows:—Europe, 4,500,000; Asia, 3,800,000; Africa, 500,000; America, 300,000; and Oceania, 110,000, making a total of 9,210,000.

THE GENEVA CORRESPONDENT of the *Times* announces that Bishop Herzog has left Switzerland for the United States, with the object of promoting a scheme for the federation of all Christian Churches in the Universe.

MR. J. G. ALEXANDER, 11, Old-square, Lincoln's-inn, W.C., has visited Brussels, in connexion with the work of distributing Gospel tracts and papers at the National Exhibition there, from a kiosk erected by the Monthly Tract Society. Having seen the great readiness of the people to receive the truth, he has made arrangements for erection of a tent, on the ground adjoining the kiosk, where Gospel services will be held, commencing on Sunday next. Mr. Brown, of the City Mission, who labours among the French in Soho, will take charge of the services at the tent, and a young Dutch Jew, acquainted with the French and Flemish languages, is ready to accompany him. Mr. Alexander states that the expenses of this effort will amount to about £70, including the cost of the tent, which can be used for open-air work in Belgium at the close of the Exhibition. Those in charge of the work have the promise of cordial assistance from local pastors and other Christians.—*Christian*.

"MANY PRECIOUS LIVES have been sacrificed, and much treasure has been expended," writes *Africa* "in relieving the Zulu tribe from a cruel despot, and then the wealthiest of civilized nations leaves the people in that barbarism without making any effort to teach and elevate them. Little is known in Great Britain of the state of a Kaffir tribe under chiefs and witch-doctors. It is simply a system of terror. Although there is now much less killing in Zululand than there was during Cetewayo's régime, death by witchcraft will continue as long as the tribe remains under its native chiefs. It can only be stopped by the appointment of resident British magistrates. We feel quite sure that if the gentlemen who formed the deputation to Lord Kimberley on May the 27th, praying for the restoration of Cetewayo, had any knowledge of the state of an African tribe under its native chiefs, feelings of humanity would have restrained them from offering such a petition. Had our nation appointed four experienced and honourable men as magistrates over the tribe at the close of the war, it would have been now on the high road to civilization. All our nation has done for the Zulus is to give them John Dunn. Verily, the blood of Isandhlwana has flowed in vain! When the sins of our nation are reckoned against us by God, our neglect to do good to the barbarous Zulu people will be amongst them."

AT A RECEPTION given in San Francisco on the 30th of last August by the Women's Foreign Mission Society of the Presbyterian Church, to the Missionaries who arrived here recently by the *Oceanic*, Miss Brittan is reported by the *Chronicle* to have given a very interesting account of the difficulty attending Missionary work among the women of India, where she had been labouring for many years. In her address on the occasion Miss Brittan said:—"the girls are married at the age of five and six—never later than ten—on account of the believed effect that such a misfortune would have on her ancestors. She is put into a box, which is closed up like a coffin and covered with a decorated cloth, and in this shape taken to the husband's house, where she is deposited and left for the rest of her life, never to go out save on the occasion of exceptional and rare visits to her mother. In the high caste houses the outer court, around which are the men's apartments luxuriously furnished, is reached by an underground passage. A passage leads from this to the inner court about which are the wives' rooms or cells. The walls and floor inside are of brick; there is no bed, no chair and no furniture, but a sort of desk and a box, in which the occupant's clothes are kept. They are never taught to read or write, and I suppose that when I went there first, not one in 80,000 could read. All of the world they ever see is the inner court. They are marvelously beautiful, however, both men and women, as a race, despite the hard lot of the wives. Each lady has her own brick-floored cell, and sleeps on a strip of matting. The widows are far worse off, however. They can never marry again; can eat only one meal a day, of rice; are debarred by superstitious custom from receiving any help or any word of love or mercy; are compelled to wear their hair hanging loose, uncleaned and unbraided, and cannot speak in the presence of their mother-in-law or sister-in-law without permission. Every three weeks they have a twenty-four-hour fast. I saw one little girl, a child, who was burning up with fever, and whose tongue, black and swollen, was protruding from her parched lips. I asked her if she wanted water, and she signified feebly that she did. I told the women to get her some, and they refused, saying that she was a widow, and it was wrong. She had had no water for three days, but they would not let me give her any, on the plea that I was a polluted foreigner and such an act would break her caste and that of the whole house. She died in agony the next day."

OPPIUM IN CHINA:—Mr. T. D. Marshall sends the following extract from a letter by Dr. Barchet, of Ning-po, who has a hospital there for the treatment and cure of the victims of this deadly drug:—"Since the beginning of the Chinese New Year we have received over seventy new cases, so there is every probability that we shall be able to cure even a larger number

thau last year. Many of those cured attend now the preaching of the Gospel, and the effect this work has had on the Chinese is already very noticeable; foreigners, too, feel the moral effects of it. As opium is so great an obstacle to the spread of the Gospel in China, we discussed the subject at our last Missionary Association in Ning-po, and several papers have taken notice of the discussion and of the Ning-po Opium Hospital. The friends who have helped in establishing it may well rejoice with us at the success that has thus far attended the work, and we need not fear for the future, for God is with us." Our correspondent states that Dr. Barchet still requires £30 to complete and furnish the Hospital, which will be self-supporting. Doubtless some of our readers will be glad to help on such a good work.—*Christian*.

IN A LETTER RECEIVED FROM OOROOMIAH, in Persia (dated May the 20th, 1880), Miss Louisa Good, an English lady, who at great personal and pecuniary sacrifice, is devoting her life to the work of the religious and moral elevation of the Persian women and children, there is full confirmation of the deplorable accounts already forwarded to England from other sources in reference to the terrible famine in North-West Persia. A single sentence from Miss Good's letter will summarize the present misery:—"Mothers are killing and eating their own children from their desperate hunger."

DEATH OF A MISSIONARY:—We much regret to hear of the death of the Rev. M. A. Sherring, the well known Missionary and scholar of Benares. He died at Benares of cholera. Mr. Sherring's labours in the cause of literature and education well merit some recognition from the Government. He leaves a widow and five children. We hear there have been but few other cases of cholera in Benares, and the health of the troops is good.—*Pioneer*.

BAPTIST MISSION AT OOTACAMUND:—The *Madras Times* says that "the headquarters of the Baptist Mission at Ooty have been removed from Commercial Hall to Charing Cross Villa, which has been leased from Mr. Williams, who has moved to Coonoor. The removal was the occasion of a very pleasant social tea-meeting on Friday evening, August 13th, in the new chapel, where were gathered a goodly number of the friends of Mr. and Mrs. Pearce who carry on the Mission. Refreshments in abundance, and an interesting entertainment of song, greeted old and young, as they gathered around the well-spread tables. On Sunday morning the Rev. G. Pearce preached the dedication sermon in the new Chapel Hall. The Mission is in a very encouraging condition, and bids fair to prosper. It is now three years since Mr. Pearce has held preaching here, and two years since a Baptist Church was organized. Two English services and a Sabbath School are held on each Lord's Day, besides a Tamil service conducted by a native brother. A service on Wednesday afternoon is also held. With the Mission is connected a normal school, which has a boarding department, where, in addition to the attention given to the various studies of the young people, special care is taken of their health and domestic comfort. The school is under the charge of Mrs. Pearce, who is a graduate of Mount Holyoke Seminary, of the United States. She has three assistant teachers. Dr. Roberts, of Ooty, has been ordered to Afghanistan, and his family is moving to Madras."

#### REUTER'S TELEGRAMS.

LONDON, 30th September, 1880.

England and Russia are disposed to give military aid to Montenegro.

#### SONGS.

(From the Japanese.)

##### I.

The nightingale warbles  
So silverly clear,  
The sweet soul of silence,  
Enraptured must hear;  
But prison his music  
In fettering bars,  
And through they were golden  
With sheen like the stars,  
His heart in its sorrow,  
Would swell thro' his song,  
And tenderly murmur,—  
"I weary and long—  
Ah me, for my dwelling  
Low-rustling with leaves—  
My little house sheltered  
By emerald eaves!"

##### II.

In the beautiful paths of dream-land,  
I chanced to wander astray,  
Where the snowy blooms of the plum-tree,  
Were clouds in a golden day,  
And the flowers seeming brightest and rarest,  
And the buds seeming sweetest and fairest,  
A gleam on each odorous spray—  
I plucked, me-thought, on my way,—  
But alas! The day-dawning brightened  
With tender blushes of rose,  
And I left full many a blossom  
In still, enchanted repose;  
And the flowers that now seem the rarest,  
And the buds that seem to me fairest,  
Are those all untouched in my dreaming  
So I crave in my foolish regret,  
One flower that is lovelier yet!

F. B. H.

Tokio, 27th September, 1880.

#### [FROM AN OCCASIONAL CORRESPONDENT.]

SWITZERLAND, 12th August, 1880.

All the world is holiday making at this season. The prodigious swarms of tourists one encounters on every steamboat, railroad, post-road, hotel and pension in this country make one wonder how the ordinary work-a-day world finds room for them when play is over, especially when one considers further that every town and fishing village along all the coasts of Europe, and every bay and promontory in the whole round of the British islands are also crowded to the extent of leaving no room to swing the proverbial cat—whatever that nautical or surgical operation may be. The Scotch moors and rivers, likewise the Welsh, account for a still further number of pleasure-seeking money-spenders. Still, when all is said, Switzerland carries the palm as the desire of all nations, for they come literally from the east and the west, the north and the south to breathe the crisp and health-bearing air of the Alps and to fill the coffers of this energetic and intelligent little nation. For to the natural attractions of the country which no human hand could spoil, the "Switzers" have added everything they could think of to make the tourist's path smooth and the residents surroundings agreeable. Whether by instinct or by industry the "Switzer" has learned to cook and he has mastered the art of hotel-keeping, an art which has utterly baffled the British intellect, though it has been caught up in some of its rougher and more glaring aspects by the Anglo-Saxons over the Atlantic. The Germans on the Rhine do it fairly well on a large scale, but their style seems only a copy of the Swiss. The "Switzer" does it equally well on all scales. In the large establishments at Lucerne, Interlaken, and such places, you have the full array of officials in gold-lace, silver-lace, magpie, green apron, and chernbim in buttons, several grades of chamber-maids, and another *imperium in imperio* with its own special grades of dignity in the *salle à manger*. Moving off trunk lines and away from the main foci of tourists, you descend the scale in the most symmetrical and artistic manner. Just as in war when the officers get killed off or disabled their functions are performed by the survivors on some systematic plan, so here when the hotel cannot support the Grand Secretary, the Under Secretary, the *Portier* (a magnificent personage who has all wisdom and

knowledge at his finger ends), the assistant Portier, the deputy assistant Portier, and so on down to Boots and Buttons, the staff just shrinks evenly all round, until you get the whole of their functions concentrated in one or two females, the proprietors handing the dishes, superintending arrivals and departures, and bustling round the stables. Yet everything is comfortable and the work is as well done as if there was an army to do it. Private enterprise has done great things to make Switzerland attractive, but the coöperation of the local governments has also done much. At every show place—and every place sets up for such—the roads are well kept, clean paths are made through the woods, seats are placed and kept in order at every point where there is a view, with nobody to ask you two-pence for sitting in them, or to hint that you are trespassing. Finger-posts are placed everywhere for those who can read German, so that one need never lose his way; conveyances are all carefully organised to work without friction and to suit the convenience of travellers whether for short distances or long. The system of sending luggage by post, which is in vogue also in some other countries, is an important facility here, where so many pedestrians indulge their special vanity. But it is not for nought that the "Switzer" does all this. The tourist is his largest item of revenue and he lets out his country just as frugal widows let their sea-side houses at a very handsome price. An American gentleman told me—and it is a curious fact that the Americans are the surest sources of information in this country—that one million tourists find their way into Switzerland every year. I don't know what a million is, except that it takes seven figures to express it, and I don't know whether it is credible or not, but my informant's estimate of an expenditure of one hundred francs per head I do know something about, and if experience is worth anything I should say it is ridiculously under the mark. Put it at two hundred and you will still be within the limit, and reduce the numbers to half-a-million, and you arrive at the apparently enormous gross revenue levied from tourists of one hundred million francs a year. I think half-a-million not so incredible, because another American gentleman, a clergyman too, told me that forty thousand Americans had come over this year to Europe, most of whom find their way through England to Switzerland. Now though the American element is very prominent here, there are a great number of Germans, a sprinkling of French, and a host of Englishmen. Out of one hundred visitors I should say there are

Frenchmen .....	1
Germans .....	15
Americans .....	15
Englishmen .....	65
Other nations .....	4

100

but this must not be taken as statistical: I have probably underestimated the German element.

So then it is quite worth the "Switzer's" while to make things pleasant for strangers. It is his business, for without these strangers he could not live in the style he does. And it is easy for the "Switzer" to do it, for all that the traveller consumes is cheap in this country. The pastures are rich and ubiquitous, the beef is excellent and plentiful, and the land flows with milk and honey. Of wheat there is sufficient grown in the valleys to make the "Switzer" independent of high-priced imported wheat. Fish is disappointingly scarce, and though these clear, green lakes swarm with them they don't seem to be available for general consumption. The fish one eats generally comes from Paris. Living is on the whole cheap. With Cook's coupons travellers can live like fighting-cocks at the best hotels for eight shillings and six pence a day, including light and attendance. And good *pensions*, such as the one I am now in, will keep you for six francs a day. There are of course dearer as well as cheaper places, according to splendour and locality.

Considering what large establishments have to be kept up—and they are thoroughly well kept—and the shortness of their season, these charges are moderate enough. The drawbacks are the tips innumerable that the traveller has to submit to, which make all calculations of ways and means fallacious. In hotels you are beset at every turn of the staircase and in every corner of the entrance hall, by an obsequious troupe who insist collectively and singly in wishing you *bon voyage* and keep on wishing it until you buy them off with a franc a piece. When you are stepping into the omnibus (you would have walked to the station, some five and twenty yards off, only the *Secrétaire* put the bus fare into your bill) another lot, appear headed by a gorgeous gentleman whom, if you had met at a ball, you would have taken for a Marshal of France or a Russian Grand Duke. This gentleman also bows very low and wishes you all manner of good things, and the bleeding process begins over again. When you have paid away your last coin and the coachman drives off, you are smitten by the discovery that the only man of all that crowd who has really done anything for you in the place has got nothing. His position did not permit him to put himself *en évidence* in the front rank with His Excellency the Commander-in-Chief. Mr. Cook has

done something to discourage this annoying and unjust system, by commuting for attendance in his coupons. His triumph is only theoretical, however, *Messieurs les domestiques* have not ratified the treaty. The only attempt I have noticed on the part of hotel-keepers themselves to discountenance the practice was at the Falls of Giespach, where a notice was suspended in the dining rooms to the effect that the servants in that establishment are "not dependent on *pour boires* for their wages."

Besides the proximity of high mountains—always exhilarating—there is a peculiar sense of freedom in Switzerland, caused in some measure by the vast preponderance of pasture over arable land and the profusion of wild woods. Fruit grows promiscuously everywhere, and it is hard to realise the sense of property in heavy laden boughs which embrace across the high roads. This is a season of an abundant cherry harvest and the prospects of Kirch-wasser are therefore good. It is largely manufactured in this district.

From the sanitary point of view Switzerland is everything that one chooses to make of it. It can either be very healthy or the reverse—a question mainly of elevation. The valleys are in many cases alluvial and marshy, and if they don't produce malaria I am very much mistaken. Goitre, as is well-known, prevails rather extensively, and the country is also credited with cretinism. I have seen several cases of goitre. Some of them in people who seemed well to do. The "Switzer" lives in a putrid atmosphere when left to himself, that is when he has not arranged his house for the accommodation of foreign visitors, seeming to appreciate but slightly the blessing of a pure atmosphere. On the elevated ground there is absolutely nothing to pollute the air, and that such places are healthy *Va sans dire*. The place I write from is one of these, a small village 1,000 feet above the Lake of Thun, and 2,200 feet above the sea, partially isolated and commanding a magnificent panoramic view of the Alps from the Waterhorn to the Wildstwhel.

## PARIS LETTER.

(Ladies.)

Paris, 31st July, 1880.

It is not more than a fortnight since the nation was astir to celebrate the national fête—very beautiful and very gay, as it said in passing. To-day it is as much forgotten as the tricolor ribbons and paper costumes invented for that event: sensations are short-lived in France, for they follow in battalions, one swallowing up the other. Mlle Auclerc has had her hours of martyrdom for her sex, and they have passed unobserved: she declined to pay taxes until her sex had the right to vote for members of parliament and town councillors. The rate-collector informed her that was not his affair, so he seized her furniture, sold it by public auction, and not a sympathizer attended to buy in the articles and present them to her: but the age of chivalry is past, and philanthropy is not at all remunerative. The sewing clubs founded by Madame MacMahon in the heyday of her husband's rule are failures. She had enlisted aristocratic and plutocratic young ladies to form stitching meetings, and by their example and the presentation of their work to the poor, hoped to win over the crowd to royalty. However, there is one bright episode to chronicle: none but the brave deserve the decoration of the Legion of Honor. Annette Drevon has been promoted in that order; she is fifty-five years of age, has raven hair, and is a costermonger, trundling her cart daily in the streets of the quarter where she resides, while soliciting the public to buy her "artichokes and cauliflowers." She was *cantinière* of the 32nd infantry regiment, and followed it during the Algerian, Italian, and Crimean campaigns. During the battle of Magenta, two Austrians were on the point of capturing the regimental flag from the lieutenant; Annette flew to the rescue, despite the shower of balls, shot the two Austrians, and returned in triumph with the colours. She was decorated on the field for her bravery. During the war of 1870-71, she was with her regiment—her children; she wandered into the enemy's lines at Thionville, and encountered a Bavarian soldier who grossly insulted her. She drew her revolver and shot him dead: she was tried by court martial and condemned to be executed at Metz. On the morning of the execution Prince Frederick Charles was passing through the city: hearing that a woman was about being shot, he ordered a respite, read the notes of the affair, pardoned Annette, and sent her safely into France four days later. Only five women have been decorated with the Legion of Honor; Rosa Bonheur for painting, some nuns for Florence Nightingale sacrifices, and a post-mistress, who at the risk of being immediately shot, wired a warning to some French outposts, and so enabled the army to escape being surrounded. But Annette is the only sister who has won her laurels on the battle-field like a knight of old. Sadder is the history of Mme. Wedmore; she was an exceedingly pretty married lady, and compromised her fair reputation with Lord Paget, now the Marquis of Anglesea, who promised to marry her when she obtained a divorce from "home." This secured,

the Marquis espoused a widow—Mrs. Woodhouse. All the efforts at consolation of Lady Clinton were of no avail: her friend commanded a most sumptuous deep mourning toilette, and placing his lordship's letters and presents on a table, drank a large quantity of poison. When discovered her features were as black as her mourning. The other side of the story is, that the deceased had a weakness for drink and died from excessive indulgence.

Rather an unusual number of marriages are taking place during this, our dead season, and chiefly among the "new strata" of society, as the noble Faubourgs call the millionaire republicans. M. Gichard, a sub-lieutenant in the 8th dragoons, has been married to the wealthy Mlle. Depret. He has a fortune of two millions of francs income, inherited from his uncle M. Bochet, the founder of the gas company of Paris, who died a Cæsar. M. Bochet was a Swiss, and in his youth so poor that he had to walk all the way to this city, arriving barefooted. He had a great admiration for Gambetta, and left him immense property; this Gambetta returned to the family, only reserving the right to pass a few weeks in the Château of Crêtes, in Switzerland during autumn, where he is received by Mme. Arnand, the widowed niece of M. Bochet, who is rich and on the shady side of forty. Her son is M. Gambetta's private Secretary, and drives his four-in-hand. People are continually marrying his mamma to Gambetta, and also another rich and leading republican widow—Mme. Adam. "Barkis," however, does not appear to be willing; he encourages matrimony not the less, as a good deal of his time is taken up acting as best man for his young friends, who prefer civil marriage—a mode of wedlock becoming very general. The ceremony is performed by the mayor, who on the formalities being accomplished—an affair of five minutes, delivers an address, where the Republic, like the bride, is covered with flowers, and honeyed words distributed to all celebrities present. So far the ceremony approaches in many respects a civil interment, only at the latter the friends indulge in cheers for the Republic.

Some families have their yachts, others their private railway carriages, &c., but Mme. Flammarion, wife of the popular astronomer, has her own balloon made of pure Chinese silk. She has just inaugurated a series of ascension parties, where her husband and a few *savans* had arranged to pass two quiet nights in space, to see the sun rise and set, and learn all the scientific secrets possible. Her husband urged her not to enter the car, but she insisted, alleging she had promised to share his dangers, as well as his triumphs, and further, the prospect of a second honeymoon could not be resisted; the cords were then cut, and the travellers rose *en route* for the moon. After a night and a day, they were blown away from Paris, then back over the city, and finally they descended at Rheims, apparently for no other motive than to breakfast. For ladies who may be contemplating a similar voyage, I may observe that Madame Flarion's toilette consisted of a Madras costume, a pretty sailor's hat, with a flying ribbon having on the ends *au revers*, a foulard to guard the throat against probable draughts, and a pocket india-rubber overall.

The outfit for ladies, who instead of soaring above the lark content themselves with a fast life at the sea side, is a more expensive affair: its very selection even in the tropical period we enjoy can hardly be called a labor of love. When tulle and lace are the only articles to be purchased the task is not difficult, but to try new mantles proof against evening and autumn chills, is another affair. The best way to escape these trials is to rely on a cashmere shawl, for it is fashionable all the year round.

Jack-pudding is reported to have made his legendary costume out of the material of a mattress; fashion seems to have now adopted his idea, to judge from the multitude of check designs in cambric, gauzes, and foulards which make up into very pretty summer costumes, especially when trimmed with Valenciennes, Russian lace, and English embroidery.

It seems to be true, that solely by preserving in a wardrobe for twenty years all that reigning fashion condemns, at the end of that period, the costumes would become the latest novelties; there is no stuff or colour however ancient, that is not at present the mode. Antique shades rule, such as Titian red, and Veronese blue, copied from those artists' paintings: laurel leaf and pheasant red will be colours in vogue during the coming winter. A toilette much patronized is in Surah, faded heliotrope, with round jupe; across a large plaited flounce are folds of drapery knotting behind: the corsage is a surcot Veronese, in knitted silk, laced behind, the borders disappearing under one of the folds just described; the capuchon, equally flat, is in Surah, with a large satin ribbon bow; collar small and straight, in embroidered heliotrope velvet. White toilettes are also in vogue, and mousseline de laine under its various names. White cambric is also in request, and makes charming costumes, it is simple, and its freshness will be increased if a foulard scarf be added. The tussor Madras enjoys the same rôle as in Persia, the rest of the toilette being plain, in cashmere or foulard; indeed Madras is employed in every manner; for carriage drives, travelling, and wraps; one thing ought to be avoided, never to over-load it with lace or ribbon. Children,

and even girls aged twelve and thirteen, patronize Madras, which imparts gracefulness, roundness of form, and fulness to their little figures. Babies appear to be covered with embroidery, even they have their capuchon, which imparts to them quite an air of importance, and those who cannot yet walk in the streets, have shoes in faille, of all colours: it is mamma who in this matter acts the rôle of shoemaker.

For the sea side a new coiffure has appeared—the Diana, consisting of two plats: it is difficult to dress the hair after being wet, so when it is twisted into a kind of rough chignon, the "Diana" is attached, by crossing the plats over the head, causing them to descend down the chignon, to the back of the neck, where they terminate with a little buckle.

Riding habits are a complicated work and ought never to be executed save by firstclass makers. The corsage is full of mysteries, having to be wadded here and restricted there, depending on the carriage of the rider and the movements of the horse.

The long jupe has ceased to be the mode; many *matinées* are made in nansouk and muslin, lined with silk or Scotch cambric. They are made straight as a camisole, are richly trimmed, and fasten to the waist with a ribbon, knotting in front. Collars and fichus are of all shapes; the Mazarin is composed of cambric, with Valenciennes insertion, thus recalling the time of Louis XI. The hats generally in favor are the large bathing shapes (*baigneuses*) in Italian straw; they are most elegant, when the trimming—always white—is in silk cambric or lace: occasionally flowers are added, but little or no ribbon. The "Panama" and "Manilla" come next: so far as shape is concerned fancy is the sole guiding principle. All shapes are admissible, provided they be sufficiently eccentric: the large *cabriolets*, projecting on the forehead, are generally buried under a mass of feathers from which lace escapes in the form of snow. The strings are in silk cambric or iris gauze, bordered with lace, forming a vaporous fold beneath the chin, in this fold two gold pins are placed, or a diamond butterfly, or an emerald fly seeming to be escaping from the fold of the gauze or cambric. Even the popular jewel—the wild boar, may be observed in brilliants, with his red eyes peering forth.

This is a busy and a trying moment at the Conservatoire, or National Academy of Music, an institution endowed by the State for the free education of the youth of both sexes, for the career of musician or *artiste*. A preliminary examination only is necessary, and the admitted, if possessed of talent and industry, have a fair road to success, and the right to an engagement in one of the theatres enjoying a Government grant. Examinations take place every year, open to the public, and before a jury composed of the highest musical and theatrical authorities, who then and there deliver their verdict: if contrary to the opinion of the crowd, the latter hiss and hoot, and have just freely indulged in this mode of unreflecting condemnation. The result of the examinations has been satisfactory, without being remarkable; no star has shot from any sphere and, on the whole, the young women were better than the men. The best student actor was M. de Férandy, nephew of Got. The pupils are at liberty to select their own parts, the jury makes up its verdict from the execution.

It is a popular belief in France, that men only are in favor of cremation; their leanings have just received a heavy blow, as it appears that this method of sepulture cannot take place without the enactment of a special law. Not one of the advocates of the innovation has announced so far, that he has directed in his will that his corpse is to be transported to Saxony or Italy, and burned according to law; now the faith that acts not, cannot be a faith sincere.

One or two journals devote a few lines to the return of the ex-Empress Eugénie from Zululand; she has never been forgiven for provoking the German war, and her sorrow finds no echo in the hearts of those who have to mourn the loss of husbands, brothers and sons.

It is the custom, when a great house in the country gives a fête, to provide the poor in the neighbourhood beforehand with a good meal; the practice is extending to Paris, in the form of sending a contribution to the local poor-box.

#### JAPANESE NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as make them readable and intelligible.]

#### COURT, POLITICAL AND OFFICIAL.

A native journal says that His Excellency Okuma, Privy Councillor, paid an official visit to the United States Legation at Tsukiji, on the 24th ultimo. The visit is reported have been in connection with the proposed new foreign loan.

The same paper states that His Excellency Oki, Privy Councillor, paid an official visit to His Excellency Ito, Privy Councillor, at about 4 p.m. on the 23rd ultimo. Their Excellencies then went to the residence of His Excellency Iwakura, Junior

Prime Minister, where a conference was held which lasted until 11.30 p.m.

His Excellency Sano, Minister of Finance, accompanied by a number of secretaries, paid a visit to His Excellency Okuma, at about 6 p.m. on the 23rd ultimo.

According to a native paper the entire control of the Custom house at Fusan, which has been hitherto vested in the hands of the Japanese Consul, is to be transferred to the Korean Government.

A native paper states that Shimazu Hisamitsu, better known to foreigners as Shimadzu Saburo, who has resided in Kagoshima for a long time, has been summoned to come up to Tokio with all expedition. If this report be true the paper asks what is the reason for this order.

A vernacular journal reports that Mr. Nakajima, Senator, has sent in his resignation.

The same paper states that His Excellency Oyama, Minister of War and the ex-Chief of Police, paid a hurried visit to the Cabinet at about 10 a.m. on the 24th ultimo, where he held a secret conference with some of the Privy Councillors.

A *soirée* was given at the French Legation at Dai-machi, Mita, Tokio, on the 22nd ultimo, to which His Imperial Highness General Prince Higaashi Fushimi, a number of officers, and about twenty-eight foreign and Japanese gentlemen were invited.

The *Nichi Nichi Shinbun* states that "His Majesty the Emperor gave a state banquet in European style to the Prime Ministers, Privy Councillors and the Minister of War, in the Palace, on the 25th ultimo. No politics were discussed, but the principal subject of conversation was the beautiful scenery of various places in the interior. The banquet ended at 1 p.m."

The same paper writes:—"The new French Minister for Japan, whose departure from Paris was postponed in consequence of the proposed revision of the treaties, will start about the beginning of this month, armed with full powers to comply with all alterations proposed by the Japanese Government."

The *Hochi Shinbun* contains an abbreviated form of the memorial recently addressed to the Prime Minister by Mr. Odagiri Kaneaki, the delegate from the Yamanashi prefecture, praying for the establishment of a National Assembly:—"Knowing that a National Assembly confers great benefits on the country, we wish to persist in demanding that the Government shall establish one. We are well aware, however, that numerous memorials have already been returned to those who sent them, so that it may be of no use for us to forward a petition, as it may meet with a similar fate. If the Government considers that the people have no right of petition, and that petitions will always be rejected, they ought to make this known by official notification without delay; but if this is not the case, it would be better to announce that such a privilege does exist, and that certain petitions will be received in a certain prescribed course, so as to give an opening for the acceptance of the demands of the nation."

A native paper says that at a meeting of the Cabinet two or three days ago, a member suddenly rose up and said:—"The air has lately been filled with various rumours about us, all unfounded no doubt, but yet these reports do exist, and I consider it to be in consequence of our not leading virtuous lives. I wish we would all make an effort to maintain an upright course of conduct in future." He then vehemently attacked the personal behaviour of each member present without the least ceremony." The paper from which we quote declines, as usual, to be responsible for this piece of news.

The *Mainichi Shinbun* reports the arrival at Tokio of His Excellency Mayeshima, the Postmaster General, on the 25th ultimo, and of Governor Nabeshima, of the Tochigi prefecture, on the 26th ultimo on official business.

The *Mainichi Shinbun* says that on the 26th ultimo His Excellency General Yamagata, Privy Councillor, paid an official visit to His Excellency Sanjo at his yashiki at Nagato-cho, but finding him absent at his country seat at Imado followed him thither and held a secret conference, returning home at about 6 p.m.

The *Akebono Shinbun* states that the ex-King of Looschoo

has received a present of a carriage and pair from the Imperial Household Department.

A vernacular journal states that since the arrival in Tokio of Mr. Itagaki Taisuke, ex-Privy Councillor, the delegates from different prefectures, now in the capital with petitions for the establishment of a National Assembly, visit him daily at his temporary residence in the Kawasaki, Kobiki-cho.

A native paper states that Mr. Nomura, Governor of Kanagawa, accompanied by two subordinates, started on the 27th ultimo on a tour of inspection of his prefecture.

The *Choya Shinbun* says that Mr. Watanabe, Chief Secretary of the Daijo Kwan, who has been ordered to frame some regulations for the control of commercial firms and companies, attended a meeting of the Senate on the afternoon of the 28th ultimo.

According to the *Mainichi Shinbun*, His Excellency Inouye, Minister of Foreign Affairs, frequently holds private conferences with His Excellency Terashima, Privy Councillor, and Ex-Minister of that Department, with regard to treaty revision.

The *Mainichi Shinbun* says that His Excellency Privy Councillor General Kuroda has resigned, in consequence of his advice that the revenue should be payable in rice not having been accepted.

His Excellency Terashima, Privy Councillor, paid a visit to His Excellency General Kuroda at his residence at Naka-no-cho, Azabu, on the 28th ultimo.

His Excellency Inouye, Privy Councillor, visited His Excellency Iwakura, Junior Prime Minister, on the same day at about 2 p.m., and remained until 7 p.m.

On the same day also, His Excellency Sano, Minister of Finance, paid a visit to His Excellency Okuma, Privy Councillor.

Mr. Ario, Under Secretary of the Revenue office in the Finance Department, has been ordered to the prefectures of Yamagata and Niigata, to investigate the working of the land tax.

The *Nichi Nichi Shinbun* says that on the occasion of His Majesty the Emperor's visit to the Cabinet a few days since, a number of documents were presented to him by the Prime Ministers and Privy Councillors.

A native paper also says, that four or five days ago a certain Prime Minister held a very secret conference with one of the Privy Council, on the subject of the depreciation of kinsatsu, when the latter expressed his opinion that unless all paper money was destroyed when withdrawn from circulation, it would decline more and more. The Prime Minister held different views which, however we are not able to give. This may be in connection with the order sent to the Finance Department from the Daijo Kwan on the 25th ultimo that the paper money withdrawn from circulation should be burnt.

A Joto Saibansho is to be established in Hakodate.

#### NAVAL AND MILITARY.

A native journal reports that the Naval Arsenal at Odawara-cho, Tsukiji, Tokio, is to be amalgamated with the dockyard at Yokosuka.

The construction of the Western Admiralty station at Mihara, in the province of Bingo, will be commenced early next year. Barracks for the men-of-war's men are to be erected at Nagasaka.

The *Hochi Shinbun* reports that the commissariat of the Tokio garrison will shortly leave for Hakone, to practise marching and manœuvring in that neighbourhood.

A native journal announces the departure from the Kiododan of a battalion of infantry, which has marched out to the Narashino plains for exercise in various manœuvres.

A native journal states that a new Naval College is to be erected at a cost of 99,000 yen. The construction of the new buildings for the Naval Department is to cost 135,000 yen.

His Excellency Admiral Kawamura, Privy Councillor, paid an official visit to the U.S.S. *Richmond*, on the morning of the 29th ultimo.

#### INDUSTRIES, TRADE AND FINANCE.

The *Mainichi Shinbun* publishes the following extract from the letter of a correspondent in Fusan, Corea:—"As to the state of commerce at Fusan, the export of rice is gradually becoming reduced, while the import of shirtings increases daily. The

consequence is, that Korean money already shows a considerable decline in value, and as the winter approaches it is expected to show a further depreciation."

The *Hochi Shinbun* contains the following note on the proposed financial changes:—"As regards a remedy for the financial administration, some suggest the raising of a new foreign loan, and others that the revenue shall in future be paid in rice instead of in currency. We have, however, been informed that the Government have concluded not to adopt either of these proposals, but intend to introduce a new system of inland revenue, whereby saké and all similar luxuries will be taxed; while as regards foreign commerce they will do their best to pave the way for direct trade, and thus by degrees the financial position of the country will be restored."

The *Sei Dan* publishes a report that a certain nobleman has persuaded several members of his order to raise a subscription of 6,000,000 yen in specie, and to lend it to the Government in order to restore kinsatzu to their proper value.

The *Hochi Shinbun* writes:—"Sunday, the 26th ultimo, was the day on which the agreement of the Tokio and Yokohama import merchants to suspend business for a short time, was to expire. In consequence of the continued rise in the price of specie, however, a further meeting has been held, on which occasion one or two cotton merchants of Tokio strongly insisted upon being released from the agreement. The curio merchants of Yokohama, however, recommended that the arrangement should continue for a space of fifty days. After a prolonged and animated discussion, it was decided to keep the existing agreement in force until the 3rd instant, and the following certificate was drawn up:—

"In the former agreement it was determined that no purchases should be made from foreign merchants from the 20th to the 26th of September; but it is now certified and agreed by all who signed that document, that it shall continue in force for another week, to commence on the 27th of September."

In Osaka and Kobe more stringent regulations are in force than those in Yokohama and Tokio. not only are purchases forbidden, but even the delivery of goods already contracted for. Some merchants in the latter places, expecting that there would be a demand for import goods in Osaka and Kobe, shipped their stock to those ports. The traders there, however, refuse to purchase import goods even from Japanese and not even the prices were inquired, so that the goods were sent back to the shippers.

According to the same paper Mr. Iwasaki, superintendent of the Banking Section of the Finance Department, left Tokio for Yokohama on the 27th ultimo. The cause of this visit is said to be the rise in silver and the rate of exchange of Mexican dollars. Specie is still steadily advancing in price and was at a premium of sixty per cent over kinsatzu on the morning of the 27th ultimo.

The *Nichi Nichi Shinbun* says that the public loan bonds issued by the Government for the redemption of kinsatzu amount to 20,000,000 yen.

The same paper states that from the commencement of the silk season until the 26th ultimo, 79,379 cards were brought into Yokohama from various districts, namely:—2,150 cards from Yashiu; 3,444 from Shinshiu; 38,037 from Iwashiro; 3,600 from Kashiu; 1,485 from Yonezawa; 391 from Iwaki; 4,283 from Joshiu; 18,800 from Akita; 6,389 from Bushiu.

The following statistical report compiled by the Finance Department, shows the quantity of saké brewed in Japan during the past three years:—

Year.	Koku.
1877 .....	2,862,045.962
1878 .....	3,851,780.522
1879 .....	5,026,782.973

The *Hochi Shinbun* says that the paper money purchased by the Government by the sale of silver coinage, now amounts to 10,000,000 yen. It is a currently rumoured that the paper currency thus purchased is to be destroyed.

The *Nichi Nichi Shinbun* contains the following on the tea trade:—"A telegram was received in Yokohama from San Francisco on Saturday last, the 25th ultimo, to the effect that there had been a great fall in the price of tea which declined to twenty-five cents per pounds. This news caused great

confusion among the tea merchants, and some buyers stopped receiving delivery of cargo already contracted for. On the following day another telegram arrived, announcing a further decline to eleven cents per pound; this caused even more confusion and all the buyers wished to forfeit their contracts. All the merchants were going hither and thither on that day and the next, inquiring for further intelligence, but they eventually quieted down and are anxiously expecting the next news. We think that so sudden and great a decline is due to simultaneous arrivals of tea ships both on the Pacific and Atlantic coast. It is a very common practise with European and American merchants in the open ports to communicate with their fellow-merchants at home by telegram, in order to confuse the market prices and then, taking advantage of the opportunity, to buy cheaply. Our tea merchants therefore, should not sell their stocks until they can ascertain the actual news, so as not to suffer loss by falling into so cunningly devised a trap."

The *Nichi Nichi Shinbun* writes as follows:—"The propositions for the revision of the regulations for issuing public loan bonds, in exchange for kinsatzu, have lately been sent to the Senate from the Cabinet. It is not very clear to us with what view the propositions were made up, but we learn that the regulations were originally drawn up in 1873, though few people were aware of it. Moreover they are found very inconvenient, since the present system of book-keeping was devised, in transactions between the Finance Department and the Fucho authorities. When it is made known to the public generally that the exchange of kinsatzu is specially mentioned in the new law, it should to some extent lessen the depreciation of the paper currency, and it is with this idea that the present regulations are being revised."

The *Hochi Shinbun* states that on the 15th ultimo the Kamishiro iron mine was formally opened by Mr. Sato, Superintendent of the Mining Bureau. The iron from this mine has proved to be of excellent quality, and after being puddled is sent to the Iron Works on the adjoining mountains.

The same paper states that "a telegram was received in Tokio on the 30th instant from Yokohama, to the effect that paper money has become scarcer, and that the interest for it is 6 yen per \$1,000 per day."

#### MISCELLANEOUS.

The *Nichi Nichi Shinbun* publishes a report to which it does not itself give any credence, that several nobles and officials have recently purchased, in the neighbourhood of Muroran, Yesso, large tracts of land through which the proposed railway will run, with the intention of selling them back to the Government at a profit.

We learn from a native source that the *Fuso Shinshi* was suspended on the 24th ultimo by order of the Head Police Department. The proprietors were ordered not to sell the copies of their issue No. 36, and, if there were any copies of it still remaining in their hands, to deliver them to the authorities.

The *Nichi Nichi Shinbun* says that applications have recently been made to the authorities, by the people of the prefecture of Shimane, to be allowed to settle upon the island of Takeshima on the coast of Iwami. The island is said to have never been visited, and to be quite uninhabited. Permission was granted, and over forty families are about to emigrate to the island.

The *Hochi Shinbun* publishes the following letter from Ikuno, in the province of Tajima:—"Ikuno and its neighbourhood were visited by a very heavy storm of wind and rain on the 15th ultimo. At about 3 p.m. on the following day all the streams and rivers overflowed their banks and flooded the city. The oldest inhabitant asserts that such a misfortune has not happened for the last hundred years. Four persons are missing and are supposed to have been drowned. Five houses have been carried away entirely, two half ruined, and a countless number of buildings damaged. All the rice fields and vegetable gardens have suffered more or less, and many bridges have been swept away. Some injury was done to the interior of the Ikuno silver mines, which blocked in seven or eight mining colonies for a short time; fortunately they did not lose their lives. This accident was due to a

landslip caused by the storm, which barred the bed of a torrent, and diverted the water into the mines which are now like a sea. Work is of course at an end for the present, and operations are in train for pumping the water out of the mines.

The *Nichi Nichi Shinbun* states that the *Kinji Hiron* was suspended on the 24th ultimo, by order of the Head Police Department. The proprietors were ordered not to sell the copies of their issue No. 292 (which contained an article headed "Is the Government unkind to its people") and if there were any copies of it still remaining in their hands to deliver them up to the authorities.

The *Nichi Nichi Shinbun* states that according to recently published official statistics which were compiled this month, the number of vessels built on the European model, now in possession of the Government and private individuals throughout the whole Empire, amounts to 192 steamers and 278 sailing ships. Of these, 142 steamers and 151 sailing ships belong to private individuals. The vessels of the navy are not included in this calculation.

The *Mainichi Shinbun* contains the following news from a correspondent at Fusan, Corea:—"On the 9th ultimo the steamer *Annei Maru*, belonging to the Sumitomo Company, arrived here, on her first trip. To celebrate her safe arrival, the Japanese Consul and other officials and several leading gentlemen and some Korean officials, were invited on board on the 12th ultimo, when steam was got up and she went for a trip round Zekkei Island and back to her anchorage in front of the Japanese settlement. The guests were then entertained at a banquet in the European style. The steamer was built in the Nagasaki dockyard to run between Japan and Corea. This, as we said above, is her first trip. It is intended to run her twice a month hereafter between the two countries."

The *Akebono Shinbun* announces that the Osaka Mint is busily engaged in coining copper money, in compliance with a request from the Okinawa prefecture (Loochoo).

A correspondent of the *Nichi Nichi Shinbun* writes as follows:—"At about 4 p.m. on the 24th ultimo, a very severe gale suddenly sprang up on the coast of Awaji. Twelve small fishing boats engaged in their usual occupation were capsized and over twenty fishermen were drowned; not one man of any of the crews escaping."

The *Hochi Shinbun* publishes the following from a reliable source:—"On the 16th ultimo there was a severe storm of wind and rain in Sakai harbour. The public gardens and other places were flooded by an unusually high tide, and the water at last reached the flooring of the houses, many of which were swept away. A number of vessels were wrecked, but fortunately no loss of life is reported."

The *Hochi Shinbun* says that the construction of the Tsuruga railway is being carried on with great rapidity, and that about two ri of the line is already completed.

#### THE JAPANESE PRESS.

#### IS THE JAPANESE GOVERNMENT REALLY UNKIND TO ITS PEOPLE?

(Translated from the *Kinji Hiron*.)

WE have been informed with regard to the proposition to raise a new foreign loan of £20,000,000 that His Majesty the Emperor himself has declared "We do not wish it," and that rumours are current to the effect that notwithstanding this expression, and violent discussions daily in the Cabinet, the Government has definitely decided upon this step, which must be a source of regret to all thoughtful men. We know well that if the Government wishes to recover from its financial difficulties there can be no better way than to establish a National Assembly, by which course the expenditure will be transferred to the hands of the people. Has the Government, however, different views from ours? Or is it that the Government considers it unpleasant to hand over a finance already so badly administered, and consequently desires to disguise the actual state of affairs and then open a National Assembly and give up its cooked accounts to the nation? Or if this is not the reason, can it be that the Government, looking upon the people as infants, and therefore incapable of managing so greatly involved finances properly, has determined to manage as long as possible, and then, when unable to face its difficulties any longer, to throw the burden upon the shoulders of the nation? Various circumstances having furnished a pretext, it may thus eventually have been decided to raise a new foreign loan of £20,000,000. We have heard that the gentlemen in favour of negotiating the new loan argue that, as paper has depreciated so much, while specie has gone up correspondingly, the only way to maintain the finances of the Empire at present is to raise a foreign loan, and then withdraw the paper from circulation, so as to recover the confidence of the nation. This may, perhaps, be true to a certain extent. The Government has already mismanaged its finances and brought them to their present complicated position. The Government has always looked upon the people as being in a state of political infancy, and openly declared them incapable of holding any such important legislative right as the administration of finance, so that it would be impossible for the Government to throw such complicated and irremediably broken-down finances upon a nation it has always despised as being incompetent to manage them. We can excuse the Government in many respects, although the establishment of a National Assembly finds no favour in its eyes, and it is busy in devising some method of temporarily relieving the financial pressure; still we cannot excuse it when the remedy it proposes is the negotiation of a foreign loan. We can give an illustration of the advantages and disadvantage of such a course from everyday life. A sick man who is partial to spirits is forbidden them by his physician, but he disregards the injunction. Now all spirituous liquors are injurious in cases of illness, but we find, comparing one with another, that alcohol is more hurtful than spirits, and the latter again more so than beer or claret. Though all of these are injurious we should certainly give the sick man claret instead of alcohol. Our Government is suffering from its financial difficulties and is urgently seeking some remedy; does it then, disliking the idea of establishing a National Assembly, wish to raise a foreign loan, considering it better to suffer injury from the latter course? Looking at it from the Government standpoint, it may be deemed that to establish a National Assembly, or to raise a foreign loan, are both equally disadvantageous and injurious: but let the Government compare disadvantage with disadvantage, and then decide on its course. Both alcohol and claret being actually injurious in time of sickness, does the Government mean to assert that it will prefer the former to the latter? How can such be the case? The Government should decidedly, with patient abnegation, open a National Assembly, so as to surrender the right of financial administration into the hands of the people, and entirely abandon any idea of raising a foreign loan, which is certain to cause great harm. The present great depreciation in paper money is not due simply to the enormous amount in circulation, but more to the fact that the Government has lost the confidence of the nation. If this con-

confidence existed, the financial difficulties could be better remedied by increased taxation, or the raising of a domestic loan, and there would be no necessity to raise a loan so far off as in London or Paris. The Government, however, does not act in this manner; is it because the authorities themselves are aware that they have lost the confidence of the nation, and are consequently unable to accomplish their ends in their own country?

It is not an easy matter to raise a foreign loan, and though there are many capitalists in London, if we wish to raise a loan of £20,000,000 more, we must pay at least seven or eight per cent per annum and limit the terms of instalments for short periods, otherwise we shall get no subscribers. If we could manage to raise a loan at so favourable a rate as five or six per cent, we cannot of course prolong the instalments for a hundred or a thousand years; shall we be expected to repay them in twenty years? If so we shall be asked for the sum of 5,000,000 gold yen every year. Shall we be expected to repay them in ten years? If so we shall be asked for the sum of 10,000,000 gold yen every year, nor is this all, for we must pay every year both the instalment of the principal, and the interest as well. After a careful examination of the estimates of revenue and expenditure presented to the Prime Minister by the Minister of Finance, we find that the foreign and domestic loan together amounted to 358,047,190 yen, and that 5,817,538 yen, as the instalment of the principal, and 15,631,362 as the interest thereof, have to be paid: thus the principal and interest of the National Debt, which is to be paid this year, when added together make the enormous total of 21,448,907 yen, or more than one-third of the annual revenue, which is 59,033,507 yen. Such being the case, if the Government raises an additional foreign loan of £20,000,000, and undertakes the heavy responsibility of paying up both principal and interest, how will it be able to administer its finances properly? The new foreign loan is to be raised simply to redeem the paper money, so that Government cannot apply it to any other object. The paper currency, however, bears no interest and moreover is inconvertible; even if the whole of it be withdrawn from circulation we cannot assert that the Government has actually grown any richer; it is only that a domestic loan, bearing no interest, has been exchanged for a foreign loan which does. If the Government intends to raise the foreign loan and redeem the paper currency, it will, for a time, be at ease, but when the operation of withdrawing the paper has been completed, it will find difficulties heaped on difficulties. Even without adopting such a course, the Government has lost the confidence of the nation, and if it intends to raise so reckless a loan, what feelings will be created in the minds of the people?

Observe the position. The Government, deploring the constant rise in the value of silver coinage, attempted to check it by selling silver from the treasury of the Finance Department, with a temporary success, but as soon as the coin thus sold became distributed in various directions, silver again commenced to rise and its premium over paper went to 40 per cent, then 50 per cent, and finally, on the 17th instant the market price in the Yokohama Stock Exchange,—notwithstanding an enormous amount of silver sold by the Finance Department—reached the figure of 58 per cent, and as there was no knowing how much farther it would go up the Exchange was closed. Is not this well known? Alas! when a Government has lost the confidence of its people, a policy of procrastination cannot restore it, and such a course as to raise a foreign loan will decrease it more and more; is not this a very sad fact?

If the Government after thoroughly investigating the general condition of the country, and carefully considering the amount of self denial it incurs, should open a National Assembly, (although a disagreeable course for itself) and should surrender the right of financial administration into the hands of the people, the arbitrary acts of an absolute monarchy come to an end, and the people will be allowed to participate in political affairs. There may be perhaps some feeling of derision—and it may be said that the Government, being no longer able to manage the difficulties of its finances any longer, has transferred them to the people, who it has hitherto regarded as in a state of political infancy—but when once allowed to participate in politics, the people will consider the advantages of the country, and will feel towards the national finances as they

do to their domestic expenses. Therefore, if the members of the National Assembly approve the increase of taxes, the people will soon acknowledge their correctness, and, if the Government wish to raise a domestic loan, the people will subscribe to it and thus the finances would cease to trouble the Government as at present.

Let the Government sweep away the heavy fog from before its face, and not trouble itself about attempting to restore the finances to a proper equilibrium independently; let it take the vote of the people, and follow a proper policy of governing the country with their assistance, and it will find great hope for the future. There are many able men in the Government; which of them then will advise His Majesty the Emperor, pointing out the disadvantages of a foreign loan, and suggesting the immediate establishment of a National Assembly, so that we, the nation, may be enabled to take charge of the financial administration? We deeply regret that we have heard of no one who intends doing this. Is the Japanese Government really unkind to its people?

#### LAW REPORTS.

##### IN H. B. M.'s CONSULAR COURT FOR JAPAN.

Before R. T. RENNIE, Esq., Judge.

Monday, the 27th day of September, 1880.

MORI WAKA v. JOSEPH WICKERS.

This was an action brought to recover \$269.35 being the value of a piece of land and the title deed thereof, a house and personal effects; all belonging to the complainant and alleged to be detained by the defendant.

Both parties appeared in person.

Mori Waka, a Japanese woman, warned, stated:—I have been for sometime past employed by the defendant. I am at present living with a relation at No. 10 Miyo-cho. I have been employed by defendant since 1878. On the night of the 6th of June I was turned out of my own house by the defendant who beat me. The number of the house was 1,482, Ishikawa. The house was my own. I had bought it with the wages entrusted to me by the defendant. Both house and land were registered in my name. Defendant turned me out on the night in question by catching me by the arm and kicking me out. On the 9th of July the defendant pulled down and removed the house. He carried off all my property. The house was constructed for ninety-five yen: the ground cost forty-five yen. The defendant carried off the title deed. I had it with other documents in a cabinet. I now claim 269.35 yen and a return of the title deed. The balance of my claim is for my personal property. I recognise the correctness of the list [produced] of the things I lost.

Cross-examined by the defendant:—When you first took me in I had four suits of clothes. You arranged to give me ten yen per month. You give me fifty yen for the land, but that money was an accumulation of my wages. I have witnesses to prove the destruction of the property, but they are not here.

Joseph Wickers, sworn, stated:—I am the defendant in this case. I admit pulling down the house and removing the goods and chattels which I was using when the complainant was living with me. My reason for so doing was that I had positive proof of her infidelity. I consequently turned her out. She made several attempts to effect a reconciliation, but without success. I said that if she would agree to an alteration of the name in the title deed for six months I would reconsider the matter. I pulled down the house, and carried off all that there was in it. I had lived in the house entirely for the last two years. I had possession of the title deed during the whole time. (Title deed put in.) I gave her the money to buy the land and build the house. I gave her fifty yen for the land and paid one hundred and fifty yen for the house. I paid it myself to the carpenter. I have always entrusted her with paying all bills. I consider that I had a right to the clothes and house, but the land I am afraid is Japanese. Complainant has never applied to me for the title deed. I bought the clothes for myself, and let her wear them. The original cost of the clothes I gave her was from twenty-five to thirty yen. I have also bought her jewelry. Half the clothes the plaintiff alleges that I

took away, she has now up in Tokio. [The list of clothes alleged to be retained was read over to the defendant who identified the only articles of which he had possession, including the title deed and the materials of the house.] There was an objection made by the municipal authorities soon after the house was built. It was not on any stone foundation. I paid the carpenter, through the complainant, one hundred and fifty yen. I have the receipt for it at home. The Japanese have warned me several times to remove the house.

His Honour:—Do you really expect me to believe that you, having two children by this woman, gave her no actual wages, and only lent her clothes? It is absurd. I should like to ask the woman a question.

Mori Waka, recalled, said:—I paid the one hundred and fifty yen to the carpenter in three instalments. I borrowed the money from a Japanese. I subsequently repaid this loan with money received from the defendant as part of my wages. I only paid ninety-five yen to the carpenter. I don't know about the stables as there were several receipts.

His Honour, addressing the defendant, said:—You admit that you have no right to the title deed or the land, so you must give them both up. There is no evidence, however, that the house itself was a fixture, or that you had given it to the complainant, so she cannot recover it. As regards the clothes and other property, I consider that your conduct was very bad throughout and in consequence of it and your treatment of the complainant, I order you to pay her one hundred yen compensation: to give her, as before said, the ground and title deed, and to pay the costs of Court.

The Court then adjourned.

# IN THE U. S. CONSULAR GENERAL COURT.

Before T. B. VAN BUREN, Esq., Consul-General, Judge.

Measrs. A. S. FORBES and E. R. SMITH, Assessors.

Friday, the 1st day of October, 1886.

SIDNEY M. SMITH, of San Francisco, by his Attorney F. C. SPOONER *versus* ISAAC BUSH and AUGUST LANDELDT.

On the Court reopening

His Honour said that he had been informed by the Kengo that they had been unable to find the brokers required, either the one referred to by Mr. Bieber or the man who formerly resided in Otamachi. Knowing, as he had remarked before, the wonderful system of espionage practised by the Japanese Government, it seemed to him a most amazing thing that these men could not be discovered. However, he was assured that such was the case by the authorities and he did not doubt it. If it should turn out that no such man as Itoya, who was mentioned by Mr. Bieber exists, it would furnish a decided commentary on the case.

Neither counsel having any more evidence to produce

Mr. Litchfield said:—I have some further remarks to make on the subject of the kinsatsu transactions. As to the main features of the transactions of the defendant Bush, it was a question whether in keeping the books as he did, he intended to conceal his defalcations. Mr. Talbot's report, however, was as elaborate as possible, and the conclusion that he arrived at was the only one that could be arrived at by any man of common sense. The report justifies me in asserting that the case is entirely in the defendant's favour, up to the point of the kinsatsu transactions. The Court has said that it was most decidedly strange that a man in Mr. Bush's position should deal so extensively with a Japanese whose name he barely knew. But if the Court recalls the general nature of transactions between foreigners and natives, it will remember that frequently only the man's name is known. Then when any trouble arises through breach of contract, or realization of things speculated in, we find that the name given is merely the name of a house perhaps fifty years old, and the man occupies an entirely different position from what we expected. This was apparently the position of Mr. Bush. He met a man who was a broker, or tout for a broker, during the kinsatsu speculation mania in January, February and March last. He called himself Takajiro, touts for business, and transactions ensue. As the accounts produced by Mr. Bieber show, transactions between Mr. Bieber and the broker were not

always conducted at a loss, but that there were occasionally slight profits. Similarly in the defendant's case it is probable that the broker paid up some few small profits to encourage Mr. Bush to put confidence in him, a man about as well known as Imada, Itoya, or any other names at that gigantic swindle, under Government auspices, in Honecho dori. Mr. Bush, I say, was in the hands of a tout, and when the bubble burst this tout disappeared with it. Again, as to the probability or otherwise of Mr. Bush's dealings, we have his sworn periodical accounts from his broker. These accounts should show the broker's name and address but they appear most unfortunately to have been burnt. This is nothing unusual as a witness produced by the other side has had a similar mishap with his own books. He stated, however, that he had a broker, Itoya, who by the way is no more known than Takajiro, from whom he obtained a list of his transactions which he produces: it is imperfect but it is what Itoya told him. As I said before, Mr. Bush's conduct through the case has been that of a man anxious to pay up all his just debts. He might have left the country with what plunder he had, if he had it, instead of remaining here, and could have retired from our sight and left no more traces than did the broker Takajiro. But Mr. Bush has no means of getting away. He has given all his property to his creditors and is left high and dry. Were he the rogue that is alleged what could be simpler than with \$10,000 at his command to produce a dozen Takajiros, as any of us could do, all furnished with accounts, duly stamped, sealed, and signed, to impress the Court with their accuracy. We all know this is possible. Mr. Bieber's accounts were obtained thus and are all imaginary. My client could easily, had he wished, bought several Takajiros in the stock market. As to the alleged tampering with Japanese witnesses; the counsel for the other side will probably complain that sufficient efforts have not been used to discover the broker mentioned, but Mr. Bush has done his best and wherever he has been, spies from the other side have followed him: the further he went the more unjustifiable allegations and remarks would have been made. It amounts to this. Mr. Bush and his nephew have been in the habit of going to the exchange shop kept by Takajiro Midzutani during the course of the year. On the first occasion, as Mr. Bush explained, it was to ascertain the address of his broker and on the second it was Mr. Bush's nephew who went and did a transaction on his own account of \$1,000, which as he explained to us he had saved from his wages. This is by no means improbable, as a paid servant is frequently better off than a partner, as many in Yokohama know to their cost. This was all he had to say on the evidence now as to the charges. The defendant was charged with defrauding his creditors, and appropriating money belonging to them to his own use. The plaintiff must establish that, on March 26th, when Mr. Bush made his assignment, he was in possession of the goods which he appropriated. Both possession and appropriation must be clearly shown. I submit that this has not been done. What was done was to prove a suspicion of reckless trading, and to make a charge of gambling during some months previous to the assignment. Such evidence was not enough to convict a man of legal fraud. We must be satisfied that Mr. Bush knew that the money was not his, and that he was unable to meet his creditors at the time of his speculating. On this point we had no evidence. His own sworn statement is that on the very eve of the assignment he was unaware of his position; in fact on the contrary he believed he could meet his creditors and pay all bills in full. This statement was probable because in examining the accounts it was seen that but a few of the bills had matured, and that they would have come in for payment serially, when defendant could probably have met them and continued his business. It would have been better for the creditors to have accepted the assignment and not to have frittered it away in useless litigation, and better for the defendant if he had at once made a clean breast of it on the 26th of March.

Mr. Hill replied:—I will be as brief as possible and comment only on the supplementary evidence. I shall not follow the example of the learned counsel and romance about what might or can be done with Japanese witnesses. I am quite willing that the native evidence produced by both sides should be compared. The plain hearing of the case, which if I exaggerate I hope will be corrected is, that Mr. Bush had a large amount of goods entrusted to him

which he sold and then fraudulently appropriated the proceeds. Fraud, as we know, can be of two kinds, direct and constructive. I believe that in "Storey on Fraud" it is described as coming, like the devil, in all shapes. Lord Hardwicke describes it as infinite. No text book gives hard and fast rules as to evidence of fraud. Mr. Talbot's report was undoubtedly correct, but certain items which I selected in Mr. Bush's account are entirely ignored in it. As to the kinsatsu speculations, it would be no satisfaction to me to have Mr. Bush imprisoned, but by doing so, he would be compelled to give up the money which I believe him to possess. I say that the evidence of Mr. Bush and his nephew is in every aspect entirely false, as is proved by the other witnesses. In the proof of fraud, there is not only the suggestion of falsehood but the suppression of truth. Every question I asked Mr. Bush was replied to that "he didn't know," which was a suppression of truth. The same remark applies to the evidence of Seidenburg. When this \$1,000 transaction came out casually in the evidence, he comes out with a story to explain it and says that it was his, and that his total profit was two yen less a commission of four-tenths of one per cent. Calculate this and you will find it means a loss of two yen. A small circumstance, perhaps, but it shows how things stand. The native broker swears he remembers the transaction, but asserts it was done entirely with Mr. Bush. If this were not true Mr. Bush and his nephew would have procured some other evidence to rebut it. The evidence shows that Mr. Bush had this money some months after the assignment. Even if he paid it to his nephew he had no right to do so. Now as to the amount of Mr. Bush's dealings. He alleged he lost \$10,000. I have taken the trouble to make a computation upon the figures supplied to us by Mr. Bieber, and I find that Mr. Bush must have had transactions to the extent of \$460,000 to have lost the sum he asserts that he lost. To conclude, I consider that I prove this: there are sales to men named Maruya, Ah Foi, and one of a safe, which do not appear in the accounts, and the sum of \$10,500, which is alleged to have been spent in kinsatsu. I say that these goods were sold by the defendant Bush who wrongfully, unlawfully, and fraudulently, concealed the proceeds from the creditors. I consider our proof is clearly sustained. Our prayer is:—1st, for judgment for the sum of \$24,060: 2ndly, that the defendant Bush be arrested and examined, and detained in custody until the sum missing, which I make out to be in all \$11,324 and which is now in the hands of Mr. Bush, be paid over, and 3rdly, that all his property be attached. Next, as to the defendant Auguste Langfeldt; there is no allegation of fraud against him and he has acted throughout in a thoroughly upright manner. But as the assignment to him was fraudulent it becomes null and void, and I ask that the money received under it be paid into Court, or, if the Court approve, that Mr. Langfeldt or Mr. Spooner shall be appointed administrator of the estate. I ask also for costs of the suit, and repeat again that the defendant Bush should pay up the \$11,324 now in his possession, or be imprisoned until he does so.

His Honour:—After a cause so long and so protracted it is not to be expected that the Court can give judgment at present. But we can make a few remarks. As to the counsel's comments on fraud, we agree with him that fraud assumes so many shapes that positive proof is not always required; but still we must always have a certain amount of legal proof. It is very possible that if the defendant Bush's story is true, he may have committed a moral fraud, but not a legal one. He gambles with money that does not belong to him. This is wrong, but even if it is, the Court does not consider it such a legal fraud as to make him liable to what the petition asks. The petition states that the defendant has not accounted for the money known to be in his possession. The defendant admits receiving the goods and owing the money, but pleads that he spent this in various ways, including speculations in kinsatsu. This seems to me the sole question. The only proof that touches this is Mr. Bush's own testimony. There being no positive testimony on the other side, the question is whether, as nothing can be produced to upset Mr. Bush's evidence, it ought to be believed or not. The defendant asserts that he gambled to the extent of nearly half a million dollars, without ever knowing the name of his broker, or whether he used the money for himself, or ever went near the shosha. This is the most marvellous thing

I ever heard in my life. As to his books, they show the utter incapacity or utter dishonesty of his book-keeper. I make these remarks now, but, as I said before, cannot give judgment at present. Counsel will be notified when the decision of the Court will be announced, which will not be before the departure of the American mail.

The Court then adjourned.

## IT MIGHT HAVE BEEN.

### A STORY IN TWO CHAPTERS.

#### I.

When Tom This or Charlie That, with whom we have laughed and sported so often and so merrily, goes *under*, drowned by the waves which he has not had sufficient (pecuniary) strength to swim in, it is curious how easily we take the catastrophe. Not one of us takes the trouble to ponder over the desperate battle and buffeting our friend must have had before he threw up his arms and went down. To drop metaphor, we never remember how plucky he was, how cheery to the last; it never strikes us that, while we were enjoying his quips and cranks at that last Ascot party, he was bidding adieu in his heart—poor fellow!—to all that made life pleasant to him, and that our plans of future enjoyment were to him what arrangements for the morrow would be to a man with an hour to live. We never realise, or think of realising, what his high spirits must have cost him; or how sad must have been to him the outlook which was a blank, or how bitter all the sordid worries of the situation. How little we think of them! To "go smash" sounds so easy and natural, almost the proper thing to do. And yet before the "smash" comes, most of its agony has been tasted. There is the endless putting off of duns; the incessant excuses to creditors; the slow—and yet all too quick for the debtors—forms of law; the shifts and schemes to avoid publicity; and the despair, the knowledge that in a few weeks or days all London—meaning one's own section of that city—will be talking of one's delinquencies and difficulties. It is hard to say whether the "I always said so" of a foe will be worse to think of than the less prophetic but not much more sympathetic remarks of a friend. Ruin, like sea-sickness, gains little pity in certain circles, and no doubt there is justice in this. If a young man with a few hundreds a year will live at the rate of a few thousands, he must, even though Fortune smile on him at race-courses for a time, soon come to a full stop; unless indeed he has sagacity enough to call in the aid of the goddess *ex machina*, an heiress. But your improvident good fellow can commit most crimes sooner than sell himself and insult an innocent woman by a lie at the altar; so, as a rule, the curtain falls on his little stage: the erst admiring audience go home to supper and revelry; and he, in shabby clothes, slinks away to some cheap haunt and hides himself, hopeless of a new engagement.

Herbert Dale was on his last legs. Favourites would not win: trumps were always on the other side; relations looked—and no wonder—coldly on him; mothers shrank from him. The end seemed very near. But he never quite appreciated its excessive nearness until one morning he was awakened by his servant—in those charming chambers of his in Jermyn Street—and told that a "person" had called and desired to see him. That person, whom he immediately interviewed in his smoking suit, was a sheriff's officer.

"I have not the pleasure of the acquaintance of the Sheriff of Middlesex," said poor Herbert, on hearing the "person's" errand; "and, although deeply obliged to him for kindly offering to carry my money to my worthy friend and tobaccoist, Mr. Mumschell, I really must decline it—without ill-feeling—more especially as I don't happen to have the money in the house."

"You'd better pay and have done with it, Sir," said the other—a most gentlemanlike-looking Hebrew.

"Exactly," said Herbert, "I certainly will take part of your advice, if possible, and have done with it. Pay I won't, for the good reason that I can't."

"No doubt your lawyers will put it right."

"I wish you'd go to them and try. They tell me they can't, but I have no doubt they would listen to the Sheriff of Middlesex speaking through you."

Mr. Shadrach, with all his suavity, didn't like being chaffed; he had several little visits of the same nature as this to pay that morning. So he put on his business manner, and said, "Then I'd better call my man in."

"Oh dear no," said Herbert, getting between the door and his visitor. "Two's company, you know. Better to keep 'the man we have than call in others that we know not of.'"

Mr. Shadrach, who was not a student of Shakespeare, looked a little fierce for a moment, but any idea of physical force vanished from his mind as he glanced at the young man standing, with a mocking smile on his lips but some sternness in his eyes, between him and the door.

Herbert Dale was not perhaps what a young lady just out would call handsome; but there was much in his six-feet of manliness, in his well-knit, active figure, in his bright blue eyes and broad low forehead, that amateurs of male good looks could admire; and there was in his manner a blending of devotion with a sort of implied superiority or protectiveness, which had much to say to the many conquests he was currently rumoured to have made in drawing-rooms. Not that he aspired in any way to be a lady-killer. It was simply natural to him to flirt with every decent-looking woman he met, and he always fell in love with one or other of them. His life—with intervals of gambling—had been one long love-story. There was a romance of his school-days; another came of his sojourn at a private

tutor's before entering the Army; and afterwards they came quickly, treading on each other's heels. As long as a woman could keep his love—and in that there was much of respect, besides absolute belief—she could do anything with him. But the smallest scintilla of deceit—the faintest sign that she was unworthy of respect—and he became as hard and impassable as King Arthur seemed to Vivien.

At the end of each of his day dreams Herbert Dale believed that his heart was broken; that henceforth cynicism and loneliness were to be his portion, until, lo! a fresh divinity appeared, and the wound was healed as if by magic.

Unselfish in an extraordinary degree, he would have given his all without a moment's hesitation to one whom he trusted. He would scarcely have held out his finger to save from death one who had deceived him.

Such is a hurried and imperfect sketch of the man who, one fine June morning faced, according to this story, the sheriff's officer in his own sitting-room.

"You will gain no advantage from not allowing my man in," said the latter. "I've got to do it, and by keeping me you only put me to inconvenience and do yourself no good."

"That is true," said Herbert, struck with the logic of the remark. "I suppose if I were to kick you out someone else would come, besides that, I should have hard labour. Well, call him in."

Obedient to a whistle, a bullet-headed, soldier-like man stepped in from the passage and stood at attention, awaiting orders.

"You will stay here till you have my order to quit possession," said Mr. Shadrach; "and you will conduct yourself quietly and properly. Allow nothing to be removed from the premises. Five shillings a day is the possession fee, Mr. Dale. Good morning. Sir, I trust you will see your solicitor at once and arrange." And the sheriff's officer hastily departed, leaving Herbert seated gloomily in a chair, while the man in possession stood bolt upright in front of him.

And while he sat there his thoughts wandered to a house he had left but the night before—a house grand and gorgeous, filled to the brim with evidences of wealth, served by countless domestics, each of whom had a larger income than he, Herbert Dale; and to a young woman in that house, its mistress, who could give the man she loved, luxury, wealth, everything that a good young man could desire. And then his thoughts left this subject and he saw another young woman, fairer than the last, with liquid violet eyes and russet-brown hair, with half-open lips that quivered as with pain.

"Oh, my darling!" he murmured, and the sheriff's man looked at him in surprise.

"Go downstairs and eat and drink," said Herbert—an order cheerfully obeyed; and again he meditated.

The situation was simple. There was an heiress he could marry if he chose; there was a penniless girl he loved and who loved him; and here was he, absolutely without a shilling, with nothing before him but America, or Australia, or starvation.

As I have said, the situation was simple, but nevertheless it bothered the young man; and when at length he dressed himself, gave some orders as to his unwelcome guest's meals, and sauntered out into the street, he was still in a dazed state of perplexity.

The first man he met was Harry Pletcher, the most careful young millionaire in town.

"Hallo, Herbert, old fellow, I was just coming to see you! Tom Blades, and Kineadine, and Fitzhust and I are going to club together for a house for Goodwood, and want another man. Will you join? It's not dear; and I bring my cook—of course we all share his week's wages. What do you say?"

It was with the greatest difficulty that Herbert kept back the "yes" that rose to his lips from habit, and declined.

Then he passed on to his Club, and as he discussed his pint of champagne (ordered from habit too) he heard two old peers, whose united incomes would have gone near half a million, discussing the wickedness of not giving your foreign cheeses, as well as beer, bread, sauces, &c., at lunch for nothing.

The champagne pulled him together a little, and he took stock of his resources. There was his wardrobe, some little jewellery, about five boxes of cigars, and his cousin.

Now two years ago he had quarrelled with this cousin, who had imagined he was expected to allow some yearly sum to Herbert, and who spoke harshly to arouse the other's pride, if possible. This was not difficult. Herbert had indignantly spurned his ill-made offer, and had vowed that nothing should induce him to touch a penny of his dirty money. No. The cousin was of no use. His friends? Well, he had plenty. But most of his intimates were hard up themselves, and those who were not were scarcely of the kind to whom it is given to do a favor nicely. No. He would ask no friend.

Then, absolutely against his will—for while he sat at lunch he had vowed to flee temptation—he walked straight off to the little house in Chapel Street where resided Eleanor Burnley with her parents.

Eleanor Burnley was the young woman with violet eyes and russet hair of whom he had meditated.

In the hall he met Mr. Burnley—a busy man who did nothing, in a hurry, all day—who greeted him in an embarrassed manner, and went out swiftly. In the small outer drawing-room he met Mrs. Burnley, proud and portly, with a faint redness in her nose and an air of general perspiration about her. She too seemed embarrassed.

"Oh, you'll be so pleased to hear, Mr. Dale—dear Eleanor—she has liked him so long—and his circumstances are so satisfactory!"

"What?" said Herbert, pushing rather unceremoniously past to the inner room, where he heard voices. Here on a sofa sat Miss Burnley, and close beside her, looking happy but very sheepish, Sir Miles Teyton, the wonderful coach driver, whose father made his money in starch. Miss Eleanor rose rather hurriedly on

Herbert's entrance, and blushed all over her face; but Mrs. Burnley came quickly to the rescue.

"I was just telling Mr. Dale, my dear child, that he must be the first to congratulate us. I think you know Sir Miles Teyton? Yes? We are so pleased that it can be announced at last. Of course it has really been settled for some time, and—"

"For how long?" asked poor Herbert in a strange, underground kind of voice, looking straight at Eleanor; but Eleanor, who had turned very white now, did not reply.

"Oh, for some time! But it's best always to keep these little matters secret until everything is settled. You must be great friends, you two young men, now. As my son-in-law you will have to like my friends, Miles."

Herbert did not say anything. He only stood there looking at the girl; and she trembled under his glance.

"Do you drive a coach?" asked Sir Miles, wishing to break through a silence that added to his shyness.

"No," said Mrs. Burnley, seeing that the other man did not meditate replying. "No; but I hope he soon will. There is nothing so pretty as a coach. I am sure, Miles, when I first saw those lovely chestnuts of yours—"

"Roans."

"Ah, yes, roans; when I saw them first I said to dear Richard—"

"I have a word to say to Miss Burnley. May I say it to her alone?" asked Herbert, abruptly. The mother glanced at the daughter and hesitated; then for the first time the latter spoke—

"I have a word to say to Mr. Dale, mamma."

Mrs. Burnley still hesitated; but, with unconscious tact, Sir Miles terminated the awkwardness by catching sight of his own coach through the window of the inner room and flying there to look at it; while Mrs. Burnley, after a warning look at her daughter, followed. Then Herbert went close up to the girl, who still stood there, pale and trembling, and said, in a low voice, "This is your free act—you are not coerced!"

"No." He could only just catch the word.

"You will swear that to me?"

"Yes; it is my own free act."

"Why?" That was all he could say. His wits were wandering. He had come, it is true, to say good-bye for ever; but not like this.

"I could not stay unmarried all my life; and you told me you had no money."

He held on to the back of a chair. Was this the girl he had held in his arms while she sobbed at the bare idea of losing him only the other day?

"I am afraid you have learned it very suddenly. Sir Miles proposed a week ago. I took till now to think, and now I have decided."

"You are business-like."

"I could not marry a poor man."

"But you can break a poor man's heart!"

"I hope not. You are free; you can—"

He interrupted her fiercely, "Yes, I can; I can do what you are doing! I can sell myself, too—and by Heaven I will! Good-bye!"

She never looked him in the face. Perhaps if she had she would have broken down. But he thought it was coldness.

"Good-bye," she said; and in another moment Herbert Dale was driving down Piccadilly, his brain in a whirl—in a sort of fever of haste to do what he had set himself as quickly as might be.

## II.

Yes—Miss Gullamore was at home—yes, she would see Mr. Dale. So Mr. Dale was ushered into the heiress's room. She was tall and angular, about thirty-five years of age, with a dark brow and a determined and somewhat cynical expression of mouth.

The room was suggestive of an artist's studio—for Miss Gullamore painted bad pictures—and was otherwise littered with expensive ornaments of doubtful taste.

It was some time before our distraught hero could bring the conversation round to the necessary point. It is very hard to be sentimental with a lady who insists on talking of such very mundane subjects as the state of Peruvian Bonds or the price of professional beauties' clothes; or going into ecstasies of joy over Frith, and of horror over Barne-Jones; but at length Herbert managed to get to a ball where he had met the heiress a short time before.

"That was a very pleasant evening," he said.

"Oh, yes; we danced together a great deal; and you were so nice—not cross as you sometimes are."

"Surely I was never cross to you?"

"Oh, yes—often. Do you know, I sometimes thought it was because you were in love with my dear little friend, Nelly Burnley. But, of course, now she is to be married—"

"What! do you know that?"

"Yes. It was to come out to-day; but she came and told me of it in confidence—let me see—oh, quite a week ago."

Herbert set his teeth and felt decidedly cross.

"She's a dear little thing, and will make a capital wife for him. Don't you think so?"

"I daresay. I didn't come to talk about her," said Herbert, with affected indifference; "I came to talk about you."

"Me!" cried Miss Gullamore, with a start. "Why, you don't mean to say I've come out already?"

"What!" asked he, again.

"Why, about me. I only got the letter yesterday, and answered it an hour ago. I think I should have told you, Herbert, for you are such a dear friend of mine—quite a brother. But how did you know of it?"

"I know of nothing. Are you engaged to be married, too?"

Then the heiress, looking positively handsome in her triumph,

produced a letter, which she turned so that only the signature was visible, and showed to her guest.

"'Northallerton'! What does the Duke want?"

"You are very dense this morning, my dear Herbert. The Duke wants me to be—the Duchess."

The conversation languished rather after this. Herbert wanted to get out into fresh air, and offer up on the pavement a thanksgiving for having been saved making a fool of himself; but Miss Gullamore was so delighted with her prospect of titular greatness that she wouldn't let him go until she had expended all her plans of party and ball-giving, and for making Northallerton House the rallying place of all the leading politicians, artists, and social lions of the town.

Then he escaped; but not before she had made one observation to him which made his heart beat.

"Do you know, Herbert," she said, as she stood by him in the doorway, "that a week ago, if you had asked me instead of the Duke, I think I should have said yes."

"Should you, though?" feebly replied Herbert, and went meekly down the broad staircase, and meekly was let out by the three gigantic footmen, aided by a groom of the chamber, without whose efforts the door of that mansion could not be opened and shut.

At the Club that night Herbert encountered the first *désagrément* of being penniless. In the excitement of the day he had quite forgotten the trifling fact that he was almost at the end of his cash—his banker was of course one of his bitterest foes—and cab fares and payment of a small bill that had been defrayed by his servant had now swallowed it all up. So that, after his dinner at the Club, when the bill was presented, he could not pay. At the said Club ready money was the rule, and the situation was awkward. Sitting next to Herbert was a man who had for many years professed the greatest friendship for him, and to whom Herbert had been able to do many little acts of kindness in the way of obtaining him invitations for "difficult" houses. This person was connected with a business in the City, and was reputed to enjoy some £30,000 or £40,000 a year.

To him our hero said—  
"Lend me a tenner, old chap. I can't pay you back directly, but I will very soon—as soon as I can."

The other hesitated—hesitated!—and Herbert, his cheeks flushing, quickly went on—

"Oh, it doesn't matter, if you can't spare it!"

"Well," said the rich man, drawing a long breath, and taking a sip of his Mergaux—"well, I am not very flush of cash just now, and—in fact, my dear Dale, I make it a rule never to lend money. If I did I should be portered out of my life. Because prattling idiots choose to label a man rich, every spendthrift relation thinks he has a right to ask for money. I cannot—"

"I am no relation, and I wouldn't take your money if you offered it me on your knees," interrupted Herbert, as he mentally vowed that starvation should not induce him to ask another "friend" for a penny.

Breaking a rule of the Club by sternly refusing to settle his dinner bill that night, he sauntered out into the street, turning over and over a florin and sixpence he had in his pocket, and wondering whether it could be considered extravagance if he spent some of that money in cigars.

Back to his chambers with that man in possession sitting there—back to his chambers full of recollections of the girl he had loved, of reminiscences of his old merry life—he would not go. No: he would try at once what to be homeless meant. If it was hardship to wander about through a summer's night, what would it not be when the fog and frost came? Was he any weaker or more cowardly than the many tramps of either sex he had often seen sleeping on the benches in the Mall as he strolled home from some ball, joyously revolving memories of flirtations to be continued on the morrow night?

There was nothing terrible in the thing after all: it was a mere matter of habit; he said to himself as he strolled aimlessly along the Strand and came to Waterloo Bridge. It was a lovely night, and he leaned up against the parapet and gazed down at the river with its track of golden light, in which the tiny waves seemed to dance so merrily: and tried to moralise, and found he could do nothing but remember little snatches of opera, and longed to smoke.

Then he must have dozed: for suddenly, as it seemed, several hours passed away, and the clocks were striking one. As he lazily glanced around he was aware that just in front of him stood a girl, dressed in that lawdy finery that marks a certain class—a girl who was watching him.

"Do you know me?" he asked, at last.

"Yes, do you not know me? I am Kate Maynard."

"Good God! You!"

"Yes. When you let me go—when you turned from me with such bitter scorn—what did you think I should become? What had you made me?"

Herbert looked at the painted cheeks, the sunken eyes, the general look of misery that speaks of strong liquors and low dissipation, and shuddered.

"I am glad that you should see what you did. By—I am!" she said, with a vile oath and a viler laugh. "Are you proud of it, Mr. Dale?"

"What do you say to me?" he asked, with another shudder.

"What do you think me to be? My parents? They loved me better than you. Who were you? To be deceived—you—!"

"If you had been true to me—"

"Don't tell me lies. Yes, I had been true to you, you might have been true with me. I had—perhaps two. What then? What was between them and me? I had no money to make me comfortable. You were an old—of You—!"

Again a vile oath, this time in a shrill scream, as she lifted her hands as if to strike him.

He did not answer her. Her gin-tinctured accent spoke the voice of his conscience. He was dumb before this outcast from decent humanity.

"But I'm glad to have seen you once more, and there wasn't much time. Let me look at you. Yes, as handsome as ever. You men don't go to wreck like us."

"Now, then, young woman, no loitering here; you must move on," said a policeman, tramping heavily up.

"All right, Bobby," said the girl, with a strange laugh. "I'm a-going to move—right out of your way, or the back's, either"; and she passed away into the gloom.

"She's a rum 'un," said the policeman to Herbert, looking after her: "always a hanging about this 'ere bridge. She'll come to no good, won't that girl. There's the regular bad look in her eye."

"How do you mean?" asked Herbert, quickly; "the bad look?"

"Yes; the look I've seen in their eyes often just afore they jumps in. They come and has many a look at the river afore they makes up their minds; and that look gets stronger and stronger."

"But surely in that case it is your duty to watch them?"

"Lor' bless yer, they is as artful as old thieves when they means business. But this one ain't made up her mind yet, I don't fancy."

He was wrong. Almost before the words had left his mouth there was a shriek from the centre of the bridge, a splash in the water beneath, and in another moment the cry that a woman was in.

Then followed the usual turmoil of such occurrences—alas! so common in this great town of ours—and in the confusion Herbert was unable to keep his eyes on what he had at first taken to be the unfortunate girl in the water. He got round to the end of the bridge and into a boat as quickly as any one, but could see nothing; and for two hours he rowed about with two other men aimlessly.

Another boat however was more successful, and at the end of that time a shout far down the river told them that the object of their search was attained. She was stone dead; and it seemed to Herbert Dale as he leant over the body that to those worn features had returned in death the innocence and beauty that he remembered; remembered in those days of careless youth, when he had for the gratification of a passing fancy sacrificed a human creature's future.

"You'd best go home, Sir," said the inspector; "you're wet and tired; and not accustomed to these things either, Sir. Best go home."

He went out of the police station feeling as if his heart was turned to stone.

Now, for the first time, he realised all the atrocity of his crime. Now, for the first time, he realised what this girl's shame may have meant to those who had loved her; and the dandy, the young man about town, the Lothario of the boudoir, sat him down on a doorstep and cried like a child.

And then a great temptation assailed him. Of what use to him was life? Of what use could he be to others? He had not been afraid to die; and how far happier he had looked in death than a few hours before in life! Who was there who would mourn his loss? Yes. She—the poor girl who owed her misery to him—had set him an example he would follow.

Almost happy now that the great problem of life was solved, he rose and retraced his steps to the river. There was to him nothing cruel or cold in its appearance as it reflected back the rays of the newly-risen sun. Rather it seemed to invite him to come and rest in its placid bosom. Out in the centre—he would jump from there—just where she did. This was no sin, rather was it self-punishment—expiation.

Thank Heaven he had never learned to swim, so that death would come quickly. Now was the time. The bridge was clear. He mounted the parapet. A few words of prayer. Now for the leap—one—two—three!

"Please, Sir, I've shown the gentleman into the sitting-room, and he says he'll wait till you are ready."

"Wait—sitting-room!" said Herbert Dale, opening his eyes slowly, "and the—the sheriff's officer?"

"The what, Sir?"

"The sheriff's—but what does it all mean? Did you call me just now, Jenkins?"

"Yes; a minute ago I told you the gentleman had called on important business."

To slip on a dressing suit was the work of a minute. Herbert darted into his sitting room and found an elderly man in black seated there.

"Excuse my troubling you so early, Mr. Dale. I am private secretary to Lord Rockington. He has just been appointed Lord High Commissioner of our new Province in Turkey, as no doubt you know, and is anxious to proceed there at once. Therefore he thought it would save time if I brought you this letter and took back to his Lordship your reply."

The letter ran:—

DEAR DALE,—

I hear—pray forgive me my mentioning it, but otherwise I should not dare to try and take such a necessary man from London—that you are rather hard up. Will you come out with me to Turkey as Deputy Commissioner? I am permitted to nominate to this post by the courtesy of the Government. The salary is only £1500 a year, but you will have no expenses, and can save even on that. I am in a great hurry, to conclude arrangements, so answer, if possible.

Yours truly,  
ROCKINGTON.

There is little more to tell. Herbert's cousin was a better fellow than he thought him, and with a little help from him (given all the

more readily as Herbert was his heir) and a little persuasion from a crafty family solicitor, all Herbert's debts were arranged, and he was made free to sail with the Marquis.

But before he went he took a journey. He went down to a village in Hampshire where he had once dallied through a summer month, and he called at the little inn and got into conversation with the innkeeper.

"Remember Kate—daughter of old Maynard at the Hill Farm, of course he did; and a pretty girl she was too. Yes; she went away in a hurry some said with a young gent that came down here a-fishing, but in reality, as I and all who knew her believe, to seek her fortune; a wilful lass she was. Well, she came home again before long—just as they all was a dying of anxiety; and said she hadn't found the streets paved with gold, as the saying is. And she done well too, Sir, married Jack Woake up at the Manor Farm, a well-to-do-man as is in the parish, and has five of the prettiest children. That's the farm, among them trees yonder where you see the smoke, and here's Jack a coming up the road."

A sturdy, fresh-looking young farmer nodded a pleasant good-day to Boniface as he strode along the road; and, to the said Boniface's great astonishment, the inquisitive stranger suddenly grasped his hand, saying, "Thank you, Sir, you've done away with the last bit of bitterness in that accursed dream."

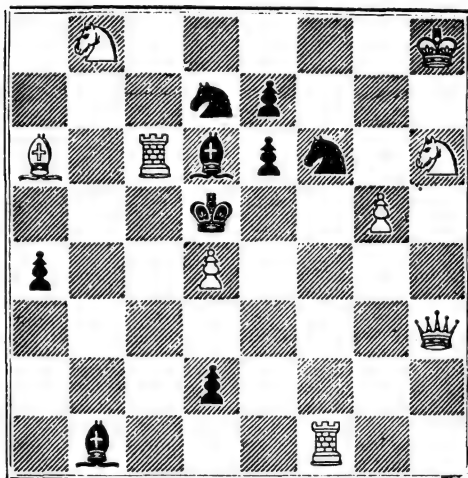

Shall I give you an epilogue?

Well, when the Prime Minister of the New Government, Mr. Chamberlain, determined to give up all the British possessions abroad, our Province in Turkey was of course, with Gibraltar, Malta, and Cyprus, included; so Lord Rockington and his staff came home; and not long after this event the late Deputy High Commissioner, Herbert Dale, was married at St. George's Hanover Square, to a young lady of the name of Eleanor Burnley. The great heiress, Miss Gullamore, was at the wedding, and it was rumoured that she shed a tear when signing the book in the vestry.—*Vanity Fair*.

### DOUBLE ACROSTIC.

True, in America they're noted,  
For doing things courageous;  
But, 40 days to fast, is voted,  
A little too outrageous!

1.  
Young men, beware of frequent spree,  
Or you may get a touch of these!

2.  
We go to listen to music sweet,  
And days before, engage our seat.

3.  
However bad 'tis on the foot,  
'Tis good in ear; but both will shoot!

4.  
An English poet, well known to fame;  
Oft' read his poems, oft' heard his name.

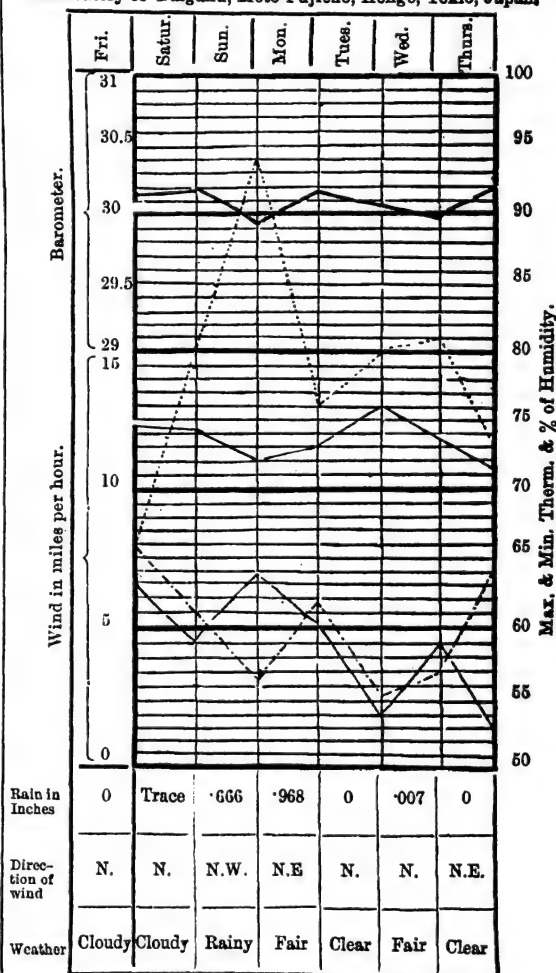

5.  
In ancient times, for a result,  
All, need these "wise words" to consult.

6.  
By this, your line is straight and fine;  
This too, by you, may "draw the line."

SAYONARA.

### METEOROLOGICAL REPORT

FOR WEEK BEGINNING FRIDAY, SEPTEMBER 24TH, 1880.  
Observatory of Daigaku, Moto-Fujicho, Hongō, Tokio, Japan.

### REMARKS.

Heavy line represents barometer.

Light continuous line—max. & min. thermometers.

.....represents velocity of wind

.....percentage of humidity

Max. velocity of wind 19.0 miles per hour on Friday, at 1 a.m.

The barometer is reduced to the freezing point and to the level of the sea.

The highest reading of the barometer for the week was 30.238 inches on Saturday, at 7 a.m., and the lowest was 29.890 inches on Sunday, at 10 p.m. The highest temperature reached during the week was 76° and the lowest was 53° the first being for Tuesday and the last on Thursday. The maximum and the minimum for the corresponding week of last year were 71° 5 and 58° respectively. It will be seen that the range of temperature, which was 23° for this week, is much greater than that for the same week of last year. The total amount of rain was 1.641 inches against a trace only for the corresponding week of last year.

## SHIPPING INTELLIGENCE.

## INWARDS.

Sept. 27. British ship *Lupata*, B. Raven, 1,039, from Antwerp, General, to C. Illips & Co.  
 Sept. 29. Japanese steamer *Niigata Maru*, Walker, 1,603, from Hongkong via Kobe, Mails and General, to M. B. Co.  
 Sept. 30. Japanese steamer *Wakanoura Maru*, Christensen, 1,343, from Kobe, Mails and General, to M. B. Co.  
 Sept. 30. Japanese steamer *Takago Maru*, Young, 1,230, from Shanghai and way-ports, Mails and General, to M. B. Co.

## PASSENGERS.

Per Japanese steamer *Niigata Maru* from Hongkong via Kobe:—Messrs. J. W. McCarthy, J. Biasett, and G. Wilson in cabin; 209 Japanese in steerage.

Per Japanese steamer *Takago Maru*, from Shanghai and ports:—Mr. and Mrs. C. Eddale, Mrs. H. Kirby and child, Chevalier de Boleslawski, Messrs. H. McGregor, H. Pors, Wooyeda, Arnstein, J. Douglas, Dr. J. W. Gulick, and 10 Japanese in cabin; 4 Europeans and 9 Japanese in steerage. For San Francisco:—Captain Summers, (U.S.N.) For Liverpool:—Mr. Alex. Campbell.

## OUTWARDS.

Sept. 23. Japanese steamer *Kokonoye Maru*, Dithlofen, 1,133, for Hakodate, Mails and General, despatched by M. B. Co.  
 Sept. 28. British steamer *Ercambia*, Wildgoose, 1,401, for New York via China ports, Tea, despatched by Mourilyan, Heimann & Co.  
 Sept. 29. German barque *Waltire*, Davis, 805, for Chefoo, Ballast, despatched by Cornes & Co.  
 Sept. 29. Japanese steamer *Tokio Maru*, Swain, 1,146, for Shanghai and ports, Mails and General, despatched by M. B. Co.  
 Sept. 30. Japanese steamer *Tokai Maru*, Hogg, 1,042, for Kobe, Mails and General, despatched by M. B. Co.  
 Sept. 30. Japanese steamer *Toyoshima Maru*, Hubbard, 946, for Hakodate, Mails and General, despatched by M. B. Co.  
 Sept. 30. British barque *West Glen*, Thompson, 690, for San Francisco, Ballast, despatched by Captain.  
 Oct. 1. British steamer *Stentor*, Kirkpatrick, 1,350, for Kobe, General, despatched by Butterfield & Swire.  
 Oct. 2. Japanese steamer *Niigata Maru*, Walker, 1,603, for Hongkong via Kobe, Mails and General, despatched by M. B. Co.

## PASSENGERS.

Per British steamer *Malacca* for Hongkong:—Eight Chinese and one Indian in steerage.

Per Japanese steamer *Tokio Maru* for Shanghai and ports:—Mr. and Mrs. Iburg, Miss Kellog, Messrs. Arima, (2), Iwahashi, Tanabe, (2), Martin, Munster, Shimadzu, Hagart, Nakagami, K. Yamamura, Ohida, Kitano, Chiziki, Captain Crichton, Messrs. F. E. Bestly, (U.S.N.), Fukasawa, (2), Kleinman, S. L. Forbes, Okaguchi, Kai C. Chu, Kwong Kong Horu, Wong Yau Cheong, Fan Yen Fang, Mand, J. W. Ben, A. A. Meyers, E. Coyne Smith, Blair, Mr. and Mrs. Ah Sung, and Mrs. Kawamura.

Per British steamer *Stentor* for Kobe:—Mrs. R. M. Brown and child. Flighty Japanese in steerage.

Per Japanese steamer *Niigata Maru* for Hongkong via Kobe:—Vicente de Galard, Marquis de Canolle, Messrs. G. H. Prichard, H. Macgregor, F. G. Leale, Frank Rose, and Morita.

## CARGOES.

Per British steamer *Malacca* for Hongkong:—

Silk for France ... .. 50 bales.  
 " " London ... .. 9 "

Total ... .. 59 bales.

Per Japanese steamer *Tokio Maru* for Shanghai and way-ports:—

Treasure ... .. Silver Yen 112,865.15  
 " " " " " " " " \$ 9,600.00

## REPORTS.

The Japanese steamer *Takago Maru* reports:—Had rough weather throughout the passage.

## EXPORTS.

**SILK.**—During the past week there has been a considerable move in silk and about 850 shipping bales have been taken into foreigners' godowns. There have, however, been all kinds of reports regarding the great bulk of these silks; it is said that the Japanese are obtaining advances against most of the bales delivered; another report being that they intend shipping on their own account. It is impossible to ascertain the actual facts, but we do not consider ourselves far wrong in stating that the *bona fide* sales to exporters have been few since our last report.

Prices for Hanks are very firm. Kakedas and Filatures are rather lower.

Total shipments to date 3,192 bales against last season 2,814 bales.

Stocks 7,210 Japanese bales.

	Exchange 3/9½	Exchange 4.65

**SHIPPING.**—There has been no movement whatever in our shipping.

## MISCELLANEOUS.

**BUGS, FLEAS, MOTHS, BEETLES,**

and all other insects are destroyed by

**KEATING'S INSECT POWDER,**

which is quite harmless to Domestic Animals.

In exterminating Beetles the success of this Powder is extraordinary, and no one need be troubled by those pests. It is perfectly clean in application.

Ask for and be sure to obtain "KEATING'S POWDER," as Imitations are Noxious, and fail in giving satisfaction.

SOLD BY ALL CHEMISTS IN BOTTLES, 1/- & 2/6 each.

**KEATING'S WORM TABLETS,**

A PURELY VEGETABLE SWEETMEAT, both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for **INTESTINAL** or **THREAD WORMS**. It is a perfectly safe and mild preparation, and is especially adapted for Children.

## TESTIMONIAL.

Medical Hall, Gildersome, Nov. 28th, 1876.

MR. KEATING,

Dear Sir,—I think it nothing but my duty to inform you of the immense sale I have for your Worm Tablets, which I may justly say is enormous, and in every case gives the greatest satisfaction. I have now in stock two bottles containing the Round Worms brought me during the last few days by customers, one Worm 40 yards long. I dare not be without the remedy.—Yours respectfully,

M. A. WALKER.

SOLD IN BOTTLES, BY ALL CHEMISTS AND DRUGGISTS.

Proprietor—**THOMAS KEATING, London.**

**REWARD AND CAUTION.**—Whereas fraudulent imitations of this unsurpassed remedy have been sold, I hereby request anyone knowing of the vendor of the same to communicate with me, on conviction of the offender a liberal reward will be paid.

April, 1880.

## THE SILVER QUESTION.

THE present attitude of Germany is not encouraging to those who hoped that the Government of that country would retract its action in the matter of demonetizing silver. The authorities shew no sign of a modification in their policy and public opinion, such as it is, largely preponderates in favour of the nearest possible approach to a single gold standard.

Few questions are of greater importance to business men in the East than the restoration of silver to something approaching its former stability, and the prevention of those violent fluctuations which have so frequently occurred between the relative values of gold and silver. The cause of these variations is not far to seek and is, indeed, only too well known and recognized. When France, Germany, Holland, Switzerland and Italy coined silver freely and without restriction, there were no fluctuations between gold and silver. Silver did not vary to any appreciable extent in its relative value to gold. It was accepted by all the banks and all the mints (except in England) at a fixed price. It was money; it was a legal tender. But when vast amounts were withdrawn from circulation, when it became a mere article of export to the East, and Germany sold overwhelming quantities, then the fluctuations in value took place. Silver was no longer money, it was merchandise and the price of the commodity fell to 47 pence, which was, however, soon recovered by Germany discontinuing the withdrawal of the silver currency from circulation, and stopping further sales of the metal.

From time to time efforts have been made by the advocates of bi-metalism, to induce Prince Bismarck to reconsider his decision in making gold the single standard of value. These attempts were at one time stated to be on the brink of success, and it was openly said that the Chancellor was shaken in his faith in the currency reform

of 1871; that he disliked especially the great loss inflicted on the German Government by its sales of the demonetized silver; and that there was considerable discontent in the country at the lack of silver coin in circulation. Events, however, soon proved the utter fallacy of these predictions and assertions. Prince Bismarck refused to entertain proposals made to him by the United States to engage in a conference on the silver question, and so the matter has, as far as regards the German Empire, remained up to the present.

As we already remarked the attitude of the Empire is unfavourable to those who hope for the speedy rehabilitation of silver through German action. We notice in an English journal, that the Cologne Chamber of Commerce has recently called the attention of the Government to the fact that silver is largely accumulating in the banks, and gold becoming relatively scarce; but, while asking for Imperial aid, the opinion is advanced that the true remedy for the evil lay in the still further displacement of silver by gold. Again, and following on the same side of the question, Professor Soetbeer, an eminent authority on financial subjects, and one of the chief advisers of Prince Bismarck on matters of coinage, has lately published an exhaustive article on the silver question. Professor Soetbeer states that "some eighteen or nineteen million kilograms of fine silver have been brought on the market during the nine years from 1871 to 1879, without counting an amount of four million kilos acquired through the adoption of the gold standard in Germany and the melting down of the old silver coins of Germany and the Scandinavian countries. Thus, the supply has been about 22,500,000 kilos, of a total value of 4,000 million marks. What use and distribution have been made of this quantity? By far the greatest portion has gone to and remained in British India and the Eastern Asiatic countries; the registered exports of silver from England, the Mediterranean ports and San Francisco sent to Asia, amounting in the above period to some 9,500,000 kilos. In addition to this must be counted the exports across the Russian frontier to China, the imported silver florins into the Dutch East Indies and the Austrian Maria-Theresa dollars to Africa. The total absorption by the Orient cannot, therefore, be less than ten million kilos. This demand has been very unequal. In 1877 it was remarkably large, viz., to the value of 400 million marks. The remainder has been mostly used for coinage. England coined for home and colonial uses some 6,300,000 pounds, using for the purpose 650,000 kilos of fine silver, the coins withdrawn from circulation not giving much material. A great deal of the metal was coined for private parties from 1871 to 1874 in France, Italy and Belgium. In the Latin Union, silver coinage to the value of 880 millions francs was struck during the period 1871-1878, and 3,970,000 kilos of fine silver was used. The Netherlands Government coined 97 million guilders from 1871 to 1877, using 916,000 kilos of

fine silver. Next followed the United States, with increased coinage consequent on the passage of the Bland bill—the total coinage being 47,350,000 silver dollars from 1871 to 1879, and upwards of 50 million subsidiary coins, requiring a total of 2,270,000 kilos of silver. The 'trade dollar' coinage we have included in the Oriental absorption. A great portion of the Austrian and Russian coinage has been remelted. The total quantity of silver required for the present coinage of Europe and the United States may be estimated at 7,800,000 kilos. Of these, 22,500,000 kilos, not less than 17,800,000 kilos, or 79 per cent., has been used for coinage or for the purposes of international trade—thus leaving 21 per cent., or 4,700,000 kilos, for other uses, technical, jewellery, &c., or an annual consumption of from 500,000 to 550,000 kilos. We have brought up these figures for the purpose of obtaining some means of judging, in combination with the tendencies of the more important States, the future development of the silver question. The outflow of silver to Asia will doubtless retain its importance in the future, and to all appearances it will be enlarged. The capacity for absorbing will only be limited by the supply of equivalents for the offer of silver, whether these be in products or in acceptable acknowledgments of indebtedness; and the best outlook in this respect is evident for British India." After dealing at considerable length with the probable increased demand for silver occasioned by the requirements of the British Indian trade, the Professor points out the certainty that, as the value of silver declines, so must the products of India and China be paid for at higher rates and thus larger quantities of that metal be required. The author observes in the course of his interesting contribution to this very important subject, that "there is no likelihood of the silver coinage being stopped. If Eastern Asia has hitherto absorbed almost one-half the silver production, although the remittances from India to England are about 20 millions sterling annually, there is little doubt that all the surplus will be taken up. British India, with its 240 million of inhabitants, and the imports of England from that and other Asiatic countries to the amount of £50,000,000 per annum, would furnish an immensely increased capacity for absorbing silver should there be any decline in the value of the metal. Wages, wares, and the decline of barter in the remoter districts, would all be so many factors. The silver market is now in a transition state, and is affected by three conditions, which will be only temporary, and which will be changed by the consolidation of the Indian finances, the completion of the German coinage reform, and the final acceptance of the double standard by the United States. But the relative worth of the metals will depend on the decision of the United States, for if that country maintains the silver standard the fluctuations of the metal will be restricted. It will make an enormous difference whether the United States decides to coin annually from 1881, 580,000 kilos, or almost one-third the entire production." The conclusion arrived at by Professor Soetbeer is, that the depreciation of silver is likely to prove permanent, although ultimately fluctuations in value will cease to any great extent, and further that Germany has no interest in endeavouring to remedy the depreciation.

In other parts of Europe, although little attention appears to be openly paid to the question, practically agencies are at work that must speedily compel action of some description. It is evident that France cannot long maintain her present attitude of seeming indifference. In the cash of the Bank of France, silver is accumulating and gold diminishing at a rate that will ensure early attention. According to recent returns the Bank held in round figures £50,000,000 of silver and only £30,000,000 of gold, against

£92,600,000 of note circulation and £17,200,000 of private deposits. The official returns shew that during the first half of the present year, the exports of gold exceeded the imports by about £1,800,000, while the imports of silver exceeded the exports by some £1,000,000. Thus it appears that in France, affairs are quickly drifting towards a position in which the country will be virtually less upon the double standard basis than upon the silver basis. When that point has been reached action must be taken. On the whole we conclude that the time is ripening for France, which is now apparently rapidly becoming the depository of the surplus silver of the world, exerting her influence toward fostering an international double standard alliance. Great Britain, of course, will not fall in with any such proposition, but the United States will very likely be glad to do so. If a mutual understanding in this direction between the Great Republic and the States of the Latin Union is once arrived at, a recurrence of the fluctuations in silver will be effectually prevented,—a consummation most devoutly wished by the merchants of the East.

#### SUGAR CULTIVATION IN JAPAN.

IT is interesting to note the steady development of non-indigenous productions in this Empire and especially that of sugar, the consumption of which article has so greatly increased in this country of recent years.

Up to the time of the opening of Japan to foreign intercourse, the cultivation of sugar was confined chiefly to the province of Satsuma and its dependency of Loochoo, and to the southern parts of the island of Sikoku, but it is noticeable that the first step taken by the Japanese in introducing foreign inventions and systems, was in the direction of improving the sugar industry, and was undertaken by that most conservative of the feudal clans—Satsuma, who introduced into their territory in the Loochoo islands extensive sugar mills from Europe at a cost of some quarter of a million of dollars. This fact, we may observe in passing, has its bearing on the vexed Loochoo question, and has apparently been overlooked by the Chinese Government.

The sugar establishment in the Loochoos did not succeed, principally through neglect of using proper fertilizing agencies in the cultivation of the cane, and it was abandoned far too hastily by the Satsuma officials as they mistakenly attributed the failure to climatic causes. Whereas it has now been ascertained that among many unsurpassed advantages this country enjoys in climate, soil and products, it enjoys this important one, viz: that sugar-cane grows successfully here in a considerably higher latitude than any place yet known. Whether this is due to the beneficent action of the Kuro-siwo, or Black stream, or to whatever cause, it is established that the cane will grow to perfection as far north as the province of Nambu, if not higher, and that in Yesso the Beet-root will grow in perfection, whereas in France it is confined principally to the southern part.

In China, sugar does not grow successfully further north than the Che-kiang (Ningpo) province, if we except a particular fine kind of Sorghium which grows on the large alluvial islands at the entrance of the Yangtze-kiang river. Japan, therefore, possesses an industry of great importance which can be developed to any extent, and this has been recognized fully by the late Minister of Finance, Mr. Okuma, and the present Minister of the Interior, Mr. Matsugata, to whose indefatigable exertions the success this industry promises to attain is mainly due. When it

is considered that the import of sugar into Japan doubles itself every three years, and that last year four times the quantity of sugar was imported to find a profitable market than was imported twelve years before, and that the ratio of increase has been as stated, we cannot deny that it is high time to extend this industry, and there is nothing apparently to prevent Japan becoming self-supporting in this import, if not of producing a sufficiency of the product for a considerable export trade.

The chain of islands of which Japan and the Philippines form a portion, promise to be one of the chief sources of supply in this part of the world. The great colonies in Australia draw their supplies chiefly from the Philippines and Mauritius, and there is no reason in the future why they should not import from Japan.

Before concluding our remarks there is another consideration with regard to sugar which in these days of Trade and Guild combinations ought not to be lost sight of. Sugar is a luxury to the poorer classes, and has been found to be the first luxury they can conveniently dispense with on economical grounds. This fact was clearly established by the experience of the cotton-spinners of Lancashire during the lamentable civil war in America. The poorer classes in this Empire have little enough saccharine matter in their customary food to exist upon, but they also have scant enough clothing to cover them, and we are much mistaken if sugar is not found to be the first luxury the people will deny themselves if poverty extends.

**N**OTWITHSTANDING the warlike rumours that are again noticeable in recent Shanghai papers, we feel convinced that all danger of hostilities between China and Russia has passed away. Of course it is impossible to foretell what may happen if the astute Ministers who rule the Middle Kingdom cast aside the eminently prudent policy which has distinguished them, impelled to adopt such a disastrous step by some great internal pressure. At the same time there is a very remote chance indeed of anything of the sort taking place, and facts point unmistakably to a peaceful solution at no distant period, of the difficulty which has arisen between the two Empires. Having avoided the threatened danger it is instructive to look back and observe what a narrow escape the Treaty Ports of China had from a Russian blockade. We know, indeed, that attempts were made to shew the exemption of these ports from hostile interference, but the fallacy involved in any such contention was pretty well exposed by ourselves and others at the time. We have lately come across a despatch from Lord John Russell to Sir F. Bruce, which very effectually disposes of the absurd proposition that the "Concessions" in China have ceased to form an integral part of that Empire. The despatch in question is dated on the 8th of April, 1868, and runs thus:—"I have to state to you that Her Majesty's Government entirely concur in your views, and approve the instructions which you have addressed to Her Majesty's Consul at Shanghai, as reported in your despatch of the 3th November last, with regard to the proposals made by the Taoutai for taxing Chinese subjects who reside within the so-called British Concessions. The lands situated within the limits of the British Settlement are without doubt *Chinese territory*, and it cannot reasonably be held that the mere fact of a residence within those limits exempts Chinese subjects from fulfilling their natural obligations."

**S**OME time since we noticed a letter written by the great Orientalist Professor Max Müller to the *Athenæum* on the subject of Sanskrit Texts in this Empire. Professor Müller has recently received some further information regard-

ing the matter, and communicated it to the *Athenæum* in a letter from which we take the following extract:—"At the end of my paper on 'Sanskrit Texts in Japan,' printed in the last number of the *Journal* of the Royal Asiatic Society, and fully reported in the *Athenæum*, I mentioned in a postscript (March 10th) that I had received from Mr. Wylie a copy of a vocabulary called 'A Thousand Sanskrit and Chinese Words,' compiled by I-tsing, about 700 A.D., and brought to Japan by Zikaku, a Japanese priest, in 847 A.D. The edition of this vocabulary which Mr. Wylie bought in Japan was published by Jiakumyo in 1727, and in the preface the editor says:—'In the temple Hôriuji, in Yamato, there are treasured *Prigñāpāramitā-līdaya-sūtram* and *Sousho-dhāraṇī*, written on two palm-leaves, handed down from Central India.' Hôriuji is one of eleven temples founded by Prince Umayado, who died in A.D. 621. This temple is in a town named Tatsuta, in the province Yamato, near Kioto, the western capital. I ended my article with the following sentence:—'Here, then, we have clear evidence that in the year 1727 palm-leaves containing the text of Sanskrit Sūtras were still preserved in the temple of Hôriuji. If that temple is still in existence, might not some Buddhist priest of Kioto, the western capital of Japan, be induced to go there to see whether the palm-leaves are still there, and, if they are, to make a copy and send it to Oxford?' Sooner than expected this wish of mine has been fulfilled. On the 28th of April Mr. Shigefuyu Karihara, of Kioto, a friend of one of my Sanskrit pupils, Mr. Bunyiu Nanjio, who for some years had himself taken an interest in Sanskrit, went to the temple or monastery of Hôriuji to inquire whether any old Sanskrit MSS. were still preserved there. He was told that the priests of the monastery had recently surrendered their valuables to the Imperial Government, and that the ancient palm-leaves had been presented to the Emperor. In a chronicle kept at the Monastery of Hôriuji it is stated that these palm-leaves and other valuables were brought by Ono Imoko, a retainer of the Mikado (the Empress Suiko) from China (during the Sui dynasty, 589-618) to Japan, in the thirty-seventh year of the age of Prince Umayado, i.e., A.D. 609. The other valuable articles were: 1. Nio, i.e., a symbol used in Buddhist temples; 2. Midzuga-me, a water vessel; 3. Shaku-jio, a staff, the top of which is armed with metal rings, as carried by Buddhist priests; 4. Kesa (Kashaya), a scarf, worn by Buddhist priests across the shoulder, which belonged to the famous Bodhidharma; 5. Habi, a bowl, given by the same Bodhidharma. These things and the Sanskrit MSS. are said to have belonged to some Chinese priests, named Wai-sz (Yeshi) and Nim-shin (Neuzen), and to four others successively, who lived in a monastery on the mountain called Nan-ngok (Nangak) in the province of Hang (Kô) in China. These palm-leaf MSS. may, therefore, be supposed to date from at least the sixth century A.D., and be, in fact, the *oldest Sanskrit MSS. now in existence*." Professor Müller expresses a hope that the Japanese Minister to Great Britain will request the Minister of the Imperial Household to allow these MSS. to be copied or photographed. We have no doubt that His Excellency Mori Arinori will comply with the wishes of the learned Professor, and also that the request will be cheerfully granted. At the same time the Asiatic Society of Japan might render good service by moving in the matter, if they have not done so already, which is not at all improbable.

**T**HE Japanese Government is acting judiciously in preventing as far as practicable any adulteration of the tea grown in the country. The attempt at sophistication reported from Kobe some time since was, we believe,

promptly suppressed and a recurrence guarded against. It is in this way that the reputation of Japan Teas for purity, and the consequent demand for them will be maintained. In China, however, notwithstanding many serious warnings, a different course is apparently adopted by the natives, and a recent *Shanghai Courier* says "we fancy there would be fewer tea drinkers at home if people knew what some of their tea was made of. The sale and exportation of the stuff which, for the want of a better description, is called 'Maloo mixture,' has been prohibited over and over again by the Mixed Court, where large quantities of it have been confiscated; yet there seems to be still a brisk trade going on in it. The police, however, are acting with praiseworthy vigilance in the matter and are frequently making heavy seizures. Within the past week, the Hongkew division, under the able direction of Mr. Stripling, have seized a couple of tons of such rubbish, consisting of dried tea leaves mixed with willow leaves, and have buried it, as usual, in the waste land opposite the station. It cannot be a particularly pleasant thing for people at home to know that, before they get some of their 'tea,' Chinese coolies have stewed it down two or three times and quite finished with it themselves."

THE recent death of General Albert J. Myer, one of the originators of the world-renowned Signal Service Bureau of the United States, and its chief from the time of its establishment under the War Department to the day of his decease, naturally recalls the great services which the Bureau has rendered to humanity. Growing more immediately out of the Signal Service Corps of the army, the Bureau commenced operations in 1870, with stations in all the large cities of the East, West, North and South, the most Western point of observation being then at Salt Lake. The value—practical as well as scientific—of the work accomplished was soon recognized, and the scope of operations largely extended, until at present it has in round numbers some two hundred stations, and about eight hundred employés. "The Signal Service Bureau," we read in an American paper, "rapidly began to accumulate facts, which having first served a practical purpose became the property of the scientist. The reports were compiled into ponderous and learned volumes. Works were published showing the direction of air currents and the pathway of storms and tempests. New storm-theories were invented. Other nations followed where America had led, until the most insignificant country had trained observers and well appointed signal stations. Naval officers of all nations, in all parts, were required to observe and contribute regularly to the stock of weather information. A system of international exchange of maps and reports was adopted. The press of England and America began to publish intricate daily maps showing atmospheric condition and probabilities. The Bureau gradually widened its field of usefulness by gathering information regarding the fall of meteors, earthquakes, sand-storms, sun-spots and natural phenomena of all kinds not otherwise systematically collected, meanwhile increasing the number of its stations, perfecting its machinery, and printing yearly more voluminous records." The Bureau is admittedly wonderfully efficient, and has rendered incalculable service. The question naturally arises:—Cannot something of the same kind be carried out here? Timely warning of the approach of the destructive typhoons would be an immense boon. Japan is in telegraphic communication with every other part of the East important in this connection, the Government has in its service a gentleman thoroughly competent to organize and carry out the work, to whom the duty would indeed be

a labour of love, and there really seems no good reason why this Empire should not stand in the same relation to the Asian Continent as regards a Signal Service, as America does at the present time to the Continent of Europe. We consider the matter well worthy the earnest consideration of the authorities.

WE have to acknowledge the receipt of the first part of Mr. Bramsen's new publication "The Coins of Japan." The present number deals with the copper, lead, and iron coins issued by the Central Government, and is notable for the same careful arrangement and thorough finish which is such a distinguishing feature in the "Chronological Tables" by the same author. Numismatics has long been recognized as one of the most valuable auxiliaries towards the acquisition of a knowledge of the past history of a country, the present publication has, therefore, a definite and enduring value. It is encouraging to observe foreign residents possessed of the necessary intimate acquaintance with the literature of this Empire, applying their talents in works of this description, and we trust that others will be found ready to follow the example set by Mr. Bramsen. It is evident that, if the remaining numbers of "The Coins of Japan" sustain the favourable impression given by the one already issued, no library pretending to be supplied with books of reference affecting this Empire can be considered complete without a copy. For obvious reasons we are compelled to hold over a review of the work at present, but shall deal with it when in a more advanced stage.

#### THE REVENUE AND EXPENDITURE FOR THE 9TH FISCAL YEAR, 1876-77.

(Continued from last week.)

POSTAGE STAMPS:—In comparing the amount in the definitive account with the corresponding item in the estimate, we find an increase of 86,344.603 yen. This is due to the extension of the postal service and the increase in the number of letters, post office orders, &c. From similar causes there was an augmentation of 105,961.467 yen as compared with the similar item in the definitive account for the 8th fiscal year. The following table shews the increase and decrease between the estimated and definitive accounts:—

	DEFINITIVE.	ESTIMATED.	INCREASE OR DECREASE.
	Yen.	Yen.	Yen.
DOMESTIC:—			
Stamps, &c. ....	638,769.823	...	...
Fees on Money Orders ...	25,837.070	...	...
" " Private Boxes ...	3,032.750	...	...
Total.....	667,639.643	...	...
FOREIGN:—			
Stamps, &c. ....	20,500.810	...	...
Receipts from Shanghai line .....	1,088.150	...	...
Total.....	21,588.960	...	...
Grand Total.....	689,228.603	652,884.000	Inc. 36,344.603

TAX ON RULED PAPER FOR PETITIONS, &c.:—In comparing the amount in the definitive account with the corresponding amount in the estimates, there appears a deficit in the former of 222,299.850 yen. The cause of this decrease is the fact that the tax was begun to be collected as late as the 2nd month of the 9th year of Meiji. In comparing the amount with the corresponding item in the definitive accounts for the 8th fiscal year, a sum of 16,709.771 yen appears in excess against the latter. This increase is due to the fact that the amount collected in that term was for the whole year, while in the previous term it had been collected only for five months as the tax commenced, as already mentioned, in the 2nd month of the 9th year of Meiji. The following table shews the increase and decrease between the estimated and definitive accounts:—

	DEFINITIVE.	ESTIMATED.	INCREASE OR DECREASE.
	Yen.	Yen.	Yen.
Tax on Ruled paper for petitions.....	61,666.291	...	...
Tax on Ruled paper for writs issued by Civil Court.....	3,891.094	...	...
Tax on Ruled paper for official communications.....	14,616.765	...	...
Total.....	80,174.150	302,474.000	Dec. 222,299.850

**LAWYERS' LICENSE FEES** :—When compared with the corresponding item in the estimate, there appears a deficit of 75,080 yen under this heading, which is due to the fact that the tax began to be enforced as late as the 2nd month of the 9th year of Meiji. Again, in comparing the amount in the definitive account with the corresponding sum in the definitive accounts for the previous year, the former will be found to exceed the latter by 4,170 yen. This increase, again, was caused by the fact that the tax collected in this term was for the whole year, while in the previous term it had been collected for five months only, as it commenced to be levied from the 2nd month of the 9th year of Meiji.

**TAX ON SILK WORMS' EGG CARDS** :—The definitive account of this receipt as compared with the estimate, shows an increment of 2,867.945 yen. This increase is owing to the augmented manufacture of the silkworms' egg cards on account of the increased foreign demand for the article.

The definitive account of this item, as compared with that for the fiscal year preceding, shows an increase of 1,970.405 yen. The increase is due to the same cause as already mentioned.

**STAMPS ON RAW SILK, FLOSS SILK AND COCOONS** :—There will be found an increase in the definitive account under this heading of 9,964.966 yen over the estimate. This is due to augmented manufacture owing to increased exportation, although the tax in question was collected for only ten months, being abolished by Notification No. 37, issued in the 4th month of the 10th year of Meiji. In comparing the amount in the definitive account with the corresponding item for the previous year, the former will be found to exhibit an increase of 4,265.814 yen, the cause of which is similar. The following table will show the comparison of increase and decrease between the definitive and estimated account :—

	DEFINITIVE.	ESTIMATED.	INCREASE OR DECREASE.
	Yen.	Yen.	Yen.
Stamps on Raw Silk...	30,102.756	19,983.000	Inc. 10,119.756
" " Cocoons...	1,282.210	1,090.000	Inc. 192.210
" " Floss Silk..	72.000	419.000	Dec. 347.000
Total.....	31,456.966	21,492.000	Inc. 9,964.966

**RAW SILK DEALERS' LICENSES** :—On comparing the amount of the definitive account with the estimate, the former shows an increment of 2,167.600 yen over the latter. This is due to the fact that dealers have increased in number and the export trade was in a prosperous state as was explained in the remarks on the item of "Stamps on Raw Silk, Cocoons and Floss Silk." It should also be noticed that the augmentation was the result of only ten months' collections, as the tax was abolished by Notification No. 48, issued by the Home Department in the 4th month of the 10th year of Meiji. In making a comparison between the amount in the definitive account and the corresponding item for the year previous, there will be found an increase of 2,810.800 yen. This increase is due to the same cause as already mentioned. The amount of the tax in question was included in the item of Stamps on Raw Silk, &c., in the first table of the definitive account for the eighth fiscal term.

**SHIP LICENSES** :—There will be found an increase in this item amounting to 4,478.012 yen when compared with the corresponding sum in the estimate. This increase was due to the fact that over 3,400 yen was collected—the number of ships increasing yearly—and over 1,000 yen was levied by the Colonization Department for ships of under 500 koku over the sum anticipated when the estimate was made. On comparing the amount in question in the definitive account with the corresponding item for the year previous, an increment of 4,604.331 yen was found, which is attributed to the same causes as already mentioned. The following table will

show the increase and decrease between the definitive and estimated accounts :—

	DEFINITIVE.	ESTIMATED.	INCREASE OR DECREASE.
	Yen.	Yen.	Yen.
Licenses on steam ships.	4,036.976	...	...
Licenses on sailing ships after European model.	542.271	...	...
Licenses on sailing ships after native model....	128,639.765	...	...
Total.....	133,119.012	128,641.000	Inc. 4,478.012

**VEHICLE TAX** :—The definitive accounts show an increase over the estimates of 34,901.642 yen, which is attributed to the greater number of vehicles in use. Again, if we compare the amount in the definitive account with the corresponding sum for the year previous, we find that the former shows an increment, due to the same cause, of 21,708.792 yen. The following table gives the particulars :—

	DEFINITIVE.	ESTIMATED.	INCREASE OR DECREASE.
	Yen.	Yen.	Yen.
Tax on Carriages.....	1,018.000	...	...
Tax on Jirikisha.....	160,007.802	...	...
Tax on Ginahia (wagons drawn by oxen).....	1,439.000	...	...
Tax on Wagons.....	72,437.840	...	...
Total.....	234,901.642	200,000.000	Inc. 34,901.642

**TAX ON COMPANIES** :—There will be found a deficit of 154,266.365 yen in the definitive account as compared with the estimates. This is owing to the fact that it was impossible to make an accurate calculation when this tax was proclaimed by Notification No. 105, in the 9th month of the 9th year of Meiji.

**SHOOTING LICENSES** :—In comparing the amount in the definitive account with the estimate there appears a decrease of 91.829 yen, due to the fact that the number of applications for licenses has fallen off. There is also a decrease of 289.429 yen, as compared with the definitive accounts for the previous year from the same cause. The following table exhibits the increase or decrease in the definitive and estimated accounts :—

	DEFINITIVE.	ESTIMATED.	INCREASE OR DECREASE.
	Yen.	Yen.	Yen.
Sportsmen's Licenses...	1,810.000	...	...
Professional hunters' Licenses.....	44,821.171	...	...
Total.....	46,631.171	47,573.000	Dec. 941.829

**CATTLE DEALERS' LICENSES** :—In comparing the definitive with the estimated account there will be found a decrease of 1,125.429 yen. There is also a decrease of 29,934.862 yen as compared with the same item in the last fiscal year. This is explained by the fact that, in that year in order to simplify the accounts, the sum which had been collected for the first six months of the 9th year of Meiji was added to the sum which had been collected for the last calendar year, making the whole period one year and a half, an arrangement effected under Notification No. 143, issued by the Finance Department in the 11th month of the eighth year of Meiji, to the Cities and Prefectures. In the present year, however, the revenue collected was for one year only, and consequently a total decrease of about 30,800 yen is apparent. Against this there is an increase in license fees amounting in all to about 800 yen; by deducting this sum from the total decrease, we have the result as given above.

**TAX ON WEIGHTS AND MEASURES** :—In comparing the item in the definitive account with the estimate, there appears a decrease of 5,454.018 yen, which is accounted for by the fact that the regulations for levying this tax and the rules for enforcing it, were established by Notification No. 135, issued in the 8th month of the 8th year of Meiji; and, as was the case with the tax on tobacco, their working has not been sufficiently tested up to the present. Again, comparing the present amount with the corresponding sum in the definitive accounts of the last fiscal year, there appears an increase of 700.482 yen, attributable to the manufacture having increased.

**COPYRIGHT FEES** :—The definitive accounts exhibit a decrease as compared with the estimates, of 1,566.715 yen which is due to the same causes as brought about the decrease in

the tobacco tax. Notification No. 135, which regulates this impost, was only issued in the 9th month of the 8th year of Meiji. In comparing the amount in the definitive account with the corresponding item in the previous fiscal year, there appears a decrease of 2,738,957 yen. The reason is that, in the previous year, those who had already published books applied in great number for copyrights.

**PASSPORTS AND OTHER FEES:**—The receipts in the present definitive account exhibit an increase on the estimates of 1,818,095 yen. This is owing to the fees payable by applicants for pilotage licenses not having been taken into consideration when the estimates were framed. Pilots' licenses were only established by Notification No. 154, issued in the 12th month of the 9th year of Meiji. Again, in comparing the amount in the definitive account with that of the previous fiscal year there appears an increase of 2,966,844 yen. This is due to the transfer to this heading of passport fees and sums received on account of the registry of mercantile shipping from "Miscellaneous Revenue." The collection of the fees on pilots' licenses only began just before the commencement of the fiscal year in question.

**TAX ON DRUGGISTS' LICENSES:**—The present definitive account exhibits a decrease on the estimate of 121,545,288 yen. This is due to the fact that the tax only came into force on the publication of Notification No. 7, in the 1st month of the 8th year of Meiji, and consequently a satisfactory estimate could not be made, and to this the difference between the estimated and actual receipts is attributed.

The following table gives the increase and decrease in the definitive account as compared with the estimate:—

	DEFINITIVE. Yen.	ESTIMATED. Yen.	INCREASE OR DECREASE. Yen.
Wholesale Dealers' Licenses, &c.....	25,645,012	...	...
Retail Dealers' Licenses, &c.....	2,809,700	...	...
Total.....	28,454,712	150,000,000	Dec. 121,545,288

**MINES UNDER PUBLIC WORKS DEPARTMENT:**—On comparing the definitive with the estimated accounts, a decrease of 601,972,052 yen is found in this item. The cause we attribute to the varying production. Though few mines paid expenses and left a profit, yet a great improvement took place in the treatment of the ores. Occasionally a sudden change took place in the lodes; at other times the supply of water used in the various amalgamation operations fell short or ceased, and sometimes work had to be stopped owing to disturbances in the vicinity of some of the mines.

The following details shew the condition of each mine:—

**GOLD, SILVER, AND LEAD MINES AT SADO:**—In consequence of the imperfect means used in the treatment of ores, the production decreased, and although an improvement in the process has taken place and made up to great extent for the previous loss, yet sufficient time has not yet elapsed to reap the full benefit of the alteration. Accordingly a decrease of about 117,300 yen is apparent.

**SILVER MINE AT IKUNO:**—After opening the mine the direction of the lode changed, and the quality of the ore decreased. The supply of water for amalgamating the ore suddenly ceased in the 7th and 8th months of the 9th year of Meiji, and operations had frequently to be suspended. In consequence there has been a decrease in the production of 200,400 yen.

**SILVER MINE AT KOSAKA:**—Owing to the imperfect method of working, formerly adopted, new machinery was found necessary. Of course the beneficial results of the alteration could not be immediately apparent, and therefore we find a decrease of 15,000 yen.

**GOLD MINE AT OKUZU:**—Although an increased production was anticipated from the employment of the new machinery, yet considerable delay took place in getting the amalgamating apparatus into proper working order, and to this cause we attribute the decrease which has taken place of 38,400 yen.

**COAL MINE AT MIKE:**—Work at this mine was temporarily suspended during the Satsuma rebellion. As the price of coal was low, sales were afterwards deferred, and accordingly there was a decreased return of about 201,900 yen.

**SILVER MINE AT INNAI:**—A decrease of slightly over 900 yen took place which was attributed to a falling off in the quantity of ore, but at the same time there was an increment

of more than 13,900 yen from the sale of ore purchased from the Ono Company, and of ore obtained while the authorities of the prefecture of Akita worked the mine.

**COPPER MINE AT KAWAGUCHI:**—A decrease of over 9,600 yen is apparent in the results of working this mine, which is attributable to the scarcity of ore and the high cost of carriage.

**COPPER MINE AT ARAKAWA:**—There is also a decrease in the estimate as regards this mine of more than 4,100 yen, owing to the property being transferred to a private association in compliance with the wishes of the inhabitants of the locality.

**COPPER MINE AT ANI:**—Although the sale of ore purchased from the Ono Company produced an increase over the estimate of about 11,700 yen, yet the Hadhimori silver mine, which is worked in connection with the Ani mine, had to be closed in consequence of heavy falls of snow blocking the workings from autumn to spring. The estimated production of the Ani and the Taro (lead) mines was, therefore, not so large as anticipated, and a total decrease in the estimate is apparent of about 39,600 yen.

Comparison of the increases and decreases under the various headings as mentioned above, will give the total decrease already stated.

There is also another mine, called the Kamaishi Iron Mine, which came under Government control in the 7th year of Meiji. Although this mine was being got into working order, yet the necessary preliminaries had not been completed and actual operations therefore could not be commenced.

Taken altogether, the receipts in this definitive account as compared with those of the year previous, shew a total increase of 56,237,078 yen.

This satisfactory increase took place notwithstanding a falling off of over 56,300 yen owing to the Satsuma rebellion causing the suspension of operations at the Miike Coal Mine, and a decrease of over 12,500 yen attributable to other obstacles, in all a diminution of over 68,900 yen. On the other hand there was an increase of over 91,300 yen, owing to the development of the mining industries at Ani, Innai, etc., when those properties came into the possession of the Government in the latter half of the fiscal year preceding that now under consideration. There was also an increment of more than 33,800 yen in consequence of the mines at Sado, Kosaka and Okuzu, having gradually increased in productiveness. Taking all the augmentations into account there has been a total increase of more than 125,100 yen, which, when set against the decrease already mentioned, will give the nett increase stated above.

The increase and decrease in the produce of each mine as regards the estimated and definitive accounts are shewn in the following table:—

	DEFINITIVE. Yen.	ESTIMATED. Yen.	INCREASE OR DECREASE. Yen.
Sado .....	75,554,938	192,863,000	Dec. 117,308,062
Ikuno .....	101,902,520	302,400,000	Dec. 200,497,480
Kosaka .....	48,008,074	63,019,935	Dec. 15,011,861
Okuzu .....	20,890,764	59,330,065	Dec. 38,439,301
Miike .....	79,306,472	281,288,000	Dec. 201,981,528
Innai .....	34,291,359	81,296,000	Dec. 47,004,641
Kawaguchi .....	2,306,816	12,000,000	Dec. 9,693,184
Arakawa .....	7,842,200	12,000,000	Dec. 4,157,800
Ani .....	180,749,805	208,628,000	Dec. 27,878,195
Total .....	610,852,948	1,212,825,000	Dec. 601,972,052

**MINE AT HIROSHIMA:**—The total receipts in the definitive account were 216,368,600 yen. Upon the petition of the owner of this mine in the 11th month of the 8th year of Meiji, as briefly explained in the definitive account for that year, the property was placed under the control of the local authorities. When the estimates were prepared a sufficient time had not elapsed to allow of a proper calculation being made of the probable receipts from this source. However, when this definitive account came to be made up, the increase already mentioned was apparent. The income from the mine as compared with that in the previous fiscal year, shews an increase of 213,578,820 yen.

The sum of 143,300 yen of this large increment is owing to the fact that the present accounts include the return for a full year, while in the definitive accounts for the previous year, only six months' operations were included, that being the time work was carried on by the Government. An increase of more than 70,200 yen was obtained by the sale of ore

which had been procured before the fiscal year now under consideration.

**RAILWAYS UNDER THE PUBLIC WORKS DEPARTMENT :—** The amount of the receipts in this definitive account as compared with the estimate, shows an increase of 115,915.647 yen.

Notwithstanding a decrease of more than 44,500 yen, caused by the smaller number of passengers by the Tokio and Yokohama line, yet there was an increase of over 160,400 yen in the definitive account from the receipts caused by the improvement in the traffic on the Kyoto and Osaka line. The latter line was opened by Notification No. 13, issued by the Public Works Department in the 7th month of the 9th year of Meiji. When the estimates were prepared a sufficient time had not elapsed to afford any guide to the probable returns, but when the present account came to be made up the increase was found to be as stated.

Again, the receipts in this definitive account as compared with that for the previous year, exhibit an increase of 166,678.262 yen.

Of this increment more than 183,000 yen is owing to the extension of the railway from Osaka to Kyoto, but at the same time there has been a decrease, as already explained, of more than 16,300 yen on the line between Tokio and Yokohama.

The difference between the estimates and the definitive accounts is shown in the following table :—

	DEFINITIVE ACCOUNTS. Yen.	ESTIMATED. Yen.	INCREASE OR DECREASE. Yen.
<b>Tokio-Yokohama Line :—</b>			
Passengers.....	374,656.967	...	...
Freight.....	37,961.820	...	...
<b>Total.....</b>	<b>392,618.787</b>	<b>437,178.000</b>	<b>Dec. 44,559.213</b>
<b>Kyoto-Kobe Line :—</b>			
Passengers.....	379,694.727	...	...
Freight.....	36,569.133	...	...
<b>Total.....</b>	<b>416,263.860</b>	<b>255,789.000</b>	<b>Inc. 160,474.860</b>
<b>Grand Total :—</b>			
Passengers.....	734,351.694	...	...
Freight.....	74,530.953	...	...
<b>Total.....</b>	<b>808,882.647</b>	<b>692,967.000</b>	<b>Inc. 115,915.647</b>

**TELEGRAPHS UNDER THE PUBLIC WORKS DEPARTMENT :—** The amount of the receipts in this definitive account, as compared with the estimate, exhibit an increment of 67,497.539 yen.

The cause of this augmentation was the extension of the telegraph line between Kumamoto and Kagoshima, and between Kokura and Oita, and also the fact that a great number of messages were sent on account of the Government service during the time of the Satsuma rebellion.

The increase in the present definitive account over that of the previous fiscal year amounts to 65,684.185 yen, the cause of which is already mentioned.

**FACTORIES UNDER THE PUBLIC WORKS DEPARTMENT :—** The diminution in the definitive account under this section of the revenue compared with the estimate, was 19,116.916 yen. This diminution was caused by the fact that, although there was some increase from the receipts which were not taken into account when the estimates were framed, yet the purchase of new machinery and the workmen being comparatively unskilled, caused expense which was not anticipated. We will now give a brief outline of the condition of each undertaking :—

**SHIP-BUILDING ESTABLISHMENT AT NAGASAKI :—** A decrease of over 7,700 yen was occasioned by the delay in the completion of the works.

**SHIP-BUILDING ESTABLISHMENT AT HIOGO :—** A decrease of over 40,100 yen has taken place owing to orders having fallen off, and the postponement of some work to the subsequent fiscal year.

**ENGINEERING ESTABLISHMENT AT AKABANE :—** There has been an increase of over 46,500 yen on account of the gradual improvement of this factory, and the consequent large augmentation of the work turned out.

**CEMENT FACTORY AT FUKAGAWA :—** A decrement of over 18,600 yen took place owing to the impossibility of producing large quantities of the cement, because the ovens used for drying the clay were not efficient.

**EXPERIMENTAL ESTABLISHMENT AT UCHI YAMASHITA-MACHI :—** This establishment was formerly under the control of the Home Department, and was transferred to the Public Works Department in the 1st month of the 10th year of Meiji. Therefore the probable receipts were not included, when the estimates of the latter Department were framed. However, an actual return of over 700 yen has been received. These increases and decreases when balanced, will give the diminution mentioned above.

**THE GLASS FACTORY AT SHINAGAWA,** also belongs to the same Department and was commenced in the 3rd month of the 9th year of Meiji, but, owing to the fact that the actual time of working has been short, there are no returns for the present.

The amount of the revenue from these Industrial Establishments for the present year, shows an augmentation of 48,806.962 yen over that of the previous year. This is due to an increase of more than 75,400 yen, of which over 74,600 yen resulted from the gradual development of the works in the three establishments at Akabane, Nagasaki and Fukagawa, and a sum of 700 yen owing to the transfer of the branch establishment at Uchi Yamashita-machi to the Public Works Department as already mentioned. There was, however, a decrease of over 26,600 yen, of which sum over 25,800 yen is due to the diminution of orders received at the establishment at Hiogo, and a sum of over 400 yen owing to the abolition of the Nioko-sho, in the first month of the ninth year of Meiji.

The following table shows the increase and decrease of the definitive and estimated accounts :—

	DEFINITIVE. Yen.	ESTIMATED. Yen.	INCREASE OR DECREASE. Yen.
<b>Ship-building Yard at Nagasaki .....</b>	<b>107,446.304</b>	<b>115,300.000</b>	<b>Dec. 7,853.696</b>
<b>Ship-building Yard at Hiogo .....</b>	<b>14,891.725</b>	<b>55,000.000</b>	<b>Dec. 40,108.275</b>
<b>Engineering Works at Akabane .....</b>	<b>49,599.856</b>	<b>3,000.000</b>	<b>Inc. 46,599.856</b>
<b>Cement Factory at Fukagawa .....</b>	<b>8,345.275</b>	<b>27,000.000</b>	<b>Dec. 18,654.725</b>
<b>Experimental Works at Uchiyama's-machi .....</b>	<b>799.924</b>	<b>...</b>	<b>Inc. 799.924</b>
<b>Total .....</b>	<b>181,083.084</b>	<b>300,000.000</b>	<b>Dec. 19,116.916</b>

**FILATURES UNDER THE CONTROL OF THE HOME DEPARTMENT :—** The increase in the definitive account under this heading as compared with the estimate is 204,610.628 yen. Of this sum over 88,500 yen was owing to the good price obtained for the silk, and over 116,000 yen was carried over from the previous fiscal year and has not been included in the estimates of the fiscal year now under consideration, as was stated under the item "Filatures under the Control of the Home Department," in the report on the definitive accounts for the eighth fiscal year.

In the fiscal year preceding, there were no receipts entered under this item as they were carried forward to this year.

The following table will exhibit the increase and decrease in the definitive account as compared with the estimate :—

	DEFINITIVE. Yen.	ESTIMATED. Yen.	INCREASE OR DECREASE. Yen.
<b>Filature at Tomioka...</b>	<b>180,965.845</b>	<b>20,000.000</b>	<b>Inc. 160,965.845</b>
<b>" " Sakai .....</b>	<b>61,644.783</b>	<b>18,000.000</b>	<b>Inc. 43,644.783</b>
<b>Total .....</b>	<b>242,610.628</b>	<b>38,000.000</b>	<b>Inc. 204,610.628</b>

**PRINTING BUREAU UNDER THE FINANCE DEPARTMENT :—** The increase in the definitive account under this heading as compared with the estimate is 63,308.597 yen.

The cause of this augmentation was due to the fact that there has been a great improvement in all branches of the work.

Again we find that the increment in this definitive account over that of the fiscal year preceding, is 63,925.732 yen.

The cause of this increase has been already mentioned.

**FACTORIES UNDER THE NAVY DEPARTMENT :—** The excess in the present definitive account under this heading as compared with the estimate was 48,025 yen.

The cause of this excess was due to the fact that although by the suspension of work in the Kagoshima factory during the disturbance at that place a falling off of 7,000 yen took place, yet the operations of the dockyard at Yokosuka have been greatly extended year after year.

The excess of this definitive account over the fiscal year preceding was 60,838.562 yen for which the cause has been already mentioned.

The following table shews the increase and decrease in this definitive account as compared with the estimate :—

	DEFINITIVE. Yen.	ESTIMATED. Yen.	INCREASE OR DECREASE. Yen.
Yokosuka Dockyard...	175,025.396	120,000.000	Inc. 55,025.396
Kagoshima Factory ...	...	7,000.000	Dec. 7,000.000
Total .....	175,025.396	127,000.000	Inc. 48,025.396

**MINT UNDER THE FINANCE DEPARTMENT :—**The increase in the definitive account under this heading, as compared with the estimate, was 381,237.245 yen. This increment was due to the fact that a great quantity of silver was brought to the mint by the public, and that the production of subsidiary coinage (both silver and copper) shewed a profit of over 256,600 yen. Moreover, in consequence of the increase in the export of sulphuric acid, over 90,200 yen has accrued from this source of revenue, while over 34,000 yen has been received for the assay and refining of bullion.

The definitive account shews a decrease of 297,998.720 yen as compared with that of the last fiscal year, which is due to the fact that in the previous year there were contingent receipts amounting to over 610,100 yen, which represented the profits on copper coinage, which ought to have appeared in the accounts for the fiscal period prior to the 6th month of the 8th year of Meiji. There was no such extraordinary source of revenue in the present year, although the receipts include 212,000 yen derived from the coinage of silver and copper, and over 100,000 yen from the manufacture of sulphuric acid and other articles.

The following table shews the increase and decrease in the definitive account as compared with the estimates :—

	DEFINITIVE. Yen.	ESTIMATED. Yen.	INCREASE OR DECREASE. Yen.
Profit on Coinage ...	976,690.000	720,000.000	Inc. 256,690.000
Profit on Sulphuric, Nitric and Muratic Acids.....	102,547.734	12,300.000	Inc. 90,247.734
Profit on other opera- tions.....	72,799.511	38,500.000	Inc. 34,299.511
Total.....	1,152,037.245	770,800.000	Inc. 381,237.245

**SALES OF GOVERNMENT PROPERTY :—**The amount of this definitive account as compared with the estimate, shews an increase of 156,481.762 yen.

Several causes contributed to this increment. Although the petition to annul the contract relating to the purchase of the railways between Tokio and Yokohama was granted, yet the sum of 214,000 yen, the amount of the instalment, was not received in this year, but over 76,500 yen was received from the sale of land, timber, stone, &c., to those who surrendered their pensions. An augmentation was also apparent owing to the arrangements for the surrender of pensions gradually approached completion. In addition to the above, at the time when the estimates were prepared, the sales of Government land, buildings, &c., were completed under the conditions in force at that time. Since then, however, the disposal of the estates formerly belonging to the Shrines and Temples, and of other Government land has gradually decreased. Receipts from the various other sources of revenue under this heading have also increased by 293,900 yen.

Altogether, a total increase of 370,400 yen appears in this definitive account under the item. By deducting from this amount the decrease above mentioned, we find the nett increase to be 156,481.762 yen as already stated.

A decrease of 1,569,107.883 yen appears in the present definitive account under this heading, as compared with that for the year previous.

The cause of the decrease was, that although an augmentation of over 58,200 yen was received owing to the large sums derived from the sales of Government lands and other property, yet the proceeds of the sales of timber from the Government Woods and Forests was transferred to another item. A decrease of over 58,200 yen was exhibited by sales to those who surrendered their pensions, and over 214,000 yen calculated upon was not received in this year owing to the contract for the sale of the railway between Tokio and Yokohama being cancelled. The total amount of these items of

decrease is more than 1,627,300 yen. Deducting the total increase we have the nett decrease mentioned before.

The following table shews the increases and decreases in the definitive as compared with the estimated accounts :—

	DEFINITIVE. Yen.	ESTIMATED. Yen.	INCREASE OR DECREASE. Yen.
Yearly instalment from the sale of the Taka- shima mine .....	69,500.000	65,000.000	Inc. 4,500.000
Instalment from the sale of the railway between Tokio and Yokohama .....	214,000.000	428,000.000	Dec. 214,000.000
Sales of Government Lands, Buildings, Stores, Timber, Stone, &c. ....	565,753.762	199,772.000	Inc. 365,981.762
Total.....	849,253.762	692,772.000	Inc. 156,481.762

**RENT OF GOVERNMENT LANDS, BUILDINGS, &c :—**The amount of this item in the definitive account as compared with the estimate, shews an increase of 18,112 595 yen.

This increase was owing to the fact that Notification No. 53, relating to the rents of Government buildings, being issued in the 5th month of the 9th year of Meiji, sufficient time had not elapsed when the estimates were framed to afford any basis for an accurate calculation. As a matter of fact, however, the actual number of Government tenants has greatly increased.

Again, the amount of the receipts in this definitive account as compared with that for the year previous, shews a decrease of 1,110,511.295 yen.

Such decrease was owing to the fact that the miscellaneous receipts of various kinds belonging to the Reserve Fund, which appear in Table I. (Rents of Government property; &c.) appended to the report of the definitive account for the eighth fiscal year, have been transferred in this fiscal year to the item of "Miscellaneous Revenue out of Taxes." This accounts for over 1,043,400 yen of the decrease. Furthermore, the sale of Government lands and buildings to those who surrendered their pensions in the previous fiscal year was very great, in consequence of which the rent for the present fiscal year considerably diminished. In several minor items there is a decrease of over 67,000 yen.

**RECEIPTS FROM GOVERNMENT WOODS AND FORESTS :—**Under this heading the present definitive account shews a decrease of 35,266.198 yen, as compared with the estimates. This is due to the expiration of contracts for the sale of timber. In the previous year this item was included in the "Sale of Government Lands, Buildings, Timber, Stone, &c.," while in the present accounts a special heading has been provided for them, which explains the increase in the total sum.

**MISCELLANEOUS REVENUE FROM VARIOUS TAXES :—**An increase of 877,108.552 yen will be found under this heading in comparing the definitive with the estimated accounts, which is to be attributed to the following causes. There was a decrease of over 126,600 yen thus : 58,200 yen loss on the sales of sample articles for the purpose of encouraging native industry ; and 68,300 yen by the transfer of the profits derived from the manufacture of ruled paper for petitions, stamps, etc., to the Printing Bureau under the control of the Finance Department. There was an increase to be set against this, however, of over 807,500 yen by the sale of articles not required by local authorities, 127,500 yen accruing from fines, and 68,600 yen from the sale of silkworm's egg cards, which makes a total of over 1,003,700 yen. By placing these several increases against the decreases, the result given above will be attained.

Again, the amount of this definitive account compared with that for the previous year, shews an increase of 1,283,863.831 yen. This we attribute to the fact that there was a falling off of 74,600 yen owing to there being no unusual payment made by a Foreign State in the present fiscal year such as happened in the year previous upon the exchange of Saghalien for the Kurile islands. Freight earned by vessels controlled by the Colonization Department decreased over 69,500 yen, and the sale of land and articles not required fell off to the extent of more than 144,100 yen. Notwithstanding this large deficiency there was an increment of more than 1,333,900 yen, by the transfer to this heading of the miscellaneous receipts formerly included in the item of "Receipts from Sundry Advances" in the definitive account for the

preceding year and placed to the reserve fund; and also by the transfer to "Miscellaneous Revenue out of Taxes" of the receipts from the sale of articles not required by the Government, which were included in the item of sales of Government Land, Buildings, Timber, Stone, &c., in the definitive account for the previous year.

**REVENUES OUT OF TAXES:**—In addition to the increase just mentioned, over 50,600 yen was obtained by the sale of silkworms' egg cards, and over 43,400 yen by the disposal of articles bought for the Philadelphia Centennial Exhibition and exhibited there. Other sums were obtained from various other sources, and taking all the items of increase together they amount to more than 1,428,000 yen. The decrease already mentioned being deducted from this increase, will give the nett augmentation stated above.

The following table shews the increases and decreases in the estimated and definitive accounts under this heading:—

	DEFINITIVE. Yen.	ESTIMATED. Yen.	INCREASE OR DECREASE. Yen.
Sales of Silkworms' Egg Cards .....	148,645.425	80,000.000	Inc. 68,645.425
Sales of Books .....	30,556.623	11,436.000	Inc. 19,120.623
Commutation of Military Service .....	8,464.500	3,240.000	Inc. 5,224.500
Sales of Surplus Stores, &c. ....	455,028.652	43,165.000	Inc. 411,863.652
Revenue from Reserve Fund .....	248,756.271	319,268.000	Dec. 70,511.729
Fines .....	127,579.376	...	Inc. 127,579.376
Miscellaneous Receipts	884,926.705	569,740.000	Inc. 315,186.705
Total .....	1,903,957.552	1,026,849.000	Inc. 877,108.552

**REPAYMENT OF ADVANCES:**—A decrease of 93,912.456 yen was found in this definitive account, as compared with the estimate. This falling off we attribute to the fact that, although there was an increase of more than 44,600 yen owing to settlements made by various Departments, and better regulations which produced improved results, yet a considerable deficit of 138,600 was found after allowing a renewal of the term of payment to those debtors who met with unforeseen misfortunes, and to the heirs of deceased debtors, and writing off all debts which had become bad in consequence of the bankruptcy of the debtors or the poverty of their heirs.

A decrease of 1,506,789.321 yen was found in the definitive account for the present term as compared with the fiscal year preceding, which we attribute to the circumstance that, although there was an increase of more than 131,500 yen by the augmentation of advances for charitable purposes, yet there was a decrease of more than 1,638,300 yen in the temporary advances from the reserve fund, as stated in the seventh section of the introductory remarks to the estimates for the 9th fiscal year, which is not included in the revenue and expenditure.

The following table shews the amount of each item under this heading in definitive account and estimates, together with the increase or decrease thereof:—

	DEFINITIVE. Yen.	ESTIMATED. Yen.	INCREASE OR DECREASE. Yen.
Repayment of advances for charitable purposes .....	656,065.372	...	...
Repayment of advances for promoting national industries .....	41,932.172	...	...
Total .....	697,997.544	791,910.000	Dec. 93,912.456

**REPAYMENT OF ADVANCES MADE IN PROPORTION TO KOKU DAKA (rice production):**—In this item an increase of 4,059.654 yen is observed in the definitive account, as compared with the estimates. This was due to the fact that, although there was a decrease of more than 17,200 yen consequent upon the abandonment of claims, the absconding or bankruptcy of debtors, and the enlargement of periods for repayment, etc., yet there was an increase of more than 21,300 yen on account of moneys being received, during the present fiscal period, which had stood over from the year previous.

A decrease of 21,828,077 yen appears in the present definitive account as compared with that of the year previous. This is due to the fact that amounts payable in instalments were fully discharged in the year preceding and some claims were abandoned, while in other cases renewals of the term of repayment were granted.

**REPAYMENT OF ADVANCES MADE TO PEOPLE OF THE LATE HANS:**—In this item there is a decrease of 192,815,038 yen in the definitive account as compared with the estimate, which is due to the fact that better regulations were put in force as regards the advances made by the late Hans, and some claims were written off owing to the poverty of the heirs of the deceased debtors.

There is also a falling off of 16,258.070 yen in the present definitive account as compared with that for the year previous, which we attribute to some advances having been completely repaid during the preceding year before the actual due dates.

**HARBOUR DUES:**—On the 11th month of the 8th year of Meiji, a temporary cessation of these dues was notified. For this reason, there were no receipts in this year.

**AKITA MINE:**—This item appeared under a separate heading in the previous definitive accounts, but as it was subsequently transferred to the control of the Public Works Department, no special mention of the revenue derived from the mine appears in separate form this year.

**REPAYMENT OF ADVANCES FOR BUILDING BRICK AND STONE RESIDENCES IN TOKIO:**—This item belongs to temporary advances from the reserve fund, so it will not hereafter be included in the accounts of revenue and expenditure, as stated in the seventh section of the introductory remarks to the estimates for the 9th fiscal year.

(To be continued.)

## CORRESPONDENCE.

(Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.)

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

SIR.—Permit me to add a few words to the letter I recently addressed you touching the origin of the proposal for an equal partition of the Shimonoseki indemnity. You have contended that it came from the side of Great Britain: I, that it was a contention and suggestion of the American Minister.

I believe that the extracts I have already given from Lord Clarendon's despatches will fully bear me out. But, if not, the following passage from Earl Russell's despatch to Mr. Winchester, dated the 26th July 1865, will set the question finally at rest:—"The Agents of the four Powers in Japan have agreed to leave to their Governments the partition of the indemnity. The French Government have no fixed views on the subject, and confine themselves to pointing out what appears to them to be an equitable manner of proceeding. The Americans have called attention to the moral influence which the joint action of the four Powers exercised independently of the force employed—a moral influence of which it is right to take account, inasmuch as it contributed to the prompt and favourable solution arrived at, and which should be considered as influencing the partition."

Earl Russell then goes on to suggest that \$2,000,000—two-thirds of the total indemnity—should be divided among the four Powers interested, in proportion to the force which they devoted respectively to the proceedings; and further says that after \$480,000 have been deducted from the remaining third for compensation for actual injury done to American and Dutch shipping, a balance, \$580,000, would be left for distribution among the four Powers. It is beyond doubt that he considered that ample concession would be made to the contention of the American Minister if this balance were equally divided among the four Powers.

But, in the end, the whole indemnity was divided on this principle, so that the United States Government found itself in the unenviable position of making a profit of \$600,000 out of a punitive act, to which it contributed one gun and a party of marines under a subaltern officer. Of course the conscience of every right-minded American who knew anything of the affair, was outraged. I have twenty times said that I never made any accusation against the American people for this deplorable act of their Minister. Were the nation polled to-morrow, I believe that they would, to a man, vote for the restitution of this money to the Japanese. And I am as firmly of opinion that this will ultimately be done by the Government at Washington, where, from the very first, the transaction was regarded as equivocal, if not unworthy. Olet, said Mr. Seward, when the

money came into his hands; and, then and there, he placed it to a suspense account in the books of the Government, and refused to pay it into the public treasury. I doubt not that his puritan descent had much to do with his act, and that the sturdy honesty of his character revolted from any participation in a deed tainted with the guilt of Achan.

Do not let us doubt it, Sir: "The Gods are just, and of our pleasant vices make instruments to scourge us." The American will restore this money to Japan.

Yours faithfully,  
W. G. HOWELL.

London, 19th August, 1880.

#### REUTER'S TELEGRAMS.

LONDON, 4th October, 1880.

The report that the Albanians had burned Dulcigno has since been declared unfounded, and hopes are entertained of a peaceful solution.

LONDON, 5th October, 1880.

The Porte has communicated to the Ambassadors of the Great Powers a general scheme for the settlement of pending questions.

LONDON, 7th October, 1880.

The revised scheme for the settlement of pending questions submitted by the Porte to the Great Powers is considered an insult to the European Concert, and a Naval Demonstration in the Bosphorus is therefore in contemplation.

And that literary contributions of every description be addressed to the EDITOR.

YOKOHAMA: SATURDAY, 9TH OCTOBER, 1880.

JAPANESE ERA 2510, MEIJI 13TH YEAR, 10TH MONTH, 9TH DAY,  
DO-YO-BI.

#### NOTES OF THE WEEK.

The M. M. steamer *Menzaleh* arrived from Hongkong on Tuesday last, having on board the home mails of August 20th. European and American despatches went forward by the O. & O. steamer *Gaelic* this morning. The P. M. S. S. *City of Tokio* left San Francisco bound for this port on the 20th ultimo, and may be expected to arrive at any moment.

We observe by an advertisement in a vernacular paper, that a race-meeting will take place at Toyama Park on the 16th and 17th of October instant. The meeting is under the auspices of the United Race Club, and will probably attract many visitors from Yokohama. It is to be regretted that the Club does not give publicity to its proceedings through the foreign press, as we are quite sure that Japanese sportsmen like to see a good attendance of foreigners at their meetings. We are informed privately that the competitors will be confined to members of the Army, Navy, Police and Imperial Household.

We would call our readers attention to the advertised performance on Monday evening by the new Amateur Dramatic Association. We hear that the corps is hard at work and intend to give regular and frequent performances throughout the winter. We hope to see a full house on the opening night, when some *debutants*, together with some of the old Yokohama favorites will appear. The full band of the *Richmond* will perform in the compound next the Theatre, and the pieces selected are bright, mirthful and entertaining. In fine everything points to an opening of the season with great éclat, and we are sure that all who attend the representation will not fail to spend a few pleasant hours.

A sad accident, arising out of the recent typhoon, occurred in Tokio yesterday. A three-storied Japanese house had been partially twisted by the violence of the wind, and some workmen were employed to try and pull it back into its original position. While some six or seven of them were on the roof assisting in the operations, the house suddenly collapsed with a crash; all the men received injuries more or less severe, one unfortunate fellow having his eyes literally torn from their sockets by a splinter.

The European mails brought to Hongkong by the Peninsular and Oriental Company's steamers, continue to be carried from that port to Japan by the vessels of the Mitsu Bishi Company, thus causing an agreeable disappointment to those who prophesied all sorts of inconvenience when the British Government withdrew the subsidy from the elder line. We learn that the *Sumida Maru* sailed from Hongkong for Yokohama via Kobe on Saturday last, having on board the English mail, and will be due here on next Monday morning at daylight.

The total darkness in which the streets of the settlement are allowed to remain after nightfall, is a constant subject of comment by visitors, and is to them all the more unaccountable when they see the disused lamp-pillars void of lanterns. Residents explain in reply to inquiry that matters have remained in the same pleasant position for the last six years, and the exorbitant demands of the then proprietor of the gas-works is given as the cause. These works have changed hands not very long since and now belong to a company which has, we understand, made overtures to some leading citizens to effect a resumption of the street lighting upon what must be considered reasonable terms, having regard to the price charged by the former proprietor. In 1873-4, one hundred street lamps were lighted at a monthly cost per lamp of about \$4.70. At the end of the term of the contract the lighting committee, which was composed of a few public-spirited gentlemen who devoted a good deal of time and labour to their self-imposed task, asked for a reduction of some ten or twenty per cent. in the price charged. This request was treated in a very cavalier manner, ultimately the whole project fell through, and the lamps have remained unlighted ever since. The present Gas Company are, we believe, shewing a very different disposition, and are anxious to make any reasonable concession, which will effect the resumption of lighting up the foreign settlement. We are informed that the company will supply gas under the same conditions as before to the hundred lamps, at the monthly charge, per lamp, of four yen and ten sen, which at present rates is only slightly over one-half of the price demanded in 1873-4. In addition a probability of a reduction after the new year is mentioned. It appears, therefore, that all now requisite is for a few influential gentlemen to emulate the example of the members of the former lighting committee, convene a public meeting, and take the matter in hand energetically. We feel sure that the public will gladly support a movement having for its object the rescue of the streets from darkness. Let the trial be made and we are confident the result will prove eminently satisfactory.

The *Examiner* says that Secretary T. Nissi, who has just left St. Petersburg for Japan, after ten years' diplomatic service at the Russian Court, intends on arriving at Tokio, to bring out a work entitled "The Japanese in Russia."

Yokohama was visited last Sunday night by a very severe gale, almost approaching a typhoon. Up to eleven o'clock p.m. there were no actual indications of the coming blow, as the barometer then stood at 29.35, but afterwards it began to fall rapidly. The gale then set in accompanied by a perfect deluge of rain, and reached its height at about half-past two o'clock a.m., when the barometer showed as low as 28.651. The Settlement, generally, bore witness to the strength of the gale. The English hatoba presented a sad sight of destruction in the morning. Two steam launches—one belonging to the post office—and Messrs. Jardine, Matheson & Co.'s gig, suffered considerably; the fragments of over fifty sampans were floating about, the disconsolate boatmen trying to collect their property. When at its worst the direction of the gale was from the north-west, and as the entrance to the hatoba faces that way, it is thus explained how so many of the boats, launches, &c., became

injured. Many houses suffered both on the Bluff and the Settlement: the fine old willow tree by the Church was blown down, while up at the race-course the grand stand and the fences have been levelled, and there was a general destruction of trees, fences, &c. Many of the streets on the swamp were flooded. In harbour, the *Tsukuba Kan* and H.M.S. *Fly* dragged anchor. Owing to the extreme celerity with which the latter vessel got under steam, she was extricated from her perilous position when abreast the Grand Hotel. We are informed that the framework of a godown in course of erection by Messrs. Jardine, Matheson & Co. has also been blown down.

A native paper states that the number of houses demolished in Tokio by the gale of last Sunday night amounts to 1,086: twelve were damaged by flood and, altogether, 2,637 buildings were more or less injured. Twelve persons were killed and twenty-three injured. The effects of the gale were not confined to Tokio and Yokohama alone; along the Tokaido the Tennin-gawa, the Ooi-gawa, the Fuji-kawa, and the Sakumi-gawa all overflowed their banks, and many trees and houses were blown down. Five boats belonging to a saké distillery had left Shimoda for Toba but having encountered the gale, three of them put in to Shimizu and the other two into Fukuda harbour. In Nakasendo, the Arakawa overflowed near Kunmagaya in the Gunba prefecture, and carried away a Buddhist temple and many other buildings in Hisashima Mura. The Tone-gawa and the Ritane-gawa also overflowed their banks. The trees and forests in the Government reservations, and those along the roadside have been mostly blown down.

The M.M. steamer *Tanais* returned to Yokohama on Monday night having encountered the full force of the typhoon of which we experienced a portion on Sunday last. Owing to the courtesy of Captain Reynier we are enabled to publish the following full report:—"Left Yokohama, on the 3rd instant at 9 a.m. there was continuous rain and a slight gale from the N.E. At 3.45 p.m. rounded Rock Island. After leaving Tsuruga experienced a strong swell from the S.W. The barometer, which was at 759 when we left Yokohama commenced to fall until it stood at 755. Then the gale veered to the S.E. and increased in strength and steadiness. At 6.30 p.m. sighted Omai light fifteen miles distant. Laid the course to pass the light at ten miles. The barometer continued to fall in an abnormal manner, but the course was unaltered. Between seven and eight p.m. there could be no doubt that we were under the influence of a typhoon, the centre of which was a little to the right of our course. At 8 p.m. the barometrical reading was 744 and a perfect tempest blew. An enormous sea rose from the S.E. and the vessel began to labour heavily. There was no doubt whatever that we were crossing the path of a typhoon which opposed us with great force. We did not dare to run into the coast, which was at least 20 miles off, on account of its dangerous character, and the fact that the ship was making very slow progress, and I especially dreaded the neighbourhood of the islands, which are in the south near Idzu. There was nothing to do, therefore, but to cross the centre of the typhoon. I steered to the S.S.W. to avoid all fear of a lee shore. All this time the barometer was very irregular; at 10 p.m. it showed 729; a terrible wind was blowing and we shipped seas at every moment, now from the S.W. and now from the S.E. from which direction they were of so great a strength that the ship strained terribly. The stoke-hole was filled with water. The violence of the tempest increased up to eleven o'clock when the barometer showed 724: at this moment the zone of the typhoon was entered. At 11.30 p.m. the wind ceased suddenly; the barometer stood at 722, the lowest point reached. At midnight there was a lull. Then a N.W. wind of terrible strength arose. The barometer began to rise. At about eleven o'clock the rudder was damaged: about midnight a sailor, Matthieu Dominique, who was standing on the poop, was thrown overboard by a lurch of the ship and all efforts to save him were unavailing. To lower a boat would have been to send men to certain death and to our grief we had to abandon him to his fate. Two other men were wounded. At 1 a.m. the storm was at its worst, and the rain and sea were so great that one could barely see the forepart of the vessel. After 1 a.m. the barometer rose very quickly

but the weather did not become settled until the morning of the 4th instant, at about 5 a.m. In consequence of the damage done to the rudder, I decided to return to Yokohama for repairs, especially as the engines were working only slowly. During the typhoon the mizen rigging was damaged and the davits of two boats were carried away, as were also a few hen-coops. The vessel having strained so much the usual reservation is made in case of the cargo being damaged; the pumps were kept going all the time. The vessel anchored in Yokohama harbour at 11.30 p.m. on the 4th of October."

Having repaired damages, the *Tanais* left for Hongkong on Tuesday night.

The O. & O. Company's steamer *Garlic* passed through no less than three typhoons during the passage from Hongkong. By the courtesy of Captain Kidley we are enabled to give a full report of the voyage. The vessel left Hongkong at daylight on the 26th of September, and had fine weather to Lamock Island, but high confused sea and strong south-west current. On the 27th September, barometer falling rapidly, wind north-west, weather ugly and threatening. At 4 p.m. wind commenced to haul to northward. At 6 p.m., lay ship to on the starboard tack, and lay to for twenty hours, the wind having gone to the south-east, and barometer rising, proceeded full speed.

The following is the reading of barometer, with direction of wind at time:—

#### 27th September.

Noon .....	29.42	Wind	N.W.
4 p.m. ....	29.15	"	N. N. W.
5 " .....	29.16	"	N. by W.
6 " .....	29.20	"	North
7 " .....	29.25	"	N. by E.
8 " .....	29.25	"	N. N. E.
9 " .....	29.27	"	"
10 " .....	29.35	"	N. E. by N.
11 " .....	29.39	"	N. E.
12 " .....	29.40	"	"

#### Morning 28th September.

1 a.m. ....	29.43	"	N. E.
2 " .....	29.46	"	N. E. by E.
3 " .....	29.47	"	E. by N.
4 " .....	29.50	"	East

Ship in starboard quadrant of typhoon, storm having passed to southward of ship's position. Had cloudy weather to the Islands. On the 30th September at 11.15 p.m. the south-eastern end of Tokaro Sima, bore north (true) distance 4 miles, wind north-east, with a very heavy swell from the eastward. October 1st, wind steady from N. E. with steady barometer until midnight, when the wind commenced to haul to the eastward, and the barometer to fall, sea very high and confused, ship standing to eastward to get sea room, as soon as possible brought ship on starboard tack, engines going at a speed to keep ship's head to sea. Ship in the starboard semicircle of a typhoon that was moving to the N. W. and not far from axis line. From noon October 1st to noon October 2nd, wind had shifted from N. E. to E. S. E. and remained steady. At 1 a.m. of the 2nd the barometer commenced to fall rapidly, and fell from 29.04 until 10 a.m. when it showed 28.16, wind blowing with hurricane force and heavy rain. At 11.30 a.m. wind shifted to S. E. then to N. E. round by North, and settled into W.N.W., blowing hard for three hours, when the weather cleared. The ship (as shewn by action of wind) must have passed close to the centre, the storm recurring to the north-east. Passed Oosima at 9 p.m. on the 4th October, and arrived at Yokohama on the 5th, at midnight.

An English journal says that "it is the right thing at St. Petersburg to patronise the missionary operations of the Russian Orthodox Church in Japan. All the ladies have been embroidering altar clothes or trimming sacerdotal robes for the cathedral which the Synod is going to build at Tokio. Count Cheremetieff has given 20,000 roubles towards the fund for endowing the bishopric—a large sum, as incomes go in Russia."

The contemplated union of the aged Baroness Burdett-Coutts with the young Mr. Barlett, is still exciting much comment in London, and a hoax was recently perpetrated by the announcement that the marriage would take place on a certain day. The *Whitehall Review* remarks on the subject that "the scene in the

Savoy, when the people assembled to witness the wedding of the Baroness Burdett-Coutts, was extremely funny. A great crowd got into the churchyard and into the church, too; while more were kept in the street by policemen. There they waited, hour after hour, till at last the Rev. Mr. White ascended the pulpit steps and announced that the marriage would not take place that day. But what on earth moved a member of Parliament and one of those who gave the Bachelors' Ball to cool their heels in the Savoy? The principal mover in the legal proceedings which are being taken to enforce the will of the Duchess of St. Albans in the event of the Baroness Burdett-Coutts's marriage is not Mrs. Money, eldest sister of the Baroness but the solicitor for the heir, who, as I have previously stated, is Mrs. Money's son. The Baroness and her two sisters are, as they always have been, on very good terms. There are some who think it possible that the wedding may not take place after all! I confess that I should never be surprised to hear that Lady Burdett-Coutts had adopted Mr. Bartlett in lieu of marrying him. Were she to do so she would meet the wishes of all her friends. I learn that a highly-placed and illustrious personage spent two hours counselling the Baroness in this direction on Sunday morning, prior to His Royal Highness's departure for Germany. It is quite true that Mr. Bartlett was naturalised only a short time ago; but that, it is said, was simply the result of negligence."

The Geneva correspondent of the *Times* writes under date 8th of July:—"A private correspondent communicates to the *Journal de Genève* some particulars concerning the earthquakes which befell at Smyrna on July 29 and 30:—'This morning' (July 29), he writes, 'at 7 minutes to 5, we had here a terrible earthquake shock. The oscillations lasted 12 seconds, and ran from north to south. Had they lasted a few seconds longer, we should have had to deplore a catastrophe as frightful as that of 1776, when 25,000 people were buried under the ruins of the city. At 5 o'clock all the inhabitants were in the streets. A Turk was killed in his oratory while saying his morning prayers. In St. George's-street a young girl and a boy were buried beneath the ruins of a house. They were taken out with difficulty, and though much hurt are still alive. A list of the wounded has been published, but it is so evidently untrustworthy that I hesitate to repeat the figures which it gives. The damage to public monuments and private buildings is incalculable; it must amount to several million piastres. All the houses in the city are injured, and the traces of the shock are to be seen everywhere. In the absence of trustworthy official information, I give you the results of some of my own observations. Two large houses and three shops in Franque-street are partially destroyed. The same fate has befallen two great khans and 20 warehouses of the bazaar. A part of the Turkish quarter has suffered so much that it has had to be abandoned by its inhabitants. The Governor-General's palace, the basilica of St. John, the Aidin railway station, the new post and telegraph offices, are seriously damaged. The shocks have been felt since last night (this was written on July 29), and people are in a state of panic. Many inhabitants have fled from the city and taken refuge in the neighbouring villages, some of which, however, have suffered even more than Smyrna. At Bourabat, a small town about 15 minutes by railway from Smyrna, ten houses and the minaret of a mosque have fallen, killing three persons. At Menemen (three hours from Smyrna) the whole of the bazaar, all the churches and mosques, and many houses have been thrown down. Up to Monday 12 dead had been disinterred from the ruins, and a fire which broke out shortly after the earthquake completed the destruction of the unfortunate town. The river Hermus, which passes near Menemen on its way to the Gulf of Smyrna—a part of its banks having fallen in—has inundated the surrounding country. New springs have burst forth on a mountain near Magnesia. In Magnesia itself 28 buildings, among which are two large mosques, have been destroyed. At Horokui, an orthodox Greek resort of pilgrims, ten houses, five *cafés*, several shops, and the beautiful steeple of the Greek church, are in ruins, and 14 persons have perished. There is a rumour that the village of Yamanar has disappeared, but this requires confirmation."

## ECCLESIASTIC AND MISSIONARY NOTES.

**YOKOHAMA CHRISTIAN ASSOCIATION**—The first regular meeting of the season was held at the Temperance Hall on Wednesday evening, the 6th instant at 8 o'clock. After a hymn had been sung and prayer offered by the Rev. L. H. Gulick; the vice-President, the Rev. E. C. Irwine, M.A., read the 12th Chapter of John from the 23rd verse. He mentioned that the President, Mr. A. J. Wilkin, was prevented through indisposition from being present, and then gave a very interesting address on the words of the 32nd verse—"And I, if I be lifted up from the earth, will draw all men unto me"—in which he urged on the members the necessity for individual effort in order to make the Association successful, while at the same time he reminded them that they must ask for, and rely on the aid of the Holy Spirit, without which little or no permanent good would be done. Mr. Irwine mentioned, also, that members should bear in mind that they have a duty to perform in attending the meetings themselves; and in trying to induce others to do so. He announced that during the present season the regular meetings of the Association will be held on the first Wednesday of each month, and it was hoped that they would be well attended. Other meetings of a social and more secular nature will also be held, but all of which will not have religious objects in view. A few remarks on the same subject were made by the Revs. A. A. Bennett and L. H. Gulick. The vice-President then stated that it was intended to recommence the Bible classes, and after some discussion the meeting was closed with prayer.

**BIBLE SALES IN JAPAN**—In connection with the work of the American Bible Society, the Rev. J. Goble has constructed two vehicles from which to sell the Scriptures. One of these is a two-wheeled carriage of narrow gauge, drawn by one horse, and can be used wherever a jinrikisha can go. This vehicle is so made that on an emergency it will run for a short distance on one wheel only. The carriage is of such simple design that it can easily be taken to pieces, and carried over or round obstacles otherwise insuperable. In the space of four months from the latter part of last March, over 4,700 portions of the Scriptures were sold for cash, during two long journeys of several hundred miles in localities to the north and east of the capital. The sales were greatly promoted during these trips by the use of a magic lantern illustrative of scenes from the Scriptures, the exhibitions being attended by the notables of the various towns, as well as by very large numbers of the other classes of the inhabitants. Mr. Goble has also contrived a very convenient hand-cart for use in the streets of Tokio. Work was commenced with this vehicle on the 21st of last September, and during one holiday no less than 600 portions of the Scriptures were sold. In five days of the first week, 1800 portions were disposed of, and during the week ending last Saturday (October 2nd) 1,200; making in all for eleven working days over 3,000 portions of the New Testament—mainly Gospels.

"IT IS INSTRUCTIVE," says the *Pall Mall Gazette* of the 20th of last August, "to watch the work of prominent Churchmen in an unenclosed field; that is to say, beyond the limits within which they are protected from competition. At the last monthly meeting of the Society for the Propagation of the Gospel, the report of a special committee on the constitution of the society was presented. The growth of the society has exceeded the powers of the old machinery; and it is now proposed to meet the difficulty by a method in accordance with 'modern political experience' by 'insinuating representative government, by electing periodically a strong executive, and by provision both for regular and for extraordinary appeals to the whole constituency.' Possibly the executive, as devised in the scheme of the special committee, is rather flavoured with officialism; but the essential recommendation is that 'a poll of the whole society by voting papers may be demanded on any question decided by vote of a general meeting.' If the report be adopted in February next, the effect will be practically to place the power of moulding the policy and shaping the machinery of the society in the hands of the whole body; since the checks that have been devised, such as the power vested in the president to refuse the poll, would be obviously ineffective in face of a popular movement. The proposed amendment of the constitution of the Society for the Propagation of the Gospel is a scheme of democratic reform, devised by such eminent Radicals as the Bishops of Carlisle and Ely, Earls Powis and Nelson, and Mr. Hugh Birley, M.P."

**THE CORRESPONDENT** of the *Times* telegraphs from Washington that the American *Chargé d'Affaires* at Constantinople has been instructed by his Government to impress upon the Porte the necessity of taking prompt and energetic steps to punish the murderers of the American Missionary, Mr. Parsons. The Board of Foreign Missions has laid the case before Mr. Evarts, urging energetic action on the part of the United States in order to secure the punishment of the assassins and guarantees for the safety of American Missionaries in Turkey. In his reply, the Secretary of State said that the Government had already taken steps in the matter, and that the case would receive his earnest attention.

WE ARE GLAD TO LEARN that Miss Brittan, concerning whose work in India and reception at San Francisco, notices have appeared in our previous issues, has opened a Home for Eurasian children, temporarily at No. 72, Bluff. It is designed to enable all parents desirous of so doing obtaining a good moral and intellectual training for their children.

THE EXPATRIATED JESUITS:—A bill has been laid before the Jersey States Assembly in view of the expected arrival in that island of Jesuits banished from France. It is proposed to enforce the provisions of an Act of George IV. against the establishment of the order of Jesuits in England. The Act provides that no establishment of the kind shall be allowed to immigrate, under pain of banishment for all concerned; and no religious order is allowed to open a scholastic institution without the permission of the Assembly under a penalty of £50.

CHURCH CONGRESS:—One of the most important discussions at the coming Church Congress, Leicester, is expected to take place on the religious condition of the nation in the upper, middle, and industrial classes. The speakers who will introduce the subject are: The Bishop of Bedford, the Rev. Canon Barry, the Rev. Berdmore Compton, the Rev. Harry Jones, the Rev. Gordon Calthrop, and the Rev. W. Lefroy.

RUSSIAN RELIGION:—According to a recent report, there are in Russia, besides the cathedrals, about 85,000 churches, of which 30,000 are parish churches. The services are carried on by 37,718 priests and 11,857 deacons; there are 65,951 lay church servants, such as sextons, &c. The State contributes to the support of 17,667 churches (a little more than half of the whole number) the annual sum of 4,384,312 roubles (about £657,000). The total amount contributed by the State for maintaining churches in Russia is about 5,200,000 roubles (about £680,000).

A RICE FESTIVAL:—The Cambridge Delhi Mission is steadily progressing. The Rev R. R. Winter has now six Cambridge graduates working under him, besides the veteran Tara Chand. A letter describing the Mission at Chota Nagpore mentions that some hundreds of Kol Christians worship in a beautiful Gothic church, and that at a rice harvest festival there was a procession of brown-faced children, followed by men bearing on their heads baskets of newly-cut rice, which one by one they poured before the altar, the amount being 10cwt. of rice.

MEETING OF NATIVE CHRISTIANS:—An open-air meeting of Native Christians, is to be held in the grounds attached to the Seiyoken, Uyeno Park, Tokio, on Tuesday and Wednesday next, the 12th and 13th of October instant. Exercises will commence each day at nine o'clock in the forenoon, and continue until six o'clock in the evening. Addresses will be delivered by numerous Native and Foreign Christian teachers, all the proceedings being in the Japanese language. This will be, we understand, the first meeting of the kind ever held in Japan by the express permission of the Government, and it is therefore specially interesting on that account. It is also worthy of notice that the movement has entirely originated with, and been wholly carried into effect by, Native Christians.

#### SHANGHAI LETTER.

SHANGHAI, 28th September, 1880.

Our papers here have copied from the *Japan Herald* the panegyric on Sir Thomas Wade which was published as a leader in that journal, and to most of the residents, who ought to know something about the British Minister at Peking, the article in question is as much a piece of fresh news as the latest telegrams from Afghanistan. We not long ago obtained all our information about the Russo-Chinese quarrel, the state of the Government at Peking, the intentions of Li Hung-chang, and the movements of Colonel Gordon from the Japan papers, and not a little were we astonished at the information conveyed. Now that the British Minister is presented to us in quite a different light to what foreign residents in China have viewed him, we begin to wonder whether our rates of exchange and prices for shirrings and opium, will not be settled for us in Japan. One of our papers very justly says, "What the Japan papers know about China, that is not known here, would fill a large book." And indeed it seems so. Still, it is gratifying in this age of excitement, when the daily inquiry is always "What news?" for us in Shanghai to know that every Thursday, with the arrival of the Japan steamer, we may look for information about our own movements and the progress of events in China generally, of which we had no conception.

The case of the British steamer *Carisbrook*, which was apparently decided at Amoy by the Acting-Consul in such a high-handed manner, is to be heard on appeal here, and unless the

Amoy Consul can show a better case than it would at present appear that he can do, he stands a very good chance of knowing to his cost that he is amenable to a Supreme Court in China. According to the lawyer who is conducting the appeal case for the steamer, there are eight reasons why the Amoy Consul is utterly and entirely wrong, but, of course, we have to hear the other side of the question. Yet it seems a great risk to the interests of British shipping, that any Consular official, "clothed in a little brief authority," should be able to detain steamers at his will and pleasure, fine the Captain \$500 or imprison him for three months, and yet reject his request for an appeal without assigning any reason. To make matters more complicated, we now hear by telegram from Amoy that the same official has again detained a British steamer, by illegally demanding a bond which it is out of the power of the Agents or Captain to give. The issue of these cases in the Court of Appeal are of paramount importance to all connected with shipping.

Our sportsmen have been actively engaged all this month. The unusually cool weather we had towards the end of August brought the snipe down in large numbers, and earlier than usual, so that fine sport was to be obtained all round the settlement at the latter part of last month and the beginning of this, the sportsmen living on the Bubbling Well Road having only to step into the fields adjoining the houses to find lots of birds. The popping of guns on the 1st of September was as frequent as it is at home on that day, though cotton here represents the stubble and turnips of old England. Some time ago the Municipal Council allowed pheasants to be sold in the market during September, though the close season used to extend to October, so now many sportsmen make this a pretext for pheasant shooting any time this month. *Vive le sport!* We shall perhaps be shooting hen pheasants in midsummer next year.

The police have just made another seizure of Maloo mixture. It appears a brisk trade is done in this rubbish, which must pay so well that constant confiscation does not seem to hinder it at all, and no good will be effected in putting a stop to the sale of this wretched stuff, until those dealing in it are severely punished.

The Autumn Race Meeting is fixed for Friday and Saturday, the 29th and 30th October, and Monday, the 1st November, and as we have fairly got through the summer, training is in active progress. The course was opened on the 1st of this month, but as we were then in the height of the summer, the Grand Stand was but poorly attended. Now, however, all is changed, and as the entries close on Saturday next, no opportunity is lost for a trial of the powers of the various griffins that have been bought this autumn, or kept over from last meeting. The purchases of griffins are rather under the usual average, as buyers have been dependent on overland mobs which had left the north before war was threatened, for owing to the number of ponies required for military purposes, no animals have been permitted to leave for the south latterly, and in consequence we have no arrivals of steamer griffins as usual. To this cause, however, may be attributed the fact that no very promising new griffins have, as yet, appeared on the course, as the steamer ponies were supposed to be the pick of the northern mobs, and worth the freight that had to be paid for their passage. The favourite griffin at present is *Folle-Farine* a pony kept over from last spring, and which nothing now training can touch at this date. Much was expected of this pony last spring, but just before the meeting he was withdrawn from the training as not being fit. He was then in inexperienced hands, which may account for his breaking down, but he will now be more carefully looked after, and if all goes well he will be difficult to beat, as he is a regular flyer. Besides *Folle-Farine*, there are only two or three griffins that at present attract any attention, but there is yet lots of time before the meeting, and a China pony is as uncertain and changeable as a woman. Opinions vary as to the merits of Mr. Risk's crack *Strathmore*, some thinking that he is moving in his old form, and others that his best days are past. It will surprise me, however, if he is not well to the front in some of the great races. The veteran *Black Satan* is training again, his owner being seemingly desirous that this game old pony shall score half a century of wins. Mr.

Bill has plenty of his musical instruments on the course, of which the best, perhaps, is *First Violin*, as he did a mile and a half the other morning in 3.21½ without being distressed. There are, of course, lots of the "Wild" ponies, with their idiotic names, but less is known of their merits than of the other ponies, as their owner trains them in the dark, and before less early risers can manage to reach the course in the morning. The great race at the coming meeting will be the *St. Leger*, which admits griffins of the Spring Meeting running, as well as those of this autumn. By many *Struthaird*, the pony that was beaten in the Griffin's race last spring, but which won the Derby and several other races easily, is looked upon as the favorite for the Leger, but he will have to carry top weight, and may therefore find some others that go in on better terms hard to beat. *Viceroy* and *Wild Echo* are also fancied for this race.

Training is also going on for the Regatta, but I am sorry to say there will be no English crew for the International race, which will now lie between the Scotch and the Teutons. Many changes have already taken place in the crews, but they are probably now fixed for good, bar accidents, and the Teutons have their work cut out to beat their northern opponents. Thanks are due to them for their pluck in accepting the challenge, without which the regatta would have been robbed of its great excitement, which could ill have been spared.

In the theatrical world the initiative has been taken by the members of the Country Club, who announce an amateur performance, in which ladies take part, for the 6th of October. The A.D.C. have done nothing yet, though they talk of offering us a good programme. We are not likely to lack amusements this winter, as we shall shortly be visited by the Italian Opera Company, who are earning laurels in the south at present. A dramatic company are also expected here, and will no doubt treat us to light drama, but we cannot expect anything very great from them. This is a pity, as it would do some of our residents no harm to become better acquainted with Shakespeare's works. When John Jack's Company were here early in the year, they were playing the drama of "The Octoroon," the scene of which is laid in America in modern times, a river steamer being brought into one of the scenes. At the bottom of the play-bill which gave the cast of this piece, was an announcement that Mr. John Jack would perform Shakespeare's Falstaff scenes the following week. A worthy resident, who is a constant theatre-goer, was present on this occasion, but somehow or another mixed up the name of Shakespeare with the play going on before him, and his chronological wits being woolgathering, during the interval between the third and last acts, confided to his neighbour that "he didn't think much of that play for Shakespeare." Why his hearer burst into uncontrollable laughter the speaker could not make out then, but he is a wiser man now.

#### PARIS LETTER.

PARIS, 14th August, 1880.

M. Flammarion, the astronomer, says that one of the best means to know the population of a country, is to ascend in a balloon; not an inhabitant but will come out of the houses to see it pass. M. Grévy and the two Presidents of the Chambers, have discovered another plan:—to visit a locality without any preparation, as they have just done in the case of their trip to Cherbourg. Not only along the line of railway did all the people come out to see the civilian governors of France, but at Cherbourg the inhabitants appeared never to rest within doors. They were a fair test of the popularity of the Republic, which has kept its promises, and conferred what was expected. Never was order more perfect, never liberty more extensive, never country more prosperous, and all universal suffrage demands is, that what exists shall endure, and be developed with prudence and sagacity.

Extremes meet: the ultra-radical and ultra-monarchal journals agree to abuse Gambetta and call him "dictator," as well as accusing him of aiming at the purple. This coalition deceives no one, not even the high contracting parties themselves. Gambetta never was more popular; he has led the republicans to battle and ensured them victory; he has disciplined them and

sought out the best men in the ranks for positions of trust. He has no need to anticipate his hour for being President: M. Grévy would retire in his favor to-morrow if he so desired; but Gambetta fills the more important post of chief of the republicans, and he maintains their command without infringing on the attributes of the chief of the state.

There is not a little work yet to be accomplished, requiring the fiery eloquence of Gambetta, and his passionate action. He is all-powerful by his genius, his persuasive powers, the purity of his patriotism, and the unsullied character of his life. In France every one desires to be dictator; it is a fashionable place in political history. Ledru Rollin and Odilon Barrot, Blanqui and Delescluze, were in their day accused of being dictators. Every citizen is free to be dictator like Gambetta—by persuading the majority of his superior common sense and self-abnegation. With Gambetta, the Republic is bone of his bone and flesh of his flesh, and all his energy, plans, and talent, are devoted to consolidate and develop that form of government for his country. France respects M. Grévy, but it applauds M. Gambetta.

No one is sorry that the dissolute journals have come to grief; liberty of the press is not involved in pulling up a paper ostensibly published to disseminate pollution, and to make money by the wilful corruption of manners. The offending journal is *Gil Blas*, the most dangerously libidinous sheet ever published, for it aimed to cover its filth with the mantle of respectability. Its proprietor is very rich and ought to be devoting more attention to his latter days than acting as purveyor for depraved passions. If convicted, the penalty is light, a few hundred francs fine and a couple of weeks' imprisonment, but this condemnation for outraging public manners involves at the same time loss of civil and political rights, ineligibility for any public employment, and incompetency to direct family affairs. You are at once an outlaw and a minor. No amnesty pardons the offence. It is impossible in France for a man convicted of public indecency to be rehabilitated. After this, people are not justified in saying that on questions of immorality they manage these things, as in Sterne's time, differently in France.

The case of the American "Baron" Hickey, of California, is different; he threw himself body and soul into the meaningless violence of French party politics; he brought out a so-called paper—*Triboulet*, named after Hugo's celebrated dwarf, and resembling *Punch*, in shape only. In this weekly periodical he accumulated every week all the nasty and disagreeable things the clerico-monarchists said in private against the Constitution and the Ministers whom the nation has lawfully chosen. In fact, he was laundress for the washing of the family linen in public. There was not a particle of wit in the paper, but no lack of abuse and scurrility. The Baron was not only imprisoned, but several times fined for breaches of the press laws, and latterly he was a weekly delinquent. The adulations of those for whom he drew the chestnuts out of the fire turned his head, and ultimately led to his being expelled from the country. He is rich, and will return home a wiser man, resolved never to meddle with things that do not concern him. It appears that more serious political offences, connected with plans for the restoration of Henri V., are laid to his charge.

Archery and donkey races, are the two latest novelties patronized by the *crème* of society at their villa residences. As usual the last ass in wins, but no prize will be awarded, but rather a penalty inflicted, if the animals do not pass the post at a fixed hour. Archery and kindred outside games will never be popular with French ladies; their ideas of enjoyment are limited to remaining seated in a splendid toilette, and rivaling Lady Teazle in social criticism, or disputing about the dresses of Worth, and the *capotes* of Lucy Hoquet.

The sporting season has opened in France commencing, as usual, in Corsica, the most southern part of the realm, and advancing by zones northwards. About September, the 22,000 disciples of St. Hubert that Paris contains, will be at liberty to blaze away at every specimen of natural history in the suburbs. Well-to-do shopmen in the rue des Lombards, are ordering their coffee canvass suits, hiring dogs, and borrowing fowling pieces; others are redeeming their fire-arms from the pawn offices, as "uncle" is the best of armourers, while poachers are

arranging to have stocks of game to sell to Nimrods, so that bags will be filled on returning to town; sometimes, however, the game smells terribly strong after this mode of slaughtering, but saves all hanging.

The sensides are invaded by mammas, marriageable daughters and children home from the vacation. By October next the registrar will be able to take stock of what the sea has given up—of lovers. Odd, that listening to "what the wild waves are saying" should be more favourable to matrimony than the sounds of Strauss' "Blue Danube," or Farinelli's "Oh! oh! oh!" Such is the fact however. Trouville has its ten-day pilgrims, but it is encountering a rival at the other extremity of France, at Royan, a village situated at the mouth of the Gironde,—called the French Mississippi on account, perhaps, of its muddiness. It is the favorite summer resort for the inhabitants of Bordeaux—and others who want good bathing, real ocean air, pretty scenery and moderate life. The bathing men have a great reputation among the ladies: they hoist them up and down in the air like babies, before letting them drop on a wave.

Since that part of Paris which is built over the Catacombs has shown signs of dropping in, not a few persons commence to visit the ancient quarries out of which living Paris has been built, and where dead Paris is interred—as evidenced by over two millions of skulls, and stacks of femurs, tibia and fibula, that ought to make the mouth of a certain town councillor water, who proposes to convert all into phosphate of lime and manure the fields. Well, there is nothing very extraordinary in descending the eighty-nine steps, that bring the visitor and his lantern twenty-two yards below the sewage and gas-pipes of the capital. The pillars supporting the vault on which Paris is built are rather in marl than in rock, and crumble very easily. To add to the water supply of Paris, several pits are in course of being sunk.

The assizes of Laon are trying Virginie Dumaire, aged thirty, for shooting Dr. Picart, about her own age. She had been the lover of an old gentleman who left her all his fortune—50,000 francs. In 1877 she made the acquaintance of Dr. Picart, then a medical student: she formed a liaison with him, had some children, and paid the expenses of his examinations and diploma—5,000 francs. The Doctor threw her off, as usual, like a dog or a horse, and resolved to marry another love last April. Virginie waylaid him, asked was it true he was going to be married: was informed, yes: she threw her arms round his neck for an eternal adieu, lodged three balls in his heart, and fell to the ground with the corpse. She informed the judge she was ready to recommence, preferring to see Picart dead, than married to another. She cross-examines all the witnesses herself, and so effectually as to win over the public in her favor. She may count upon more than extenuating circumstances from the jury.

M. Bordman is a Hanoverian, the son of English parents; he had a mania for killing all Bismarck's people, who robbed him of his country, and all Turks—who had deprived him of his fortune. He was locked up in a public lunatic asylum, and his insanity caused him to be selected as a beautiful subject at clinical lectures. In time he was discharged cured, but seeing his case reported by the doctor in a medical journal, he brought an action for damages and lost the case. He said his profession was that of an "astromomer."

When Napoleon I. set out for St. Helena, he brought with him four cooks, and of course his *Chef*, Carême—an odd name for kitchen attributes. On landing, four Chinese were allowed to assist the cooks. Napoleon liked black-puddings, and "Sir Lowe" did not stint him. He loved Macaroni as an Italian, and ate pounds of it as ravenously as Rossini. Sorrel soup was his favorite, and a dish of sweets was the invariable wind up. "Sir Lowe" has been accused of being the gaoler and executioner of the Emperor. Carême calls the historical governor, a "gastronomic coward," because he kept the prime meat and game for his own table, and allowed none for the artistic skill of Carême. When the latter returned to France, he manufactured several dishes and called them after leading celebrities: one was named, "Sir Lowe," and was so hot, as to require a fire brigade to cool the tongue that once tasted it.

Contrexville is an inland mountainous thermal station: a

gushing editor asserts:—"the beach is every day crowded with most fashionable people."

It costs five million francs a year to light Paris with gas.

At Roquette prison there are only three condemned cells, and a fourth will be required in a few days. It has been suggested to create a vacancy by guillotining any one of the three scoundrels.

A Frenchman writes from Rome, that he was nearly shocked to death: a waiter served him with "Bazine wine," the favourite liquor preferred by the Marshal when he visited that restaurant. The next horror he was subjected to, was an invitation to occupy a chair once patronized by Napoleon III.

A gentleman entered a restaurant and asked the waiter the nature of the bill of fare; the gentleman gave a melancholy shake of the head and left: he was supposed to be Dr. Tanner.

"Monsieur," said a guide pointing to the four flags on which is erected the guillotine; "this is the spot where Troppmann was executed: what a lesson for us to lead reputable lives."

"My dear son, I send you six shirts, made out of my old ones. When worn out keep them to be altered for your younger brother."

#### JAPANESE NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as to make them readable and intelligible.]

#### COURT, POLITICAL AND OFFICIAL.

A Native paper states:—"Recently His Excellency Sano, Minister of Finance, addressed a petition to the Cabinet suggesting the negotiation of a foreign loan, but with one or two exceptions only, the entire body opposed the scheme and scouted it completely. In consequence of this, the Minister has made up his mind to tender his resignation and informed His Excellency Okuma, Privy Councillor, of his intention."

According to the *Hochi Shinbun* His Excellency General Kuroda, Privy Councillor and Chief of the Colonization Commission, is so seriously ill that, on the 27th ultimo, he was compelled to send in his resignation.

A native paper states that there is a report, which it does not guarantee, that His Excellency Okuma, Privy Councillor, suggested that one-fifth of the revenue shall in future be paid in rice. This was opposed by His Excellency Inouye, Privy Councillor, whose remarks were approved by all the others present, and the proposal was consequently dismissed.

In one of its recent issues the *Hochi Shinbun* referred to the approaching departure of the Dutch Minister and said "we will shortly be in possession of full news respecting it." In its issue of last Saturday we find the following:—"We have gleaned these few facts about the departure of the Dutch Minister from various foreign friends in Yokohama. When our own Foreign Department recently distributed drafts of the proposed treaty revision to the several accredited Foreign Representatives here, a copy of the same appeared in the *Japan Herald*. As the source from which this information came was not given, it caused the authorities much surprise and they made very strict inquiries as to where it could have been obtained, as such an occurrence was most unusual. Being unable to trace this delinquency to any of our own officials, they concluded that the draft in question must have fallen into the hands of the *Herald* through the medium of a foreigner. The Foreign Department thereupon made inquiries of the various Foreign Representatives, who almost unanimously asserted that they knew nothing about the matter. The British Representative, however, rendered most valuable assistance in making inquiries as to the source whence the information leaked out, and finally procured irrefutable evidence that it was the Dutch Minister who gave a copy of the draft to the *Japan Herald*. This was communicated to the authorities who came to the conclusion that it would be more advantageous to the interests of Japan not to have so inconsistent a diplomatist in the country. The Foreign Minister therefore communicated with the Dutch Government by telegram, and as they had no explanation to offer for such conduct, their Minister was at once recalled and will leave Yokohama by the mail on the 5th instant."

In a subsequent issue the statement relative to the action of the British *Chargé d'Affaires* is contradicted.

The *Mainichi Shinbun* states that the members of the Risshin-sha, one of the most influential political societies of Tosa, announce their intention of discussing the question of the establishment of a National Assembly, at a meeting to be held in Tokio in November next, when an application will be sent in to the Government on the subject. In the event of its rejection, the association state that they will be compelled to establish a Private National Assembly on their own account.

The *Nichi Nichi Shinbun* states that the new criminal code and the code for the administration of Justice, will be put into force at the same time as the new civil code which is now being compiled. Mr. Boissonade, the French legal adviser to the Government, is expected to complete this compilation by the month of May next.

The *Hochi Shinbun* publishes a current report that one of the Prime Ministers has tendered his resignation.

Writing on this subject the *Hochi Shinbun* says:—"The subject of our financial difficulties is now in everyone's mouth and is quite the fashionable topic of conversation. It appears that some members of the cabinet have come to the conclusion that there is no other remedy for the present crisis than the raising of a foreign loan, but they have been opposed by Privy Councillor Inouye alone, on the following grounds. 'A foreign loan,' he asserted, could only be entered upon in cases of the greatest emergency, such as war expenses or the undertaking of very important public works, and even then we must first calculate how we shall pay off the loan before we enter into negotiations for it. We have not at present any urgent circumstance to justify us in raising a foreign loan, and ought not to do so to relieve the financial depression. Moreover, we have no particular scheme for its repayment. We can only depend upon tea and silk, and even the export of these two articles does not make a fair balance between the annual imports and exports as everyone knows. We have no right to raise a loan, relying on these two articles, and, if we do so without considering the present inadequate condition of our resources, we shall only plunge the country deeper into difficulties.' Mr. Inouye's words seemed so reasonable that no one ventured to oppose him and it is decided at last that the foreign loan should not be raised. We wonder if this is, after all, merely gossip."

The *Nichi Nichi Shinbun* writes as following:—"One newspaper says that the reported resignation of General Kuroda was due to the rejection of his proposal that the revenue should be payable in rice, while another assigns it to ill-health. We have been informed, however, that from the beginning of next year the Colonization Commission is to keep its finances separate from those of the Government (i.e. the Commission will collect taxes from the people under its jurisdiction and pay its expenditure from them). In consequence of this General Kuroda will resign his office in the Privy Council, but continue in his position as Chief of the Colonization Commission so as to be able to devote his services entirely to that department. We do not, however, guarantee for the truth of this report."

The *Hochi Shinbun* states that there is to be a grand theatrical performance at the Awoyama Palace on the 12th or 13th instant, before Their Majesties the Emperor and the two Empresses, the Imperial Princes, the Prime Ministers, Privy Councillors and Nobles.

According to the *Mainichi Shinbun*, Mr. Maida has been appointed Consul-General at Paris.

Senator Nakajima was allowed to retire from office on the 5th instant, at his own request.

We take the following from the *Nichi Nichi Shinbun*:—"At a banquet recently given to several high personages, one of the guests inquired in a dejected manner if there was no method by which the present state of the finances could be remedied. Another guest thereupon replied as follows:—"Your Excellency is assuming an official responsibility in making such an inquiry: it would be better to consider the cause of the matter than to seek for a remedy. The population of Tokio numbers about one million, and if we calculate each person's average monthly expenditure at five yen, the annual expenditure would amount to sixty yen, so that unless they gained a profit

of sixty million yen, the finances could not be in a prosperous state. Again, taking ten per cent. as an average profit on commercial transactions, the population of Tokio must possess a capital of 600,000,000 yen to cover their annual expenses. It is a well-known fact that this amount of money does not exist in the capital, and consequently the poorer classes are pawning or selling their clothes and furniture, in order to obtain the bare necessities of life. In such a state of affairs it is no wonder that many houses are now unoccupied, and that many tenants cannot pay their rents.' The other guests were greatly affected by these remarks and the precise calculations of the speaker, who is a noted statistician, interested them greatly."

The *Mainichi Shinbun* says that two or three Privy Councillors held a meeting at about 4 p.m. on the 6th instant, at the Enriokwan.

The *Hochi Shinbun* states that on the 6th instant, His Excellency Privy Councillor Terashima visited the branch office of the Colonization Commission at Suiba, to call upon General Kuroda the head of that department. The General, however, had not attended his office for some days, and hurried messengers were sent hither and thither to find him, but without result. The paper goes on to say that it has been informed the General refused to see anyone after he tendered his resignation.

#### NAVAL AND MILITARY.

The *Mainichi Shinbun* mentions that His Excellency Admiral Enomoto, Minister of the Navy, is about to visit Shanghai via Kobe and Nagasaki.

The same paper says that Port-Admiral Hayashi inspected the *Tsukuba Kan* on the 3rd instant.

According to the *Nichi Nichi Shinbun*, barracks for the sailors of the Western Naval Division are to be erected at Iwakura on the island of Tsushima, in the prefecture of Nagasaki.

The *Hochi Shinbun* says that Admiral Enomoto, Minister of the Navy, and Port-Admiral Hayashi, inspected the *Hiyei Kan* on the 3rd instant at Shinagawa, and afterwards left for Yokosuka.

Another native paper states that Admiral Kawamura gave a grand official banquet on the 2nd instant at the Enriokwan.

The 1st battalion of the Imperial Guard left Tokio for Nikko on the 2nd instant.

The *Mainichi Shinbun* says that one or two powerful men-of-war, are shortly to be built in the Yokosuka dockyard, on the lines of the *Fuso Kan* and *Hiyei Ka*.

A detachment of cavalry from the Kiododan training school is to leave for the Narashino plains on the 11th instant, for exercise in field evolutions.

A native paper states that a garrison is to be established in Yesso, and that the headquarters will be at Goriokaku.

The same paper informs us that a battalion of artillery belonging to the Imperial Guard left yesterday for the Shinoshitsu plains, for three weeks' drill.

The *Nichi Nichi Shinbun* reports that Admiral Enomoto, Minister of the Navy, came to Yokohama on the 7th instant and paid a visit of inspection to the *Fuso Kan*.

#### TRADE, INDUSTRIES AND FINANCE.

A distillery for the manufacture of brandy has been established at No. 13 Kojimachi, Gochome, Tokio, by a Mr. Miyuchi Fukuzo.

The *Mainichi Shinbun* publishes the following from a correspondent:—"As there were reports circulated recently about a great fall in the price of tea, I made inquiries at once among the foreign merchants of Yokohama and ascertained that, on the contrary, tea of the best quality is now fetching thirty-nine cents per pound in America, a rise of one cent per pound as compared with prices ruling in August last. Medium qualities are fetching twenty-seven cents per pound, a rise of two cents as compared with prices at the same time. There is, however, a large stock of inferior qualities from which it may be inferred that a fall in prices is probable in the event of more supplies arriving. The rumoured decline was, therefore, only a cunning device of foreign traders, to enable them to buy first class and medium grades at cheap rates. Anyhow owing to these reports, a decline in prices actually did occur. This could not happen if native merchants exported more tea direct.

It is, of course, due to the fact that native merchants do not possess the proper amount of commercial influence that they should."

The new fish and poultry market in Hamacho, Tokio, was formally opened on the 2nd instant.

The *Choya Shinbun* says that in consequence of the present demand for specie, the Osaka mint is turning out about twenty-three thousand silver yen, daily.

The inhabitants of the island of Hirado, in Hizen are, according to the *Keizai Zasshi*, about to establish a whaling company with a capital of 30,000 yen. In former times the pursuit of whale fishing was a very prosperous industry, no less than two hundred being captured in one year. This occurred about 170 years ago in the era of Kiobo but latterly, since the han was abolished, the pursuit has been gradually abandoned, principally through want of funds. It is expected that the new company will restore the industry to its former flourishing condition.

According to the *Mainichi Shinbun* a sailing ship company has been started to trade between the ports on the coast of Yesso. The fleet numbers ten vessels.

The following monthly return, compiled by the Custom House Bureau in the Finance Department, shows the exports and imports for the month of August last:—

Imports .....	yen 3,586,761.43
Exports .....	" 3,038,507.39
Excess of imports .....	yen 548,254.04
Customs duties .....	yen 277,421.78
Export of specie .....	yen 870,549.00
Import " " " .....	" 71,054.57
Excess of exports .....	yen 799,494.43

The *Hochi Shinbun* states that paper money to the amount of 4,000,000 yen has been withdrawn from circulation by the Finance Department, and will be burnt in the premises of the Government Printing Office after the 7th instant, between the hours of 9 a.m. and 2 p.m. Anyone will be allowed to witness the operation.

A branch of the Public Works Department is to be established in Yesso.

According to the *Hochi Shinbun* the crops have suffered only slightly from the recent severe weather. The market gardens have been equally fortunate, but the buckwheat has sustained some slight damage. The forests, however, have received considerable injury.

The *Nichi Nichi Shinbun* writes as follows:—Some time ago a German employé of the Public Works Department made an actual survey of the iron mine at Akazawa in the county of Kuji in the province of Hitachi in the prefecture of Ibaraki. His report was, that the lode extends into the prefecture of Miyagi for about thirty-seven ri, and that the ore is of excellent quality, but could only be obtained by sinking shafts at least fifty feet deep. Responsible men in the provinces of Hitachi and Iwaki have combined and intend opening the mine with a capital of 100,000 yen. Mr. Watanabe, formerly dai-sakan of Tokio, has been appointed head manager of the company and has left for the locality of the mine.

A native journal informs us that ten thousand lengths of gas tubes are to be made in the workshops of the Finance Department before the end of April next year.

#### MISCELLANEOUS.

A native paper says that Mr. Iwasaki Nagatake, ex-Governor of the prefecture of Kochi, proposes to establish a company under the title of Kaisei-sha with branches in various parts of the country, such as Hiogo, Satsuma, Ooshima, Osaka, and Kobe. It is intended to purchase two steamers, the *Yamato Maru* and *Yamashiro Maru*, at first and commence operations with them.

The following are the statistics of the number of births in Tokio during the month of June last. Total births, 1,431, of which 1,395 were legitimate and 36 illegitimate. The total number of deaths from January to June last was 7,845, of which 4,286 were males, and 3,559 females.

According to the *Hochi Shinbun*, 108 Japanese ships arrived in Yokohama during last month, with 4,632 passengers and 639,174 packages of cargo. During the same period 29 foreign ships arrived with 45 Japanese, 82 foreign, and 687 Chinese passengers. 111 Japanese and 33 foreign ships left Yokohama during the month of September.

A native journal states that Mr. Kawasaki's new dockyard at Hiogo is now completed, and will shortly be opened. The dockyard at Tsukiji, Tokio, owned by the same proprietor, has been opened now only some twenty-eight months, yet twenty-seven vessels have been constructed there already.

Mr. Uchida, editor of the *Choya Shinbun*, has been fined forty-five yen for a breach of the law of libel.

The *Mainichi Shinbun* states that the following journalists have been fined recently:—Mr. Yoshikuni Kakichi, editor of the *Komon Shinpo*, for publishing two articles headed "Let not the Government upset itself," and "If the Cabinet be not corrupt why does it propose corrupt measures?" has been sentenced to two years' imprisonment and a fine of 300 yen, in accordance with the law of libel. A similar sentence has been passed upon the editor of the *Fuso Shinshi* for three articles headed respectively "The Government is over and over again proposing reforms in Government Departments," "In proportion as the Government proposes schemes for controlling the agitation for a National Assembly, the greater the difficulty becomes," and "The re-appearance of the suspicious Fujita affair." Mr. Akawa Sorajiro, editor of the *Sei Dan*, for publishing an article headed "Friction between the Satsuma and Chosin members of the Cabinet, which will soon cause a great explosion," has been sentenced to one year's imprisonment, and a fine of 150 yen.

The *Choya Shinbun* states that in the course of the year 1882, telegraph lines are to be laid throughout Yesso. In compliance with a request made by the Colonization Commission, a training school for telegraph operators to be employed in Yesso is to be established under the superintendence of the Telegraph Department at Kobiki-cho, Tokio.

The members of the well known Oomeisha Debating Society in Tokio, intend giving a grand entertainment on the afternoon of the 15th instant, at the Seiyoken Hotel, Uyeno, in honour of Mr. Itagaki Taisuke, ex-Privy Councillor, who has recently arrived in Tokio from Tosa.

The *Hochi Shinbun* says that the *Seifu Maru*, built at the Kawasaki dockyard in Tsukiji, was successfully launched on the 4th instant.

The *Nichi Nichi Shinbun* states that the *Toshimichi Maru*, built at the Ishikawa-jima dockyard, was to have been launched yesterday.

The number of passengers by the steamboats running between Yokohama and Yokosuka during the month of September last, amounted to a total of 14,791 persons.

The *Nichi Nichi Shinbun* reports that the Consul for Austro-Hungary left on a trip to Nikko on the 5th instant.

We learn from another native source that in consequence of the frequent injury done to the submarine cables that connect Shikoku with the mainland, by storms and bad weather generally, they are to be laid in a new position.

## ARRIVAL OF THE FRENCH MAIL.

London, 1st Sept.—The Right Hon'ble W. P. Adam has been appointed Governor of Madras. In the House of Commons last night a debate took place relating to South African affairs, when it was announced that the Government would not press confederation on those Colonies.

The Hon'ble Stewart Jackson, late Judge of the High Court of Calcutta, has been knighted.

Berlin, 1st Sept.—The Emperor of Germany has issued a proclamation to the army, in which he recalls the memory of Sedan, and urges strict discipline and effective training in order to be prepared for any war that may be necessary to guard the Fatherland in future days of difficulty.

St. Petersburg, 1st Sept.—The Chinese Government desires to substitute for the Kuldja treaty a convention ceding a province, &c. The Russian Government requires the rectification of the frontier in order to stop disorder arising from the flight of Chinese into Russian territory. It has been decided to carry on negotiations relating to these questions at Peking, whither M. Butzow will repair.

Simla, 1st Sept.—The Marquis of Ripon leaves on the 10th, visiting Edwardesabad and Kurrachee en route to Bombay to receive the Marchioness.

There is no truth in the report that the Beluchi troops mutinied. At Kurrachee the intense excitement has subsided.

London, 2nd Sept.—It is announced that the naval demonstration by the Great Powers has for its object to produce a moral effect, and that it is not intended to resort to coercive measures.

London, 3rd Sept.—The House of Lords yesterday threw out on the second reading the Registration of Voters (Ireland) Bill. In the House of Commons Mr. Parnell proposed to tack the bill on to the Appropriation Act, but Lord Hartington suggested a resolution of remonstrance with the Lords, to which Mr. Parnell assented.

London, 3rd Sept.—All the vessels forming the several contingents which comprise the united fleet for the naval demonstration have sailed for Ragusa. In the House of Commons the Secretary of State for India, said that the object of the naval demonstration was not apprehended; it was to shew the determination of the Great Powers not to allow their decisions to be rejected or delayed in execution.

London, 3rd Sept.—The Under Secretary for Foreign Affairs announced that the commander of the English Mediterranean Squadron will command the united fleet, but will consult the other admirals as to the political questions to be settled. It is believed that the European concert is so complete as to cause a prompt surrender of Dulcigno without coercion, and the naval demonstration will no doubt accelerate the settlement of the Greek frontier.

London, 3rd September.—Negotiations have been opened between Chili and Peru, and the Western Powers are mediating.

London, 3rd Sept.—The *Flying Scud*, Captain Pick, which left Vizagapatam on May 20th for London, has run ashore in Alger Bay. Five lives were lost, and the vessel is expected to become a total wreck.

London, Sept. 3rd.—A deputation waited upon Lord Hartington to-day and presented a memorial demanding the annexation of Kandahar. In reply, his lordship said that he adhered to the declaration which he had made in Parliament that the question requires time for consideration, but General Burrow's defeat had not facilitated the decision of the question. His lordship admitted the

existence of reasons in favor of our retention of that city and said that military men believe it to be an important, strategical position, but it would require strong reasons to prove the necessity of holding it against the wish of the people. Further, a considerable force would be required to be maintained there, which might be more beneficially employed in India. Thus the re-establishing of a powerful and friendly Afghanistan would become extremely remote. An advantageous trade might possibly spring up, but it would be dearly bought by inconvenience and difficulty.

Constantinople, Sept. 3rd.—The Sultan has issued an imperial irade ordering the immediate surrender of the town of Dulcigno.

London, Sept. 4th.—In the House of Commons last night Lord Hartington dissented from the terms of Mr. Parnell's resolution of remonstrance to the House of Lords when the latter moved that the Irish Registration Voters Bill should be tacked on to the Appropriation Act. Mr. Forster opposed the motion but blamed the House of Lords for the course they had taken. He further said that if they persisted in such proceedings it would in time become necessary to amend the constitution of the House of Lords. There was great excitement in the House, and the motion was negatived by 58 against 23.

London, 4th Sept.—The vote for the Irish Constabulary has been passed, and Mr. Parnell has promised to use his influence for the prevention of outrages in Ireland. Major General Michael Biddulph succeeds Lieut.-General Sir F. Maude in the Rawul Pindi command.

St. Petersburg, 4th Sept.—The Czar has arrived at Livadia. A report is current that the railroad at Charkoff was mined.

London, 5th Sept.—In the House of Commons the Secretary of State for India, in reply to a question, said he admitted that General Burrows' defeat was discreditable, and the country was determined to know who was to be held responsible for it. The House of Lords has adopted the House of Commons' amendment in the Burials Bill. Parliament will be prorogued on Sept. 7th. Mr. Gladstone has returned from his cruise quite well.

St. Petersburg, 5th Sept.—Twenty-five thousand Russian troops have arrived at Verma, seven days' march from Gekko Teppe.

London, 6th Sept.—In the House of Commons on Saturday, a debate took place relating to Turkey, when the Premier made a statement in which he said that unless the Porte discharges the duties of Government towards its subject races tolerably, Turkish integrity and independence must learn to shift for themselves. In the House of Lords Earl Granville disavowed Mr. Forster's remarks on the recent action of the House of Lords, and said that the Chief Secretary for Ireland merely expressed his individual opinion.

Constantinople, 6th Sept.—The Ambassadors of the Great Powers have informed the Porte that the fresh proposals submitted for the settlement of the Montenegrin question are unsatisfactory, and that the naval demonstration will take place.

St. Petersburg, 6th Sept.—General Scobelloff has been summoned to Livadia, where the Emperor now is, to attend a council of war. It is believed that the General insists upon the punishment of the Merv Turkomans.

London, 7th Sept.—The ship *Strathmore*, Captain Heinsworth, from Masulipatam for London, has been abandoned off the Cape of Good Hope. All lives were saved.

London, 7th Sept.—The Hares and Rabbits Bill has been read a third time by the House of Lords.

London, 7th Sept.—Parliament was prorogued to-day when the Queen's speech, of which the following is a summary, was read by the Lord Chancellor:—

The failure of the Porte to execute its engagements has delayed the settlement of the question of the Montenegrin frontier. The treaty of Berlin not having been executed in other important points the Great Powers communicated to the Sultan their judgment thereon, and considered the best means for the settlement of the pending questions. They hoped to obtain their object by the action of a European concert, the signatories to the treaty of Berlin pressing on the Porte with all the authority of the united action, measures calculated to ensure tranquillity in the East. The Government were not unmindful of the considerations stat-

ed at the opening of Parliament, which would guide the policy of the Government. On the north-western frontier of India, measures were taken to complete the military evacuation of Northern Afghanistan. Some progress had been made in the pacification and settlement of the country when a resumption of hostilities under Ayub Khan necessitated further military operations in Southern Afghanistan. Prompt measures were taken by the Indian Government for the relief of Kandahar, and conspicuous ability and energy on the part of the officers and troops employed were displayed in their execution, resulting in a brilliant victory of the gallant force under General Roberts. Her Majesty trusted that war would now be terminated speedily and honorably. Regret was expressed that hitherto it had been impossible to give precise information to Parliament on the general state of Indian finance, owing to a recent miscarriage in the presented accounts of the Afghan war expenses. These will be justly required before entering upon their practical consideration, but India may rest assured that the pledge will be redeemed positively in a short period, that England shall sustain a substantial portion of those expenses. No advance has been made in effecting confederation in South Africa, but it is trusted that a moderate and conciliatory policy will allay the agitation in Basutoland. Thankfulness is expressed for several weeks of fine weather which have secured a good harvest, and which is reasonably abundant in some parts. A further revival of trade is anticipated and also increased revenue. Her Majesty dwells with especial pleasure upon a probable improvement in the condition of the people of Ireland.

Constantinople, 7th Sept.—The Albanians have agreed to the cession of the town and district of Dulcigno.

Berlin, 7th Sept.—It is stated that the interviews which have taken place of Prince Bismarck with the Austrian Minister for Foreign Affairs has strengthened the friendly relations between Austria and Germany.

London, 8th Sept.—In the House of Commons yesterday, the Under Secretary for Foreign Affairs, in reply to a question, said that the Governor of Bagdad had despatched troops against the Arab tribes which recently attacked the British steamer *Khalifeh*, while navigating the Tigris.

London, 8th Sept.—A terrible colliery explosion has taken place at Sengeseaham (? Seaham), 180 men were in the mine at the time, of whom 150 are supposed to have perished; a great fire has broken out in the pit. The Board of Trade Returns of Exports for the past month amount to £19,125,000, showing an increase of £1,750,000 compared with last year's returns. Imports for the same period amount to £31,187,500, showing an increase of £2,687,500 compared with last year.

St. Petersburg, 8th Sept.—The dispute between Russia and China on the Kuldja question has been satisfactorily arranged, and a treaty will be signed at Peking.

London, 9th Sept.—In a three days' cricket match between the All England Club and the Australians, the English team, who went in first, scored 420 runs, of which W. G. Grace made 152. The Australians had to follow on their innings, having scored only 149. Murdoch, on the second innings, carried out his bat with the top score of 153. The All England won the match eventually by five wickets.

#### THE AFGHAN WAR.

Allahabad, 1st Sept.—Details of the late sortie by the Kandahar garrison, similar to the account given by the Press Commissioner, have been received by a correspondent with General Roberts' force. Prior to the sortie, the position is described as follows:—Ayub at first occupied our deserted cantonments, but was shelled out by the Kandahar garrison. He then moved his force to a strong position on the Herat road between Mir Bazaar and the Argandab river. His right flank was on a steep hill over old Kandahar, and his left on the river. His front was unusually strong, approachable only through a mass of orchards and villages, watered by many deep canals and irrigation channels, which can be crossed only at a few points. One battery of four guns, including one Royal Horse Artillery gun, and an Armstrong breech-loader, is on picket on the hill commanding our cantonment, while in Deh-i-Khoja, 900 yards from Kabul gate of the city, one six-pounder is placed on the walls of this village, loop-holed for musketry, and similar measures of defence taken in all

the other neighbouring villages which are chiefly held by Ayub's Irregulars. The garrison in the citadel seems to have been annoyed by the fire from Deh-i-Khoja, so General Primrose resolved to make a sortie, with what result is known.

It is reported that Ayub's Regulars refused to turn out on the occasion of the sortie by the Kandahar garrison.

Simla, Wednesday night.—A letter from Colonel St. John to General Roberts, dated 25th August, states:—"Rumours of the approach of your force have been sufficient to relieve the city from investment. On Monday night the villages on the east and south were abandoned by their mixed garrison of Ghazies and Regulars. Yesterday morning Ayub struck his camp and marched to a position on the Argandab between Baba Wali and Sheekh Chela, due north of the city and separated from it by a range of rocky hills." The letter ends. Two regiments of Cavalry under General Gough reached General Roberts seventeen miles from Kandahar on the 27th, and General Roberts and the main body arrived the following morning. On the 29th the whole force halted for a day at Robat, marched to Mound on the 30th, and should have been in Kandahar on the 31st, with the expectation that Ayub might be attacked the next day. Colonel St. John visited General Roberts in camp at Robat. Ayub was still at Baba Wali and had entrenched his camp. The Herati troops are said to wish to retreat to Khankueh, but are dissuaded and sworn on the Koran to fight. Sirdar Hashim Khan and Ahmed Ali Khan have arrived in Ayub's camp. Musa Jan is expected shortly.

Ayub has written an apologetic letter to General Roberts making overtures for terms.

Allahabad, 2nd Sept.—"Robat correspondence 29th" Roberts heliographed Phayre Kandahar 8th attacks Ayub's entrenched camp 31 who tendered apologies but unconditional surrender required."

It is very difficult to understand the figures here given; the best we can make of the message is as follows:—General Roberts heliographed from his camp at Robat to General Phayre on the 29th or 28th and intimated his intention of attacking Ayub's entrenched camp on the 31st. But, in the meantime, Ayub had tendered apologies with a view to negotiation, but was told in reply that unconditional surrender was required.

Allahabad, 3rd Sept.—The latest news regarding Ayub is that he was strongly advised to retreat to Girisk; opposite counsels prevailing. The general belief is that Ayub wished to avoid General Roberts, who proposed pursuing. Tribes numbering fifteen hundred men have offered Colonel St. John to desert on an attack, professing loyalty to Abdnl Rahmau.

General Primrose's total loss was 27 officers and 200 men killed. The number of wounded is not given. Grain is abundant; sheep scarce, in fact only four left. The Burrows disaster is now explained. General Primrose is to be greatly blamed for stopping General Brooke at Singiris, a town nine miles west of Kandahar, and here, curiously enough, Ayub Khan was reported, on the 30th, to have taken up his position. Hundreds were lost thereby. Ayub's force was occupied in looting treasure. The pursuit was brief. The official account is unfounded. The villagers killed the exhausted and retreating force. The cantonment was abandoned precipitately and valuable stores sacrificed. General Brooke's sortie was also mismanaged. The first design, that of seizing the villages with a rush, was abandoned, and shelling substituted. The villagers were, however, covered underground and defence was ready. A retreat was ordered to the ramparts hastily, and one party was bodily annihilated.

Simla, 3rd Sept.—The Queen has sanctioned an Afghan war medal.

General Roberts arrived at Candahar on the 31st ult. unopposed.

The troops are in excellent health. 600 (?) are sick. Ayub still at Baba Wali entrenching.

General Roberts is making reconnaissances, which will enable him shortly to deliver an attack to the best advantage.

Bombay, 4th Sept.—Official news is said to have been received at Kurrachee early this morning to the effect that Ayub had been attacked and defeated by General Roberts. Ten thousand men and twenty-seven guns were captured.

Quetta, 3rd Sept.—The news of victory is confirmed at

Simla. General Roberts attacked and defeated Ayub Khan and captured 27 guns. The Kabulis retreated up the banks of the Arghandab. No further particulars have been received.

Bombay, 5th Sept.—The following casualties during the fighting on Wednesday are reported:—22nd Regiment Captain Straton killed. 72nd Regiment—Lieut.-Colonel Browlow and Captain Frome killed, and Captain Murray and Lieutenant Monro wounded, besides seven men killed and eighteen wounded; 92nd Highlanders—Lieutenants Menzies and Donald Stewart wounded, eleven men killed and thirty-nine wounded. Lieutenant-Colonel Battye, of the 2nd Goorkhas, and Major Slater, of the 2nd Sikhs, were wounded. The native casualties are not ascertained yet, but they are believed to be not excessive.

Ayub is believed to have fled to Khaknez. Lieutenant Machine, who had been a prisoner, was found murdered. Shewell has died of his wounds received at the sortie.

Kandahar, 5th Sept.—No excitement. A spy confirms the news that Ayub fled towards Herat. It is hoped to make arrangements for a supply of food for Kandahar. The Chaman mails have arrived. General Roberts will try to induce the tribes to bring the food supplies. General Gough marches with cavalry to Kokaran owing to the forage difficulty.

Simla, 6th Sept.—Ayub Khan fled to Khaknez without stopping. He left next day for Garak without baggage or troops, intending to go on to Herat. The gates of Kandahar have been opened to peaceable Afghans.

Allahabad, 7th Sept.—General Roberts reports from Kandahar on the 2nd, that he found it practicable to turn Ayub's right and place himself in the rear of Baba Wali. He first took an elevated village by the 92nd Highlanders and 2nd Goorkhas, who fought gallantly. After nine o'clock, he attacked with Macpherson's and Baker's brigades supported by Macgregor's whole infantry under Ross, at Pir Paimal point, where the enemy was in great force and fought resolutely. The British advanced most determinedly, and at noon the camp was captured. The natives killed were eleven; and wounded 72. General Primrose led the garrison troops. The Cavalry Brigade marches to-morrow to Kokaran to facilitate supplies.

Allahabad, 8th Sept.—A correspondent writing from Chaman on the 5th reports that General Macpherson made a reconnaissance on the morning of the 31st, and occupied a hill where the enemy appeared in strong force. The object was gained and our forces retired in the afternoon.

Generals Gough and Chapman made a reconnaissance on the Herat road to test the strength of the enemy, who were found numerous three miles out, and engaging within 300 yards. Macgregor's force arrived in time to help the Sikhs, who had followed 5,000 men. The battle of the 1st was a most unqualified success, Roberts capturing the camp and thirty guns, with stores and ammunition.

#### THE TYPHOON AT KOBE.

On Sunday night, October 3rd, this district was visited by a storm of great violence, and the damage to house property on the Concession and in the Native Town has been very extensive. Throughout the whole of Sunday, the weather was very threatening, the barometer fell rapidly, and there was every appearance of a coming storm. Before sunset the wind was so high that the sampans and small boats in the harbour were taken to the cambers for shelter, and those on shore who belonged to vessels in port had to make up their minds to stay on shore all night. The wind came from the north-west and north, veering round to north-east; so that it blew down from the hills in strong gusts and swept over the bay; had it been from the opposite direction the shipping would have been in danger. At sunset, the sky in the west was of a hazy reddish hue, and in all other quarters thick and dark, so that it was easily seen that a violent storm would soon burst overhead. From eight o'clock till nearly midnight, the storm continued with terrible fury and wrought great havoc; the streets were full of falling tiles and broken planks, so that many people did not venture to go home, but stayed in the houses where they happened to be before the storm came on; and in many a house the night was one of great alarm; at every gust of wind, strong and newly-built houses shook to their very foundations, while above the roar of the tempest

was heard the crash of falling tiles from adjacent houses, and while the storm lasted it was impossible to see what damage was being done. By daylight, the scenes of wreck and ruin all over the Settlement and in the Native Town were greater than anyone could have anticipated. There was hardly a street in which the effects of the storm were not seen, by broken fences, roofs stripped of their tiles, or houses levelled with the ground; and the streets were strewn with branches of trees, broken tiles, zinc water-spouts, and broken timber. The most extensive damage, and at the same time the most unfortunate, is that which has befallen the Kobe Regatta and Athletic Club, for the boat-house was entirely destroyed, and with it all the fine boats,—Canton fours, single and double sculls, canoes, and almost everything it contained; and this is not all the loss sustained by the Club, for the Theatre and Gymnasium building at the south-east corner of the Recreation Ground is also entirely destroyed. The scene at the boat-house yesterday was very sad; the whole of the large wooden house in which the boats were kept had been blown clean over, falling backwards on the dressing-room and other part of the premises between the boat-house and the beach. The roof and supporting beams had come down crashing on the tiers of boats and all of them were buried in a heap of broken timber. When the coolies cleared away the ruins, it was found that many of the canoes were not much damaged; some of them, however, are completely wrecked; all the single and double sculls are badly damaged, some of them entirely destroyed; and the Canton four-oared boats are severely damaged, though they are not so bad as to prevent their being repaired. The whole of these boats were laid out on the ground before the boat-house, and presented a sight which must have made many of the athletes of Kobe sad, though not down-hearted; the Autumn Regatta appeared on first thoughts to be doomed, but it is, we believe, intended to make an effort to bring it off, although it will probably be later than the original fixture. The indomitable zeal and pluck of the rowing men of Kobe have overcome many difficulties, and this misfortune will not baffle them. Behind the boat-house, the dressing-room was one mass of broken timbers; the pavilion or grand stand was another scene of havoc, and all the other buildings on the Club's ground were more or less damaged; the trees on each side of the steep path leading up to the grand stand were broken and twisted, so that it was scarcely possible to get through between them. The other property belonging to the Kobe Regatta and Athletic Club—the Theatre and Gymnasium—on the corner of the Recreation Ground, which has been almost completely demolished will be a severe loss to the Club. The building stood at the corner which would be most exposed to the gale; and the wind had got a hold on it under the roof of the large open verandah; and the main portion of the building was overturned, leaving the small reading-room standing at the left and the dressing-room at the right wing, both these small houses being partially unroofed. The space between them now is only a mass of broken timbers and tiles. The thatched roof of the Cricket Club's pavilion has been blown about considerably. At the Kobe Club, a brick wall and fence has been blown down on the north side of the grounds and some of the out-houses slightly damaged; round on the other sides of the Club garden the fence has also been broken down; and on the south corner, the building used as a bowling alley has a portion of the roof laid bare. At the Gas works, a large black fence has been blown down, and on the roof of the main building a large quantity of tiles have been torn off. At the Kobe Iron Works, extensive damage has been done to the roofs of the machine shops, godowns, and other buildings. The Kobe Paper Mill also received great damage, two corners of the extensive and substantial brick buildings having been unroofed, and the gable end of the boiler-house, a strong brick wall, blown in. The British Consulate premises have sustained considerable damage, a godown with corrugated iron roof having been completely wrecked, and the servants' houses are very much damaged. Two houses in course of erection on Lot No. 74 have been blown down; a godown on Lot No. 91, and a ten-firing godown on Lot No. 61 have shared the same fate. The Protestant Church has also been severely damaged, part of the roofing having been laid bare; the roof was thatched with bark, and it was easily blown away; but a more serious question

is the alleged damage to the walls of the building, as they are said to have gone several inches out of plumb; the small belfry also appears to be twisted. All along the Uramachi, or northern boundary of the Concession, there is wreckage on every hand; scarcely a house without some extensive damage, and many of them almost completely destroyed. At Sanno-miya Temple, the force of the gale is well illustrated by the scene of havoc which surrounds the small wooden temple, which formerly was shaded by some of the finest fir trees to be seen in this district. Two of these trees have been torn up by the roots, both trees falling towards the street, and their huge branches are broken in splinters. The largest of these two old firs is about three feet in diameter, and has a fine clean trunk of almost uniform width, over thirty feet in length under the first large branches; it has come up by the roots, leaving a hole in the earth four feet deep, and more than twenty feet across. The top branches came crashing down on one of the stone pillar lanterns at the portals of the temple. The other tree which came up by the roots is considerably smaller than the one just described. A third tree which consisted of two huge limbs, forked a few feet from the ground, has also been destroyed, one of the limbs have broken clear across about twenty or thirty feet from the ground, and where it was about two feet in diameter; in falling, this tree smashed down the rear quarters of some small Japanese houses. Another tree standing a short distance behind the temple, has a large limb broken, and in its fall one of the branches struck on the ridge of the temple roof, and made a deep hole in it.

The Japanese houses, thickly packed in the streets of the Native Town of Kobe and in Hiogo, do not seem to have suffered much; but at any place where a foreign-built house, by its greater height, was exposed to the fury of the gale, it has come in for its share of the damage, which varies according to the exposed situation. On the Native Bund, many young trees, mere saplings, have been bent down to the ground, others broken across, and some uprooted. Messrs. J. D. Carroll & Co.'s block, including the Hiogo Hotel, suffered considerable damage, especially on the north side of the buildings, where the wind caught the roofs and stripped off the over-hanging tiles and water spouts. At Kobe Railway Station, the damage was very extensive, large roofs of corrugated iron being blown away. Portions of the roofs have been blown off the following buildings:—the station building, the carriage shed, the running shed, the machine shop, and the paint shop; and the stores godown is completely wrecked. At Sanno-miya Station, the fencing round the platform was nearly all blown down. The Hiogo Kencho grounds suffered by many young trees being damaged, and at the back of the Kencho, a large brick wall was demolished. At Kusunoki Temple, the trees do not appear to have suffered very much, but some of the small shops in that neighbourhood were considerably mixed up by the roofing boards being blown about. On the banks of the Minato-gawa extensive damage has been done to the splendid avenue of fir trees which line the banks of the dry watercourse, at least a dozen fine trees having been broken at the trunk or uprooted, while many more have lost large branches. On the east bank of the river-bed, a little up from the Aioibashi, there used to be a tea-house of rather nice appearance,—a circular pavilion, with thatched roof of conical shape; all that remains of it now is a few planks lying there and here, and the cone of thatch rests on the ground, as if the supports had been blown out from below it. Further up, and on the west bank, beside the tea-house which is a favourite resort for many, a large wooden pavilion was erected for some special purpose in connection with the visit of H.I.M. the Mikado to the Minato-gawa, in July last; this new house has entirely collapsed, and what little of it is not level with the ground on the top of the river bank, has the worse fate of being sent down the further side into the ditch by the side of the fields.

As we have already indicated, the storm was not so severely felt in the harbour as it would have been had the wind come from an opposite direction; but even as it was, the harbour has its own tale to add to the calamities of Sunday night. Two native boatmen are reported to have been drowned and several are missing; a house-boat belonging to Messrs. Mourilyan, Heimann & Co. went out to the P. & O. s.s. *Sunda*, and has not since been seen. A sendo in a cargo

boat lying in the Eastern Camber, was found dead yesterday morning; he had been leaning over the side of the boat, and his head was crushed against the Camber wall. Six or seven sampans are said to have gone adrift from one of the batobas. In a few days, we fear there will be sad tales from the sea, for the storm was one of extraordinary severity, and has been felt probably all over the country. The damage inland has also most likely been very great, as may be inferred from the fact that the telegraph lines from Kobe to Nagasaki, and from Kobe to Yokohama are both broken.

Our Osaka correspondent writes that there was a tremendous blow there from N. N. E. Many houses on the Concession were slightly damaged, and one of the large pine trees at the northern end of the Concession was blown down.—*Hiogo News*.

## LAW REPORTS.

### IN H. B. M.'s COURT FOR JAPAN.

Before MARTIN DOHMEN Esq., Acting-Consul.

*Monday, the 4th day of October, 1880.*

Shaik Robi Ullah, a native of India, was charged on remand with stabbing a Japanese on the night of the 28th ultimo.

Yamagata Yatsushi, warned, stated:—I keep a general store for the sale of foreign goods. I am in the employment of Mr. Clark, at No. 102. On the 28th of last month, at about 0.30 a.m., the prisoner broke open the front door of my shop and entered with a knife in his hand. I was asleep in the shop at the time; but was aroused by the noise and got up: the prisoner then struck me with the knife on the left arm. There was a woman there at the time; after the prisoner had stabbed me he ran away. I was stabbed right through the arm (wound shown). A man called Lemon, who was at the eating house number 136 opposite, stopped the man and took him to the police station.

The prisoner had no questions to ask.

By the Court:—I have been attended daily by the doctor from that night until now.

Idziya Shimbashi, warned, stated:—I am also a general hopkeeper and live upstairs in No. 102. At about mid-sight on the 28th ultimo, I heard a noise and went down with a light, and found the prosecutor struggling with the prisoner, who stabbed him in the arm, and cut me in the thumb. I am the wife of the master of the house. (Witness showed the mark of a slight cut on her right thumb.) After this he ran out by the back door.

Prisoner had no questions to ask.

Nomura Heidetake, warned, said:—I am a policeman of the 3rd rank, of the Kanagawa Ken. At about 0.45 a.m. on the 28th ultimo I was on duty in front of No. 178 Houmura. I heard a noise at 102 and immediately went there. When I got there, the foreigner who lives at 136 went in before me. I went in and then found that the prisoner had escaped by the back door. I went out that way and saw that the foreigner had arrested him. I then took the prisoner to the police-station.

Prisoner asked no questions.

Prosecuter recited, produced a bill of \$25 which he claimed for damage done in the house, doctor's attendance, fees at the German Hospital, and loss of his own labour.

The prisoner in his defence said:—I went to the house of the prosecutor and paid one dollar to the witness Idziya Shimbashi for which her daughter accompanied me to the theatre where she agreed to go home to my lodgings. Instead of doing so, we returned to the house of the prosecutor where the girl asked me to wait a few moments. I accordingly waited in a lane adjacent, at the foot of some steps which lead to the upper portion of the house. I was then suddenly attacked by, I believe, four or five men who beat me with sticks about the head. In self-defence, I took out a small pocket knife which I use to cut up tobacco and struck out blindly. I have no witnesses. I do not know the number of the shop, nor the man who keeps it, and have no grudge against him. If I struck him with my knife, it was purely accidental.

The Acting-Consul said that sufficient evidence had been produced to justify the prisoner's committal for trial; he

could, in the interval, procure any witnesses he had, and prepare his defence.

The Court then adjourned.

### A TALE OF THE PERIOD.

She is 'divinely tall.' She has the most beautiful gray eyes imaginable; eyes capable of caressing you into a state of ecstasy, or of freezing the very marrow in your bones. She is so lovely and can be so charming that she has many enemies, who say every possible thing against her that woman can say of a woman whom they envy; and that, we know, is a great deal. Since nothing can be adduced against the present perfection of her figure, to which it is obvious no artificial aid is lent, they assert that she *will be* too large. Of course they say she dyes her gold-coloured hair and paints her face, even to those lovely coral gums in which her two rows of pearls are set. Strange to relate, she is clever and accomplished; and I confess it is quite natural that any one should demur to take this statement upon trust, because it is not only unusual, but it seems unfair, that brains and beauty should meet in one woman. Yet so it is. She is twenty years old; but she is no longer a girl. Although she has had exalted personages of many nations at her feet, she is neither satisfied nor happy; she suffers pangs of heart-sickness; she is already world-weary. It is melancholy sometimes to see so young and charming a person so tired, *blasé* *dix-neuvième*. It is rumoured that she has had a disappointment; that she bestowed her fresh young heart unwisely; that parents and guardians stepped in and prevented two young people, who saw Paradise in each other's eyes, from making themselves unalterably wretched. There is a lovely, humid, pathetic expression in her large gray orbs, as though many tears had veiled them.

She is called Eleanor l'Estrange—always Eleanor. One feels that to abbreviate the name of this superb young woman to Nellie would not be in accordance with the fitness of things; diminutives are not for her. Her lover would call her 'my queen,' 'my angel,' 'my adored one!' or by some such high-flown appellation.

Miss l'Estrange's friends and enemies all say that she *must* marry a duke. Her friends say it in perfect good faith; her enemies in malice, spite, and with gibes and sneers. But even they cannot deny that she would make a duchess in accordance with the popular idea of what so great a lady ought to be. I spoke but now of parents—parents, however, she has none. Her father and mother both died in her infancy, and she has been brought up and tenderly cherished by a wealthy aunt, the widow of a baronet. She has, besides, a sufficient income of her own to pay for those Paris toilettes, those innumerable gloves with innumerable buttons which she affects, and other costly necessities and fancies besides. She is idolised by her aunt—perhaps a little spoiled. She is on occasion wayward, haughty, exacting. No one knows this better than herself; and no one would more resent other people showing that they knew it than Miss l'Estrange. She is therefore not quite perfect. Her friends are spared the poignant reflection that she is too good for this world, and have no occasion to examine with anxiety the beautiful part of her anatomy (about whose region I am not quite sure) where wings might sprout to carry her to another world.

A lover remarked to her that her faults were more charming than other people's virtues. I do not think the remark was quite original. I fancy I have heard it before. At all events, having discovered his opinion, Miss Eleanor treated him to a considerable experience of what he found so attractive.

At the moment of which I write the Duke has been found for my heroine; he and she are together under one roof, convened there by the Honourable Mrs. Augustus Smoothleigh, a widow, and an amiable excellent woman, who takes the world as she finds it, which happens to be very comfortably and easily. She allows nothing to trouble her; worry impairs digestion, and she is wise and fortunate enough to look for and to find distraction in the pleasures of the table. She has no children; but two fat pugs are the objects of her affectionate solicitude, and supply any little faint sensation of what it is the fashion now to call heart-hunger in her bosom. She has asked the Duke and Eleanor; she has, besides, invited the Countess Minooover and her two daughters. Of the jealousies and heart-burnings likely to be developed by bringing these rival candidates under her roof together, Mrs. Smoothleigh reckons nothing; she gives them all the chance, and 'let the best woman win!' The Ladies Wyley are good-looking showy girls, who do everything that is supposed to be attractive in the eyes of men. They ride, dance, sing, play lawn-tennis, and any other game. If they have tempers, men never see them, and only hear of them indirectly sometimes, through a valet *per* a lady's-maid. They never look disdainful like Eleanor; never treat good matches with coldness and indifference like Eleanor; never show signs of world-weariness and boredom like Eleanor. Men are never afraid of them, as they occasionally profess to be of Eleanor. But, on the other hand, men have never fancied their hearts broken nor been distraught by passion for the *beaux yeux* of the Ladies Wyley as they have for Eleanor's. The daughters of the Countess Minooover hate and fear Miss l'Estrange; they therefore embrace her, gush over her, call her dearest, and entwine her in their arms. Eleanor's feeling to the Ladies Belladonna and Arnica Wyley is purely negative; she treats them with extreme politeness, and invariably addresses them by their titles: it is her little way of declining their intimacy. Of the real state of their feelings towards her, she is perfectly well aware.

It is time to say something of Duke himself. His Grace of Cubston is, perhaps, the most graceless youth who ever raised a doubt in a truly Conservative mind about the value and expediency of hereditary honours. He was a duke at three years old and, most unfortunately for him, was brought up by the weakest, most foolish,

most injudicious mother imaginable. He has been surrounded by tondies from his earliest infancy; has been taught *noblesse oblige* instead of *noblesse oblige*; is ignorant of the existence almost of any other person than the Duke of Cubston; and, were he not that exalted person, would probably get kicked out of every house into which he had been inadvertently invited as a guest. His age is twenty; he has a vacuous and dissipated look; his features are the reverse of aristocratic: his should-be patrician nose is snub; his eyes are the counterparts of those of a fish which we eat with oyster-sauce; his mouth is garnished with two rows of irregular teeth. Nothing would induce him to go near a dentist, who, in these days of enchantment, might have turned them into a set of even pearls. Still, if he would only once now and then apply a brush to them it would be something. His manners contrast very badly with those of his valet and groom, who are very polished young men indeed; his education is *nil*. After a few months at Eton he left because he declined utterly to be swished, and was allowed the choice between that ignominious though common ordeal and leaving. From that time he has spent his days almost entirely in the stables, though he has nominally had tutors; and there are just two things he can do—he can ride and he can drive. Though he has not come into his property as yet, he enjoys a princely allowance, and is quite as mean as many (I will not say most) very rich men. If he plays a round game in a country house, he probably finds on sitting down that he has left his money up-stairs, and borrows or gives little bits of paper to represent coin, which he is not always careful to redeem. Who could ask a duke for twelve or fifteen shillings? If he forgets to pay it must be through sheer inadvertence. The servants of his entertainers rarely profit by his visits. His ducal hand has been seen to give two-pennyworth of coppers to a porter at a railway station, to the agony of his valet, who has the gentlemanlike instinct of his class on the question of *douceurs*.

His Grace smokes cigarettes all day and all night as long as he is awake (other people's, if he has the chance), and never says, 'By your leave' or 'With your leave,' even in a lady's drawing-room or boudoir. And his fair hostesses do not like to wound his sensitive feelings by suggesting to him that there is any impropriety in the freedom of his behaviour.

The Duke has heard of Miss l'Estrange; has seen her in the Royal enclosure at Ascot; has met her at one or two balls. (He rarely attends balls, they bore him.) Until to-night he has never spoken to her.

As she sails into the room before dinner like a young princess, his Grace confides to a 'pal' that she is a real ripper. He does not, however, take any step towards making her acquaintance, but waits until she shall throw herself at his head.

'They all do it,' he says, with a grin. His ducal mind is full of quotations, for the most part not culled from Shakespeare.

He does not sit near her at dinner; it is his fate, of course, to lead in his hostess.

'Beastly bad luck!' he whispers, frowning to the aforesaid pal, 'having to take in that old cat. Why don't she get a old Dook here for herself?'

One of the Ladies Wyley sits on his right hand and does her best to emuse him. She is not very successful. He occupies himself with staring at Eleanor, who, to his disgust seems ignorant of his very existence, and smiles with her beautiful gray eyes continuously into those of an impecunious younger son with charming manners and a great fund of amusing small-talk. When the Duke condescends to speak, he either makes some remark eulogistic of Miss l'Estrange or abusive of the dinner; to his hostess he does not trouble himself to talk, and she, as he expresses it, 'keeps her head well in the trough' all the time.

Lady Arnica is convulsed with merriment.

He is 'so amusing,' she vows; such a nice boy, and so full of fun; really quite original.

When the ladies retire, two or three men make for the door to open it. His Grace just manages to rise to his feet, that is all.

'Here stands a post!' he quotes again in a loud voice, looking at Eleanor; but she does not seem to hear or notice his pleasantry, though the Ladies Belladonna and Arnica are literally overcome with laughter.

The Duke is rather piqued. When the door closes on the fair, he says to his neighbour that she is a blanked fine girl, but blanked proud, and gives herself blanked airs; and he continues to talk entirely about her until his naturally thick utterance grows thicker still, and a move is made to join the ladies.

Now although Miss l'Estrange is perfectly aware of the social value of a duke, although she knows how eminently fitting and desirable it is that she should become a duchess, and although she can talk in the most coldblooded manner about a mercenary marriage, yet when an individual duke is presented to her, whose appearance and manners are distasteful to her, she cannot bring herself to treat him other than she would any disagreeable young man ungarlanded with strawberry-leaves. So, when he sprawls on to the sofa beside her after dinner, and leans at her and makes her coarse compliments, she turns those lovely eyes upon him with something of the same expression that a disgusting reptile would bring to them, and answers him in the coldest voice she can command. His Grace likes it; he chuckles to himself; her behaviour comes upon him with the pleasing force of novelty.

'I say, you wouldn't look at me all dinner,' he remarks, lolling against the back of the couch with his hands well in his pockets.

'Why wouldn't you?'

'I suppose I was engaged in eating my dinner,' returns Eleanor freely.

'A beastly bad one, too, wasn't it?' says his Grace.

On the contrary, I thought it excellent,' contradicts Miss l'Estrange.

'No, did you though? well, tastes differ; as the old woman said when she kissed her cow. Why, now, in that aspic there wasn't the least flavour of garlic!'

'Garlic!' utters Eleanor.

'Yes. Why, you can't cook without garlic: you always get it abroad. O, hang it! there's a woman going to caterwaul. I vote for a round game, don't you? I shall go and tell the old gal we want to play Nap.'

And, without waiting for an answer, the charming youth gets on his legs and rolls off to Mrs. Smoothleigh.

'After this song,' she says good-naturedly; and Lady Belladonna offers to get the cards and divide the counters, whilst his Grace, without attempting to help her, returns to Eleanor.

'All right, I've squared her,' he says, with a wink of his ducal eye: 'we're going to have Nap.'

'But why are you not helping Lady Belladonna to get the things ready?' inquires Eleanor, in the same tone in which she might address a twopenny little esquire.

'O, she's a strong able-bodied young woman,' he returns; 'it'll do her good.'

Without a word Miss l'Estrange rises and crosses the room to the table where Lady Belladonna is busy with the counters. After a moment, in which he is battling with surprise, the Duke follows her.

'Why did you leave your Jeremiad?' he says, quoting from his music-hall repertoire.

Eleanor, not being familiar with the quotation, glanced at him with an air of calm surprise.

'O Duke,' cries Lady Belladonna invitingly, 'do come and help me count!'

'Never could count,' he returns, thrusting his hands deeper into his pockets.

'Then,' remarks Miss l'Estrange, with a light flash of her eyes, and sweeping together the little packets she begun to sort, 'if it is too much trouble for you to help us, it will be too much trouble for us to play.'

'O no, hang it!' cries his Grace, sitting down with alacrity and drawing the counters towards him. 'I'll help if you want me too.'

Lady Belladonna tries to conceal her disgust called forth by Eleanor's impertinence, not the Duke's.

When the game commences the Duke insists on going partners with Miss l'Estrange. As usual he has no money; but several purses are placed at his disposal, and out of one he borrows the five shillings necessary to pay for his counters. As the game goes on it is manifest that he rather regrets having gone partners with Eleanor; she is playing so recklessly and losing so many fish. At his third remonstrance, she, having already bought a fresh allowance of counters to which he does not offer to contribute, divides the little heap in two, and pushing one towards him, says,

'Now, Duke, we will dissolve partnership.'

'Right you are, says Moses!' responds his Grace. He still has the pleasure of sitting next to her. Fortune does not favour him to-night. Though he only puts on one counter at a time they steadily diminish, and he has to borrow fish from his neighbours. Eleanor declines to lend him any, which gives Lady Belladonna a chance of showing her superior generosity. Eleanor loathes meanness, and has not the smallest idea of encouraging it in duke or commoner. At the end of the game the company in general is some twelve shillings the worse off for his Grace, who vaguely says he will pay in the morning, but omits to do so.

Next day the men go shooting, and the Ladies Wyley propose to accompany them in the break, and see the first of the sport.

'You don't mean you're not coming?' cries the Duke, as the party about to start collect in the hall. 'O, I say, that's too bad!'

Miss l'Estrange is not equipped for outer air.

'I do not care to follow men out of doors,' returns Eleanor rather superciliously, but in a tone only audible to her interlocutor. 'One has quite enough of them indoors.'

'O,' returns his Grace, with a look distinctly intended to be amatory. 'But when I like any one, I like to be with 'em indoors and out of doors too. "That's the sort of man I am!"'

'So do I when I like any one,' returns Eleanor.

'Come, I say, that's one for me,' cries his Grace, delighted at her pluck in snubbing him. 'But you can't stop in with old Catekin and the other old woman.'

'Who is old Catekin?' inquires Miss l'Estrange coldly.

'Mincover, Minever, Catekin, don't you see?' guffaws the Duke.

'I like to have a name for every one, don't you?'

'No,' replies Eleanor curtly. 'And if you talk so loud she will hear you.'

'I don't care if she does,' returns his Grace. 'She'd only grin and pretend she thought it a good joke. I say, I've a great mind to stay behind with you, and not go shooting at all.'

'If you stay at home,' replies Miss l'Estrange, with energy, 'it will not be with me. I am going to my room to write letters.'

'Never write letters,' he answers. 'I've got a pile of letters and invitations a yard high, and I haven't answered one of 'em yet.'

At this juncture he is called away, and goes off, nasally humming 'My Grandmother's Clock.'

In the afternoon it came on to drizzle. The ladies repair to the billiard-room for a little distraction. Eleanor is so weary of hearing panegyrics of the Duke that she would hail anything as a relief. She is bored; out of sorts; cross with her devoted aunt for having suggested that the Duke admires her; cross with herself because she feels an unconquerable aversion for him and an utter inability to be civil to him.

About half-past four his Grace bounces into the billiard-room. The other men have gone to make themselves presentable before appearing in the presence of ladies. But the Duke receives a warm welcome. He is entreated to join in the games, and acquiesces as Eleanor is playing. He devotes all his attention and conversation to her, and seems as pleased to see her as though he had been separated from her for weeks.

Her aversion for him increases at every moment. When one game is over she lays down her cue and prepares to retire.

'O, I say, don't go!' he cries. But she is resolute. So, after more efforts to detain her, he stands sulkily by the door, which he does not, however, offer to open.

'Are not going to open the door for me, Duke?' inquires Miss l'Estrange, with a little curl of her lip: 'or does your Grace's exalted rank relieve you from the obligation of being civil to ladies?'

Thus chidden, he makes a pounce at the handle, throws the door wide open, and salaams to her as she passes out. The faces of Lady Mincover and her daughters are a study. Only that Eleanor's aunt happens to be present, they would remark very freely upon her insolent presumption.

'Ain't she a clipper!' cries the Duke, delighted, turning to the rest of the company: but they can only command the muscles of their mouths to a ghastly grin without answering.

All the evening long his Grace lolls or sprawls beside Miss l'Estrange, his dull eyes quickening more at every smile she bestows on him, his heart becoming more inflamed.

'My dearest, sweetest love,' says Eleanor's aunt, following her that night to her room, 'pray, pray, don't throw such a chance away! I am sure the Duke will propose if you only give him the least encouragement.'

When Miss l'Estrange is alone, she throws herself into a chair and weeps torrents of tears. She takes a miniature from her bosom, and kisses it and makes the most extravagant demonstrations of mingled affection and grief over it. Then, with unbound locks, she paces her room—one might fancy her rehearsing the part of some tragedy queen. Has she not desired a duke, beyond all things! Here is a duke, and the very thought of him drives her to madness. Has she not sworn that her heart is adamant; nay, that it is shrunk, dwindled away altogether; that she would marry *any* man who could bestow the rank and worldly wealth upon her that she desires! But an imaginary man and a real man are two very different beings. It is easy to promise anything and everything about the former; but when the latter is an offensive young cub whose breath is on your face and his hand on yours (as it happens to Eleanor next day), why, it makes all the difference.

Will any one believe that, in a tale 'of the period,' a beautiful young woman in her senses refused a duke—a duke on the eve of coming into eighty thousand a year!

I declare solemnly that the Duke proposed, went on his knees to Eleanor, sobbed, swore, entreated, and that she actually refused him. She has been wretched ever since, and it serves her quite right. — *Whitcomb Review*.

## METEOROLOGICAL REPORT

FOR WEEK BEGINNING FRIDAY, OCTOBER 1ST, 1880.  
Observatory of Daigaku, Moto-Fujicho, Hongō, Tokio, Japan.

## REMARKS.

Heavy line represents barometer.  
Light continuous line—max. & min. thermometers.  
.....represents velocity of wind.  
.....percentage of humidity.  
Max. velocity of wind 93.0 miles per hour on Monday, at 3 a.m.  
The barometer is reduced to the freezing point and to the level of the sea.

The highest reading of the barometer for the week was 30.378 inches on Wednesday, at 10 p.m., and the lowest was 29.356 inches on Sunday, at 10 p.m. The highest temperature was 76° on Tuesday and the lowest was 55° on Wednesday, the maximum and minimum for the corresponding week of last year being 78° and 49°9 respectively. The total rain for the week was 7.260 inches against 1.260 inches for the corresponding week of last year. The meteorological feature of the week was the storm of wind and rain of Sunday night and Monday morning. It will be remembered that the curve for the barometer in the chart exhibited above is constructed from the means of the three regular daily observations, and does not, therefore exhibit any extraordinary fluctuations which may occur between two regular observations. On the night of the 3rd instant, the barometer stood at 29.356 inches at 10 p.m. from which it sank rapidly until 2 a.m. of the 4th, at which time the minimum of 28.735 inches was observed. From 1 a.m. the observations were hourly. From the minimum the barometer rose rapidly, reaching 29.312 inches at 5 a.m. Very little wind blew until 1 o'clock a.m., at which hour the velocity increased with great rapidity, the maximum being reached about 3 o'clock a.m. The maximum was recorded as above, about 93 miles per hour. Nearly five inches of rain fell, most of it during and before the early part of the wind storm. During the storm the wind was constantly veering between the north and the north-west.

## SHIPPING INTELLIGENCE.

## INWARDS.

Oct. 2, Japanese steamer *Shinagawa Maru*, Walker, 908, from Ogrino-hama, Mails and General, to M. B. Co.  
Oct. 5, French steamer *Menzaleh*, Homery, 1,273, from Hongkong, Mails and General, to M. M. Co.  
Sept. 5, British steamer *Bengloe*, Webster, 1,190, from London, General, to Smith Baker & Co.  
Oct. 6, British steamer *Sunda*, Reeves, 1,704, from Hongkong via Nagasaki, Mails and General, to P. & O. Co.  
Oct. 6, British steamer *Garlin*, Kidley, 2,652, from Hongkong, Mails and General, to O. & O. Co.  
Oct. 6 Japanese steamer *Tokai Maru*, Hogg, 1,042, from Kobe, Mails and General, to M. B. Co.  
Oct. 6, Japanese steamer *Kokonoye Maru*, Dithlefsen, 1,133 from Hakodate, Mails and General, to M. B. Co.  
Oct. 8, Japanese steamer *Genkai Maru*, Conner, 1,917, from Shanghai and ports, Mails and General, to M. B. Co.  
Oct. 7, British steamer *Euphrates*, J. Mitchell, 1,300, from Kobe, General, to Smith, Baker & Co.

## PASSENGERS.

Per French steamer *Menzaleh* from Hongkong:—Messrs. Michimene, Mazzocchi, Gualini, Civetta, Dell Oro, Velini, Savio, Oltoloni, Inselvini, Chibourg, Desgenatais, Bing, and Huot.  
Per British steamer *Gaelic* from Hongkong:—Mr. and Mrs. R. Deacon. For San Francisco:—Captain J. F. Rowell and 249 Chinese.  
Per British steamer *Sunda* from Hongkong:—Mr. and Mrs. Brent and two children.  
Per Japanese steamer *Genkai Maru* from Shanghai and ports:—Hon. G. F. Seward, Mrs. Seward, 3 children and European maid, Mrs. E. L. Browning, Mrs. Robins, Messrs. B. F. Bousfield, G. Gaman, S. Bryan, A. Gillingham, L. L. Fobes, G. Hamilton, W. G. Mathews, Lyall, Shimidzu, Mrs. Inonye and child, Messrs. Akabashi, Kakimoto, Wada, Takei, Ogino, Sabata, Masuda, Mr. and Mrs. Haruta, Messrs. Kitanogo, Obuki, Sasaki and Ogura; 3 Europeans, 204 Japanese and 2 Chinese in steerage.

## OUTWARDS.

Oct. 3, French steamer *Tanaïs*, Reynier, 1,735, for Hongkong, Mails and General, despatched by M. M. Co.  
Oct. 6, German schooner *Solid*, Weise, 165, for Newchang, Ballast, despatched by Chinese.  
Oct. 6, German 3-masted schooner *Hecht*, Ploetz, 358, for Newchang, Ballast, despatched by Chinese.  
Oct. 6, Japanese steamer *Takasago Maru*, Young, 1,230, for Shanghai and ports, Mails and General, despatched by M. B. Co.  
Oct. 6, German barque *Oswald*, Kleimann, 445, for Nagasaki, Ballast, despatched by P. Bohm.  
Oct. 8, Japanese steamer *Tokai Maru*, Hogg, 1,042, for Kobe, Mails and General, despatched by M. B. Co.  
Oct. 8, Japanese steamer *Shinagawa Maru*, Walker, 908, for Hakodate, Mails and General, despatched by M. B. Co.  
Oct. 9, British steamer *Gaelic*, Kidley, 2,652, for San Francisco, Mails and General, despatched by O. & O. Co.

## PASSENGERS.

Per French steamer *Tanaïs* for Hongkong:—Mr. and Mrs. Wyld Messrs. Martin du Nord, Bieber, and Ito.  
Per Japanese steamer *Takasago Maru*, for Shanghai & way ports:—Mrs. Irwin, Miss Irwin, Miss Emory, Miss M. E. Jackson, Messrs. C. Drummond, J. B. Jackson, Ikeda, T. Walsh, Oki, Momesaki, Hashi, Matsumura, (2), Takahashi, Yokogi, Ota, C. Oxley, Abe, Taft, C. Rohde, G. Wilson, C. J. Tarring, Kusama, Tamai, Sakawa, Okegawa.  
Per British steamer *Gaelic* for San Francisco:—For Paris:—H. E. Chevalier W. de Stoetwegen and wife. For Havre:—Elysis Mendes. For Liverpool:—James Taylor, T. Whitely and Alex. Campbell. For London:—Carlos Maristany, B. H. Chamberlain and J. H. Gubbins. For San Francisco:—Capt. J. Sumner, (U.S.N.), Capt. J. Rowell, Lieut. Davenport, (U.S.N.), C. H. Wallroth, Lieut. J. H. Stevens, (U.S.N.), J. H. Perine, J. Morimura, M. Shijio in cabin; 3 Europeans and 249 Chinese in steerage.

## CARGOES.

## COMMERCIAL INTELLIGENCE.

**IMPORTS.**—Business has at last reopened but is very lethargic. Buyers profess that the demand in the interior is very small and consequently say that they will wait for lower prices. Holders, on the other hand, are not eager sellers, believing that the country demand will yet arise. We reduce quotations of the principal Manchester goods, but even at the figures given below there is very little doing, and quotations must be considered more or less nominal.

### COTTON YARNS:—

Nos. 16 to 24, Common to Medium ...	per picul	\$28.00 to 31.00
" " " " " " " " " " " "	"	\$31.50 to 32.75
Bombay, No. 20 do. " " " " " "	"	\$30.00 to 31.25
Nos. 28 to 32, Common to Medium ...	"	\$34.50 to 35.50
" " " " " " " " " " " "	"	\$36.00 to 36.50
" 38 to 42 " " " " " " " "	"	\$41.00 to 42.50

Camlet Corda ... 29-30 " 22 " ...	4.50 to 5.75
Mousselines de Laines:—Grape 24 yds. 30 in. ...	0.17 to 0.17½
do. Itajime 24 " 30 " ...	0.23 to 0.29
do. Yuzen 24 " 30 " ...	0.35 to 0.45
Cloths, all wool plain or fancy ... 48 in. to 52 in. ...	0.80 to 1.50
Pilots ... 54 " to 56 " ...	0.32½ to 0.47½
Presidents ... 54 " to 56 " ...	0.60 to 0.65
Union ... 54 " to 56 " ...	0.32½ to 0.60
Blankets, green, 6 to 8 lbs. ... per lb. ...	0.39 to 0.42

**SUGAR.**—The market has fluctuated and sales of 10,000 cases have been made at between \$4.20 and \$4.25. The market closes at the former quotation.

**SAIGON RICE.**—No sales have yet been made and the market is without animation.

**KEROSENE.**—Buyers have entered the market and taken off some 12,000 cases at the slight advance of our quotations.

Sugar:—Takao in bag ... per picul	\$4.20 to \$4.25	Japan Rice ... per picul	\$2.90 to 3.40
Taiwanfoo in bag ... "	\$4.20	Japan Wheat ... "	\$2.30
Ching-pak and Ke-pak ... "	\$8.00	Saigon Rice [cargo] ... "	\$1.85
China No. 4-5, Kongfun & Kook-fah ... "	\$6.50 to \$8.50	Kerosene Oil ... case	\$1.75 to 1.77

## EXPORTS.

**SILK.**—Since our last report a fair business has been done in this staple. Hanks of good medium and the best classes have found favour with purchasers, and have been taken to a fair extent. In goods of lower grades nothing particular has transpired. Arrivals have come to hand rather freely, and we estimate the present stock to be about 4,500 bales.

	Exchange 3/9½	Exchange 4.85
New Silks { Hanks.—No. 2 ...	\$510 to \$520 = 17/1 to 17/6	= fcs. 47.80 to fcs. 48.60

" Kakeda.— " to " ...	\$560 to \$630 = 18/9 to 21/	= " 52.50 to " 58.60

**TEA.**—There has been a good demand for all grades, settlements for the week amounting to 5,500 piculs. Prices have declined since our last report, but at the close there is less doing, holders being rather firmer especially for best qualities. Total settlements to date at both ports are fully 30,000,000 lbs.

Common ...	\$13 to \$14	Fine ...	\$24 to \$26
Good Common ...	\$16 to \$17	Finest ...	\$27 to \$28

KIGA,  
(Hakone Hot Springs.)

Yokohama, July 19, 1879.

## W. & A. GILBEY'S WINES AND SPIRITS.

**W. & A. GILBEY** have special facilities for carrying on an extensive Foreign Trade, having held for many years in their Excise Bonded Stores, for the purpose of their Home Trade, a stock of not less than 12,000 Casks of Wines and Spirits, which are equally available for Export. These stores are by far the largest private Duty Free Warehouses in the World, and are under the supervision of a staff of Excise Officers specially attached to these Warehouses.

THE EXTENT of W. & A. Gilbey's purchases enables them to give the best VALUE to the public, as a twentieth part of the Foreign Wines consumed in the United Kingdom is supplied from their stock. In the year 1876 W. & A. Gilbey paid duty on 1,881,049 gallons of Wines and Spirits, and the average quantity bottled and sent out by them daily was 3,050 dozens or 36,600 bottles.

QUALITY is guaranteed by W. & A. Gilbey, and is the same whether the Wines or Spirits are obtained direct from their Head Establishments or from any of their Agents. The purity and genuineness of every article in this list are guaranteed in accordance with Act of Parliament, 38 and 39 Vict., Cap. 63.

W. & A. Gilbey have always adhered to the standard of Bottle Measure recently recognised by the Government, namely—

6 bottles contain one gallon; 12 half-bottles contain one gallon.

SECURITY is ensured to the purchaser, each bottle bearing W. & A. Gilbey's seal and label guaranteeing quality and measure, and the strength also in the case of Spirits.

## MISCELLANEOUS.

## THE GREATEST

## WONDER OF MODERN TIMES HOLLOWAY'S PILLS.

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir SAMUEL BAKER.

In his work entitled "The Nile Tributaries in Abyssinia," says, "I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and that I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an agreeable effect upon the patient, which satisfies him of their value."

## SIMPLE, SAFE AND CERTAIN! HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER.

In his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse-feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock." Sold by all Chemists and Medicine Vendors throughout the World May 17th, 1873.

"HIGHEST AWARD & PRIZE MEDAL PHILADELPHIA  
EXHIBITION, 1876."

A PURELY VEGETABLE SWEETMEAT, both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for **INTESTINAL** or **THREAD WORMS**. It is a perfectly safe and mild preparation, and is especially adapted for Children.

## TESTIMONIAL.

Medical Hall, Gildersome, Nov. 28th, 1876.

MR. KEATING,  
Dear Sir,—I think it nothing but my duty to inform you of the immense sale I have for your Worm Tablets, which I may justly say is enormous, and in every case gives the greatest satisfaction. I have now in stock two bottles containing the Round Worms brought me during the last few days by customers, one Worm 40 yards long. I dare not be without the remedy.—Yours respectfully,

M. A. WALKER.

SOLD IN BOTTLES, BY ALL CHEMISTS AND DRUGGISTS.

Proprietor—THOMAS KEATING, London.

**REWARD AND CAUTION.**—Whereas fraudulent imitations of this unsurpassed remedy have been sold, I hereby request anyone knowing of the vendor of the same to communicate with me, on conviction of the offender a liberal reward will be paid.

## LOCAL BILLS DISCOUNTED.

Credits granted on approved Securities, and every description of Banking and Exchange business transacted.

Drafts granted on the Chief Commercial places in Europe, India, Australia, America, China and Japan, and Circular Notes issued for the use of Travellers.

JOHN WALTER, Manager.

Yokohama, 25th August, 1880.

**The "Japan Mail,"**

A Daily, Weekly, and Fortnightly Journal,

ESTABLISHED, 1865.

## TERMS OF SUBSCRIPTION.

WEEKLY EDITION. The "Japan Weekly Mail," a Weekly Review of Japanese Commerce, Politics, Literature and Art:—Per annum, \$24; Six months, \$13; Three months, \$7.

FORTNIGHTLY Edition, being a Summary of the foregoing, is published for transmission by the American Mail Steamers via San Francisco. Per annum, \$12; Six month, \$7; Three months, \$4.

THE JAPAN DAILY MAIL is published every morning (Sundays excepted) and contains the Arrivals and Departures of all Shipping. Passenger lists, Cargoes, Vessels on the Berth and in Harbour &c., &c. Also the latest Telegrams, Japanese news, Reports of Trials in the Courts of Law, Meetings of public bodies, and all matters of interest to the Community. Special attention is called to this Journal as a medium for circulating local advertisements. It has a large and constantly increasing circulation, its low price bringing it within the means of all classes of the community. It therefore affords exceptional advertising advantages, and secures to all announcements the utmost publicity, the object aimed at by advertisers.

SUBSCRIPTION PER MONTH—ONE DOLLAR.

## AGENTS OF THE PAPER.

## A NEW ARSENAL.

IT seems to be regarded among a not inconsiderable section of the population of the British Empire, as strictly in accordance with the eternal fitness of things mundane, to raise an alarm whenever the possibility is mooted of the acquisition of territory by any other Power. The cry of danger to British interests is then heard, and cock-and-bull stories of the lamentable weakness of the English fleet form stock subjects with the Jingo exponents of public opinion. In a short time, however, some other incident—a railway accident or colliery explosion perhaps—occurs to divert the attention of the watch-dogs. When the public mind is again drawn to the subject, it is found that the vaticinations of the prophets of woe are entirely falsified by results, and that the Empire still continues to increase in wealth, power, and commercial influence.

A glance at the map of the world is useful in arriving at a correct idea of the resources at the disposal of Great Britain for the protection of her commerce, and shelter for the enormous fleet which competent American and Continental authorities declare capable of crushing the allied navies of Europe. The little spots of red shew Gibraltar, Malta and Cyprus dominating the Mediterranean and the route to India and the Far East. Aden commands the Red sea and, after passing the naval stations in Ceylon and India, we find that Singapore and Hongkong furnish readily fortified posts to protect the China and Japan traders. In the North Atlantic, again, Quebec, Halifax, and Bermuda are considered impregnable, while in the Australasian colonies, the harbours of Sydney and Melbourne are now thoroughly protected by defences constructed from plans furnished by two celebrated engineer officers, specially detailed for the service by the Imperial Government.

One link only seemed deficient in this chain of fortresses round the globe. The North Pacific, which washes

the shores of British Columbia has been, up to the present, without any naval station worthy of the name or commerce of the Empire. This we are glad to learn will now be speedily remedied. Contracts have been entered into for the construction of docks, &c., at Esquimaux, the evident intention of the authorities being to convert that magnificent position into an arsenal. This determination has probably been arrived at owing to the resolution of the Government of the Dominion of Canada, to push on the completion of the Canada-Pacific railway, a great work of which over one thousand miles have already been constructed.

This railway and arsenal will effect a very important change in the ability of Great Britain to operate quickly in these seas in time of war. Instead of encountering, as at present, the heat and inconvenience of the Mediterranean, Red Sea, and Indian Ocean, troops for employment in the Far East will be transported to Canada in about nine days from England, thence across the Continent to Esquimaux in, say, six days. And it is worthy of particular notice that from the terminus of the Canada-Pacific railway to Japan, the distance is considerably less than from San Francisco.

The harbour of Esquimaux is justly considered one of the finest in the world. It is completely sheltered, has a depth of over fifty feet of water at lowest spring tides, and is sufficiently capacious to contain at the same time the whole navy of Great Britain. The adjacent country abounds in natural resources. The vast forests furnish most valuable timber and spars of enormous size; anthracite coal—the best for steaming purposes—exists to a fabulous extent; while the quarries of stone and marble, and the exuberant fertility of the soil, are mentioned in terms of admiration by every writer who possesses an actual acquaintance with the locality.

To the Dominion of Canada, it may safely be said, England looks more than to any of her other possessions to absorb the redundant population which yearly leaves the parent hive. To Australia the voyage is long and expensive; while to the Dominion it is a matter of a few days and a few pounds at most. The United States have hitherto been the great receptacle of the surplus population of Europe, but Canada is evidently determined to enter into keen rivalry and not without well grounded expectations of success. To this end, the opening of the great North-West by means of the trans-continental railway will undoubtedly be the principal factor, since facilities of access are all that is required to divert the stream of emigration to the hitherto little noticed plains of that territory. It should also be borne in mind that in no part of the British Empire is the love of existing institutions more an article of faith than among the sturdy farmers of the Dominion. On several occasions, the well-trained Canadian militia has volunteered for active service and, if any contingency should unhappily arise, the ninety-five thousand effective troops maintained at

local cost, would no doubt be found ready to cheerfully respond to any calls made upon their patriotism.

We consider that the unquestioned preponderating influence which Great Britain will, it is evident, soon possess in these seas should point her out most unmistakably as the Power with which this Empire should cultivate most intimate connections. England desires no acquisition of territory in Japan, and that fact alone should always be kept prominently in view by the statesmen who rule the destinies of Dai Nihon.

#### THE RECENT TYPHOON.

CONSIDERABLE information has already been gathered and much has already been published, concerning the damage inflicted upon this coast and in the vicinity by the typhoon which visited us during the night of October third and fourth.

The unpleasant frequency in this part of the world of storms of the same character, renders their careful investigation by competent meteorologists a matter of the utmost importance. What is chiefly demanded, therefore, is the collection of such meteorological records and observations as may, perhaps, render it possible to trace completely the rise, progress, and varying intensity of the storm. Of course considerable time must elapse before such an investigation can be completed and, unfortunately, even at best the number of accessible and reliable series of observations will be greatly less than could be desired for the successful study of the phenomenon.

In the meantime we deem the matter of sufficient local interest, to justify a brief presentation of the principal meteorological features of the storm, based upon observations and records made at the observatory of the University of Tokio.

Although it can hardly be said that this storm gave any marked indications of its immediate approach, yet it is important to observe that there was a steady fall in the barometer from the previous Thursday—September 30th—up to the time of maximum violence of the wind. The first of the accompanying charts exhibits the barometric curve during the most interesting period; i.e. from 7 o'clock a.m. on the 3rd of October, to 2 o'clock p.m. of the 4th. Previous to one o'clock on the morning of the 4th but three observations are recorded; at 7 a.m., at 2 p.m., and at 10 p.m. These indicate a steady decline in the barometer and it is not likely that any extraordinary fluctuations occurred during this time. After one o'clock a.m., the observations were made hourly, and during a considerable portion of the time they were half-hourly. It will be seen, however, that a very important portion of the curve, from 10 o'clock p.m. to 1 o'clock a.m., is doubtful and it is not at all unlikely that, had intermediate observations been recorded, the fall of the barometer would have appeared much more sudden than it does. The minimum observed height was 28.735 inches at 2 o'clock a.m. At 3 o'clock the height was only a trifle greater than this and, from the nature of the curve before and after the interval from 2 o'clock to 3 o'clock as well as from the velocity of the wind, it seems highly probable that between these hours a lower point than any observed was reached. The curve is constructed to show the actual vertical movement of the mercurial column. From the minimum it rose rapidly until 6 o'clock a.m. at which hour the height was 29.386 inches, and from that hour the rise continued with less rapidity but with great steadiness, until the night of the following Wednesday, when the reading was 30.378 inches. Thus the range of the

barometer in three days was 1.643 inches. This is more than two-tenths of an inch greater than the range for the whole of the last year. At no time during last year did the barometer reach so low a point as 29 inches, and the mean height for the year was 29.952 inches.

The second chart shows the velocity of the wind at different hours extending over the same interval of time. These velocities are computed from a continuous record made by an anemograph consisting of a Robinson's anemometer with Beckley's registering apparatus attached. From this curve it will be seen that, so far as the wind is concerned, up to about 11 o'clock p.m. there were no indications of the coming storm. At that time a breeze sprang up, which continued at less than twenty miles per hour until about 1 o'clock a.m. when it suddenly increased in velocity, and at 2 a.m. the record shows a speed of sixty miles per hour. Unfortunately shortly after 2 o'clock, the clock-work which keeps the registering portion of the apparatus in motion was stopped, the motion of the pendulum being undoubtedly arrested by a sudden blast of great violence. This stoppage was not discovered until 3 o'clock a.m., so that between these hours the record is lost. At 3 o'clock the instrument was put in motion again and for about fifteen or twenty minutes after that hour, the record shows the extraordinary velocity of ninety-five miles per hour. From this time the violence diminished rapidly, a velocity of fifty miles per hour being registered at 4 a.m., and at 5 a.m. it had fallen to less than twenty miles per hour. Twice afterwards as will be seen by the chart, the speed rose to about twenty-five miles per hour, after which it rapidly declined.

Owing to the interruption in the continuity of these records, it is impossible to affirm that the maximum velocity of the wind was recorded. In fact there are reasons for believing that the storm reached its greatest violence somewhat before 3 o'clock.

It seems quite certain then, that at times during the storm the velocity of the wind exceeded one hundred miles per hour; and especially must this have been the case during some of the most violent blasts which were generally of too short duration to show with their full effect upon the register made. The fact that the pendulum of the anemograph was stopped between 2 o'clock and 3 o'clock by one of these blasts, and that after 3 o'clock its motion was not interfered with, would indicate that more violent disturbances took place before than after that hour. A smaller anemometer of Robinson's model was torn from its fastenings between 2 o'clock and 3 o'clock, and so completely demolished that no record even of the work which it had already done could be obtained. This is much to be regretted, as otherwise a means of verifying the extraordinary velocity registered by the anemograph would have existed. Concerning the latter it should be said that, regarding the smaller anemometer as a standard, it has been found upon examination to somewhat over-estimate the velocity of very high winds, and to under-estimate those of low speed. At the same time it cannot be positively stated which of the two instruments was in error.

A continuous record of the direction of the wind is kept. Upon examining this it is found that during the whole of the period considered, the direction varied between north and west. Up to 1 o'clock a.m. of the 4th the wind was steadily from the north-north-west. From that hour until 5 o'clock a.m. its fluctuations were confined between north-west and west. A decided change in direction seems to have taken place between the hours of 2 o'clock and 3 o'clock.

The early part of the storm was accompanied by an unusually heavy fall of rain. The violence of the wind prevented the reading of the rain-gauges during the night, but when emptied at 7 a.m. they showed a total of 4.66 inches, nearly all of which must have fallen during—at most—two or three hours.

It may be interesting to make some comparisons between the violence of this storm, and that which was undoubtedly the immediate cause of the destruction of the Tay Bridge, on the evening of the 28th of December, 1879. Unfortunately it does not appear that any very exact or reliable observations of the velocity of the wind on that occasion were made; but an approximate measure of it may be obtained from the testimony of several of the witnesses, who were men of considerable experience in the observation and estimation of high winds. The following selections from the *Times* report of the Board of Trade inquiry, are of interest in this connection. Captain Scott, R. N.—who was superintendent of a training-ship stationed in the Tay, testifies that his barometer fell from 29.60 inches at noon to 29.00 inches at 7 o'clock—that being the lowest point reached. Also that in the Navy, storms were described by numbers from 1 to 12, 12 being the maximum. Upon that scale he would describe this storm in the Tay as from 10 to 11. He had on rare occasions in China and the West Indies rated storms as high as 12.

Admiral William Heriot Maitland Douglass, who had resided at the mouth of the Tay continuously for twenty-nine years, stated that his barometer fell from 29.40 inches to 28.80 inches. The difference between these and the previous barometric heights, is easily explained by the fact that his house was at an altitude of 200 feet above the level of the sea. He declared that the gale was like a typhoon in violence, and that in all the time during which he had lived on the Tay, he had never experienced a gale of equal severity. In his opinion the velocity of the wind was from seventy-five to seventy-eight miles per hour, and that during the lulls it would fall to something like thirty.

Charles Clark, who was an amateur observer, gave evidence that 29.00 inches was the minimum point reached, and that he had marked the storm 4 on a scale of 6; and that he had never yet recorded 5 or 6.

Other witnesses testified in about the same way, all agreeing reasonably well as to barometric depression and probable velocity.

On comparing these statements with those already made concerning the recent typhoon here in Japan, it will be seen that both in barometric range and in wind velocity, the recent storm considerably exceeded that which was the occasion of the Tay Bridge disaster. The barometric change was not greater, but more sudden in the former than in the latter. Concerning the direct measurement of the pressure of the wind in pounds per square foot, it must be said that the instruments for doing this are, at present, to a great extent crude and unreliable. It is generally assumed that the pressure is proportional to the square of the velocity. Upon a scale adopted by the Smithsonian Institution and by the United States Signal Service, the velocity of twenty-five miles per hour corresponds to a pressure of 3 lbs. per square foot. Assuming the correctness of this and also of the law given above, the pressure per square foot in the Tay storm must have been nearly 30 lbs. and in the recent typhoon here it must have been nearly 50 lbs. It was shown in the tests made upon the material of the Tay Bridge, that it might have been expected to give way under a wind pressure considerably less than 40 lbs. The French and many English engineers have adopted 55 lbs. per square foot as a standard, and about the same number is used in America, but it seems doubtful if even that furnishes a sufficient "factor of safety."

In conclusion, the affirmation may be made, supported as it is by the constantly accumulating evidence of the damage done to buildings, shipping, etc., that this was one of the most violent storms experienced here for many years. From facts already known concerning other points along the coast of Japan, it would seem that, had an efficient system of observations, telegrams, and signals existed, timely warning might have been given of its approach and, possibly, much property and many lives saved. In view of this fact it appears hardly necessary to repeat the suggestion, the importance of which has been frequently urged in these columns, that the Government should, at the earliest practicable moment, inaugurate an efficient and complete Signal Service for the benefit of the whole country.

#### CHART SHOWING THE HEIGHT OF THE BAROMETER FROM 7 A.M. ON THE 3RD TO 2 P.M. ON

THE 4TH OF OCTOBER,

1880.

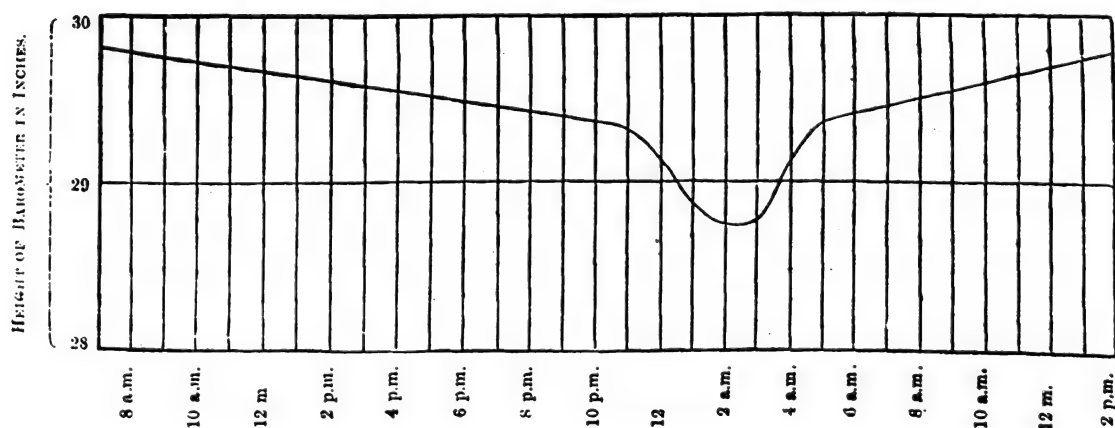

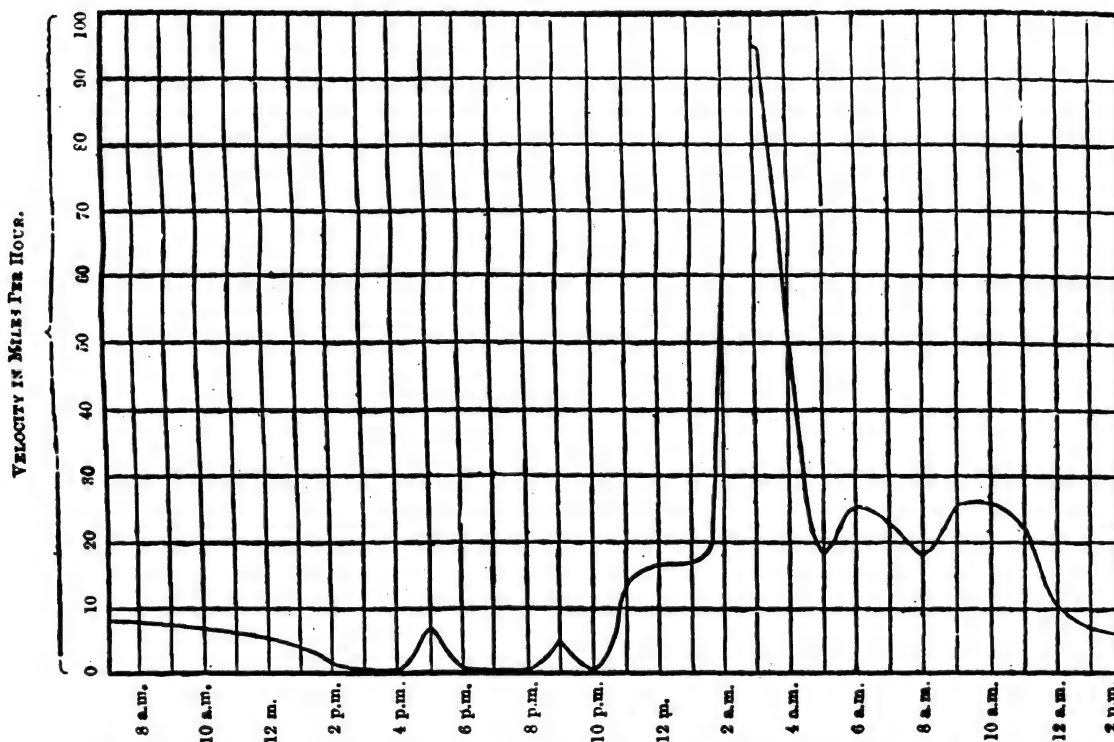

CHART SHOWING THE VELOCITY OF THE WIND FROM 7 A.M. ON THE 3RD TO 2 P.M. ON THE 4TH OF OCTOBER, 1880.

NOTE.—The break between 2 a.m. and 3 a.m. in the curve representing the velocity of the wind is due to the fact that, between those hours, the registering apparatus connected with the anemograph was not in motion.

SO much inconvenience and positive danger is caused to pedestrians by the mode in which vehicular traffic is carried on in Yokohama, that we gladly draw attention to the following suggestions of the *Celestial Empire*; for the same evil appears to exist in Shanghai also. Our contemporary recommends:—(1) That no betto should leave a horse or pony unattended in the streets of the Settlement for a single minute. (2) That no one, foreigner or native, should drive through the narrow streets of the Settlement beyond a moderate pace. (3) That speed should always be slackened on approaching cross roads or turning corners. (4) That all vehicles, whether drawn by man or beast, should keep to the left-hand side of the road. The Jehus who have gained an unenviable reputation for careering through the streets, should now show a good example and adopt these suggestions as far as applicable.

THE autumnal show of fruits and produce of Yezo was held at Sapporo on the 1st of October ultimo, and continued open to public inspection for six days. The exhibits were carefully and neatly arranged in a temporary wooden building in the centre of the town. They consisted of the usual productions of the farm and garden:—potatoes of various kinds, apples, pears, plums, greengages, melons, pumpkins, beetroot, grapes; the cabbages, onions, squashes, and some other vegetables exhibited being of enormous size. The rich soil of Yezo is evidently capable of producing food of the best quality and in abundance. All that appears to be wanting is a greater supply of labour, and a spirit of enterprise. If the thousands in the south of Japan who are living in comparative indigence could be induced to throw their strength into this field, the island of Yezo might become to them "a land flowing with milk and honey," and even if they only contemplated making the north a temporary sojourn for a few years, they might return to the south invigorated

by the climate and with an independence, to spend the evening of their days in their southern homes. The rivers and forests of Yezo are the sources of wealth also as well as the virgin soil. They all are prolific, the hand of the labourer only is required. In the exhibition were seeds of all kinds—many sorts of corn, beans, vegetables, grasses. For the implements of husbandry, carts have been manufactured and ploughs, harrows, etc., in imitation of foreign models. These were displayed for the numerous visitors from distant farms. Cattle oxen, and sheep, as well as horses—sturdy, hardened but quiet animals—poultry, etc., were also to be seen. In the silk manufacture, raw silk from cocoons to the woven articles were exhibited. Paper of various qualities, leather—dressed and made up into harness, saddles, etc.,—bemp and specimens of *asa* were shown. Beer and wine made in Sapporo, and sugar unrefined and refined, were represented. Altogether the exhibition in Sapporo, though held at an unfavourable period of the year when visitors from the south cannot be expected, was a success. The neighbouring farmers and country people came in considerable numbers and seemed delighted with the show. If some of the articles exhibited could be sent to Tokio, and again exhibited there, the effect would be good and the show would be very interesting. As soon as the new railway—now waiting only for rails and locomotives—is finished, as it ought to be in a few months, a spurt must be given to the local trade, and the produce of the Sapporo farms will find its way to the other parts of the Empire. The Colonization Department has provided for extensive works. There are in Sapporo saw-mills, an establishment for the manufacture of household furniture, a weaving establishment, a brewery, and other useful factories. The effect of these ought to be seen very soon. The new hotel is now finished and being furnished, so that when the railway is open to the coast there will be facilities afforded for a summer trip to Sapporo, which may serve as a sanatorium for southern residents.

THE feeling is very prevalent among scholars regarding the manuscripts of early writers, that almost everything there is the remotest chance of recovering has been discovered before now. We are happy to say that in many instances has this feeling been disappointed, and not so very long ago either. The recent unearthing of manuscripts of Clemens Romanus and other early ecclesiastical writers in Constantinople, was a pleasurable surprise to students of Church history. In no department have such discoveries been more surprising and more valuable than those in connection with the New Testament. Tischendorf in his wanderings among libraries in all parts of the world came upon many leaves of old New Testament manuscripts, and crowned his investigations by bringing to light in the Sinaitic monastery, the most complete manuscript of the New Testament in existence belonging to an early date. We recently drew attention to the discovery of another manuscript of a portion of the New Testament written at a very early period. From recent information we now learn that the merit of the discovery is due to two German scholars, Oscar v. Gebhardt and Adolf Harnack. These scholars were enabled, through the munificence of the German Government and an endowment attached to Leipzig University, to make a journey in March this year to Southern Italy and Sicily, in which they resolved to search for manuscripts. Their attention was specially directed to notices of a monastery at Rossano, near the Gulf of Tarentum, in which important manuscripts were said once to have been. They could find no traces of the monastery, but they heard that there was a very old book preserved in the palace of the Archbishop of Rossano. Accordingly, they asked permission to see it, and to their great joy found that it was a very valuable manuscript of the Gospels of St. Mark. They now issue an account of it in a volume just published, *Evangeliorum Codex Græcus Purpureus Rossanensis Litteris Argenteis sexto ut videtur sæculo scriptus picturisque ornatus, seine Entdeckung seine wissenschaftlicher und Künstlerischer Werth dargestellt von Oscar v. Gebhardt und Adolf Harnack.* (Leipzig: Giesecke & Devrient.) The description given of this valuable and unique work is extremely interesting. "The leaves of the manuscript are made," we read, "of purple parchment, and the material used throughout in writing is silver, except in the first three lines of each gospel, where the letters are golden. There is only one other manuscript of the kind in existence, containing any portion of the New Testament, and it is in a mutilated condition, four of its leaves being in London, six in Rome, two in Vienna, and thirty-three more have been recently discovered in the island of Patmos. The present volume, on the other hand, consists of 188 leaves, and contains the whole of the gospel of St. Matthew and the gospel of St. Mark down to the middle of the 14th verse of the 16th chapter. All the criteria used in judging of manuscripts indicate the end of the fifth or beginning of the sixth century as the date of this. The manuscript is written in uncial characters with two columns in each page. There is no separation of words, no breathing, no accent, and only the slightest attempt at punctuation. There are capitals double the size of the uncials, the Ammonian sections are indicated, and the Eusebian canons must have been given, for it contains a portion of the letter of Eusebius to Carpianus, and there is good reason for conjecturing that this was followed by a table of the Eusebian canons. The letters bear the closest resemblance to those occurring in manuscripts of the fifth and sixth centuries." The editors reserve their remarks upon the nature of the text until they publish it in full. All they state now is, that it bears a striking resemblance to that found in the other manuscript of purple parchment, that it contains some unique

readings, and that it rather goes with the later manuscripts where the Sinaitic and Vatican differ from them. Considerable interest attaches to this manuscript from the circumstance that it contains a number of painted miniatures, illustrating the life of Christ. These are amongst the earliest works of this kind that are extant. The editors have prepared outlines of them, and discuss their merits. The subjects are the Resurrection of Lazarus, the Entrance into Jerusalem, the Purification of the Temple, the Wise and Foolish Virgins, the Last Supper and Washing the Feet, the Distribution of Bread and Wine, Christ in Gethsemane, the Healing of the Blind, the Good Samaritan, Christ before Pilate, the Repentance and Death of Judas, the Jews before Pilate, and Christ and Barabbas. In all of them the grouping, we are told, is done very artistically, and that the figures are well drawn, with much animation and expression. Some of them are interesting from an historical point of view, as that which portrays the distribution of bread and wine at the Eucharist. All of them throw light on early Christian art, and Harnack thinks that he sees a closer connection between these works and Giotto, than between later miniatures and that artist. Beside the new Testament scenes there are forty heads of prophets and one or two other subjects. The volume will undoubtedly excite the curiosity of critics and artists in no small degree, and it is to be hoped that the discoverers will not be long in issuing to the world, in a complete form, their edition of the manuscript. It will be interesting to know which have the highest claim to respect on account of antiquity, the Sanskrit writings traced to Japan through the instrumentality of Professor Max Müller, or the newly discovered manuscript of Messrs. von Gebhardt and Harnack.

WE recently drew attention to the strictures passed by English journals upon the system pursued in the Mixed Court at Shanghai. The allegations, made were, in effect, that the presence of an American or European assessor gave a certain amount of sanction to the barbarities so constantly occurring. The assertions of the home papers were ostensibly sustained by trustworthy evidence, but we notice that both the Shanghai papers have essayed a defence of their peculiar institution. We think, however, that unless our contemporaries can bring forward some better argument, than they have used up to the present, their attempt will end in utter failure. The *Celestial Empire*, indeed, can apparently only urge, that "the presence of the foreign assessor is quite sufficient to ensure that no horrible cruelty will be practised." It would be interesting to have our Celestial friend's definition of horrible cruelty. Only the other day we noticed in its columns that a woman had received the first instalment of her sentence, eighty blows on the lips with a leather strap. The judgment in this case emanated from the overflowing humanity of "Cheng, Chinese Magistrate, and F. D. Cheshire, Esq., U. S. Assessor."

OWING to pressure upon our space caused by the reproduction of the Definitive Accounts of the 9th fiscal year, we are compelled to hold over mention of some new books and other matter.

#### THE REVENUE AND EXPENDITURE FOR THE 9TH FISCAL YEAR, 1876-77.

(Continued from last week.)

##### EXPENDITURE.

The total amount of the estimated expenditure for the 9th year of Meiji amounted to 62,993,847 yen, while the definitive accounts shew a total of 59,308,956.488 yen. Thus the amount in the definitive accounts is no less than 3,684,890.352 yen below the estimates. The total amount of the definitive expenditure for the financial year, as compared with that of the preceding year, when it reached 69,203,242.403 yen exhibits a decrease of 9,894,285.935 yen.

In the following table the amount of each item of actual expenditure is clearly shewn in comparison with the similar item in the estimates, and also with the actual expenditure in the preceding fiscal year.

TABLE II.—COMPARATIVE TABLE OF THE ESTIMATED AND DEFINITIVE ACCOUNTS OF THE EXPENDITURE FOR THE FISCAL YEAR, BEGINNING WITH THE 7TH MONTH OF THE 9TH YEAR OF MEIJI, AND ENDING WITH THE 6TH MONTH OF THE 10TH YEAR OF MEIJI, SHEWING THE INCREASE AND DECREASE IN THE SEVERAL ITEMS.

EXPENDITURE.	DEFINITIVE ACCOUNTS.		ESTIMATED ACCOUNTS.		DEFINITIVE ACCOUNTS OF THE 9TH FISCAL YEAR.		INCREASE OR DECREASE FOR THE 9TH FISCAL YEAR AS COMPARED WITH THE 8TH FISCAL YEAR.		DEFINITIVE.

The cause of the several increases and decreases in the present definitive account, as compared with the estimates and the definitive accounts for the preceding fiscal year are explained as follows:—

**DOMESTIC LOAN:**—The amount in the definitive account when compared with that appearing in the estimate, shows a decrease of 643,611.391 yen, which is due to the following causes. A sum of 5,800 yen for interest on capitalized pension bonds was saved in consequence of the bonds having been returned to the Government by those to whom they had been granted when their pensions were surrendered: the repayment of part of the new loan, originally appointed for the 2nd month of the 10th year of Meiji, was actually effected in the 8th month of the 9th year of Meiji for the sake of convenience, and thus a saving of 8,000 yen, being six months' interest thereon was obtained; and the estimated repayment of more than 683,100 yen on account of capitalized pension bonds was postponed. Putting these decreases together we have a gross diminution of something over 697,000 yen: There was, however, some increase which ought to be taken into consideration. For instance, there was an increase of over 37,000 yen in the payment of the principal and interest on the bonds for redeeming paper currency, and on the new and old debts on account of the better regulation of the liabilities (new and old) incurred by the old Han. There was also an increase of over 16,000 yen in the payment of interest on old and new debts, and also on certain capitalized pension bonds the repayment of which had been intended, but was postponed. Those two items of increase combined amount to over 53,300 yen. By balancing the decreases and increases mentioned we arrive at the total given above. The definitive accounts at present under review, as compared with those for the preceding fiscal year, exhibit an increment of 332,149.141 yen. This increase is owing to the following circumstances. There was an augmentation of over 83,300 yen in the interest payable during the year on the bonds for the redemption of the old paper money, in accordance with Notification No. 131, issued in the 8th month of the 8th year of Meiji. By the terms of this document the periods for payment of bonds for redeeming paper money were amended, while in the fiscal year preceding, the alteration only applied to six months' interest, i.e.:—from the 7th to the 12th month of the 8th year of Meiji. In the payments on account of capitalized pension bonds, there has been an increase of over 356,700 yen in consequence of the introduction of better regulations for the management of these securities. This augmentation is due to the circumstance, that the principal sums secured by these bonds first became payable during the fiscal year now under notice. There was also an increase due to the fact that there were larger payments on account of the principal of the old and new loans, and of some other indebtedness. There was, however, a decrease owing to the two following causes:—The amount of interest payable on the new loan was diminished in consequence of a reduction in the principal, and also because the interest on the said loan was for one fiscal year in accordance with Notification No. 50, issued in the 4th month of the 9th year of Meiji, while during the previous fiscal year, interest was included which covered a period of one year and a half. Putting these decreases together they amount to more than 287,300 yen, and when deducted from the total increment give the nett increase already mentioned.

The following table exhibits the increase and decrease of the definitive accounts under this heading as compared with the estimates:—

	DEFINITIVE.		ESTIMATED.		INCREASE OR DECREASE.

**FOREIGN LOAN:**—There was an augmentation of 42,691.538 yen in the definitive account as compared with the estimate. This increase is due to the fact that, although one English pound sterling was calculated as equal to 4.88 yen when the estimates were framed, it proved to be equal to 4.992 yen at the actual time of disbursement, thus causing an increment of over 24,700 yen as regards payment on account of the new loan, and of over 17,400 yen of the old. This also accounts for an increase of some 700 yen in the cost of advertising, commission, &c. Again, in comparing these accounts with the definitive statement for the previous fiscal year, there appears a decrease of 26,653.756 yen in the present definitive account. This decrease is owing to the fact that, although there was an increase of over 25,600 yen, owing to the adverse condition of exchange as compared with the last fiscal year, yet 52,200 yen was saved in interest on loans owing to the principal having been considerably reduced.

The following table shows the increase and decrease in the estimated and definitive accounts:—

	DEFINITIVE.		ESTIMATED.		INCREASE OR DECREASE.

**CIVIL LIST AND APPANAGES OF THE IMPERIAL FAMILY:**—

The definitive account under this item was 827,500 yen, which is neither greater nor less than the sum shown in the estimates. Formerly this charge was included under the heading of "Imperial Household Department," but from the present year a special heading was created for this class of expenditure. Consequently the item does not appear in separate form in the accounts of last year.

**PENSIONS FOR MERITORIOUS SERVICES AND HEREDITARY PENSIONS:**—There is an increase in this item of 99,121.590

The cause of the several increases and decreases in the present definitive account, as compared with the estimates and the definitive accounts for the preceding fiscal year are explained as follows:—

**DOMESTIC LOAN:**—The amount in the definitive account when compared with that appearing in the estimate, shews a decrease of 643,611.391 yen, which is due to the following causes. A sum of 5,800 yen for interest on capitalized pension bonds was saved in consequence of the bonds having been returned to the Government by those to whom they had been granted when their pensions were surrendered: the repayment of part of the new loan, originally appointed for the 2nd month of the 10th year of Meiji, was actually effected in the 8th month of the 9th year of Meiji for the sake of convenience, and thus a saving of 8,000 yen, being six months' interest thereon was obtained; and the estimated repayment of more than 683,100 yen on account of capitalized pension bonds was postponed. Putting these decreases together we have a gross diminution of something over 697,000 yen: There was, however, some increase which ought to be taken into consideration. For instance, there was an increase of over 37,000 yen in the payment of the principal and interest on the bonds for redeeming paper currency, and on the new and old debts on account of the better regulation of the liabilities (new and old) incurred by the old Han. There was also an increase of over 16,000 yen in the payment of interest on old and new debts, and also on certain capitalized pension bonds the repayment of which had been intended, but was postponed. These two items of increase combined amount to over 53,300 yen. By balancing the decreases and increases mentioned we arrive at the total given above. The definitive accounts at present under review, as compared with those for the preceding fiscal year, exhibit an increment of 332,149.141 yen. This increase is owing to the following circumstances. There was an augmentation of over 83,300 yen in the interest payable during the year on the bonds for the redemption of the old paper money, in accordance with Notification No. 131, issued in the 8th month of the 8th year of Meiji. By the terms of this document the periods for payment of bonds for redeeming paper money were amended, while in the fiscal year preceding, the alteration only applied to six months' interest, i.e. :—from the 7th to the 12th month of the 8th year of Meiji. In the payments on account of capitalized pension bonds, there has been an increase of over 356,700 yen in consequence of the introduction of better regulations for the management of these securities. This augmentation is due to the circumstance, that the principal sums secured by these bonds first became payable during the fiscal year now under notice. There was also an increase due to the fact that there were larger payments on account of the principal of the old and new loans, and of some other indebtedness. There was, however, a decrease owing to the two following causes:—The amount of interest payable on the new loan was diminished in consequence of a reduction in the principal, and also because the interest on the said loan was for one fiscal year in accordance with Notification No. 50, issued in the 4th month of the 9th year of Meiji, while during the previous fiscal year, interest was included which covered a period of one year and a half. Putting these decreases together they amount to more than 287,300 yen, and when deducted from the total increment give the nett increase already mentioned.

**FOREIGN LOAN:**—There was an augmentation of 42,691.538 yen in the definitive account as compared with the estimate. This increase is due to the fact that, although one English pound sterling was calculated as equal to 4.88 yen when the estimates were framed, it proved to be equal to 4.992 yen at the actual time of disbursement, thus causing an increment of over 24,700 yen as regards payment on account of the new loan, and of over 17,400 yen of the old. This also accounts for an increase of some 700 yen in the cost of advertising, commission, &c. Again, in comparing these accounts with the definitive statement for the previous fiscal year, there appears a decrease of 26,653.756 yen in the present definitive account. This decrease is owing to the fact that, although there was an increase of over 25,600 yen, owing to the adverse condition of exchange as compared with the last fiscal year, yet 52,200 yen was saved in interest on loans owing to the principal having been considerably reduced.

The following table shews the increase and decrease in the estimated and definitive accounts:—

	DEFINITIVE.		ESTIMATED.		INCREASE OR DECREASE.	
	Yen.		Yen.		Yen.	
Old Loan, Principal ...	499,298.073		488,000.000		Inc.	11,298.070
Interest .....	269,620.938		263,520.000		Inc.	6,100.938
Commission and Miscel- laneous Expenses .....	4,265.502		3,758.000		Inc.	507.502
Total .....	773,184.513		755,278.000		Inc.	17,906.513
New Loan, Principal ...	274,613.938		268,180.000		Inc.	6,433.938
Interest .....	804,114.548		785,900.000		Inc.	18,214.548
Commission and Miscel- laneous Expenses .....	5,676.522		5,270.000		Inc.	406.522

" Commissions & Miscellaneous Ex- penses .....	9,942.024		9,028.000		Inc.	914.024
Grand Total .....	1,857,596.538		1,814,628.000		Inc.	42,968.538

**CIVIL LIST AND APPANAGES OF THE IMPERIAL FAMILY:**—The definitive account under this item was 827,500 yen, which is neither greater nor less than the sum shewn in the estimates. Formerly this charge was included under the heading of "Imperial Household Department," but from the present year a special heading was created for this class of expenditure. Consequently the item does not appear in separate form in the accounts of last year.

**PENSIONS FOR MERITORIOUS SERVICES AND HEREDITARY PENSIONS:**—There is an increase in this item of 99,121.500

yen in the definitive account as compared with the estimates. This is due to the fact that, although there was a decrease of over 108,500 yen on account of the confiscation of bonds and the termination of annuities, there was at the same time an increase of 152,400 yen owing to the difference between the estimated and actual rice production which was converted into capitalized pension bonds. A further augmentation of over 55,200 yen appears in the payment of other pensions after the introduction of better regulations on the subject. These amounts make a total increase of over 207,600 yen and, by deducting the decrease from the increase, the net increment already mentioned is arrived at.

If we compare the present definitive account with that of the year preceding, there appears a decrease of 41,552.970 yen in this year's statement. The decrease in question is due to the fact that, the pensions to Ninnaji and twenty-eight other monasteries in Kioto, were abolished in the 6th month of the 9th year of Meiji, and a new regulation was established granting certain yearly payments; this effected a saving of over 32,000 yen. The expiration of some terminable annuities, and the confiscation of certain pensions, resulted in a further saving of over 9,500 yen.

**PENSIONS FOR SHRINES AND TEMPLES:**—There appears a decrease of 67,591.946 yen when the definitive accounts are compared with the estimates. This is due to the fact that there was a decrease of over 54,500 yen owing to the operation of Notification No. 119, issued by the Finance Department, and to the fact that only part of the unsettled pensions were paid, while the liquidation of the others was deferred until an accurate account could be prepared. This effected a saving of over 13,000 yen. Again, the present definitive account as compared with that of the previous year, shews a decrease of 1,862.414 yen, due to the gradual diminution of pensions, although at first sight some appear to have increased.

**COUNCIL OF STATE:**—The amount of the definitive account under this heading as compared with that in the estimates, gives a decrease of 71,097.611 yen. This decrease is attributable to the reforms introduced in the Civil Service in the first month of the tenth year of Meiji.

The amount shewn in the definitive account as compared with that of last year exhibits a falling off of 96,798.929 yen, a diminution which is due to the fact that there was actually a decrease of 119,600 yen. About 8,800 yen of this sum, resulted from this transfer to the Finance Department by Notification No. 156, issued in the 9th month of the 8th year of Meiji of the Printing Bureau, formerly under the control of the Council of State. There are also reductions of about 8,500 yen, owing to the manufacture of badges of honour and medals ceasing; of about 3,800 yen from a decrease in the number of foreign employés; 98,300 yen caused by the Civil Service reform already mentioned; and from various other sources. This diminution has occurred in spite of the fact that there was an increase of over 22,800 yen, due to the transfer of two offices, the Bureau of Ceremony (Shikibu-rio) and the Office for the compilation of local statistics (Chishi-kwa) to the Council of State, in accordance with Notification No. 182, of the 12th month of the 8th year of Meiji, and No. 167 of the 9th month of the same year. These two offices were previously under the control of the Imperial Household Department and the Home Department.

The following table gives the increase and decrease in the definitive accounts as compared with the estimates:—

	DEFINITIVE	ESTIMATED	INCREASE OR DECREASE.
	Yen.	Yen.	Yen.
Salaries .....	268,934.168	335,860.000	Dec. 66,925.832
Grants .....	40,152.377	39,523.398	Inc. 628.979
Travelling Expenses..	10,544.410	12,630.000	Dec. 2,085.590
Repairs .....	8,840.083	5,504.000	Inc. 3,336.083
Cost of Badges of Honour and Medals .....	1,937.411	1,746.000	Inc. 191.411
Cost of sending Officials Abroad .....	24,422.013	16,662.666	Inc. 7,759.347
Cost of Foreign Employes .....	1,879.900	1,350.000	Inc. 529.900
Miscellaneous Expenditure .....	66,192.027	89,719.936	Dec. 14,527.909
Total .....	422,502.389	491,600.000	Dec. 71,097.611

**SENATE:**—The amount appearing in the definitive account when compared with the estimate, shews a decrease of 32,474.648 yen. This is due to the fact that there was a decrease of 23,400 yen owing to a several vacancies in the Senate, and another of 9,000 yen, caused by the Civil Service reform introduced in the 1st month of the 10th year of Meiji. Again when we compare the expenditure in the present definitive account with the definitive account for the previous year, there appears a decrease of 35,170.797 yen. This is attributable to the fact that, during the preceding fiscal year, considerable expense was incurred by the construction of the new Senate House and Godowns, and in other expenses contingent upon the opening of the new establishment; these sums amounted in all to over 21,300 yen. During the year under consideration, however, there were no such disbursements required and, in addition, over 13,800 yen was saved by the Civil Service reform already alluded to, and some other items.

The following table will shew the increase and decrease of the definitive account as compared with the estimates:—

	DEFINITIVE	ESTIMATED	INCREASE OR DECREASE.
	Yen.	Yen.	Yen.
Salaries .....	126,403.078	172,360.000	Dec. 45,956.922
Grants .....	8,071.303	8,224.750	Dec. 153.447
Travelling Expenses..	3,447.000	1,512.450	Inc. 1,934.550
Repairs .....	3,360.477	1,200.000	Inc. 2,160.477
Cost of Foreign Employes .....	20,891.200	13,200.000	Inc. 7,691.200
Miscellaneous Expenditure .....	12,352.294	10,503.000	Inc. 1,849.294
Total .....	174,525.352	207,000.000	Dec. 32,474.648

**ASSEMBLY HALL:**—There is no charge under this heading in the present account, as the building could not be opened at the time expected owing to the Imperial Progress to Kioto and the disturbance caused by the Satsuma rebellion.

**DEPARTMENT OF FOREIGN AFFAIRS:**—The amount of this item in the present definitive account as compared with the sum appearing in the estimates shews a decrease of 31,787.407 yen. The diminution is due to the fact that there was a decrease of upwards of 16,500 yen owing to the Civil Service reform introduced in the 1st month of the 10th year of Meiji, and a further decrease of over 22,500 yen due to the diminution of expenses incurred in sending officials abroad. An increase, however, of over 7,800 yen appears, which was caused by the special mission to Spain and Portugal, despatched by our Minister in London. The amount in the definitive account when compared with that of the last fiscal year exhibits a diminution of 10,605.741 yen. A decrease of over 32,700 yen was effected by the following savings:—The sum of 6,400 yen, expended in the previous year for furniture for the Enriokwan (Hall for the Entertainment of Foreigners) was not required this year; over 6,300 yen was saved by the expiration of contracts with foreign employés; and over 20,000 yen by the reduction of the number of official entertainments to Foreign Ambassadors. There were also some other minor items. On the other hand, there is an increase of over 14,700 yen spent in the erection of an official residence for the Minister of Foreign Affairs, and of about 7,300 yen in connection with the Embassy despatched to Spain and Portugal.

The following table will shew the increase and decrease between the definitive and estimated accounts:—

	DEFINITIVE	ESTIMATED	INCREASE OR DECREASE.
	Yen.	Yen.	Yen.
Salaries .....	64,074.666	80,670.000	Dec. 16,595.334
Grants .....	20,258.088	15,430.000	Inc. 4,828.088
Travelling Expenses..	2,705.950	6,300.000	Dec. 3,594.050
Repairs .....	33,109.167	30,950.000	Inc. 2,159.167
Expenses of Officials Abroad .....	7,964.482	6,000.000	Inc. 1,964.482
Cost of Foreign Employes .....	8,836.391	15,930.000	Dec. 7,093.609
Miscellaneous Expenditure .....	16,863.849	30,300.000	Dec. 13,436.151
Total .....	153,812.593	185,600.000	Dec. 31,787.407

HOME DEPARTMENT:—In comparing the amount in the present definitive account with the estimate, there appears a decrease of 721,817.836 yen. There was an actual decrease of over 746,800 yen in the following items:—Civil Service reform, introduced in the 1st month of the 10th year of Meiji, 319,700 yen; postponement of opening the first and second silk filatures, 257,900 yen; alterations in the plans laid down originally for encouraging industries,—such alterations being based upon the consideration whether such industries were urgent or not,—135,600 yen; reductions in the item of repairs, &c., of over 28,500 yen; transfer of the Laboratory for Experimental Purposes in Uchiyamashita-machi, Tokio, to the Public Works Department, 28,500 yen; and over 5,000 yen from the permanent appointment in the 1st month of the 10th year of Meiji of the officials who were temporarily in charge of the Land Tax Reform Office from which they consequently drew their salaries after this change. There was, however, an increase of over 10,000 yen owing to the establishment of the Bureau for Shrines and Temples (Shaji-kioku) to replace the Department of Religion (Kiobu-sho) abolished in the 1st month of the 10th year of Meiji, and another increase of 15,000 yen owing to the great number of telegraphic despatches sent on Government service during the time of the Satsuma rebellion. Again, the amount in the present definitive account compared with the corresponding amount in the definitive statement for the previous year, shows an augmentation of 605,839.143 yen. This was due to an increased expenditure of over 792,600 yen, of which over 511,500 yen was incurred in the establishment of the Woollen Manufactory at Senju, and the extension of stock-raising at the Shimosa Sheep Farm; 86,800 yen was due to the increase of the postal system and the number of telegraphic messages and articles sent by post during the time of the Satsuma rebellion. Another item of over 68,700 yen was due to grants to the Mitsui Bishi Company and the Commercial School, commenced and partly paid for in the preceding year, but full payment for which was completed in the present fiscal year. Over 50,100 yen appears for the extension of the administration of Woods and Forests; over 32,500 yen was spent in establishing a branch office of this Department in the Ogasawara islands, and an increase of expenditure in connection with the branch office of the same Department in Riukiu. Over 17,600 yen comes under the heading of expenses connected with the issue of the regulations for Druggists under Notification No. 7, issued in the 1st month of the 10th year of Meiji, and over 15,200 yen is attributable to the establishment of the Yokohama Medicine Factory under Notification No. 32, issued by the Home Department in the 8th month of the 9th year of Meiji. An item of 10,000 yen for the establishment of the Bureau for Shrines and Temples (Shaji-kioku) completes the list. There was, however, a decrease of 186,700 yen made up of the following amounts:—Over 77,400 yen was expended in the preceding fiscal year owing to such contingencies as the construction of temporary buildings for the Department to replace those destroyed by fire; the purchase of furniture and books, and the re-arranging of all the necessary documents; the maintenance and improvement of the Public Park at Ueno, and the cost of replacing the articles lost by shipwreck when returning from the Vienna Exhibition. None of these expenses were incurred in the year under consideration. Over 28,500 yen was saved by transferring the Chishi-kwa of this Department to the control of the Council of State in the 9th month of the 8th year of Meiji; the Laboratory for Experimental Purposes at Uchiyamashita machi, Tokio, to the control of the Public Works Department in the 1st month of the 10th year of Meiji, and by the abolition, at the same period, of the branch office at Osaka of the Civil Engineering Bureau.

There was a reduction of over 10,200 yen due to the expenses for "Constructions, etc.," having decreased that amount as compared with the preceding year. Over 5,000 yen was saved by the permanent appointment to the Land Tax Reform Bureau of officials who had been lent from other Departments, and a sum of over 65,400 yen by alterations in the organization of the Government, in the 1st month of the 10th year of Meiji, and by other minor causes.

The following table shows the increase or decrease of the definitive accounts as compared with the estimates:—

	DEFINITIVE.	ESTIMATED.	INCREASE OR DECREASE.
	Yen.	Yen.	Yen.
Salaries.....	401,666.084	605,728.892	Dec. 204,062.808

Total.....	2,977,994.164	3,699,812.000	Dec. 721,817.836

FINANCE DEPARTMENT:—The amount in the present definitive account as compared with the estimates exhibits a decrease of 238,208.635 yen due to the following causes. Although a sum of over 59,600 yen accrued from charges for refining gold and silver bullion, and from the manufacture of sulphuric acid owing to the increased demand,—both native and foreign,—for that article, there was a decrease of 182,900 yen due to changes in the official system as introduced in the 1st month of the 10th year of Meiji; and to general savings effected in the Department. Other decreases were as follows:—Over 71,500 yen attributable to the diminution of the manufacture of such articles as ruled paper for petitions, stamps for legal documents, tobacco, filature silk, &c.; 12,600 yen by the appointment of officials from other offices to serve permanently, instead of as hitherto only temporarily, in the office of the Land Tax Office—a change effected in the 1st month of the 10th year of Meiji,—since which date

their salaries have been paid by that Department; 30,700 yen by no more machinery being purchased for manufacturing weights and measures, and by some minor causes. These decreases represent in all an aggregate saving of 297,800 yen and, when set against the increase given above, the result will be found as before stated.

Again, the total of the present definitive account when compared with the corresponding actual expenditure for the year previous, shows a decrease of 74,199,811 yen which was effected in the following items:—32,400 yen in the manufacture of ruled paper, stamps, etc., as a smaller supply of such articles was needed than in the previous fiscal year; 12,600 yen owing to the transfer of some officials to the Land Tax Office as already stated; and 29,190 yen due to the Civil Service reform effected in the 1st month of the 10th year of Meiji. There were also some minor items in which a saving occurred.

The following table shows the increase and decrease between the definitive and estimated accounts:—

	DEFINITIVE.	ESTIMATED.	INCREASE OR DECREASE.
	Yen.	Yen.	Yen.
Salaries.....	548,337.471	690,186.440	Dec. 141,848.969

Total.....	1,560,391.365	1,798,600.000	Dec. 238,208.635

WAR DEPARTMENT:—There will be found a decrease of 345,171,009 yen in the definitive account as compared with the estimates, which is due to the fact that the commissariat expenses for the soldiers on active service during the Satsuma campaign, and several other items, were defrayed from the special fund set apart for the cost of suppressing the rebellion. The number of the rank and file in each company has also been reduced, and the official reform commenced in the 1st month of the 10th year of Meiji, both of which circumstances contributed towards the decrease. There is also a diminution of 54,906,702 yen as compared with the definitive accounts of the preceding year. This is due to the circumstance that a sum of over 185,300 yen was required in that year for the construction of barracks in Riukiu han, and for allowances for removing the people living on the lands connected with the old castles in the provinces of Hiroshima and Himeji. This expense was not incurred in the present fiscal year. However, there was an increase of over 180,400 yen owing to the fact that the yearly expense of maintaining two companies of engineers, two batteries of artillery, and eight regiments of infantry, had to appear in the accounts of the present year, although, as these troops were only embodied in the latter part of the previous year, the cost for an entire year was not actually required.

The following table exhibits the increase or decrease in the definitive and estimated accounts:—

	DEFINITIVE.	ESTIMATED.	INCREASE OR DECREASE.
	Yen.	Yen.	Yen.
Pay of civil officers.....	231,066.318	320,213.000	Dec. 89,146.682

NAVY DEPARTMENT:—In comparing the amount in the definitive account with the estimate there appears a decrease 124,702,279 yen. This is due to the fact that, not only the cost of necessary materials for men-of-war, but also for repairs, coal, and other sundry expenses, were all paid out of the special fund for suppressing the Satsuma rebellion. This transfer of expenditure was absolutely necessary; the exigencies of crushing the outbreak called for great activity on the part of the navy, and naturally caused an abnormal outlay. The total of the definitive account when compared with the corresponding statement for the year previous, exhibits an increase of 599,154,553 yen. This is explained as follows:—Over 749,300 yen was paid in the present term on account of the ironclad purchased in England; and over 14,300 yen was paid for freight on the new boilers for the *Rinjo Kan* and two other ships; these two items amounting in all to over 763,600 yen.

On the other hand over 41,800 yen, the cost of the boilers for the *Rinjo Kan* and two other steamships, and over 5,900 yen for the extension of telegraph lines in the Yokosuka dockyard, were not paid in the present fiscal year. There was a decrease of over 19,500 yen owing to the diminution of outlay in the construction of the *Seiki Kan* and *Jungei Kan*, and another amount of over 97,200 yen was saved by a decrease in the ordinary sailing expenses during the period of the Satsuma rebellion, and sundry other items. These sums aggregate in all over 164,500 yen. The amount of the nett

decrease stated above will be found when the total increases and decreases are balanced.

The following table shows the increase or decrease in the definitive and estimated accounts :—

EDUCATIONAL DEPARTMENT :—The present definitive account as compared with the estimate exhibits a decrease of 9,488.994 yen. This we attribute to the circumstance that although there was an actual increase of over 22,400 yen under the item of "Subsidies to Schools," a saving was effected of over 31,900 yen owing to the Civil Service reform introduced in the 1st month of the 10th year of Meiji.

Again, the amount in this definitive account when compared with the corresponding statement for the previous year, shews a decrease of 48,202.848 yen. This was due to the fact that although over 20,800 yen was expended in subsidies to public normal schools in the cities and prefectures, and that the cost of erecting new buildings for the Head Office added 15,000 yen to the expenses (making an aggregate increase of over 35,800 yen), yet there was, on the other hand, a decrease of over 84,000 yen owing to the abolition of the school at Aichi ken for teaching the English language, and eight other schools. The reduction of subsidies to schools under the direct control of the Department, the Civil Service reform effected in the 1st month of the 10th year of Meiji, and several other causes all contributed to the decrease. The two items of increase given above when deducted from the decrease, will give the total net diminution already mentioned.

The following table shews the increase and decrease in the definitive and estimated accounts :—

	DEFINITIVE.	ESTIMATED.	INCREASE OR DECREASE.
	Yen.	Yen.	Yen.
Salaries .....	200,386.100	225,050.500	Dec. 24,664.400

Total .....	1,695,511.006	1,704,800.000	Dec. 9,488.994

DEPARTMENT OF RELIGION :—The amount in the definitive account compared with the estimates, exhibits a falling off of 26,010.781 yen, which is attributable to the fact that the expenses of this Department were only for seven months, viz : from the 7th month of the 9th year of Meiji, in consequence of the abolition of the Bureau by Notification No. 4, issued in the 1st month of the 10th year of Meiji.

The amount in the present definitive account as compared with the corresponding statement for the previous year, exhibits a decrease of 23,699.137 yen from the various causes already mentioned.

The following table shews the increases or decreases in the definitive and estimated accounts :—

	DEFINITIVE.	ESTIMATED.	INCREASE OR DECREASE.

### NOTES OF THE WEEK.

#### BIRTH.

On the 11th October, at 238 Bluff, the wife of A. T. WATSON, of a daughter.

The M. B. steamer *Sumida Maru* arrived from Hongkong on Monday last having on board the home mails of August 27th. European despatches left the same day by the P. & O. steamer *Sunda*. The P. M. S. S. *City of Tokio* arrived on the 12th instant from San Francisco with dates up to the 20th ultimo. The M. M. steamer *Volga* will leave for Hongkong with European mails to-morrow morning.

We were informed last Tuesday that the season has not been so unfavourable for the otter hunters as was at first supposed. One schooner which is still up north has eighty six otter skins and about three hundred seals; three otter boats had when last heard from sixty-five, fifty-six, and over forty otter pelts, respectively, and a large number of seal skins in addition.

No vessel sailed from New York for Japan between the 25th of last August and the 14th of September, nor was there any ship on the berth at the latter date. The *Golden State* sailed for Hongkong on the 9th of September, and the *N. Boynton* loading for Shanghai, was the only vessel for the Far East when the mail left.

Our San Francisco correspondent writing on the 20th ultimo, the day the *City of Tokio* sailed, says, that the China Merchants Company's steamer *Ho Chung* left port on the 8th instant on her return trip to China, laden with some 60 tons of flour, dried fish and general merchandize shipped by Chinese traders. She took no passengers for the simple reason that as many as are desired can be obtained at Honolulu, carrying them at \$53 a head to China. This arrangement is considered more profitable than filling her cabins from this port. The company's agents are inclined to state that the *Ho Chung* will return via Honolulu in December next, but they are not disposed to be at all communicative on the subject. Tom Ling Sing, the representative of the China steamship company left for the East on the 12th instant. The purposes of his visit are not positively known. By some it is said, he went to Washington to treat in reference to the matter of alien tonnage tax, which the *Ho Chung* had to pay; and others again state that he went to visit eastern shipyards with the view of ordering for his company an American-built steamship. The telegraph reports that the Chinese Government has abandoned all attempts to enforce the return to China of Yung Kwai, the student who graduated from the High School at Springfield in the state of Ohio and was admitted to Harvard College, and called home by his father for having embraced the Christian religion.

We are informed that the pilot cutter, *Eddie*, belonging to Pilot Conners, was lost at Nagazuru during the recent typhoon.

The Shanghai papers mention that the recent interruption of telegraphic communication, was caused by the Gutzlaff-Amoy cable having been maliciously cut about sixteen and a half miles from Gutzlaff.

Referring to the murder of Lord Mountmorres the *China Mail* says:—"Clonbur" is not a familiar way of spelling; and we suppose that Clonbert is intended. Clonbert is a town in Monaghan, and the gentleman who has, according to Reuter,

fallen a victim to the present insecurity of life and property in Ireland—Lord Mountmorres, of Castle Morris, in Kilkenny—is the representative of a family that claims descent from the great house of Montmorency, and came in with William the Conqueror.

The members of the Société Suisse de Tir held a very pleasant meeting on Saturday last at the rifle range, the weather being all that could be desired. Eight prizes were given which, owing to the handicapping, escaped the hands of some of the veterans. At the termination of the regular shooting, there was a private match between Mr. Favre-Braudt and Colonel Murata at 500 yards, when the latter won with the excellent score of ninety-seven out of a possible hundred, having made no less than thirteen consecutive bulls-eyes. The following is a list of the eight winners of the prizes given by the Société.

Name.	100 yds.	200 yds.	300 yds.	400 yds.	500 yds.	Total.
Mr. Münch .....	10	39	10	31	70	
" Guissani .....	8	35	8	31	66	
" Abegg .....	9	31	10	33	64	
" Dubois .....	8	29	9	34	63	
" Grob .....	8	35	9	27	62	
" Douglas .....	7	29	8	32	61	
Colonel Murata .....	6	27	7	31	58	
Mr. Bland .....	8	31	8	27	58	

A match was played on Saturday last between a Scotch and Welch eleven, captained by Mr. Dodds, and one of English and Irish under Dr. Wheeler. The former team made a total of 194 runs: the game was not decided as the latter team did not conclude its innings.

News was received in Yokohama yesterday that both Ohio and Indiana have gone republican. Little else was expected as regards Ohio, that being General Garfield's own State, and Indiana was supposed to have strong republican tendencies when the last mail left. The struggle for the Presidential chair will evidently be close.

We understand that the post office employé who annexed the money recently sent in a registered letter, has not yet been discovered.

The success of Sir John Macdonald and his colleagues in financing the Canada Pacific railway, is said to have had a very exhilarating effect in Montreal when the news arrived; prices at the Stock Exchange advancing from one to four per cent. and preparations were being made to give the successful Ministers a grand reception on their return from Europe. The completion of this important line, which runs entirely through British territory, is now only a question of time and one of the first results will probably be the establishment of a British owned steamer service to China connecting with the Pacific terminus. We notice by the San Francisco papers, that the English Government has entered into a contract for very extensive dock accommodation, &c., at Esquimaux, which will doubtless be very strongly fortified and thus afford a counter-poise to any acquisitions Russia may make in Corea. The Canada Pacific railway will also have the effect of populating the fertile lands of British Columbia, in some portions of which crops returning over sixty bushels of oats to the acre were grown last season. The enterprise, it would appear, is to be conjointly launched by the Société Generale of Paris, the Bank of Montreal, and Messrs. Morton, Roe & Co., of London. The first issue of bonds will, it is said, probably amount to £10,000,000.

The terrible experience of the British barque *Scottish Fairy* in the recent typhoon, affords a stirring example of some of the dangers of navigation in these seas. On Thursday the 7th instant, the captain of the British steamer *Euphrates* which had just arrived, reported having passed a dismantled barque making towards Yokohama under jury-masts, whereupon one of the Yokosuka steamers was at once despatched to render assistance. The vessel, which is a fine iron barque, presented a sad appearance as she was towed into harbour, with two of her masts gone and only a portion of the mizen standing. That those on board have to be thankful for their lives will be shewn by the following account of their disasters, supplied to us by the courtesy of Captain Toozes. The *Scottish Fairy* left Kobe in ballast, for Portland U.S.A., on the 30th ultimo, at 4 p.m. with a fine breeze. On the following

day, the wind freshened, a heavy swell set in, and sail was partially shortened in consequence. The next day the wind continued to increase in violence, and towards night it blew a gale. In the morning, however, the wind moderated and it was hoped that all immediate probability of a gale was over. On Sunday morning, the 3rd instant, there was a steady wind and a turbulent sea from the south-west; the barometrical reading being 29.80. The wind continued to freshen, and, at 3 p.m. it was considered advisable to take in the stay-sails and flying-jib. This proving insufficient, further sail was shortened. The Broughton Rock was sighted at 5.30 p.m. bearing N. by W. distant twelve miles. At 8 p.m. there were signs that the gale would be excessively severe, and the foresail and jib were taken in. The Island of Mekuro was sighted, when it was found necessary to set the main-topmost-staysail to avoid drifting on the islands. At 11.30 p.m. the ship gave a very heavy lurch to leeward carrying away the lee fore-lift. This caused the fore-yard to peak over end, and when an attempt was made to take in sail, the topsail sheet carried away, the sail flapped about, became unmanageable, and at last blew away from the yard altogether. At midnight there were strong squalls and blinding rain from the south-south-east and the barometer had fallen to 29.50. From this moment the gale and heavy sea increased. As the ship lay right over and could not right herself, it was thought that the ballast must have shifted, and an inspection by the chief officer proving that this was the case, all hands were sent below to trim ballast over to windward. While thus employed, a violent gust struck the vessel, tearing everything loose and throwing her over still further, the water reaching as high as the leading trucks of the rigging. The one sole remaining chance of saving the ship and crew appeared to be to cut away the foremast. The *Scottish Fairy* was now in such a position that there was no possible method of reaching the forepart except by walking along the outside of the vessel as she lay on her beam-ends! This was, however, effected without loss of life, in spite of the terrible seas which struck the ship every moment, and made a clean breach over her. The foremast was cut away, and in its fall it carried away the jib-boom. As this failed to relieve the ship, the mainmast was next sacrificed, and with it there went the mizen-topmast and the main-stay, lifting the boat on the fore-house clean overboard. In falling the wreck smashed the lifeboat to pieces. The vessel had been heeled over so far, that as she lurched some of the crew below were actually buried in the ballast, but contrived to extricate themselves. The light was extinguished by the same cause and all hands had to make the best of their way right away aft in the darkness and crawl out of the cabin hatch, and along the port side wainscoting of the cabin, which was actually a temporary floor, and still shows the foot marks. Relieved, however, by the loss of her masts, the *Scottish Fairy* now righted sufficiently to free the decks from the wreckage, although the lee rails were still under water. The barometer had fallen to 28.95, while the gale was at its fiercest intensity, but all hands worked with a will for their lives, and managed to chop all the debris of masts, yards, rigging, &c., from the vessel. At 2.40 a.m., the gale seemed to have broken up. An investigation of damages showed that the mizenmast was sprung by the heavy lurching, as all the stays went when the mainmast was cut away. Shortly after this all hands set to work again to trim the ballast, which had been thrown from the starboard to the port side of the ship. The barometrical reading was 29.50 and it is to be remarked as a singular occurrence that during the hardest of the squalls, the mercury rose as high as 31 inches. When day dawned the *Scottish Fairy* presented a pitiable appearance. The decks had been swept clear of everything moveable, the port galley doors burst in, the rails on the poop and fore-house carried away, and four deck planks smashed in, making a large chasm in the vessel. The wind was now falling as rapidly as it had previously risen, and subsided to more or less a fresh breeze from the north-east. All hands were busily engaged in trimming the ballast, and the ship was kept under a reefed spanker and staysail, and a spar and hawser were rigged for a sea anchor. At midnight the weather was dead calm, and sail was taken in. On Tuesday at noon, a jury-mast was rigged and the vessel's course laid for Yokohama, where she

arrived on Sunday the 10th instant. It will cost at least \$20,000 and probably more, before the *Scottish Fairy* can be restored to her former condition. In order to form any accurate idea of the effect of the typhoon upon the *Scottish Fairy*, a visit to the vessel in almost a necessity. Disasters of this kind, however, afford Anglo-Saxon seamen an opportunity of exhibiting the dauntless courage which has carried the British and American flags triumphantly over the ocean. To their indomitable pluck alone (under Providence) do the officers and crew of the *Scottish Fairy* owe a rescue from what at one time seemed certain death.

An accident which might have terminated fatally, but for an exhibition of pluck and presence of mind, occurred last Monday. Two American naval officers were on board the Yokosuka steamer, and one of them suddenly overbalanced and fell into the water. His brother officer quickly threw off his coat, plunged into the water, and succeeded in supporting him until the steamer could be brought round to pick them both up. We have been asked not to publish names or we should have been very pleased to place on record the hero of so gallant an action.

The Gaiety Theatre on Monday evening presented quite a brilliant scene when the curtain rose for the first performance of the new Amateur Dramatic Association of Yokohama. The three dismal lanterns which depend in a row from the façade in Main Street, were there as usual; but the vestibule and house generally had been decorated with great taste under the direction of the worthy secretary. The inspiring strains of the *Richmond* band also assisted to give the whole affair some gala effect—a good augury we trust of a successful season. The performance opened with Morton's farce "The Steeplechase," a piece thoroughly well known to all who have lived in London for any length of time. The interest of the piece centres in the unfortunate Mr. Tittums who comes down to Southampton to meet his wife returning from Havre; and whose troubles begin about half an hour before the arrival of the boat by the loss of his "Sydenham suit." Reduced to extremities he "borrows" a portmanteau belonging to a fellow-lodger at the inn and, to save himself from being brought up before the magistrate for purloining the suit of "regimentals," agrees to personate the owner of the clothes (Dr. Clipper) and in his stead to ride the *Commodore* in a steeplechase. This he succeeds in winning by some marvellous conjunction of events and is carried back to the inn in triumph, finds his wife awaiting him, and all ends happily. The part of *Tittums* was taken by Mr. Bazing, and was magnificently played throughout. Never for one instant was the interest allowed to flag, from the first groping with an umbrella for the can of hot water, to the affecting episode of shaking hands with his wife in the midst of his triumphant return. Elocution, action, and byplay, were alike perfect, and we cannot but regret that so valuable and talented a member of our community was allowed to lie *perdu* by the late Dramatic corps. He was well supported by the other characters; Mr. Shaud as *Alderman Slowcoach*, shewed a marked improvement on his first appearance some few months back. Mr. Brower as *Dr. Clipper* played the part to the life; while Messrs. d'Almeida and Eyton, as the inn-servants and Messrs. Herbert and Bernard as "Gents" were most effective. The ladies parts were, we believe, both in the hands of debutantes, Mr. Churchill acquitting himself admirably as the better half of *John Anthony* and Mr. Morse appearing as a good-looking and affecting *Mrs. Clipper*. The evening concluded with another farce "Should this meet the eye," also one of the stock minor pieces of the London stage. It is not nearly of so high a class as the *Steeplechase*, and in spite of the powerful acting of Mr. Eyton did not please the audience nearly so well. The acting of Mr. Morse as *Polly* was very good, especially in the interview with *Lionel Long* (Mr. Bernard) where he bribes her with half a crown to tell a little fib, and doubles the price for the "next size larger." He also made a great point where, astonished at *Mr. Louder's* ravenous appetite, *Polly* suggests that the door of the "Zoo" must have been left open, and hurls at him with most powerful invective the word "Beast!" Mr. Churchill made a refined and graceful *Maud*, perhaps a thought too sedate and middle-aged for a bride just

married, but otherwise quite satisfactory. Mr. Leckie as *Skinflint* did well, as did all the minor characters. Mr. Bernard as one "L.L." and Mr. Eyton as the rival "L.L." shared the honors of the piece; the great versatility of the latter gentleman being admirably displayed: especially where, "having disguised himself in a little of that oil," he sallies forth a regular dandy to the conquest of the supposed young lady whom he met at the "Grecian." His elegant posturing in this scene contrasted finely with the beefsteak interview, and we feel some little tinge of regret that so much talent should be thrown away on a rather ungrateful part. Altogether, the evening was a most decided success, and we heartily congratulate the Association on so good an opening. We hear the members are hard at work, rumours are already afloat of a prospective comedy (with real ladies?) and a grand Christmas burlesque, so that the community may look forward to a winter less dull than those we have experienced of late years.

The rowing club held its previously announced races last Monday afternoon. There was a very fair attendance and the weather was all that could be desired. The races were started with unusual punctuality and for the first race—the Champion Pair Oars—the two following crews competed:—

Colors, Blue.

Bow.—J. T. Boag.  
Stroke.—H. C. Litchfield.  
A. W. Glennie, cox..... 1.

Colors, White.

Bow.—J. Leckie.  
Stroke.—A. H. C. Haselwood.  
M. Lovell, cox..... 2

The distance was one mile. At 2.40 p.m. an excellent start was effected, Haselwood taking the lead, both crews pulling 32 per minute. Opposite No. 110 Bluff, both boats were level. Off the Pacific Mail wharf there was a great display of splashing and each bow was rather wild; the time was then 34 strokes per minute. Haselwood here put on a magnificent spurt and was answered from the other boat, which came in a winner by half a length. Time 8 min. 15 sec.

The next race was one between two scratch fours, put in to give competitors a little breathing time. The distance was half a mile and the crews were as follows:—

Bow.—J. B. Maxwell.  
J. Hunt.  
H. O. Jeyes.  
Stroke.—G. W. F. Playfair.  
A. W. Glennie cox..... 1

Bow.—E. F. Kilby.  
E. Wheeler.  
F. Walker.  
Stroke.—Woods.  
J. Rickett cox..... 2

Both boats started evenly and pulled a uniform stroke of 35 per minute up to the Grand Hotel, when Playfair's boat got ahead and won in 3 min. 20 sec.

The third race—for the Club fours—produced the following crews:—

Colors, Red, black cross.

Bow.—W. Till.  
2.—W. Gordon.  
3.—J. Walter.  
Stroke.—J. T. Boag.  
M. Lovell, cox..... 1

Colors, Black, red cross.

Bow.—A. D. Uloth.  
2.—T. F. Talbot.  
3.—P. S. Symes.  
Stroke.—T. G. Richmond.  
J. Rickett, cox..... 2

The race was close throughout, but Boag won by a short half length in the very good time of 7 mins. 8 secs.

The next event, for the Champion Pair Oars, proved an easy victory for the American crew. Both crews started at a stroke of 32 per minute. Off the Pacific Mail wharf, however, the Americans were three lengths ahead, pulling 29 to their opponents 32. The lead was gradually increased and the race won by six lengths. Time 7 min. 53½ sec. Distance one mile. The following were the crews:—

Bow.—F. V. Samuels.  
Stroke.—J. W. Whitmore.  
S. D. Hepburn, cox..... 1  
Bow.—F. E. Lewis.  
Stroke.—A. H. C. Haselwood.  
M. Lovell, cox..... 2

After this there was a scratch race of half a mile, got up between representatives of Kobe and Yokohama. The former had it all their own way from the start. Time 2 min. 44 seconds. The crews were as follows:—

KOBE.

Bow.—R. S. Symes.  
H. J. Hawkins.  
G. Hamilton.  
Stroke.—M. Pora.  
Blackwell, cox..... 1

YOKOHAMA.

Bow.—H. O. Jeyes.  
G. C. Wood.  
G. T. Boag.  
Stroke.—H. J. Litchfield.  
J. Rickett, cox..... 2

The match of Scotland vs. The World came off on Thursday but, owing to the approach of darkness, it could not be finished. There was a fair attendance of spectators and the band of the U. S. S. *Richmond* enlivened the proceedings. The play was moderate. Three easy catches were missed by Dr. Wheeler at the opening of the game, on the other hand, Mr. Dodds caught Mr. Thompson out excellently in a very difficult catch.

The bowling of Mr. Sutter was particularly effective. The following is the score:—

We notice in an English journal, "that the Conference of the Association for the Reform of the Law of Nations was opened at Berne on the 24th of August. The members were received in the Chamber of Representatives by the President of the Confederation. They included the Japanese Ambassador and representatives of the United States, France, Great Britain, Germany, Austria, Holland, and Belgium. The Japanese representative has read a paper upon Consular Jurisdiction in Japan."

A home journal mentions that a curious discovery is reported by a French provincial journal. Mocha coffee shipped from Aden reaches France by way of Marseilles through Algeria. It is, for convenience of carriage by camels across the African deserts, made up in special packages consisting of a camel's skin cut in halves, each package weighing about 185 kilogrammes. On opening one of these packages recently a goat-skin bottle was found, such as is used by the Arabs. In-

side this bottle, which had evidently never been used, were found some fifteen letters, written in Arabic, and enclosed in little bags of linen, each letter bearing the seal of a marabout. The theory is that they have come from some caravan which was attacked by Arab robbers. The story has a curious odour of romance about it, and would supply a valuable incident for an Oriental drama. The letters have been sent to Paris to be translated.

The correspondent of the *Times* writing from Vienna on the 26th of August says that "the Emperor Francis Joseph received to-day in private audience the Envoy of Japan, who presented his credentials to His Majesty. The Envoy was accompanied by the Secretary of the Japanese Legation. In the speech which he addressed to the Emperor, the Envoy transmitted the felicitations of the Emperor and Empress of Japan on the occasion of the betrothal of the Crown Prince Rudolph. At the same time he presented to His Majesty the Japanese Order of the Chrysanthemum, which is only conferred on Sovereigns. The Emperor, who expressed himself charmed with this mark of esteem on the part of the Mikado, charged the Envoy to convey his best thanks to his Sovereign."

A native paper reports that it is intended to sell the botanical gardens at Naito, Shinjiku, Tokio.

Another journal states that the Bazaar held on the Swamp gardens, and which has of late been closed, will be re-opened.

An American paper has the following:—"Inquirer" asks: "Is the *Great Eastern* the largest vessel ever built?" An impression has got abroad that she is, but such is not the case. The *Mayflower*, in which the Pilgrim Fathers came to this country, was the largest ship that ever ploughed the water. The old furniture scattered over this country, brought over by the *Mayflower*, would fill the *Great Eastern* a dozen times or more.

The *Huigo News*, which by-the-by appears to have suddenly become once more the bright little paper of old, writing on the 11th instant on the subject of the Tengu, says:—"The earliest memories of most of us are connected with tales of ghouls and fairies, and we may consider ourselves very fortunate if the nights of the earlier part of our existence were not made horrible by threats of the appearances of ghosts and goblins of awful aspect and carnivorous tendencies, which were to do something dreadful if silence was not preserved. But the nations of the East delight in an exuberance of fancy in such matters that throws the Western nurserymaid far into the shade, and even eclipses the sagas of the ancient Norsemen. In addition to the variety and hideousness of the Asiatic pantheon we, who live here amongst these peoples, are often reminded of the practical way in which they work their fancies into the web of their everyday life. A case of this nature lies before us as we write. The *Kobe Shimpō* of Thursday gives, in all apparent seriousness, an account of the way in which the "Tengu" has taken the soul of an old woman. This "Tengu," as pictured by Japanese artists, is one of the most hideous-looking objects that a lobster supper could conjure up any idea of. With a long nose, wings, and two claws on each of its four feet, it is hardly a picture that one would wish to have about a fever patient, unless he had designs on that patient's life—or conscience. We will let the *Shimpō* tell its own tale, which runs as follows: "A woman seventy years of age, named Isedani Towa, lived in lodgings in Hiogo. She was a fortune-teller, and on the 1st instant, she invited two clients, a man and woman, who desired to pry into the mysteries of the future, to spend a night with her at the shrine of the Inari at Takatorisan, in the worship of that vulpine deity. Accordingly, on the night of the 3rd, the party were housed in the Giyojodo of the temple (the building in which pilgrims stay). The old lady told her companions that on such a tempestuous night the mysterious Tengu was sure to appear and give them all the happiness for which they longed. The young woman was very much frightened, and preferred passing the time at the main shrine, while her male companion and the old crone stayed in the Giyojodo. As the night passed on, the gale increased, and the sorceress firmly asserted her belief that the spirit would arise. Whilst she was in the act of so

saying, the Tengu entered her body, the building was blown down, and life was crushed out of her."

We learn from the *Rising Sun and Nagasaki Express* of the 9th of October instant, that two large steamers—the *Naples* and the *Shadcan*—called there during the past week, en route from Cronstadt to Vladivostock, laden with arms and ammunition for the Russian forces. Both of them encountered the typhoon in the vicinity of Hongkong. After taking in coals and water they proceeded to their destination.

"A daring robbery," says the *Huigo News* "was committed on the night of the 7th instant. We have not been able to gather full particulars, as all Chinese, as usual, are very reticent in giving information, but from what we can learn we gather that about ten or twelve coolies who have been employed in working on board ship broke into a godown which stands in one of the bye streets running between the bund and the Sakaye-machi, and which is in the rear of a tea-firing godown owned by a foreign firm. The thieves removed a quantity of rice and put it in a boat, but were stopped in their operations and landed in jail, to await further investigation."

The last received *Pall Mall Gazette* says:—"Little spurts of flame have been reminding us lately of the hidden fires under the Franco-German surface. "Mme. Sarah Bernhardt," we read, "has given occasion to an incident of international importance." On examination the incident turns out to be somewhat less grave than this pompous introduction would lead us to suppose, but it is still interesting as one of those straws which show the quarter of the wind. The smouldering ill-will between France and Germany has lately led to some sharp skirmishing between the newspapers of either country about M. Gambetta's curious speech at the Cherbourg "Punch." Mme. Bernhardt will not yield in patriotic, not to say Chauvinistic, ardour to any journalist of the land. When, at a public dinner given in her honour, the German Envoy at Copenhagen proposed a toast to France, the actress in reply "made a pointed speech, at the end of which she expressed a hope that the toast had been to the whole of France, Alsace-Lorraine included." A good deal of excitement seems to have been evoked by the remark; and, if the report is correct, the banquet had to be prematurely closed in consequence of it. The better relations which have lately grown up between Germany and Denmark make it very doubtful whether the German Envoy "will be instructed to take a prolonged leave of absence." But even if no such dire consequences follow, the untoward little incident is a reminder of the volcano.

"By a strange irony of fortune," says the *London Financier*, "the shares of the failed City of Glasgow Bank have become a valuable property. City of Glasgow Bank shares have become scarce because very few shareholders have survived the blood-letting process of the liquidation. The other day an advertisement appeared offering for sale a share in the bank, on which all calls have been paid. The advertisement recites that 'the liquidators have already paid 17s per pound on the liabilities.' As regards the remaining 3s per pound, it is, of course, possible, but not considered probable, that a further call will be made; and it is now publicly known that the liquidators hold assets of great and admitted magnitude and value, but requiring time for their realization. The price asked for the share is £3,000, 'and upon this,' the advertisement alleges 'an unusually large return may be confidently expected.' With what feelings must a notification of this sort be read by the hundreds of ruined shareholders in this unhappy concern? To think, too, that the Directors of this so-called bank, just released from prison or still expiating their offence there, should have the questionable satisfaction of knowing that they have actually raised the market value of each share to £3,000."

The origin, meaning, and correct spelling of *Beau Or's* name has caused perhaps as much discussion as the official inquiry whether the horse himself, or a changeling, ran for the Derby. On the former subject a correspondent of the *American Army and Navy Journal* gives the following information:—"We have had a capital Derby; the weather was fine, and the horse of a popular man, the Duke of Westminster, *Beau Or*, won the race. I should say that the horse's name is that of a portion of a coat of arms, about which there was a law suit lasting three

years, five hundred years ago, between the Duke's ancestor and a famous knight."

The *Hochi Shinbun* says that the Government has resolved, from motives of economy to reduce by about one-half the expenditure in Legations and Consulates. The number of officials employed in those branches of the civil service will also be decreased.

A native paper states that the railway between Tsuruga and Hikida, now in course of construction, is almost ready to be opened for traffic.

The special correspondent of the New York *Herald* writing to that journal from Washington on the 10th of last September, says that "the Secretary of the Navy infers from the cable despatch received by him to-day from Commodore Shufeldt, announcing the United States steamer *Ticonderoga* at Hiogo, Japan, homeward bound, that his mission to Corea to induce the King to establish friendly commercial relations with the United States has not been successful. The outlines of Commodore Shufeldt's instructions were published in these despatches of the 30th of August. He was ordered not to display any force, and as the Coreans had several months in which to consider his appeal before any answer was given, it is supposed the request has been denied. The visit of a Corean Ambassador to Japan, however, may lead to a more favorable consideration, it is thought, of the proposition of this Government. Rear-Admiral Clitz, who succeeds Rear-Admiral Patterson in the command of the Asiatic fleet on the 1st of October, is required by his instructions not to unite with any of the European naval forces in any demonstration that may be made either in Corean or Chinese waters. The policy of the administration is set forth as eminently pacific in the East, and our naval officers are cautioned not to countenance any act that could be construed as in the slightest degree unfriendly to Eastern nations. It is understood that the mission of the new Minister to China and the Commissioners sent to obtain a modification of existing treaties between China and the United States, is now promising success, the only drawback being the possibility of the negotiations reaching over a period that will extend beyond the time of the present administration."

An exchange says that Count Arthur Dessenax, a grand nephew of the hero of Marengo, is the possessor of a morsel of Molière's skull, which he purchased fifteen years ago for 300*f.* from Count Pourtalès, who had acquired it at the sale of Baron Denon's celebrated collection of "personal relics" in 1823. Among the grisly articles then brought to the hammer, be it parenthetically observed, were the skeletons of Abélard and Heloise, of Agnes Sorel and of the Cid Campendör. Baron Denon had contrived to annex the particular relic now in the possession of Count Dessenax, for which an American amateur of such matters has recently offered him £4,000, during the transfer of Molière's and La Fontaine's remains from the graveyard of St. Joseph to the cemetery of Père-la-Chaise, which transfer took place in the year 1792. As a matter of fact, the Baron and a rival collector, M. Cailhava, upon that occasion each stole a fragment of the great French dramatist's skeleton. Cailhava secured a tooth, which he wore, set in a ring, upon a finger until the day of his death, and Denon "annexed" the skull splinter, which is destined ere long to cross the Atlantic. A third relic of Molière exists in the Musée Cluuy, a piece of his cheek bone, there exhibited in a silver mounting; but its donor, Professor Cloquet, has never been able to establish its absolute authenticity to the satisfaction of his compatriots, whereas the genuineness of the relic successively owned by Denon, Pourtalès and Dessenax is undisputed.

Mr. Labouchère in *Truth* says:—"A correspondent writes me the following practical remarks upon the 'service' question in lawn tennis. I agree with him, in a great measure, that it is hardly satisfactory that a bad player should now and then, by fluking a difficult service on his first essay, be able to effect as much on the one stroke as a good player who makes pretty sure of sending a stiff service every time. Besides, the knowledge that there is a second essay allowed, undoubtedly makes many a server somewhat careless on his first try. At the same time, I believe the change which my correspondent proposes would

not be so popular among the majority of players; many 'fancy' their service, and would not like to see its resources crippled, still less would they like to see the tally fall at the outset, by the service being at fault the first time. As a matter of private practice at home for young players, I think the plan enforced by 'An Old Player' is calculated to improve the play and to make the server far more painstaking. It must, however, be borne in mind that the acquisition of a severe service is a matter of practice; and, that practice is usually obtained in the 'grace' service, which entails no penalty if it fails. If this be abolished, severe service must be made a separate study, apart from actual play, or else be never learned at all."

The Berlin papers announce that at the beginning of the month of October instant, an ordinary sailing boat, well known on the River Spree, will start from the Jannowitz Bridge for New York. The route will lie along the Spree, the Havel and the Elbe to Hamburg, thence to Liverpool, and from Liverpool across the Atlantic, while the boat will return through the West Indian Archipelago to Lisbon, and thence direct to Hamburg, the Elbe, Havel and Spree. Four months have been determined upon by the sanguine adventurers as a sufficient period for the daring voyage, which is for the first time to connect as sister ports the great cities of Berlin and New York. The first thought of the undertaking was due to a conversation at a dinner of the Berlin Sailing Club, on the successful ocean voyage of two Englishmen or Americans in a boat of sixteen feet in length. A Berlin banker, a leading member of the club, ventured the opinion that no German would dare to undertake such a voyage. The manager of a great place of entertainment in Berlin, who was formerly the captain of a German transatlantic steamer, propounded a wager that he would find German sailors and sportsmen who would not shrink from the attempt to journey all the way from Berlin to America in a little Spree sailing boat. The wager was accepted by the banker, and the sum fixed at 6,000 marks, which is to be paid on the day on which the boat lands its passengers, after the completion of their voyage, at the Jannowitz Bridge. There seems to be no lack of volunteers for the extraordinary adventure, and the *National Zeitung* states that a naval lieutenant and a Berlin journalist are accepted as two of the companions of this Prussian Odyssey. We are not yet informed as to the name of its Ulysses.

The first of the eighty ton guns was recently lifted on board the *Inferrible* at Portsmouth and deposited in its place in the after (starboard) turret without a hitch of any kind, and with scarcely more difficulty than would be experienced in transporting a sixty-four pounder. The extreme length of the gun itself, without measuring the cascabel, was 26 feet 9 inches, or within 1 foot 3 inches of the entire inner diameter of the turret. It will thus be seen that considerable skill was required to manage the gun in its descent. Tackle and blocks, the sheaves of which had been previously tested to bear a strain of six tons, were attached to the breech and the fore part of the gun and carried to winches on the deck, for the purpose of adjusting the position of the mass, while the ship itself was capable of being moved astern by means of a pneumatic capstan alongside. As soon as the gun had been poised above the turret the forward falls were lowered, so that the gun descended obliquely, and the moment the muzzle was found to be opposite the gun port the breech was gently lowered, the ship being at the same time drawn by the stern. In other words, while the gun hung in mid-air, the ship was pulled astern, and so floated the port past the gun. The method was similar to putting a collar on a horse.

Another relic of the Spanish Armada has, says the *Edinburgh Daily Review*, been secured at Slains, Aberdeenshire, this week by the efforts of Mr. David Ritchie and the salmon fishermen. It is a large gun raised from the place where one of the ships belonging to the Armada was wrecked, and, strange to say, though it has been in that place for upwards of 200 years, yet it seems as sound as ever. The length of the gun is 8 feet, the diameter at the touchhole, 13 inches, and the diameter of the bore at the muzzle, 4 inches. It appears to be loaded partly with nails. One of the nails is in a complete state, well made and arrow shaped. A slight rubbing with a piece of cloth makes it shine, which leads to the supposition that it is made of hammered iron.

## ECCLESIASTIC AND MISSIONARY NOTES.

WE NOTICED two weeks ago the completion of the new Union Theological School building in Tsukiji, Tokio, under the auspices of the American Presbyterian Church, the Reformed Church in America, and the United Presbyterian Church of Scotland. The Chiu Kuwai (or Presbytery) of the native Church, which is under the fostering care of these three Missions, held its half-yearly session on Monday, Tuesday, and Wednesday, October 4-6th. This Church has at the present time twenty-one congregations including 1415 members, and this number represents a net gain of 244 during the past year. There are also eighty-nine candidates for baptism reported, and 679 scholars gathered at the Sabbath Schools. The contributions to the Church during the past year amount to nearly 2,000 yen, which sum has been gathered by the native Christians from among themselves, and expended by them partly toward maintaining their several places of worship, and partly in sending some of their number into the interior to preach the Gospel, in new places under the direction of their own "Home Missionary Society." This church is called the "Union Church of Christ in Japan," and is now three years old, having been organized in October 1877. Of its twenty-one organized congregations, twelve are in Tokio, two in Yokohama, one in Nagasaki, and the remainder in the interior.

THE LATE REV. M. G. GORDON OF KANDAHAR:—The Rev. A. H. Arden, the Secretary, Church Missionary Society, Madras, writes to us:—"When giving a short account of those who had fallen in the recent sortie from Kandahar, you mentioned that the Rev. Mr. Gordon was probably 'some Roman Catholic clergyman.' Allow me to correct your mistake. He was a Missionary of the Church Missionary Society, and no doubt was well-known to some of your readers, as he resided in Madras for a short time, and was associated with the late Rev. D. Fenn, in working the Palaveram Mission. A few particulars regarding him may therefore be of interest. He was well connected, and had considerable private means. After being for some time a curate with Dr. Marsh, of Beckenham, he came out as a Missionary to India under the C. M. S. and was located in Madras. Ill-health compelled him to return home; but as soon as his health was restored he proceeded to Lahore, to assist the Rev. T. French (now Bishop of Lahore) in his Divinity School. When our army was ordered to Afghanistan, he took the opportunity of visiting that country, and proceeded to Kandahar. This year he paid it a second visit in company with Bishop French. The latter, after a time, left again for Lahore; but Mr. Gordon remained behind, and appears to have met with his death whilst attending to our sick and wounded soldiers, in whom he always took a deep interest. During all the years that he laboured under the C. M. S. he never accepted any salary. He not only gave all his services gratuitously, but frequently made large donations to the Society's General Fund. He was a man of very frugal habits, and his great self-denial won for him the truest respect. Though he was a man of considerable power, he never sought great things for himself; and when a Bishopric was offered to him in Australia, he preferred to remain at his post in India, doing the humbler work of an evangelist. He was a great traveller, and, if I remember aright his letters from Persia during the famine, and from various places on the Euphrates, appeared in your columns. There are some interesting papers written from Kandahar by Mr. Gordon in the C. M. S. *Intelligence* for April of this year. I enclose a copy in case you may like to enter a few extracts."—*Madras Mail*.

REMAINS OF A SAXON CEMETERY:—In making some excavations in Rochester Cathedral precincts, the workmen have come across what is believed to be the site of a Saxon cemetery, and have unearthed several interesting relics, including human skulls and teeth, huge boar tusks, and coins.—*Rock*.

FRENCH RELIGIOUS CENSUS:—The last religious census in France shows that there are 35,387,703 Roman Catholics, 467,531 Calvinists, 80,117 Lutherans, and 33,113 of other Protestant denominations. The Jews number about 50,000, and 90,000 are attached to no Church.

WE REGRET TO ANNOUNCE, says the *Friend of India*, the death of the Rev. Dr. John Wenger, of the Baptist Mission, one of the most respected—in his case, we may say revered—of the Missionaries in this part of India. He was sixty-nine years old, and he passed from us last Friday morning, the 20th of August, at 4 o'clock. It will be forty-one years next month since he first arrived in India; that was in September 1839. He was a native of Switzerland, born in one of the border cantons, we believe. He excelled in linguistic attainments. On his way to India, on board the *Plantagenet*, he studied Bengalee under the guidance of a fellow-passenger, and after his arrival he devoted most of his time to the study of that language and of Sanskrit. He assisted the Rev. Yates in translating the Scriptures into these and other languages; and when Dr. Yates died, Dr. Wenger succeeded him. It would be impossible in this necessarily brief notice to give any account of the varied labours

of his long and eminently useful career, of his preaching in English and the vernacular, of his visits to the native Churches in the south of Calcutta, of his more settled pastoral work, and of his work as Superintendent of the Baptist Mission. But we hope some one more familiar with it than we are, will shortly tell us the story of his life. He will be much missed by the Society with which he was connected, and by a wide circle of acquaintances and friends beyond its limits. He was a man of quiet unobtrusive habits, humble, notwithstanding his acknowledged learning, and kind-hearted and tender. Good men may come after him, but those who have known Dr. Wenger will feel that he has left a void which cannot fully be supplied.

THE PASTOR'S DREAM:—A pastor of one of the uptown Churches in New York relates the following singular dream:—"Sometime ago I dreamed that I was hitched to a carriage attempting to draw it through the mud which covered the street in front of my house. How or why I had been assigned that position I could not explain; but there I was, pulling with all my might, as if I had been the best carriage horse in town. I had reached a point not far from the Church when the mud seemed to get deeper and deeper, and the carriage to draw so heavily that I gasped for breath and almost sank down exhausted. This seemed the more inexplicable when, looking back, I saw the entire congregation behind the carriage, apparently, pushing it along. But the more I tried the harder it became, and finally I was forced to stop and examine the difficulty. I went to the rear, where I supposed was the congregation, but nobody could be found. I called, but no answer. I repeated the call, but still no reply. By-and-bye a voice called out 'Hallo!' and looking up, whom should I see but one of the deacons looking complacently out of the window, and upon going to the door of the carriage, what was my astonishment, to behold the whole congregation quietly sitting inside!" There are many churches that are far from thinking that it is their place to push. Their "calling and election" is to quite a different sphere. In fine, by nature and by grace, they will assure you they are eminently fitted to ride. If you reason with these people they will tell you that you greatly mistake when you expect them to do the pastor's work. Is he not expected to take the burden of the church work upon his shoulders and bear it along? Why, bless you, sir! that's what we have him for!—*Working Church*.

THE REV. MR. SHESHADRI of the Free Church Presbytery of Bombay who lately visited Yokohama, en route to America, is thus mentioned in the *San Francisco Bulletin* of the 15th of last September.—An interesting feature of the meeting of the Presbytery of San Francisco, in Calvary Presbyterian Church on the 7th inst., was the visit of Rev. Naryan Sheshadri of the Free Church Presbytery of Bombay. Mr. Sheshadri is a full-blooded Hindoo, his complexion being as dark as that of a native Hawaiian, and as he entered, in his oriental dress, with flowing robe and snow-white turban, he presented a novel appearance. He is a cultivated gentleman, and a man of education, having an excellent command of the English language, and speaking with a fluency and ease and gracefulness seldom excelled. By invitation he addressed the Presbytery, and was listened to with the closest attention and deepest interest. He avowed himself a Presbyterian, and said that in his country there were over twenty Presbyteries and half a million members of Christian Churches. In 1878, sixty thousand of the natives were converted to Christianity. He spoke of a book written years ago by a Catholic priest who had visited the country and laboured there for some time as a Missionary, in which he declared it as his belief that the conversion of the Hindoos was an impossibility. Their religion was once thought to be so compact and have such a hold upon the people as to effectually preclude all other religions, but now the Gospel is making rapid progress among them. When he was young he attended one of the Mission schools, having great difficulty in overcoming his prejudices before he could do so. The result was his conversion and consecration to the Gospel ministry. He is now laboring as a Missionary of the Free Church of Scotland among the people of his native land. He says he has more liberty as a preacher there than he could have in England. When he was in the latter country, six years ago, he said that while waiting for the train at a railroad station he took out his Bible, as was his custom at home, read a few verses, and then began to address the people, but was at once interrupted and told he could not be allowed to proceed. "What," said he, "not allowed to preach the Gospel in free and Christian England? Why I can preach in India on the banks of the Ganges, at Bombay, in Madras, or wherever I please, and no one thinks of molesting me, but here, in this free country, I am not permitted to do so!" He attended the meeting of the Evangelical Alliance in New York, half a dozen years ago, and is now on his way to the General Presbyterian Conference to begin in Philadelphia the 22nd of this month, having arrived here on the *City of Tokio*.

REV. O. M. GREEN of the Presbytery of Japan, who came over with Mr. Sheshadri, also addressed the Presbytery. He said that when he went to Japan seven years ago there was but

two Churches there, with about forty members. Now there were twenty-one Churches, with 1,200 members, in the Presbytery to which he belongs, and 2,500 Christians in the country altogether. He has all the liberty in speaking to the natives that he could desire. He thinks that the many souls of twenty-five million people of this Empire are ready to give up their false gods, eight millions of which they claim to worship.

A resolution was adopted by the Presbytery thanking these gentlemen for their interesting and instructive addresses, and assuring them of the sympathy of the members with them in their work, and of their prayer for a blessing upon their labors. They leave for the East in two or three days, and Mr. Sheshadri will return by the way of England, making a tour of the world in his journey.

AT THE LAST MEETING of the Chiu Kuwai (Presbytery) of the "Union Church of Christ," requests were received from native Christians in Shimonoseki, and Kanazawa, Ishikawa Ken, asking for the organization of churches in those places.

THE WESTMINSTER CONFESSION OF FAITH has recently been translated into Japanese by Dr. J. C. Hepburn, and the Canons of the Synod of Dort, by the Rev. Dr. Verbeck. Both symbols are published, as translated, under the authority of the "Union Church of Christ."

THE CHRISTIAN MEETING AT UYENO was held, as announced, on Tuesday and Wednesday, the 13th and 14th instant. On Tuesday, notwithstanding the rain, several hundred persons assembled and the meeting was held in the large room at the rear of the Saiyoken. On Wednesday, the meeting was held on the lawn, and it was estimated by careful observers that a congregation of some three thousand persons was present most of the day, from nine a.m. until five p.m. The services consisted of prayers, singing, sermons and addresses. During the day sixteen speakers, Missionaries and Native Pastors, addressed the congregation. The quiet and earnest attention paid by the great assembly during the long services was noteworthy. In the afternoon, a second meeting was organized, at a little distance from the main platform, and eight speakers spoke to our attentive audience of several hundred. Baptist, Methodist, Congregational, Presbyterian, and Reformed Clergymen took part in the services, and among the Missionaries were Englishmen, Scotchmen, and Americans. A large sale of "parts" of the Testament was made at the entrance. Some six thousand parts have been sold in the streets of Tokio during the past four weeks.

## SONGS OF SADNESS.

*From the Japanese.*

### I.

The pallid dawn opens  
With roseate edge,  
And I know that up-building  
A purple cloud-ledge,  
The sun will fade softly  
When gloaming is nigh;  
But sad is his beauty  
And sad is the sky,  
At day-dawn or sunset,  
No one sad as I—  
Oh! would that the morning  
Would hide all its red,  
And leave me to shadows  
Dark-drooping instead!

### II.

The mountain of Death  
Is lonely and drear,  
And the dusk of its shadow,  
The bravest might fear,—  
How then, little Daughter,  
My winsome, wee child,  
Wilt thou thro' its pathways,  
Grove weary and wild?  
Thou knowest not reason,  
Nor thoughts high and deep—  
Thou art wise enough only,  
Low-grieving to weep.  
Thy little feet totter  
So tremblingly slow,  
Canst thou o'er the mountain,  
Thus motherless go?  
Ah! the heart of thy mother  
Is breaking below.

F. B. H.

Tokio, 8th October, 1880.

## NIPPON RACE CLUB.

FIRST DAY.—WEDNESDAY, 27TH OCTOBER.

1.—THE GRIFFINS PLATE.—Value \$200. For Japan Ponies that have never run in a Race in Tokio or Yokohama. Weight as per scale. Five Furlongs. Entrance, \$10.

Wenzel, Chaff, Chuckle, Giokuto, Hiden, Loafer, Kuromatzu, Kirin, Harkaway, Captain, Moudjik.

2.—THE HALF-BRED MAIDEN PLATE.—Value \$150. For Half-Bred Ponies that have never run in a Race in Tokio or Yokohama. Weight as per scale. Five Furlongs. Entrance \$5.

Tachibana, Sakigaki, Ikioi.

3.—THE FUJIYAMA CUP.—Value \$150. For Japan Ponies Weight as per scale. 1 Mile. Entrance, \$5.

Chuckle, Oyama, Jim Hills, Katerfelto.

4.—THE GRIFFIN SWEEPSTAKES.—Value \$— For China Subscription Griffins only. Weight as per scale. 1 Mile. Compulsory Entrance of \$20; \$10 returned if forfeit declared before 4 p.m., on Wednesday, the 20th October.

Schneider, Centaur, Paladin, Victor, Kickshaw, Pouryu, Old Blue, Heather Bloom, Dresden China.

5.—THE RIKUGUNSHO CUP.—Value \$— Presented. For Japan Ponies. Weight as per scale. Half a Mile. Entrance, \$10.

Chibi, Matsuo, Higan, Oyama, Jim Hills, Kirin, Anuandale.

6.—THE NAVY AND VISITORS CUP.—Value \$— Presented. For Japan and China Ponies. Japan Ponies, non-winners at this Meeting 5 lbs. allowance. China Ponies weight as per scale. Three-quarters of a Mile. Entrance, \$10.

Skedaddle, Chief Mongolian, Dartmoor (late Eastlander).

7.—THE AUTUMN CUP.—Value \$150. For Half-Bred Ponies. Weight as per scale. Winners at the Spring Meeting 7 lbs. extra. Three-quarters of a Mile. Entrance, \$5.

Bon René, Asagawa, Gioso, Phoenix (late Gausen), Admiral Rous.

8.—THE MONGOLIAN CUP.—Value \$150. For China Ponies. Weight as per scale. One Mile and a Quarter. Entrance, \$5.

Clown, Skeddle, Bonny Loon, Gled, Kinsatz (late Black Velvet), Kingfisher, Chief Mongolian, Daisy Chain.

9.—THE KUNAISHO PRIZE.—An Object d'Art, with \$50 added. For Japan Ponies. Weight as per scale. Winners of No. 3 or 6 excluded. Three-quarters of a Mile. Entrance, \$5.

Chuckle, Shirotorigatake, Higan, Pluton, Oyama, Jim Hills, Kuromatzu, Katerfelto, Kirin, Anuandale.

SECOND DAY.—THURSDAY, 28TH OCTOBER.

1.—THE MAIDEN PLATE.—Value \$100. For Japanese Ponies that have never won a Race in Tokio or Yokohama. Weight as per scale. Half a Mile. Entrance, \$5.

Chaff, Giokuto, Hiden, Matsuo, Higan, Pluton, Loafer, Kuromatzu, Kirin, Moudjik.

2.—THE BRITANNIA CUP.—Value \$— Presented. For Japan and China Ponies. Japan Ponies scale weights. China Ponies, 7 lbs. extra. Winners at the meeting 7 lbs. extra, accumulative for China Ponies. One Mile. Entrance \$10.

Skeddle, Kinsatz, Chief Mongolian, Dartmoor, Daisy Chain.

3.—THE KENREI CUP.—Value \$— Presented by the Governor of Kanagawa. For Half-Bred Ponies. Weight as per scale. Half a Mile. Entrance, \$5.

Bon René, Asagawa, Gioso, Tachibana, Phoenix, Warwick.

4.—THE MITSU BISHI CUP.—Value \$150. Presented. For Japan Ponies. Weight as per scale. Winners of 1 Race at the Meeting 7 lbs. extra, of 2 or more Races, 10 lbs. extra. Ponies that have not started in a previous Race at the meeting excluded. One Mile and a quarter. Entrance, \$5.

Chuckle, Jim Hills, Oyama, Katerfelto, Harkaway.

5.—THE LOTTERY CUP.—Value, \$— Presented. For Japan and China Ponies. Weight as per scale. Half a Mile. Entrance, \$10.

Shirotorigatake, Skeddle, Iden, Oyama, Victor, Kirin, Chief Mongolian, Dartmoor.

6.—THE NEGISHI CUP.—Value \$150. For Japan Ponies. Weight as per scale. Winners at the Meeting 10 lbs. Extra. Five Furlongs. Entrance, \$5.

Chibi, Chaff, Matsuo, Higan, Pluton, Oyama, Jim Hills, Katerfelto, Kirin, Anuandale.

7.—THE GERMAN CUP.—Value \$—. For China ponies. Weight as per scale. Winner of No. 8, 1st day, 7 lbs. extra. Subscription Griffins 7 lbs. allowance. One mile and a Half. Entrance, \$10.

Schneider, Clown, Centaur, Skedaddle, Bonny Doon, Paladin, Gled, Kinsatz, Penryn, Heather Bloom, Daisy Chain.

8.—THE SHIMOSA CUP.—Value \$150. For Half-Bred Ponies. Weight as per scale. Winner of No. 7, 1st day, 7 lbs. extra, other Winners at the Meeting 5 lbs. extra. One Mile. Entrance, \$5.

Bon René, Asagawo, Phoenix, Admiral Rous.

9.—THE FLYAWAY STAKES.—Value \$100. For Japan Ponies. Weight as per scale. Winners at the Meeting excluded. Three-quarters of a Mile. Entrance, \$5.

Chaff, Chuckle, Giokuto, Pluton, Oyama, Jim Hills, Katerfelto, Kirin, Annandale.

### THIRD DAY.—FRIDAY, 29TH OCTOBER.

1.—THE HURDLE RACE.—Value \$100. For China and Japan Ponies. Japan Ponies weight as per scale. China Ponies 7 lbs. extra. Once round and a Distance. Entrance, \$5.

Bonny Doon, Checkmate, Kinsatz, Kickshaw, Annandale.

2.—THE JAPAN CONSOLATION.—Value \$—. For all beaten Ponies at the Meeting. Weight as per scale. Five Furlongs. A sweepstakes of \$10 each.

Wenzel, Chaff, Chuckle, Giokuto, Matsuo, Hiden, Pluton, Loafer, Oyama, Jim Hills, Katerfelto, Kirin, Kuromatsu, Harkaway, Captain, Annandale.

3.—THE HALF-BRED CONSOLATION.—Value \$—. For all beaten Half-Bred Ponies at the Meeting. Weight as per scale. Three quarters of a Mile. A Sweepstakes of \$10 each.

Bon René, Asagawo, Tachibana, Phoenix, Admiral Rous, Warwick.

4.—THE CHINA CONSOLATION.—Value \$—. For all beaten Ponies at the Meeting. Weight as per scale. Once round and a Distance. A Sweepstakes of \$10 each.

Schneider, Clown, Skedaddle, Bonny Doon, Paladin, Gled, Kinsatz, Kingfisher, Dresden China.

5.—THE COMMITTEE CUP.—Value \$—. Presented. Champion Race for Japan Ponies. Weight as per scale. One Mile. Entrance \$10.

Shiratorigatake, Matsuo, Higan, Oyama, Jim Hills, Katerfelto, Kirin, Chuckle.

6.—THE RACING STAKES.—Value \$—. Champion Race for Half-Bred Ponies. Weight as per scale. One Mile. Entrance \$10.

Bon René, Asagawo, Giozo, Phoenix, Admiral Rous.

7.—THE FRENCH CUP.—Value \$—. Champion Race for China Ponies. Weight as per scale. One Mile and a Quarter. Entrance \$10.

Clown, Skedaddle, Bonny Doon, Paladin, Gled, Kinsatz, Chief Mongolian, Dartmoor, Daisy Chain.

8.—THE SAYONARA STAKES.—Value \$200. A Handicap for Japan, Half-Bred, and China Ponies. The Handicap to be framed so soon as possible after the last Race on the 2nd day. One Mile. Entrance, \$10.

Skedaddle, Bonny Doon, Phoenix, Admiral Rous, Gled, Katerfelto, Kirin, Kinsatz, Annandale, Heather Bloom, Daisy Chain.

### PARIS LETTER.

PARIS, 28th August, 1880.

To the other drawbacks that the Comte de Chambord possesses, a fresh one has been discovered: he is a foreigner, in the sense that he has little French blood in his veins—only two parts in a thousand, and there are many Prussians even can prove having a larger proportion. Henri V. is then not a national product; his ancestor Henri IV. the head of the dynasty, was the blood standard: well then, succeeding sovereigns in France have so intermarried with foreign princesses, that the Henri IV. blood has next to disappeared. The Comte de Chambord was already a foreigner in the sense of being a total stranger to modern France and contemporary ideas, but not to possess "the voice of blood," is a grave failing on the part of a would-be father of a people. It is more his misfortune than his fault, as his ancestors had to marry outsiders in order to keep down home jealousies. Nothing remains for the Count, but to try a *plébiscite*, an appeal to the people, like the effete Bonapartists, if he does not think the elections sufficiently expressive. In any case, the natural span of his life has been attained; at least so think a section of his followers,

who are cracking up the poor Comte de Paris as heir; but he is more German than French, and infinitely more unpopular than the Comte de Chambord. The Comte de Chambord is considered impossible, but respected: the Comte de Paris is the first, and has never been able to attain the second.

The *Agence Havas* is the French Reuter; indeed a part of the famous German Baron's establishment, as they work together. It is a monopoly, and almost official, as when the Government has any private news to be published, it passes directly all such to Havas, never to any of its supporting journals. The Agency has the whole of the provincial press in its hands, taking advertising space, in payment for its telegrams and news letters. The latter are printed, and comprise three classes: first, for the republican papers; second for those which have not the courage to be fish, or flesh or good red-herring, and third, for the royalist journals. In the last category, specimens have just been published by About's journal, and are of an unparalleled style of vituperation towards ministers and of extreme violence respecting the Republic. The republican journals demand, that henceforth the government withdraw from such an immoral association. The Agency claims to be only a factory of information for the press, an industrial undertaking, in no way connected with political morals.

France gives only a platonic attention to foreign questions, being wholly absorbed in working and getting rich. It is thus that she treats with significant silence the persistent and unjustifiable attacks of Germany on Gambetta's Cherbourg speech, wherein he laid down, that France could not remain behind other nations in bloated armaments. Germany knows she could not now invade France, and the latter has not the slightest intention to attack Germany—Alsace will return to the fold in time: the fruit is certain to fall when fully ripe. As for Greece, any intervention there will be purely sentimental. France leaves to the Russian and the Austrian Slavs, the duty of tearing themselves to pieces over the Eastern question. It is not a little singular, that M. Waddington, who took the Greeks in hand at the Berlin congress, has just been punished for that act—then deemed glorious because calling for no gunpowder—by not being re-elected president of his local general council. The Italians are simply requested to be less fidgety about Tunis, and devote all their extra energies to improving their home affairs, and not expend them on something approaching filibustering.

So far as the form of Government is concerned, the question is now definitely disposed of in France. The combat has finished for want of combatants. Papas, deeply compromised with some pretender, decline to be converted: they make atonement, by recommending their children to bow to the verdict of France. There is only one internal difficulty, but which will never dissolve the Republic—that of the relation between church and state. The general elections next year will be made on the sole ticket, not to vote an endowment for any church, leave the commerce of souls free, and let those who desire altars pay for their maintenance. It is thus that the recent Papal allocation is very unhappy; Leon XIII in reference to his views on modern society, is not a whit less obstinate, nor less violent, than his predecessor. The struggle of the church for supremacy in states is unchanged. The French will never accept the claim of the Vatican, so whatever may be the consequences, the new French parliament will certainly stop supplies, and apply the amount to popular education. It is only necessary to cast a cursory glance over the journals to see the lively interest taken in disestablishment. The conduct of the French bishops is not calculated to throw oil on the troubled waters: their hostility against, not the Republic, but the modern society it personifies, is undisguised. You cannot expect republicans to pay an army for firing on them.

The clerical and radical journals are engaged in a fierce war on the question of the "August miracles," worked at Lourdes. The latter go so far as to demand that the clergy be prosecuted. The majority of opinion treats the whole matter with perfect indifference, and object to the Republic being called upon, as was a French King once, to prohibit providence from working miracles in any month, or in any part of France. So long as the miracle does not come to the aid of any pretender, so long may the subject be left to the even tenor of its way.

Nothing is more surprising for the resident foreigner, than the facility with which Parisian tradesmen—claiming to be keen-witted, can be duped. Any person with a dashing equipage and insinuating manners, can pluck them unmercifully. On leaving Maidstone gñol, where she had put in seven years residence, Mrs. Horsfall came to Paris, and dubbed herself the Duchess of Hamilton. She could neither read nor write nor speak French, though the daughter of a schoolmaster and the wife of a bootmaker. Indeed she cannot remember where she had been married, nor the date. Well this *aventurière*, without a franc, played her cards so well, that she was able to reside in the first hotels, be carried up to bed every night drunk with Champagne and to have her carriage and servants, and tradesmen ready to throw their wares under her feet. She gulled also several English and Americans, even when aware that she had been ejected from hotels after the proprietors

learned from the Duke of Hamilton himself he had no relationship with the woman. The latter bamboozled by whispering in confidence, that her "mamma" the mother Duchess, was coming over to France, as soon as she could escape from the tyrant clutches of her son. She has been condemned to five years' imprisonment if caught, as she left the Court beforehand. As the English Government would have to pay for her board and lodging during this period, the French hope the Fair Maid of Kent has returned to Folkstone.

The communists have held an indignation meeting, respecting one Garceon, who, when a policeman in 1871, treated the communist prisoners, their families, and friends, very barbarously. He is now station-master at Vincennes and Rochefort's journal denounced him. The meeting held on the subject simply petitioned the Government to hand the fellow over to the sovereign people for justice. After this, it cannot be alleged that liberty of speech, &c., is crushed in France.

An English money changer, Barker, in the rue Royal—has absconded, leaving many of his countrymen and Parisians, to deplore his flight. One morning a notice appeared on the shutters, "closed, on account of death;" creditors on the fourth day concluded sufficient time had elapsed for tears, and had the office opened by the Commissary of Police. On examining the safe, not an angry shilling was even found therein; in fact it must have been stranger to cash for a long time, as the spiders had commenced to weave their webs inside.

A novel kind of suicide: a house porter after indulging in a superb dinner, dressed himself in a travelling costume, muffled round neck, carpet-bag at his side. From two rings in the ceiling, he passed a rope, tying his heels and neck; then he pushed away the table and swung, hammock-fashion, into eternity; in his mouth he had a cigar, and in his clutched fingers a copy of Béranger's songs.

The Duc de Chartres, brother of the Comte de Paris, failed to reach the summit of Mt. Blanc a few days ago, having become unwell on nearing the Dromedary's lump. He was carried to a neighboring village, and on recovering found his billycock battered: he went to a hatter to have it repaired. During the operation, he inquired if the mountain air scarfed the skin of the face of the ascensionists: the hatter said "yes." The duke shook his head in doubt and the hatter then wagered a glass of beer; both went to a neighboring tap, where the decision was given against the duke, who instantly paid for a drink all round.

Prizes at school vary occasionally. I was at a boarding establishment in my salad days, where the prizes were included among the extras of the bill: at one of the national schools of Paris, the Municipal Council among other entertaining volumes, gave as prizes a copy of the City Directory, and a bound collection of the railway tariffs—the desire for utility could not further go.

Mme. Adam is the proprietor of the "New Review," and the leading political celebrity among those of her sex who hold republican views. A journal hinted she was in Switzerland, preparing for her marriage with the Italian Ambassador. She denied the soft impeachment and declares she can be seen every day at Dieppe occupied, not with matrimony, but making sand pies with her grandchildren on the beach.

Three months ago a young man met a college chum, invited him to breakfast, and informed him he had just been paid fr. 10,000 at the treasury. He felt drowsy before the end of the meal and remembered nothing more than his chum placing him in a cab. He arrived at a lonely house, where he was guarded for three months by two men, who have just conducted him—blindfolded—to the gates of Paris.

Mme. Thiers is an excellent Latin scholar, and intends publishing a series of easy reading lessons in that language—at a nominal cost, for self-instruction.

In a restaurant at Dieppe: "Waiter, is this turbot fresh?"

"Yes, Monsieur, it arrived from Paris this morning."

"Papa, why did you scold me for biting my brother's finger?"

"Because you hurt him, my child." "Well, the music-master bit Adèle's mouth at the piano this morning, and then attempted to choke her by putting his arms round her neck."

A clerk states that he has for years passed by men fishing on the banks of the Seine, and never yet saw anything caught, save during the exhibition, which was an exceptional year.

"How many senses have we, Aunt?" "Five, and moral sense, which is a new one, making six in all."

#### JAPANESE NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as make them readable and intelligible.]

#### COURT, POLITICAL AND OFFICIAL.

The *Osaka Nippo* says it is currently reported that Mr. Makimura, the present Governor of Kioto, is to be promoted to the Senate.

The *Hochi Shinbun* states that the third of next month being the birthday of His Majesty the Emperor, the Minister for Foreign Affairs intends giving a grand entertainment to both Japanese and foreign ladies and gentlemen at the Euriokuwan.

The *Mainichi Shinbun* writes:—"Recently we stated that His Excellency Kuroda had handed in his resignation in consequence of the rejection of his proposal that the revenue should be made payable in rice. We learn now that he was informed that his resignation could not be accepted, but that if he was suffering from ill-health, as alleged, he could remain under medical treatment as long as he desired. The General attended the office of the Colonization Commission on Monday last.

We learn from a native paper that the Tokio Fuchō will open at 9 a.m. and close at 3 p.m. on and after the 15th instant.

The meetings of the Board of Health, which have been discontinued for some time past, were recommenced to-day.

Her Majesty the Empress Dowager visited the weaving factory belonging to the silkworm department established within the premises of the Awoyama palace on Wednesday last.

#### NAVAL AND MILITARY.

The *Nichi Nichi Shinbun* states that the new military code is shortly to be published, and will be put into force some time in the first half of next year.

Another native paper states that General Tani, Military Inspector for the West, attended by Colonel Okamoto and about eight other officers, is to leave on the 13th instant in the *Genkai Maru* on a tour of inspection to the Matsuyama barracks in the province of Iyo.

The same paper writes that it was originally intended that General Kuroda and staff should proceed to Yesso to establish a garrison there in the course of the present year, but that in consequence of pressure of business, their departure has been postponed until the early part of next year.

Another paper informs us that General Miura, Military Inspector for the East, attended by Colonel Asai and Major Katsuta, left for his district on the 5th instant.

The *Mainichi Shinbun* states that it was recently proposed to reorganise the artillery and employ Krupp guns instead of those made after the French pattern which have hitherto been used. A question arose, however, as to whether the former style was suited to a hilly country like Japan, owing to the construction of the carriages. An experiment made at Tokio, resulted completely in favour of the Krupp guns, and it has consequently been resolved to adopt them. This will enable a reduction to be made in the number of artillerymen required yearly.

The *Hochi Shinbun* states that the *Riujo Kan* is to leave for Shimizu with thirty-five naval cadets on board about the 20th instant, for training practice. She will afterwards sail for Australia. It is intended to spend about eight months on the voyage. Her first port of call will be in New Zealand, whence she will proceed to Melbourne and remain there for about a month, as the exhibition will be open then. After this she will sail round the continent, and return home via Singapore and Hongkong.

The same paper states that the Army Telegraph Department were exercised in the practical use of their instruments on the Hibiya parade ground on Monday afternoon.

A native journal reports that Generals Tani and Miyoshi, Inspectors for the western and central provinces respectively, left for their districts on the 13th instant.

The *Mainichi Shinbun* says that all the troops that are to take part in the manoeuvres on the Narashino plains, left Tokio on the 13th instant. A number of naval officers are going to witness these manoeuvres.

We read in the same paper that an increase in the commissariat department of the army is contemplated.

An alteration which will shortly be put in force, is announced, in the course of training at the college for instructing non-commissioned officers (Kido-dan). Thirty five cadets recently passed through this college and have been appointed to the Engineers stationed in the garrisons of Tokio, Osaka and Kumamoto.

## INDUSTRIES, TRADE AND FINANCE.

The *Mainichi Shinbun* writes as follows:—The silk trade in Yokohama continues to be dull, as at the time of our last report. The *Gaelic* which left on the 9th instant took with her 439 shipping bales and the *Sunda*, on the 10th instant, 100 bales.

The following is the total of cartons which have arrived in Yokohama up to the 9th instant from the various producing districts:—

Locality.	Amount.
Iwashiro ... ..	65,693 cards.
Uzen ... ..	18,492 "
Joshiu and Bushiu ... ..	29,196 "
Shinshiu ... ..	10,965 "
Akita ... ..	19,688 "
Kashiu ... ..	3,600 "
Yoshiu ... ..	3,998 "
Seishiu ... ..	380 "

Total ... .. 152,012

There are at present about seventeen French and Italian silk-merchants who have recently arrived in Yokohama: they are in a great quandary, as the ruling market rates exceed the prices at which they have already made contracts with their home correspondents.

956 packages of tea arrived on Monday last from Toba in the province of Shima. Medium qualities are selling gradually, but inferior kinds are neglected.

Cotton yarns are dull and not enquired after; prices are unchanged.

There is at present no business being transacted between the merchants of Tokio and Yokohama. At the Stock Exchange there has been no perceptible change in the rise or fall of kinsatsu, or of gold or specie.

The *Hochi Shinbun* mentions a rumour that the National Banks have decided, in the event of the present depreciation in the value of Government bonds increasing, to prevent further depreciation by purchasing all bonds offered for sale.

## MISCELLANEOUS.

We learn from a native contemporary that His Excellency Ito, General Yamada, Admiral Kawamura, Generals Saigo, Yamagata, and Oyama, and Mr. Matsukata, inspected the Agricultural College at Komaba at about 11 a.m. on the 6th instant. After witnessing various operations, the visitors returned to town at about 3 p.m.

His Excellency Sano, Minister of Finance, who has been recently living at his private residence in a state of seclusion owing to the death of his eldest son (who was a student in Germany) resumed office on the 8th instant, the term of mourning having expired. His Excellency Yoshiwara has therefore ceased to act for him.

The *Mainichi Shinbun* mentions that Mr. Kusumoto, a Senator, paid a visit of inspection to the Hirano dockyard on the island of Ishikawa, on the 6th instant.

The *Hochi Shinbun* states that there is to be a horse fair at Mita, Tokio, on the 15th instant, and races in the afternoon of the same day.

The *Konum Shinpo* was suppressed by order of the Head Police Department on the 8th instant.

Mr. Hayasaka, editor of the *Yamagata Shinbun*, has been fined fifteen yen for publishing a libel upon Governor Mishima.

A native paper states that several lectures have lately been given at the Tokio University on the subject of the various dialects prevalent in the Japanese Empire.

The *Hochi Shinbun* announces that Mr. Suganuma, the President, and Mr. Maruoka, the Manager of the Ninety-ninth National Bank were each fined fifteen yen by the Tokio Saibansho on Monday last, for violations of the 32nd, 44th and 57th Articles of the Banking Regulations.

There were no less than twenty-six men and nine women killed, while twenty-two persons received injuries of various degrees. Twelve boats were wrecked and seven boatmen were drowned.

The *Choya Shinbun* reports that on the 10th instant 438,498 notes, representing a total value of 197,493.30 yen, were burnt in the premises of the Government Printing Office.

According to a native paper the price of copper has risen

considerably. Formerly one hundred me of copper cost seven momme of silver, whereas now the price is eleven momme. The rise is said to be due to the intention of the mint to coin large quantities of copper money.

The same paper gives the following statistics, declared to be accurate, of the number of houses destroyed and lives lost in Tokio during the typhoon of the 3rd instant:—

Description.	Destroyed.	Damaged.
Official Buildings .....	32.....	4
Barracks .....	3.....	1
Schools .....	25.....	25
Hospitals .....	2.....	—
Shrines .....	26.....	2
Buddhist Temples.....	5.....	3
Private Residences.....	1,444.....	625
Manufactories.....	38.....	5
Ware-houses .....	11.....	2
Store .....	385.....	50

Total ..... 1,971..... 717

The *Nichi Nichi Shinbun* states that the Korean Embassy arrived at Fusan on the 17th ultimo, and proceeded to the capital on the 27th ultimo. The road by which they travelled had been specially repaired and was lined with spectators, who received the Embassy with the greatest signs of respect.

We learn from a native contemporary that the *Shimano Mainichi Shinpo* (a daily paper published in the province of Shinano) was suspended on the 8th instant by order of the Home Department.

Another paper writes as follows:—"Is it the effect of the recall of the Dutch Minister? In all the Foreign Legations here the Ministers take charge of all documents concerning treaty revision and similar documents whose contents are desired to be kept secret, and will barely allow even their secretaries to see them. This is what it should be when we consider the meaning of the words 'diplomatic secrecy.'"

The *Nichi Nichi Shinbun* states that on the 12th instant Mr. Fujinami, of the *Akebono Shinbun*, was sentenced to three years imprisonment and a fine of 800 yen (of which five yen was remitted owing to his having recently been fined that sum) in consequence of a breach of the law of libel. The articles which were considered to violate this enactment were headed "On the transfer of Prime Ministers, Privy Councillors and Ministers of the various Departments," in which it was asked if this was done by the wish of the Emperor, or from the domineering action of the bureaucracy; or whether there was a suspicion that clever officials would use their master as a tool. The other article was headed "What will be the result of an application for a National Assembly," and was deemed inflammatory.

We learn from a native paper that the construction of the new post office at Hakodate was commenced in the beginning of the month.

The *Choya Shinbun* quotes the following from the *Hokuriku Nippō*:—"We have been informed that rumours have been abroad recently in various parts of Ishikawa-gori, that the revenue was to be paid in rice and that it was considered highly probable that disturbances would ensue in the event of this step being carried out. Such, however, is not the case. The Government, it is true, receives the revenue in money, but the landlords get their income from the tenant farmers all in rice; it is only the landlords who pay the revenue to the Government in money, so that the proposed change could make no difference."

A native paper states that the recent typhoon was the cause of very great damage in the prefecture of Oita. Dwellings, rice-crop, vegetable gardens, bridges, &c., all suffered, and twelve people were killed.

According to a paragraph in the *Choya Shinbun* the following paper money has been destroyed at the Government Printing Office in Tokio:—

Oct. 11th.—	669,754 kinsatsu representing	78,320.30 yen.
" 12th.—	404,985 "	80,997.00 "
" 13th.—	917,460 "	720,247.45 "
	1,992,199	879,564.75

On the 17th instant, says the *Mainichi Shinbun*, being the Kaname-sai (festival of offering rice of the new crop to the Ruler) His Majesty the Emperor will receive in Audience the

Imperial Princes, the Ministers, Senators, and all the Chokunin and Kwazoku officials.

The *Nichi Nichi Shinbun* reports that His Royal Highness the Duke of Genoa visited Wado, in the prefecture of Awamori, on the 30th of last month. Some of the local officials went on board the *Uttor Pisani* to pay their respects, and were kindly received by the Duke, who showed them over the ship. Two bullocks were presented to His Royal Highness for fresh provisions and he gave in exchange several casks of excellent wine.

A vernacular journal states that Mr. Hanabusa, the resident Minister to Corea, will certainly return to that country early in next December.

Smelting works are stated by the *Choya Shinbun* to have been erected at the port of Hiragata, in order to treat the ore from the iron mine in the Hotosan mountain. This ore has recently been experimented with and found to be of very good quality. Operations will be commenced at once.

#### ARRIVAL OF THE AMERICAN MAIL.

##### TELEGRAMS.

New York, September 3rd.—A hurricane devastated the island of Jamaica on the night of August 18th. The wind raged with such fury at the beginning that street-cars had to cease running. Vessels were sunk and driven ashore, wharves destroyed, roofs blown off, trees up-rooted, and an amount of other damage sustained which it is impossible to particularize. Not a single coaster in Kingston harbor rode out the gale in safety. Twenty-seven vessels, were driven ashore or went to pieces at their docks. Every wharf but one was blown away; the beach was strewn with the cargoes of vessels wrecked; many seamen are missing. All penitentiary vessels foundered, and those at Port Royal sustained considerable damage. The damage on land is roughly estimated at £100,000. The villages of Allmanstown, Brownstown, Passmoretown, Hannahstown, Smith's Village and Fletcher's Land suffered severely. Schoolhouses were levelled, and churches and synagogues damaged. The barracks at Up Park camp went down in the gale. The banana crop is destroyed, and trees of all kinds have vanished. Three severe shocks of earthquake were felt during the storm. Communication with the country parts is cut off. The wires were all snapped, and trains could not pass, the Rio Cabrio bridge having given way. Boards, trees, sheds, shingles, household furniture, rushed through the air with lightning-like rapidity. Whole families fled from house to house seeking refuge. The roads are impassable for carriages and dangerous to pedestrians. Nearly the whole of the provision crop is destroyed, and great want will be felt by the peasantry.

New York, September 3rd.—The *Herald's* Madrid correspondent telegraphed the particulars of the frightful catastrophe at Logrono, a beautiful town built on the right bank of the Ebro, where the river is deep, and opposite a bank picturesque with vineyards and mountains, with Navarre rising in the distance. A regiment of the line was crossing on a pontoon-bridge, the band playing gayly, when an awful crash was heard. The bridge gave way, carrying into the river more than 100 men and officers. The panic-stricken soldiers on shore were unable to assist their drowning comrades, who were clinging to the debris, most of them sank to rise no more, all being in marching attire and armed with Remington rifles and supply cartridges.

The inhabitants of Logrono crowded in thousands to the banks of the river, many of them having relatives among the victims, and were frantic with grief. The authorities procured boats, and had the river dragged. The search was prolonged by the aid of torches until late in the night. The pontoon-bridge had been erected to enable passengers to cross the river, and had been pronounced safe by the engineers. Seventy-nine persons in all are known to have been drowned.

New York, September 5th.—A Madrid special says; It seems that the battalion was crossing the river on a large raft, constructed on pontoons, and in the middle of the stream, the raft began to break, and the men became alarmed and capsized it. Only half of the battalion escaped with the assistance of boats and ropes. Planks were cast in the Ebro by the inhabitants. The scenes at night in recognizing the bodies were heart-rending. Many of the officers and sergeants were married men, and their wives and families rushed to the banks during the search for the bodies by torchlight. On the next day, in the presence of the garrison and an immense concourse of people, the 110 bodies were laid in two graves. King Alfonso, the Queen and the royal family, have headed a subscription list with \$6,000.

London, September 8th.—A terrible colliery explosion occurred this morning at Seaham pit, in Durham County, on the North Sea, five miles south of Sunderland. At the time of the explosion about 180 men were in the pit, and from that time up to eleven o'clock all efforts to reach them were unsuccessful. Communication has, however, since been opened with a group of eighteen men, who are safe. The greatest excitement prevails in the neighbourhood, and the wives and families of the imprisoned men and slaughtered miners surround the mouth of the pit with loud cries and lamentations. The explosion occurred at half-past two o'clock this morning. Mr. Stratton, the resident viewer, was soon on the spot, when it was found that all three shafts of the mine were blocked, the cages being fastened in them. Stratton with a rope around his body, descended to the main seam, and heard men talking, he thought about twenty. They are considered safe. There is no reason as yet to believe that the pit is on fire, but it is feared that the bulk of the men have been killed. Seventeen men who were in the pit at the time of the explosion are safe. The owner of the Seaham mine furnishes the following: "Our worst fears are for about 120 men. The men known to be alive have not yet been reached, owing to the damage to the shafts by the explosion."

A dispatch from the colliery this evening announces that forty men, who were working two upper seams of coal, have been found safe, and some of them have volunteered and are helping to rescue their comrades who are seventy fathoms lower. The bottom of both shafts are still blockaded with debris. Up to seven o'clock a total of fifty-seven men had been rescued, the majority in an exhausted condition. Many thousands of people are crowding around the mouth of the pit. The guiding marks in the pit were blown to pieces. The explorers consequently find their work very difficult. They will keep at it all night in hopes to clear a way into the workings by morning. So far there is no sign of fire, but it is evident there must be a large accumulation of gas. One hundred and fifty men are still in the pit.

Another and later dispatch says: The rescued now number 66, and it is feared there were 230 men in the pit at the time of the explosion. Two corpses were brought to the surface at midnight, one of which was badly burned.

London, September 10th.—The explosion at the Seaham mine makes 76 widows and 284 orphans. The victims are largely single men. The first corpses were brought up this morning. One hundred and thirty is the lowest estimate of the dead. Four hundred horses are in the mine. The bodies recovered are frightfully disfigured. Some were buried so deep in the debris that they may never be found. Fires continually intercept the work. From the list published, it appears that 162 men and boys are missing. The latest official statement places the number of killed at 147. A broken Davy safety-lamp has been brought up from the main seam, and it is believed throws light on the origin of the disaster.

A later dispatch say: Thirty corpses have been recovered from the Seaham pit up to seven o'clock this evening, when

the search was suspended for the night in consequence of the accumulation of gas.

Berlin, September 10th.—The weather was magnificent to-day. The manoeuvres commenced with a parade of the Third Army Corps, at which were present the Emperor William, the Crown Prince Frederick William, and the other imperial princes. The Duke of Cambridge, British Commander-in-Chief, the Duke and Duchess of Connaught, and the Grand Dukes of Hesse, and Mecklenburg Strelitz, were also present.

London, September 11th.—News has been received from the French expedition which started up the Niger on the 4th of April last, under Capt. Gallieni. On the 11th of May, near the village of Dis in the Barharu country, the expedition was attacked by a thousand natives. After several hours' fighting, Captain Gallieni retired with a loss of fourteen killed and eleven wounded. All his baggage was lost. The expedition has refitted and started again by another route.

Havana, September 11th.—On the Island of Dominica continuous rains and high winds prevailed from August 15th to the 19th, and put the whole island under water. The crops were rotted and destroyed.

Quebec, September 11th.—The *Polynesia*, with mails for Liverpool, was detained eight hours waiting for the Montreal boat with passengers, which was delayed by a dense smoke over the river from the bush fires.

London, September 11th.—The stone lighthouse on the first point of Tanjong-Koelinge, on the west coast of Java, has been thrown down by a violent earthquake.

Madrid, September 11th.—The Queen has been safely delivered of a daughter. Both are doing finely.

The event has been the chief topic in Spain for two months. Seldom has the birth of a royal infant been looked forward to with greater anxiety, and keen is the regret of the Royalists that the baby did not prove an heir to the throne. The royal infant in Spain is ushered into the world only with great ceremonial travail. The whole court takes a hand in the labor. At this time all the old etiquette was revived. The military orders stood at the side of committees of Congress and Senate. Near them stood the deputies of Asturias, a privileged province from the time when King Pelayo and his bear-killing sons made it the rampart of Spanish liberty. Christian Rome, which has played so important a part in the history of Spain, was represented by the Archbishop of Toledo, by the Patriarch of the Indies, and by a committee from the Tribunal de las Rota, a unique tribunal created especially for Spain, an offshoot from the Papacy. The nobility were represented by a committee dressed in sumptuous and picturesque costumes, and the army by the Minister and Captain-General of Castile, of which Madrid is the capital. The people were represented by a committee from Ayuntamiento, a corporation elected by them. Representatives of great nations also contributed to this pompous display, made exclusively in the interests of the dying Bourbon dynasty. The Queen's bedroom has only one door—to prevent the possibility of smuggling in or substituting an infant—and opens upon the ante-room in which were assembled the distinguished guests. The President of the Council and Minister of Justice were conducted into the Queen's apartment by the King. When the child was born the venerable Marchioness de Santa Cruz, who performed the functions of chief lady of the bed-chamber, announced to Senor Canovas the happy event, the sex of the child, and the condition of its august mother. Senor Canovas gave the news to the guests. Then the child, naked, was carried by the King on a golden salver covered with a scarlet cloth through the ante-chamber, and presented to those in attendance, beginning with the President of the Council. Senor Canovas raised the tray aloft and exhibited it. Then the roar of artillery announced to the expectant multitude in Madrid that the royal babe had been born. Fifteen guns were fired, and a white flag was raised—two signals which showed that the child was a girl. Had a boy been born twenty-five guns would have been fired, and the national colors, red and yellow, unfurled. King Alfonso received hearty congratulations, especially from the foreign Envoys and the Ministers. Before any one departed the Minister of Grace and Justice prepared a deed recording the birth, and it was signed by many witnesses according to precedence. Then a solemn Te Deum for the happy recovery of the Queen

was sung in the chapel of the palace by the Cardinal Primate and the Patriarch of the Indies, in the presence of the nobility. All classes are highly elated at an event so fortunate for the dynasty. Directly after the presentation of the child, the chief governess conveyed her to the apartments which had been prepared in the story below the royal bedchamber. For the royal baby a suite of five rooms have been set apart, adjoining the Queen's apartments. Two ladies of high rank have been retained as its governess and ayah, and no less than three cradles, each a gem of art workmanship, have been provided by its two grandmothers, Isabella Segunda and the Archduchess Elizabeth of Austria (who are both in attendance), and by the father, who has had refurnished that in which he was laid twenty-two years ago. The infant will be baptized with the water of Jordan, sent to the King some time ago by the Marquis de Villa y Mantilla, in a magnificent vessel of Bohemian crystal, adorned with silver ornaments. The nuns of the Meson de Paredes contributed the font in which Saint Domingo de Guzman, born in Madrid, and greatly revered, was baptized. Before the birth of the present Princess of Asturias, King Alfonso's sister, a royal decree ordained that all direct successors to the crown should be denominated Princes or Princesses of Asturias. A similar decree, issued by King Alfonso shortly after his accession, declared that there being no immediate successor to the throne his eldest sister should bear the title and dignity of Princess of Asturias. As the heir is a female, complications are sure to result.

Madrid, September 12th.—The baptism of the Princess has been fixed for September the 14th. Ex-Queen Isabella will be one of the sponsors.

A futile attempt was made on Saturday to assassinate the Prefect of Valladolid. The criminal was arrested.

London, September 12th.—A telegram from Ragusa was received at Paris this morning, stating that 6,000 Montenegrins with light cannon are on their way to Dulcigno, and are resolved to fight if resisted.

London, September 12th.—A train from Waterloo station, London, for Hampton Court, came in collision with an engine last night. Four persons were killed and thirty injured.

Quebec, September 9th.—There has been no further destruction of buildings by bush fires in this vicinity, but a great deal of lumber, bark and grain is burned. About one hundred families are rendered homeless and destitute in the ranges of St. Helens, St. Theodore, St. Germain, St. Charlotte and St. Vallerin. It is estimated that the loss will be \$200,000.

Rome, September 13th.—The Budget for 1881 shows a surplus of 8,000,000 lire.

London, September 13th.—A Berlin special to the *Post* says: Prince Bismarck has abandoned the project of a bimetallic system.

London, September 13th.—A parcel containing four pounds of dynamite, connected with a tube filled with percussion caps and gunpowder, was found under a rail on the London and Northwestern line, 16 miles from Euston Square, the London terminus, this morning. It is supposed that the express train passed over the mined rail two hours previous to the discovery, but the tube was shaken from the rail by the motion of the passing train or otherwise failed to act. There is no clue to the perpetrators.

London, September 13th.—The Accrington weavers held an enthusiastic meeting to-night, and decided to strike. They will be supported by a levy of twopence per loom throughout northeast Lancashire.

London, September 14th.—The great Yorkshire handicap at Doncaster was won by *Reveller*; *Roulette* second, *School-boy* third.

The Champagne stakes for two year-old colts and fillies was won by *Balgat*. *Mazurka* and *Angelina* ran a dead heat for the second place.

Inquiry leaves little doubt that the placing of a mine of dynamite under the rails of the London & Northwestern line, was a deliberate attempt to wreck the express train to Scotland, which passed over the rails two hours previous to the discovery of the mine yesterday morning. There were 27 dynamite cartridges, each about three inches long and one inch in diameter, connected with the rails by a rubber tube filled with powder and caps. The dynamite

was soaked by the recent rain. No theory is propounded to account for the attempt.

Speaking of the strike at Accrington the *Times* says: Five thousand miners will be immediately affected. Spinners must soon stop also if the masters resolve to meet the strike by a lock-out throughout the north and northeast of Lancashire, or run only three days a week, as is probable. One hundred thousand operatives will be affected. It is understood that simultaneously with the issue of notices for a strike, the Lancashire masters will reduce wages 15 per cent in all districts contributing to the support of the strikers, and devote the fund thus created to the support of masters in Accrington whose hands are brought out by the Wages Committee.

The Prince and Princess of Wales and their children attended last night's performance of the American Minstrels at Her Majesty's theatre and enjoyed it greatly.

It is understood that Dean Stanley will pay a final visit to the United States in 1881, in company with Thomas Hughes. The visit will be for the purpose of investigating the Church question in the United States. The correspondent who gives the news adds: It is said that the growth of Catholicism in the United States is creating a current of feeling there in favor of State and Church union as a safeguard against Catholicism.

London, September 14th.—The new Finance Minister of Russia, M. Bunge, is said to have found the finances so disorganized and encrusted with defalcations, that General Melikoff has advised the Czar to appoint a Commission to investigate the department. It is believed the recommendation will be adopted, but the result will not be made public. The Commission will probably sit privately and submit the result to the Czar, who will dismiss the worst defaulters.

Ragusa, September 14th.—The international fleet consists of twenty vessels, manned by 8300 men and carrying 136 guns. Turkey is absolutely resolved to resist to the last the cession of Epirus and Thessaly to Greece. The Minister of War has opened a new credit of 1,800,000 francs for war material and the Ministry of Marine has ordered ten Krupp cannon for gunboats. It is definitely known that Riza Pasha, the Turkish commander, has positive orders to resist Montenegrin occupation of Dulcigno, although at the same time it is left entirely to his discretion whether to prevent the Albanians from entering. He has halted his force where it cannot be of the slightest use, while simultaneously Albanian volunteers are flocking through Scutari for Tusi. Five thousand men are already assembled there, of whom 3,000 are reported to be Turkish regulars. It is not known that the British Admiral, Seymour, has positive orders not to disembark his men. There is considerable excitement in Dulcigno among the Albanian Mohammedans. A vessel will soon be sent as a refuge for the families both of Christian and Mahomedan inhabitants, who are hemmed in between Albanians and Montenegrins.

London, September 14th.—All the unauthorized religious congregations have signed the compromise letter. The excitement among the Republican groups continues. The political situation is obscure and uncertain. Changes in the Ministry are regarded as probable and are freely discussed. A coolness undoubtedly exists between Premier de Freycinet and Gambetta. The position of affairs is regarded in political circles as pregnant with storms and difficulties. On Thursday or Friday, Coustant, Minister of the Interior and Worship, will propose the prompt execution of the religious decrees. It remains to be seen whether a crisis will ensue. The prevailing opinion is that Premier de Freycinet will yield.

Quebec, September 13th.—A pastoral letter from the Archbishop was read in the Basilica yesterday, deploring the continued emigration from this province to the United States, and appealing to the generosity, charity and patriotism of the people to take steps against the movement.

St. Petersburg, September 14th.—A political prisoner confined five months, recently hanged himself. Before he died he disclosed the names of the nihilist leaders and that of the author of the Winter Palace explosion.

New York, September 14th.—A *Herald* Washington correspondent writes that the statement cabled from Rome and London that Chili, Peru and Bolivia had accepted the mediation of the United States in the settlement of the

pending difficulties is not credited at the State Department, and is believed to be untrue at the Chilean legation.

New York, September 15th.—A *Herald* cablegram from Paris says: In connection with the royal christening at Madrid the *Gazette* publishes to-day amnesties for political and common law offenders, and reduces many sentences, in commemoration of the birth of the Infanta. The Government has telegraphed to the authorities of Puerto Rico, telling them to apply \$20,000 to aqueducts, ports, schools and other public works. All the crowned heads and governments in Europe have telegraphed congratulations to the King and Queen Christine. In all the Lord Chamberlain has received 1500 telegrams of congratulation. All the leaders of the dynastic parties have, on this occasion, shown their loyalty, and their journals consider the birth of an heiress to King Alfonso as an event highly favorable to the prospects of the monarchy. In the act of baptism Queen Isabella held the Infanta over an ancient font expressly brought from the Convent of Santo Domingo, and in which the Saint had been baptized in the Middle Ages. After the ceremony, the Infanta Maria Isabella, was taken back to her apartments. Other festivities will take place in October, when Queen Christine is church in the Atoch cathedral. Then bullfights, and popular entertainments will be given by the Town Council. The King and the other members of the royal family, and the Archduchess Elizabeth of Austria, have given large sums for the poor and the hospitals. The only persons present at the time of Queen Christine's delivery were King Alfonso, Queen Isabella, the Grand Duchess Elizabeth of Austria, the Marquess of Santa Cruz, the Duchess of Medina de Los Torres, and the chief ladies of the Queen's and the young Infanta's households. The royal household has been thrown into a fervent of jealousy by the marked preference shown to foreigners. The Austrian doctor who attended the Queen, and an English woman who officiates as head nurse, are the special objects of aversion. The Princess of Asturias loses her title by the birth of the Infanta, and is styled the Infanta Isabella in the *Gazette*.

St. Petersburg, September 15th.—Symptoms of the Siberian plague have appeared amongst the people of a village near Odessa.

Manchester, September 15th.—Owing to the continued depression in the Irish linen trade, flax spinners will, after October 4th, reduce the working days to four per week. An upward movement in raw cotton is threatened.

Florence, September 15th.—Larkin G. Mead, the sculptor, is engaged in studies for a statue of General John A. Sutter, the California pioneer.

Berlin, September 15th.—Waddington has requested the German Government to officially contradict Herr von Buhler's assertion that Waddington had made known to Bismarck a Russian offer of alliance with France. It is reported at Paris that Waddington has challenged von Buhler.

Rome, September 15th.—The instructions to all the Commanders of the International Fleet, except the French, state that, in case operations which may have political consequences become necessary, the British Vice-Admiral (Seymour) must confer with his colleagues, but that neither he nor they will be required to refer to their Governments before resolving on whatever course may be expedient. This liberty of action extends even to the bombardment of Dulcigno.

Paris, September 15th.—A Ministerial Council, at which the steps to be taken in regard to the religious orders are to be considered, will meet at 9 to-morrow morning. All the Ministers except Casot, minister of Justice, are expected to be present.

An evidently inspired note in the *Republique Francaise* discounts the impending decision, and says: "The Orders have but themselves to blame for what will take place in a few days."

Herold, Prefect of the Seine, leaves the Prefecture on account of his incompetent administration.

Ragusa, September 15th.—As the French ironclads ranged themselves alongside the English ironclads their bands struck up "God Save the Queen," and the English replied with the "Marseillaise." The arrival of the French ships caused universal satisfaction, and it is believed that action will now be taken.

The Albanian League at Scutari has decided to despatch

additional forces to Tnei, to threaten the invasion of Montenegro from that side. They were leaving Scutari on Monday, and the Turkish Governor made no effort to prevent them.

Cape Town, September 15th.—The Basuto Chief Lethordi made an unsuccessful attack on the mounted Cape rifles at Mafeteng on the 13th instant.

Lethordi's force numbers 600. It was routed and pursued several miles. A number of his men and many cattle were captured. The Colonials only had one man wounded. The Basutos, it is said, refuse all terms and war is inevitable.

Berlin, September 15th.—Prince Bismarck has been definitely appointed Minister of Trade and Commerce, Herr von Boetticher Supreme President of the Province of Schleswig-Holstein, has been appointed Secretary of the Home Department.

The Court of Appeal has rejected the request of Count Henry Von Arnim for a suspension of the sentence of imprisonment during his appearance before the Supreme Court to answer the charge of treason.

Ragusa, September 15th.—The Albanians continue resolutely to oppose the cession of Dulcigno, and are hastening thither en masse. It is asserted that they have resolved to kill Riza Pasha, who is at Kalekral with only 150 men. The Albanians have forwarded a fresh threatening address to the Porte.

London, September 15th.—Haulan, the oarsman, expects that it will take him a month to fully recover. He lost twelve pounds during the voyage, which he must regain before going into training. After a short visit to Manchester he goes to Newcastle-on-Tyne, where he will order a new boat.

New York, September 15th.—Livingston, the Brooklyn faster, is now in his eighth day. His face is sallow, his eyes sunken, and he is exceedingly nervous. This morning he took a short walk under the charge of watchers.

New York, September 15th.—To-night, about 11 o'clock, a man rushed into the hall and told Livingstone that his wife had committed suicide, in consequence of her husband's determination to continue the fast against her wishes. Livingstone hurried home and found his wife in convulsions. He summoned a physician, who could not discover that Mrs. Livingstone had taken any poison, and concluded it was only a device on her part to get her husband home.

London, September 16th.—Special despatches from Berlin say the Government perseveres in the intention of proposing a subsidy of several million marks for a line of steamers to Australia and the South Seas.

Paris, September 16th.—Imports into France, in the eight months ending August 31st, show an increase compared with the corresponding period of 1876 of 200,000,000 francs. Exports have increased 108,000,000 francs during the same time. The increase in imports is almost exclusively in food and the increase in exports mainly manufacture. Total imports exceed exports 10,980,000.

Paris, September 16th.—The statement of the Bank of France shows a decrease of specie for the week, of gold, 9,865,000 francs, and of silver 339,000 francs.

Berlin, September 16th.—Bismarck's appointment as Minister of Trade and Commerce is arranged so as to give him power to bring about certain new taxes.

Cape Town, September 16th.—A large crowd witnessed Sir Bartle Frere's embarkation, and there was a general demonstration of regret.

London, September 16th.—The River Ouse has overflowed its banks, and crops and other property near Manchester are damaged.

London, September 16th.—Sergeant Marshman has been acquitted of false marking at Wimbledon.

Berlin, September 16th.—The German Government has ordered the expulsion of the French Jesuits who emigrated to Alsace-Lorraine.

London, September 16th.—The Portland plate at the Doncaster meeting was won by *Discount*, *Peter* second, *Cambusdoon* third. The Juvenile stake for two-year-olds was won by *Macaroon*. The winner was bought by Green for 500 guineas. The Rous plate for two-year-olds was won by Lord Rosebery's chestnut filly out of *Czarina*.

Paris, September 16th.—The Council of Ministers to-day arrived at no decision relative to the religious decrees, but it is believed they will on Friday.

Berne, September 16th.—The Swiss National Council

decided to submit to a popular vote the question of a complete revision of the Constitution.

Rome, September 16th.—The *Diritto* states that the joint note of the Powers was presented to the Porte to-day. It insists upon the surrender of the territory mentioned in the joint note of August 3d, except Dinoseh and Gruda.

Constantinople, September 16th.—It is stated on good authority that at the Council of Ministers, under the presidency of the Sultan, to-day, Said Pasha urged imperative necessity of surrendering Dulcigno at any cost. The Imperial yacht *Izzedin*, with three aides-de-camp of the Sultan on board, sailed hence to-day for Scutari.

St. Petersburg, September 16th.—General Louis Melikoff has arrived from Livadia. The Imperial assent is announced to the proposal of General Melikoff and the Minister of Justice for the revision of all branches of the administrations of the provinces. The work of such revision in eight Governments has been allotted to four Senators.

Madrid, September 16th.—The King has signed a decree dissolving the Cortes.

Belgrade, September 16th.—It is stated that Prince Milan has accepted the resignation of the Ristic's Cabinet.

London, September 16th.—The Wages Committee of the Lancashire weavers have issued a manifest justifying the Accrington strike, and declaring the wages now paid weavers are 25 per cent. less than in 1853.

London, September 16th.—Twenty-nine more corpses have been recovered from the Seaham pit.

London, September 16th.—It is rumoured at Ragusa that Riza Pasha has been assassinated and fighting has been begun.

London, September 16th.—A despatch to the *Times* dated Gravosa, the 16th, says that at a Conference of the Admirals to-day, it was decidedly immediately to warn the foreign Consuls at Scutari and Dulcigno to remove families to a place of safety. When this is done the orders under which the combined squadrons are acting will be carried out.

New York, September 16th.—Advices from Panama state that the news from the South at last shows a gleam of peace, at least of an armistice, through foreign intervention. The Lima correspondent of the *Star and Herald* writes under date of August 21st, that L. P. Christianey, the American Minister, left that capital on August 16th, and sailed from Callao on the same day in the United States steamer *Wachusett* for the south; and adds: "Although it is generally believed that he has gone to Santiago, the capital of Chili, my opinion is that he has gone no farther than Arica, there to meet some high personage of Chili, and probably the bearer of important dispatches, and not improbably to obtain some idea of what will be acceptable to the power in Peru—Señor Pierola. On the following day there was a meeting of the French, English and Italian Ministers which seems to have ended by the dispatching on the 19th of the French man-of-war *Houssard* to Arica with documents, the contents of which have not been disclosed." The same correspondent says: "Chili has met with a check where, apparently, she least expected it, and from a quarter which she never will dare nor care to despise," and intimates that England, France and Italy have interfered. The Peruvian torpedo boat sunk by the *Huascar* in Callao bay some months ago has been recovered by the Peruvians, and is being refitted for service. A meeting of capitalists was held at the palace the other day, when it was resolved to advance 200,000 hard dollars to the Government, Señor Pierola having decided to issue no more paper.

New London, Conn., September 17th.—The steam-boat Inspectors, in the case of the *Narragansett* disaster, find that the steamboat company have violated important laws in regulating navigation. Both Captains are blamed, and both their licenses revoked.

St. Louis, September 17th.—A party, including two Directors of the Atlantic and Pacific Railroad, left Vinita, Indian Territory, the present terminus of the St. Louis and San Francisco railroad yesterday, to make a reconnaissance of the line as surveyed through the Cherokee nation and other parts of the Territory, thence to Albuquerque, New Mexico. This movement indicates preparations for constructing the railroad through Indian Territory.

Dallas, Texas, September 17th.—The Anglo-American

Syndicate here have divulged designs for the construction of 830 miles of road from Red river, in Lamar county, to the Rio Grande, in Kinney county. The name of the corporation is the Chicago, Texas and Mexican Central. The capital is \$7,000,000. A charter has been obtained, and work has already been commenced. Five of the Directors are Texans and four Chicagoans. Foreign aid comes from the Scottish American Mortgage Company.

Boston, September 17th.—The weather is beautiful, and the streets on which the procession is to pass and adjacent thoroughfares, are so crowded that it is difficult to move on them. Business is entirely suspended, and there is every indication that the memorable Bunker Hill celebration will be dwarfed when compared with to-day's event. The literary portion of the celebration was held in Old South Church at nine o'clock. Governors of States and Mayors of cities, invited guests of the city, occupied the platform extending the entire length of the church. Mayor Prince delivered the oration. The delivery occupied two hours, and at the conclusion the Mayor and guests were taken in carriages and escorted into the line of the procession.

The procession was three hours and fifteen minutes in passing, and was heartily enjoyed. It comprised State troops, trade representatives, many historic and prized emblems of the past, fire companies, a musical display, shoe-making in the past versus the present. General Lafayette's choice, etc.

Bridgeport, Conn., September 17th.—A terrible explosion occurred this afternoon in a small wooden building occupied by the Union Metallic Cartridge Company as a fuelling building, situated some distance from their main factory. At the time of the explosion five persons were at work in the building, and all are supposed to have been killed, as none have been seen since and four bodies have been found in the building, completely blown to atoms. Debris was blown a great distance. A small lake some distance from the building was literally strewn with fragments of the building. Two of the bodies were found in the lake, one with the head and arms gone. The cause of the accident is not known.

London, September 17th.—A correspondent of the *Times* at military headquarters in Montenegro, telegraphs to-day as follows: "It is thought that the Powers should no longer encourage the idle hope that there will be no bloodshed, for the first shot fired will spread the flames over and along the entire frontier."

The Greek army now numbers 30,000. A few weeks' drill has done wonders in fitting them for service. War material is rapidly accumulating, and all looks well for the purpose in hand being ripe by the end of October.

Riza Pasha, the Turkish commander, has ten thousand men at Maranga, but is powerless, his men deserting to the Albanians.

A correspondent says: "I am in a position to state that certain representatives of the Powers here have recommended the blockade of the Dardanelles by the Russian fleet, and of the Bosphorus by the combined squadron."

The Porte has informed Serbia that the fears expressed of an impending Albanian incursion are needless.

General Petrovich is near Antimari. He has six thousand men, six guns and three mountain batteries. He is waiting orders from Contouge. At an interview, he expressed strong doubts of an amicable settlement.

Six thousand Albanians are massed in position on the Mazura range, entrenched with five lines of earthworks, but within range from the sea.

London, September 17th.—Reports from Chester, Maltar, North Shields, Nottingham, Nuncatir, Penzance, Sheffield and Truro represent that heavy rains, gales and floods have caused great damage to unharvested crops.

Berlin, September 17th.—A private telegram received here from Warsaw announces that the rinderpest has appeared in the neighboring districts.

Liverpool, September 17th.—It is rumored that Sir Charles Dilke, Under-Foreign Secretary, intends to resign his official position because of ill health.

London, September 17th.—The *Standard's* Paris special says: The council of Ministers on Thursday lasted two hours and three-quarters. It is said to have been a stormy one.

Paris, September 17th.—A Ministerial crisis is im-

minent. Freycinet has Grévy's support, but all the other Ministers oppose him.

London, September 17th.—The *Times's* Bucharest special says: Military authorities of Dobruja have decided to disarm the entire population, so as to prevent brigandage, though the civil authorities object, representing that the only brigands are Turks from Bulgaria.

Pera, September 17th.—The Porte last night telegraphed its representatives abroad, protesting against the naval demonstration, and pointing out that the active interference of the European Powers in the Montenegrin question may cause disorder and anarchy throughout the Turkish dominions.

Ragusa, September 18th.—Eight thousand Albanians have occupied the town and fortress of Dulcigno, expelling two battalions of Turkish troops who formed the garrison. Riza Pasha, the Turkish commander, not having received instructions from the Porte to oppose the Albanians by force, withdrew to Goivza.

The British Vice-Admiral, Seymour, yesterday sent a letter to Riza Pasha, who was to be at Scutari. It is ascertained that the letter requires a definitive, categorical reply, in regard to the surrender of Dulcigno to the Montenegrins.

Quebec, September 18th.—The bush fire in the parish of St. George's Beauce, is reported to have committed fearful ravages. Seven or eight square miles of country is devastated on the frontier, and a large quantity of timber and grain, besides houses and other buildings, burned.

Boston, September 18th.—A special from Quebec says: The bush fire in the parish of St. George's Beauce is reported to have committed fearful ravages. Seven or eight square miles of country are devastated near the frontier. A large quantity of timber and grain, besides houses and other buildings, is burnt. Bush fires are raging within a few miles of Battersea; other fires are being rekindled in different parts of the country, and much valuable timber will be destroyed. The fires in Russell and Ottawa counties continue, and rain is badly needed.

Paris, September 18th.—The second meeting of the Council at the Palace of the Elysée this afternoon, lasted from 3 until half-past 5 o'clock. All the Ministers were present, including those who had tendered their resignations. An agreement was made by which the Ministerial crisis is adjusted. The following is said to be its basis: Constant retains full liberty of action regarding the March decrees, which he will execute at the time and in the manner he considers most suitable, without other delay than is required to give the Prefects the necessary instructions. The *Official Journal* of to-morrow will contain a letter from Constant to three Archbishops, stating that the declaration signed by the religious confraternities cannot take the place of the demand for legal authorization prescribed by the March decrees. A Ministerial crisis being avoided, President Grévy will return to the Jura to-morrow.

Manchester, September 18th.—The master weavers of North and North-west Lancashire have resolved to run but three days a week.

London, September 18th.—Hanlan had a short spin on the Tyne yesterday. He rowed a clean and powerful stroke, and his action was much freer than on Thursday. He says he is gradually recovering from the effects of sea sickness.

Berlin, September 18th.—The *North German Gazette*, in referring to the recent newspaper controversy about General Von Manteuffel's administration in Alsace-Lorraine, says: The German press is serving badly the interests of the country and general peace by the embittered controversy over the government of the Imperial provinces at a moment when Frenchmen are considering whether they should cease to make their reconquest the central policy of the French people.

London, September 18th.—Right Honorable Sir Fitzroy Kelly, Lord Chief Baron of the Court of Exchequer, died yesterday.

London, September 18th.—The bells of the parish church of Boston, Lincolnshire, where John Cotton was for twenty years vicar, were rung yesterday, in honor of the 250th anniversary of Boston, Massachusetts.

Berlin, September 18th.—A St. Petersburg correspondent telegraphs as follows: An outbreak of insurrection in Eastern Roumelia is only a question of a few weeks.

Constantinople, September 18th.—The British Consul at Van, Armenia, telegraphed to Mr. Goschen, the British Ambassador, that the Kurds had devastated thirteen Armenian villages.

Berlin, September 18th.—The Minister of Finance, Herr Ritter, replied to the enquiry from Altona, that though he is not yet able to enter into the details of the incorporation of Altona with the Imperial Customs territory, it is certain as soon as the necessary preparations are completed.

Paris, September 18th.—It is stated that the Cabinet thinks the meeting of the Law Courts should be expedited. A brief semi-official statement will be sent to the papers, announcing that the official journal will not publish anything respecting the meeting of the Cabinet. This confirms the statement that no final resolution has been taken in regard to the religious decrees. President Grévy will return to his country residence to-morrow morning.

London, September 18th.—A Paris correspondent says: Awaiting the decision of the Law Courts is merely a method of shelving the Decree question until the meeting of the Chambers. I am able to confirm the report that the Premier de Freycinet has held his ground. The question will remain intact until the reassembling of the Chambers. The Chambers will decide the fate of the Cabinet, which will remain unchanged until then.

Paris, September 18th.—The *Rappel* says that a circular will shortly be addressed to the various unauthorized religious congregations, requiring them to submit themselves to the provision of the March decrees.

At this morning's meeting the Minister of the Interior and Worship, Cazot, Keeper of the Seals and General Farre, the Minister of War, tendered their resignations. A second meeting of the Council will be held at the Palace Elysée, under President Grévy, this afternoon.

Ragusa, September 18th.—The British gunboat *Helicon* came to anchor on the 16th instant in the roads of Antivari, and was boarded immediately by a port official, who requested her departure. The *Helicon* complied, because the Treaty of Berlin forbids war ships to enter the harbor of Antivari.

New York, September 19th.—The *Tribune's* London special says: The Continental Powers seem to be squaring for the next war. It is evident that Russia and Austria must fight for the dominion of the Southern Slavs and the possession of the Balkan peninsula. The project of an Austro-Italian alliance has been spoiled by premature publicity. There is no natural harmony between these States. France is to blame for the proposal, as she offended Italy in the Tunis affair.

Charles P. Read, the noted agriculturist, declared yesterday that England could never compete with America in wheat, but that America could not grow barley nor rear pigs as well as England. Farmers' prospects are improving, but the reorganization of the land system is needed in England, as well as in Ireland, to bring agriculture to the same perfection as other industries.

Chief Baron Fitzroy Kelly, who died yesterday, is the last of the Lord Chief Barons. After existing 800 years, the title is now abolished. The office in its new form is worth £6,000 per annum. It will fall to a Liberal lawyer—probably to Attorney-General James.

New York, September 19th.—The *Herald's* Paris special says: Our Berlin correspondent telegraphs as follows: I learn from trustworthy sources that the Russian revolutionary party has assumed a totally different attitude from what it has previously held toward the Russian Government. Having seen the little that has been accomplished in the way of attaining their objects, the Nihilist leaders have decided to adopt in future a totally different line of procedure from that which they have heretofore pursued. It has been determined, so I am informed, that the movement henceforth shall be conducted in the way of secret political agitation. The leaders are now watching the progress of events on the Balkans, and are said to be in constant communication with Russian Poland, whose sympathy they expect to secure in the event of a war between Russia and Austria. The visit of the Emperor of Austria to his Polish provinces is, however, considered by European politicians as showing too clearly to Russia the danger she would incur by a war with Austria, and that she will hesitate before plunging into one.

London, September 19th.—A correspondent at Salonica

says that the northwestern part of Macedonia is very unsettled. Bands called "Avengers" have formed in the chief Bulgarian centres, and have assassinated, within the past six weeks, a number of Moslems, including one Bey and two functionaries. The Musselmans retaliated, and many Bulgarians have fallen victims. The Bulgarians are unfortunately stimulated to these excesses by emissaries from the principality of Bulgaria, and are encouraged by armed bands hovering about the frontier on the Bulgarian side. Should events take an untoward turn, the Bulgarian Government and its backers will be largely responsible for wanton and unnecessary misery and bloodshed.

Belgrade, September 19th.—A band of 300 Servian brigands has crossed to the Hungarian side of the Danube. A battalion of troops has been ordered to bar the way toward the interior. There is much alarm among the traders of Western Servia because of the recent large increase of bands of robbers.

Ragusa, September 19th.—The naval demonstration has been postponed until the Christians can leave Dulsigno; as a massacre is feared. The vessels will be unable to keep their stations soon, as the autumn storms will begin in a fortnight. Admiral Seymour, in a despatch to Riza Paasha informs him that he will be held responsible for the lives of Christians in his jurisdiction.

London, September 19th.—The Viceroy of India telegraphs that Ayoub Khan is two marches beyond Girishk, on the road to Herat. It is rumoured that the Zamaduri people offered to assist him, but he refused. The telegraph line from Candahar to India has been restored.

London, September 19th.—The steamer *Aurora* from Oporto for Southampton, foundered at sea, and fifty persons were drowned.

St. Petersburg, September 19th.—The *Golos*, referring to the secrecy maintained in regard to the objects of the Tekke expedition, says that, in view of England's change of policy, the execution of Russia's intentions in regard to Merv is no longer necessary. It will only be necessary to keep part of the Steppe, as a warning to the Tekkes in the future. The article concludes as follows: "Enough of victories and annexations. Let Russia devote herself to internal development."

Paris, September 19th.—The Ministerial crisis recommenced this morning, because of a difference of views between De Freycinet and Constans, relative to the application of the religious decrees. President Grévy has again been obliged to postpone his departure for Jura, and will preside at a Cabinet council to be held this afternoon.

Paris, September 19th.—Admiral Jaureguibery, Minister of Marine, and Vanoy, Minister of Public Works, have resigned. President Grévy has summoned Gambetta to attend at the Elysée. It is quite evident that Gambetta is the real author of the present crisis.

Paris, September 19th.—Jules Ferry has been charged by President Grévy with the formation of a new Cabinet. De Freycinet has sent the following letter to President Grévy: "After mature reflection, I have come to the conclusion that the Cabinet cannot be reconstructed as it was yesterday. There are serious doubts of its duration. Between several of my colleagues and myself there exists differences of opinion which leave no room for hope that accord may be maintained, even at the cost of mutual concessions. Such a state of things, if prolonged, would be injurious to the interests and tranquillity of the country. Believing that my retirement will offer the most prompt means of solving the crisis, I beg you to accept my resignation."

President Grévy on receiving the letter, summoned De Freycinet and, in conjunction with several of the Ministers, tried to induce him to recall his resignation; but De Freycinet refused, and President Grévy finally accepted the resignation. Soon after, Ministers Constans, Cazot and Farre had a long consultation with President Grévy. Ultimately, Jules Ferry was charged with the formation of a Cabinet. Regarding the sudden change in the position of affairs since Thursday, when the difference of opinion between De Freycinet and his colleagues appeared to be compromised, it has transpired that De Freycinet had a further consultation with Ministers Constans and Cazot, during which it became manifest that the agreement established at the Cabinet council was unreal, and the divergence of views between De Freycinet and his colleagues was irreconcilable.

The *Loir* says: Jules Ferry has already offered the Ministry of Marine to Admiral Pothuieu. Several papers consider that the Cabinet crisis will necessitate the early assembling of the Chambers.

New York, September 20th.—A special from Paris gives the following version of the scandal at the unveiling of the Thiers statue: After the unveiling, and at the conclusion of Jules Simon's speech, Oliver Pain, who was standing on the official tribune and close to Mme. Thiers, got up on the bench, and in clear, deliberate tones exclaimed, "In the name of the thirty-five thousand who were shot in May, I protest against the erection of this statue." Pain was instantly hustled away by indignant spectators, amid loud cries of "Down with the Prussian," and "To Prussia with him." It was believed that he was subsequently arrested. Mme. Thiers remained perfectly tranquil during this scene, though several times previously during the ceremony, she had been moved to tears.

Dublin, September 20th.—Parnell addressed a great meeting of tenant farmers at Ennis on Sunday, and set forth the line of policy he wished to see carried out in order to secure the early settlement of the land question. The main features of his programme are unanimity of action among Irish members, independence of English political parties, refusal to pay more than what the tenant considers fair rent, and the social excommunication of any person taking a farm from which another has been evicted for non-payment of rent.

#### THE JAPANESE PRESS.

#### THE DEPARTURE OF THE DUTCH MINISTER.

(Translated from the *Nichi Nichi Shinbun*.)

THE Chevalier de Stoetwegen, Minister for the Netherlands, left at the commencement of the current month on the plea of leave of absence. The *Hochi Shinbun* at the time commented strongly upon his departure in the following words:—

"We have gleaned these few facts about the departure of the Dutch Minister from various foreign friends in Yokohama. When our own Foreign Department recently distributed drafts of the proposed treaty revision to the several accredited Foreign Representatives here, a copy of the same appeared in the *Japan Herald*. As the source from which this information came was not given, it caused the authorities much surprise and they made very strict inquiries as to whence it could have been obtained, as such an occurrence was most unusual. Being unable to trace this delinquency to any of our own officials, they concluded that the draft in question must have fallen into the hands of the *Herald* through the medium of a foreigner. The Foreign Department thereupon made inquiries of the various Foreign Representatives, who almost unanimously asserted that they knew nothing about the matter. Irrefutable evidence that it was the Dutch Minister who gave a copy of the draft to the *Japan Herald* was, however, eventually obtained. This was communicated to the authorities, who came to the conclusion that it would be more advantageous to the interests of Japan not to have so inconsistent a diplomatist in the country. The Foreign Minister therefore communicated with the Dutch Government by telegram, and as they had no explanation to offer for such conduct, their Minister was at once recalled and will leave Yokohama by the mail on the 5th instant."

The *Herald*, however, recently made a strong attack upon the *Hochi Shinbun* denying the statement, and alleging that the departure of the Minister was actually on leave of absence, and not from such an unpleasant cause as asserted; and, afterwards, declaring that even if a copy of the draft treaty had been supplied by the Dutch Minister he would not be considered culpable by his Government as long as his action was to benefit the public. The article was throughout a strong defence of the Minister's conduct.

With reference to the subject we may state that we were in possession of information at the very first, but were unwilling to publish it lest it might lead to complications. The *Hochi Shinbun*, however, has taken the initiative, so we intend now to state the facts of the case briefly, so as to controvert the inconsistent statements of the *Herald* on the one side, and to maintain the honour of our country with

regard to diplomatic affairs on the other. We have been informed that the greatest care is observed to maintain secrecy in our diplomatic matters, but that in not a few instances have matters leaked out and appeared in the foreign journals. This happened with the draft of the revised tariff last year. In the month of August this year, our Minister for Foreign Affairs distributed to the various Foreign Representatives copies of the draft of the proposed treaty, for transmission to their respective Governments. A copy, however, suddenly made its appearance in the *Japan Herald* only a few days after the distribution had taken place. When the Minister for Foreign Affairs read this, he considered that such an unusual affair called for notice, and in order to ascertain from what source this information had been supplied he made enquiries, first of all among the Japanese officials. Finding that they had not given it, he concluded that it must have been the act of some Foreign Representative, and therefore drew up a circular, a copy of which was sent to the various diplomatists inquiring if they had supplied the *Herald* with the copy of the draft in question. A reply in the negative was received from all to whom the question had been addressed, with the exception of the Dutch Minister who, knowing his inability to deny it, left the circular unanswered for several days. Meantime our Minister had obtained evidence on the most reliable authority that the draft had been given by the Dutch Representative. In consequence of this he wrote an official despatch, informing him that in order to protect the interests of his own Department, he must decline any further communication with him on diplomatic affairs. Our Minister followed up this despatch by a telegram to Mr. Awoki, Envoy Extraordinary and Minister Plenipotentiary to the Courts of Germany and Holland, instructing him to report the whole matter at once to the Dutch Government.

On the receipt of the despatch declining further official communication the Dutch Minister was greatly surprised, and went at once to the Department for Foreign Affairs. Here he had an interview with the Assistant Minister, in the course of which he stated, that in giving a copy of the draft to the paper in question, he had not intended it for publication. He then presented an explanatory document, in which he argued that there was no reason for the Minister for Foreign Affairs to decline to continue diplomatic communication with the Dutch Government in consequence of so simple a matter. Our Minister, however, replied as follows:—"We have no intention of declining political communications with the Dutch Government, but we shall conduct them in future through our Minister; we decline any further diplomatic intercourse with the Chevalier de Stoetwegen." Since this occurred our Minister has received several letters from the Dutch Minister, but has not replied to him, and has written direct to the Dutch Government, through the medium of Mr. Awoki.

Upon Mr. Awoki receiving the telegram mentioned as having been sent to him, he reported the matter to the Dutch Minister for Foreign Affairs who at first refused to recall his Representative in Japan, saying that such a step would be quite impossible until the arrival of documentary evidence. When, however, he learnt from a second and third telegram that his Representative had offended our Minister for Foreign Affairs by his explanatory document, and that the copy of the draft of the treaty revision had been supplied to the *Herald* by the Dutch Minister, to whom it had been entrusted for transmission to his own Government, he could not refuse compliance any longer. Not wishing, as he asserted, to make the matter public, he recalled Chevalier de Stoetwegen simply by an order from the Dutch Government. We say, therefore, that what appeared in the *Hochi Shinbun* was, on the whole, in accordance with facts.

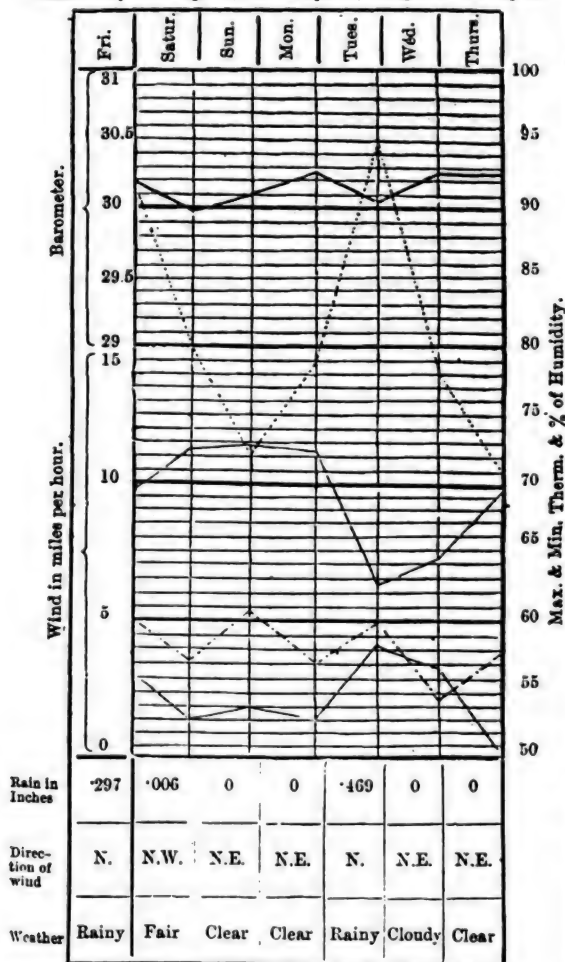

At the time that the draft appeared in the *Herald* we argued strongly that the responsible authorities ought not to let the matter pass unnoticed, and we applied to public opinion also, whether it might not be necessary for the Minister for Foreign Affairs to take some decisive measures. Since their first dealings with us Foreign Representatives, considering Japan as a mere Oriental country, have despised us accordingly, and practised arbitrary measures without the least heed, such as they would not have done in civilized countries. Twenty years has confirmed this habit, and

they do not treat our great Empire with the same courtesy which they show towards other independent sovereign countries. Such has been the case in the recent action of the Dutch Minister. If we do not cure this bad habit, and take measures for asserting the honour of our independent sovereign country, we shall in time find ourselves unable to rise from such an attitude of humiliation.

We consider that the Dutch Minister has no one to thank but himself for his recall. We trust our responsible public men will adopt the resolute course of action just now displayed, and for the future maintain the honour of our independent Empire in diplomatic intercourse. It is for this that public opinion earnestly appeals.

### METEOROLOGICAL REPORT

FOR WEEK BEGINNING FRIDAY, OCTOBER 8TH, 1880.  
Observatory of Daigaku, Moto-Fujicho, Hongō, Tokio, Japan.

### REMARKS.

Heavy line represents barometer.

Light continuous line—max. & min. thermometers.

.....represents velocity of wind.

.....percentage of humidity.

Max. velocity of wind 13.5 miles per hour on Tuesday, at 4 p.m.

The barometer is reduced to the freezing point and to the level of the sea.

The highest reading of the barometer for the week was 30.303 inches on Wednesday, at 10 p.m., and the lowest was 29.952 inches on Saturday, at 2 p.m. The highest temperature was 72°7 on Sunday and the lowest was 49°5 on Thursday. The maximum and minimum for the corresponding week of last year were 65°4 and 49°5 respectively. The total rain for the week was .772 inches against a total of .350 inches for the corresponding week of last year.

 Per Japanese steamer *Sumida Maru* for Hongkong via Kobe:—Treasure ... .. Silver Yen 100,000.00

## REPORTS.

The Japanese steamer *Wakanoura Maru* reports:—Left Yokohama on the 3rd instant at 10 a.m. with a moderate breeze. At about 7 p.m. it commenced to blow and increased rapidly with heavy rain squalls, barometer falling very quickly. There was also a high and confused sea and at 11 p.m. there was a perfect typhoon. At 11.20 p.m. there was a calm centre for about twenty minutes, when the wind shifted suddenly from S.E. to N.W. and was even more violent than before. It commenced to abate at about 2 p.m. Lowest barometrical reading 28.15. Arrived in Kobe at 6.30 a.m. on the 5th instant. Lost two quarter boats and sustained other small damages. On return trip had fine weather all the way.

The American steamer *City of Tokio* reports:—Sailed from San Francisco September 20th, at 2 p.m.: to Sept. 27th had light, variable winds and fine weather; Sept. 28th to 30th, a fresh gale from W.N.W. and N.W., with rough sea from N.N.W. On October 1st commenced a moderate S.W. gale; at 2 a.m., sudden change to N.W., dark, cloudy sky and heavy rain, with rough sea, barometer 30.26; at 4 a.m., barometer 30.10; at 7.30 a.m., sudden change to W.N.W., barometer 29.75; at noon, a strong gale from N.N.E., and heavy squalls; latter part moderating, wind N.E., and thence to Yokohama variable winds and fine weather. Arrived October 12th, at 10.10 a.m.

The British steamer *Vortigern* reports:—Left Shanghai on Saturday, 9th Sept. at 2 a.m. Experienced strong N.E. winds entire passage. Arrived in Yokohama at 10 a.m. on the 14th. Passage 5 days, 8 hours.

## SHIPPING.

**SHIPPING.**—The s.s. *Bengloc* has gone to Kobe, where she will take the New York berth. The s.s. *Euphrates* has been despatched for New York. The s.s. *Patroclus* and *Vortigern* from Europe are now in port discharging. The former goes to London via Kobe and Shanghai.

## MISCELLANEOUS.

## W. & A. GILBEY'S WINES AND SPIRITS.

**W.** & A. GILBEY have special facilities for carrying on an extensive Foreign Trade, having held for many years in their Excise Bonded Stores, for the purpose of their Home Trade, a stock of not less than 12,000 Casks of Wines and Spirits, which are equally available for Export. These stores are by far the largest private Duty Free Warehouses in the World, and are under the supervision of a staff of Excise Officers specially attached to these Warehouses.

THE EXTENT of W. & A. Gilbey's purchases enables them to give the best VALUE to the public, as a twentieth part of the Foreign Wines consumed in the United Kingdom is supplied from their stock. In the year 1876 W. & A. Gilbey paid duty on 1,881,049 gallons of Wines and Spirits, and the average quantity bottled and sent out by them daily was 3,050 dozens or 36,600 bottles.

QUALITY is guaranteed by W. & A. Gilbey, and is the same whether the Wines or Spirits are obtained direct from their Head Establishments or from any of their Agents. The purity and genuineness of every article in this list are guaranteed in accordance with Act of Parliament, 38 and 39 Vict., Cap. 63.

W. & A. Gilbey have always adhered to the standard of Bottle Measure recently recognised by the Government, namely—

6 bottles contain one gallon; 12 half-bottles contain one gallon.

SECURITY is ensured to the purchaser, each bottle bearing W. & A. Gilbey's seal and label guaranteeing quality and measure, and the strength also in the case of Spirits.

EDWARD FISCHER & Co.,  
Agents for Japan.

## SARGENT, FARSARI & CO.,

SHIP-BROKER AND CUSTOMS  
AGENT,

NO. 70, Yokohama,

(Opposite the Old British Post Office).

Yokohama, 4th May, 1880.

## MISCELLANEOUS.

THE GREATEST

## WONDER OF MODERN TIMES HOLLOWAY'S PILLS.

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

MR. SAMUEL BAKER.

In his work entitled "The Nile Tributaries in Abyssinia," says, "I ordered the druggist at Malindi to inform the Fakery that I was a Doctor, and that I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies him of their value."

## SIMPLE, SAFE AND CERTAIN! HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse-feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to look up the small remaining stock."

Sold by all Chemists and Medicine Vendors throughout the World May 17th, 1873.

tf.

"HIGHEST AWARD & PRIZE, MEDAL PHILADELPHIA  
EXHIBITION, 1876."

## SOME RESULTS OF AFFORESTATION.

A PARAGRAPH in one of the American newspapers which we received by yesterday's mail, states that in 1840 Lord Carr planted with trees a portion of his estate in Nairnshire, Scotland; which was utterly unfitted for agricultural purposes. Lately an account was made up of the result of the experiment. It was then ascertained that no less than £16,000 clear of all expenses has already been received from sales of timber, while the land is still fully stocked with trees and annual clearings, producing a large revenue, are taking place regularly. It has also been estimated that the nett profits were as great from this formerly sterile waste, as would have been the case with the best arable land.

No better practical proof than the result of Lord Carr's experiment could, perhaps, be afforded of the splendid results obtainable from Forestation, and an example is given which should not be lost sight of here in Japan. It is a patent fact that forest trees are rapidly disappearing all over this country, consequent upon the demand to supply the requirements of railways, telegraphs, commerce, &c., &c. The resulting increase in the price of timber is now apparent, and points most unmistakably to the not far distant period, when the warnings we have so frequently given upon this subject will be exemplified with very unpleasant distinctness.

France, it is well known to those who take an interest in Forestation, is one of the countries—if not the country—where the science has been practised with the most signal success. At the last Paris Exhibition, in order to bring the working of the Department practically before visitors, the Administration des Eaux et Forêts erected a Swiss chalet on the slope of the Trocadero, in which were shown illustrations of what had been doing in Forestry, and a report, arising principally out of this display has recently been issued. From this extremely interesting document, we learn that the forests of France only

occupy about 17 per cent. of the total area of the country; or twenty-two and a-half millions of acres, while Sweden has 43 per cent. of woodland, Russia 87, Austria 88, Germany 27, Switzerland 18, and Great Britain the insignificant quantity of 4 per cent. The forests in France are over two-thirds private property, while the Government has absolute control over only about 11 per cent.

The Department has made some valuable experiments with foreign woods. The Australian blue gum prospers exceedingly in the south of France, and the marshes at the mouth of the Var have been drained and the fevers prevailing there ended by planting this species of tree. In poor soil, and as a preparation for more valuable trees, the American oak has been largely made use of, and experiments are in progress with the *theya* tree of California, the wood of which is valuable in the manufacture of the finer descriptions of furniture.

The most important work of the Department, however, has been the replanting of places where forests once existed, and of the dunes or sandhills, those dreary wastes which are associated in the minds of most of us with pictures of shepherds on stilts busily engaged in knitting. It is, of course, useless to attempt to plant trees upon hill-tops exposed to the full blasts of the wind, so the plan followed by the Department has been to build weirs in the gorges through which mountain torrents rush in winter. These weirs retain the water, which forms ponds in summer instead of becoming dry. By the modified action of the water so dammed back, a broad, deep, layer of soil is formed, upon which first grass, then bushes and ultimately trees, grow. As soon as the bushes, and trees begin to grow, others soon follow, which are protected by the first. A commencement once made in this way, it is easy to change the weirs, and the original plan can be pursued and rendered more simple by the assistance afforded by the trees already growing. In course of time the mountain becomes gradually covered with wood from the gorges, the mountain stream, too, is brought under subjection, since it supplies moisture to and in turn is supplied by the growing trees. The streamlet never dries up now, as it did when the mountain was bare and its snow waters simply rushed down in the spring to leave the land arid in summer. An example of this description is given in the case of the Torrent de Bourget. As recently as in 1868 it was only a ravine of bare rocks. The hollow has since been half filled by high stone dams. The beneficial results of the work are seen in the trees and bushes which grow to the very edge of the ravine, and in the torrent being now innocuous, and never devastating the valley below with periodical inundations, as was formerly the case.

In the portion of the report which summarizes the results hitherto attained, we read that from 1861 to 1877, 68,000 acres of land were planted with trees and 3,700 additional acres turfed, the cost being about £345,000. The report states that the comparatively small amount of work done was owing largely to the fact, that the communes

and private owners had paid but little attention to the subject. It is some slight satisfaction to know that the apathy in Japan is not exceptional, and we derive encouragement from the statement that interest in Forestry is rapidly growing in France, and among the very classes who formerly looked upon the operations of the Department with an indifference amounting in some instances almost to contempt.

The laws in France on the subject of Forestation appear well calculated to promote the object in view. Grants of seeds, young trees, money, &c., may be made, and compulsory replanting is provided for in the extreme cases in which such a peremptory step is considered necessary. The Government can also enter upon private property to accomplish afforestation, and if the owner desires to re-occupy the property he must repay the expenses or surrender half of the land so improved.

The planting of the sand dunes which from their nature are continually shifting, is accomplished by laying them out in sections and building strong fences along the crests. Towards these division fences other smaller ones lead, zig-zag fashion. The sand constantly accumulates in the protected places and thus forms a bulwark for the space in the rear. The area so protected is then planted with meadow-grass, sedges, broom, or esparto grass. These, when growing, are protected by brushwood and, when once the grass has gained a footing, coniferous trees are planted. In this way many thousands of acres have been reclaimed between the Gironde and the Coubre, and it seems as if the extinction of our well-remembered shepherd on stilts was only a mere question of time.

#### WESTERN MEDICINE AND SURGERY IN PEKING.

PROBABLY it is not in the capital of the Chinese empire that the inquirer after the progress made by western medical and surgical science in the dominions of the Son of Heaven, will find the best reward of his labours. Could he penetrate to the missionary stations of the interior, he would discover that the evangelist who can minister to the diseases and accidents of the body has a far better opportunity of overcoming the prejudices, the traditions, the constitution of the Chinese mind, that stand in the way of the native's conversion to Christianity, than can be possessed by him who, however earnest, has but the gospel in his hand and heart, and at best only an imperfect knowledge of the complicated language in which he has to endeavour to explain religious mysteries. Even in Tientsin, thanks to the failure of celestial charlatanism to cure the wife of the potent viceroy of Chili, and the consequent invocation of an American lady-doctor's aid—aid which proved rapidly and thoroughly effective—even in the provincial city occidental practice and prescription are in far greater favour at the present moment than they have yet attained, or will probably for a long time achieve, in the central metropolis. There the event of a foreign medical professor being summoned to minister to the infirmity of some high-placed denizen of the palace, an empress or cherished companion of an emperor, would afford the only accurate analogy with the case of Lady Li and the relief bestowed upon her by Miss Dr. Howard. The possibility of such an analogy occurring is unhappily too far remote to be calculated upon. Nevertheless, and without such fortuitous advantage, foreign missionary doctors have a considerable practice among natives of the lower classes in Peking, where occasionally even patients of comparatively exalted station seek their services, as we

find specially mentioned in the last report of the Peking hospital, published by Dr. Dudgeon, its director.\* This gentleman, and others of less renown and experience, are working unostentatiously in the same field, and may hope with assurance that they are preparing the ground and sowing the seed for a harvest, the extent of which will be ultimately abundant, though it may not all be reaped by them or in their day. Their descendants, and those who shall succeed them in the sphere of their endeavours, may see all the peoples of the Middle Kingdom as willing to recur to the healing art of the west, as are to-day the inhabitants of Japan.

The average annual expenditure of the establishment whose proceedings are now under notice amounts to between four and five hundred taels, "a sum which has often been remarked upon by the public press in China and others, as exceedingly small when compared with the large amount of work done." The doctor claims that the outlay is smaller than that of any of the foreign hospitals in China, while the work is second to none in the others "perhaps in point of importance, influence, and the numbers of out-patients treated." The qualification here implied would no doubt apply, now, in favour of the Tientsin institutions, which have received a momentous impetus from that accidental employment of western science, to which we have above alluded, in the viceregal yamen. Of course this in no way detracts from what has actually been accomplished, under circumstances of greater difficulty and with very limited resources, elsewhere. His comparatively trifling outlay Dr. Dudgeon explains by the considerable stock of medicines and instruments, medical works and druggist's sundries, possessed by his hospital; "and above all to an incurable disposition on his part to economize where efficiency is not at stake, by doing himself what others could do almost equally well, and to the comparatively low scale of wages which predominates in a non-commercial community." We have often been astonished at the pitiful remuneration accorded to teachers and hospital-assistants in Japan. Yet the latter have, certainly, nothing to envy their brethren in the neighboring country. Dr. Dudgeon's senior assistant has lately only had six dollars per month; "and the others range gradually down, according to years of service, ability, official rank, etc., to a little over three dollars." Another cause, which might not be encountered in another locality, of economy in the management of the Peking Hospital, is to be found in the fact that the director has always had under his orders some medical students, whose expenses are borne by one or other of the missionary societies, for whose service they are being educated. A tabular statement shews the number of patients for the three years under review. It is mentioned that the returns for July and August in 1876 and 1877 "appear smaller than usual by reason of the hospital being closed for a month during the very hottest weather. The Chinese month during which the work was suspended included the latter half of July and first half of August." The conductors are, naturally, the best judges of the advisability or necessity of thus shutting the hospital during the hottest and presumably not the most healthy period of the year. We trust that under all circumstances, future reports will shew an inversion of the figures here before us. The gross totals of out-patients were, for each of the three periods, as follows:—1875, 14,606; 1876, 11,643; 1877, 8,284. In-patients treated were:—1875, 63; 1876, 27; 1877, 20.

\* Report of the Peking Hospital, in connection with the London Missionary Society, for the years 1875, 1876 and 1877, with which is incorporated the report of the Peking Opium Refuge for the years 1878 and 1879. By John Dudgeon, M. D., C. M., etc.

In the brief notes of a few of the more important cases there occurs much that will be of interest to the student of comparative medicine, but is not of a kind to present to the lay reader, or to those who are only concerned in a general way in the advance of western science in the Far East. To all three classes, however, it will be satisfactory to learn, on no less an authority than that of Dr. Dudgeon, that "the entire practice in the capital in fractures, dislocations and in all serious surgical affections" is in the hands of western practitioners. "No one thinks of not presenting himself to the foreign surgeon. There may be often considerable delay; but the general belief in the surgical ability of the foreigner is unbounded." Possibly this statement is tinged a little with justifiable professional pride and enthusiasm; but though difficulty may be found in accepting it *au pied de lettre*, it is yet invaluable as a proof that the manual branch of the white healer's skill has already commanded intense appreciation in the mind of the dense masses of the Chinese capital, and must help to pave the way for equal confidence in the pale-faced physicians' treatment of constitutional, epidemic and all other internal maladies.

Among what we may call the curiosities of practice are the not infrequent cases of injuries, received in conflict, from the teeth of the foe. The first phalanx on the forefinger of a boy fifteen years old had to be amputated in consequence of such a bite. Carbuncles are particularly common and must often prove fatal. The most deadly and painful are, perhaps, those on "the back of the neck, stretching from ear to ear, invading the lower occipital and upper cervical region." Large ulcers arise from the most trivial causes, such as the bite of a mosquito or sandfly. Great swelling and inflammation follow, succeeded by suppuration and mortification. "Self-inflicted wounds, from motives of mere revenge or for the purpose of extracting (*sic*) money are not rare." A curious case is instanced. A man was admitted, with two gashes in his throat. These wounds were sewn up; and they soon healed, although for some time air escaped through them when the patient coughed. Presumably he coughed when it suited his purpose to do so; as we are told that he lived in good style, with two attendants, in the hospital for two months. "He might have left after one month; but, as he was supported by a gambling shop, he made the small wound that remained unclosed an excuse for hanging on another month." The manner in which his power of intimidation originated is explained by the author. In brief he had been the lessee of a gambling house belonging to some great man's retainers. Having been ousted by a new contractor, he one day proceeded to the place and there cut his throat in two places. To prevent a law suit, his upplanter's friends negotiated with him, supported him in hospital, and finally admitted him to a partnership in the concern, which returned him, so long as it subsequently lasted, a daily percentage of its profits.

What appeared to be a vesicle in a girl's ear turned out to be the fleshy lodging of a dog-tick. A child, two years of age, was found to have swallowed a "large Peking cash," a coin  $1\frac{1}{4}$  inches in diameter. This juvenile patient was not so effectually relieved as the necklace-devouring infant Sam Weller Junior's amusing legend. The cash was removed, it is true, but the baby soon died from inability to take nourishment, the parts affected being greatly swollen. Cases of prevention of extension of the limbs—the impediment arising from cicatrices on burns—were happily operated upon. One boy whose legs were both doubled under him as a consequence of his unaided recovery from the effect of fire, was surgically renovated.

"He came bent, but went home straight," as his friends expressed it. A number of victims of gunshot accidents were relieved of the extraneous substances in their flesh. We can well believe that "all such cures bring a deal of honour to western surgery." Certainly, "the unanimous verdict of all classes," in Peking as elsewhere in the Celestial Empire, *should* assert "the superiority of western surgery to Chinese practice." Such was, no question, the decision of that young woman who, on the second night of her marriage, had clipped her throat with a pair of scissors, and whose young husband had "called the dispensers to attend her." The man, the tip of whose nose "was half bitten off by his wife"—it looked rather bad but was successfully treated and healed kindly,—one should hope returned a similar "unanimous verdict."

In the earlier portion of this notice we alluded to the occasional instances in which sufferers of comparatively exalted station seek the services of alien practitioners in Peking. Dr. Dudgeon, in recording the "deaths of distinguished patients," mentions seven cases of persons of high position, who were formerly treated in the hospital, were "subsequently sincere personal friends, many of them of several years standing, but have passed away." These deceased gentlemen were all amiable, and recommended themselves to their physician by the peculiarity of their diseases, their liking for photography, or their addiction to opium smoking. The first case was that of a Manchu, vice-president of the Board of punishments who, in 1872, after being cured of a very complicated affliction, presented "scrolls, silk, fruit, tea, cakes, wine and an honorarium of taels 100," and having allowed the author the "privilege of taking his photograph," died quite suddenly in 1876 from some disease the particulars of which his former adviser had not learned, but which nevertheless is declared, authoritatively, to have been altogether unconnected with his former ailment. Number two was Chung Shih, "formerly governor of Szechuen, latterly of Shinking, in which post he died." He was brother to Chung How, had rheumatism, smoked too much opium, visited the author, solicited a supply of antacids and tonics, wrote in conjunction with his brother a preface to Dr. Dudgeon's work (in Chinese) on photography and photographic chemistry, and then later expired. The doctor is too earnest to be sarcastic in stating, that, "there was great appropriateness in having Chung How write the preface, as the massacre at Tientsin originated in mistaken notions of the use to which eyes and hearts were put." To the reader who is familiar with the history of the horrible slaughter referred to, and the extent to which, at all events negatively, the ex-ambassador to Russia was responsible for it, the unconscious irony of the author and the "appropriateness" of Chung How's intimacy with foreign missionaries of any denomination are but too apparent. We regret that we have not space to give in detail the history of the "young and amiable" Tourgouth prince, "the twelfth in descent from the celebrated Khan whose re-emigration to China from the banks of the Volga, in 1771, has been immortalised by De Quincy in the 'Flight of a Tartar tribe.'" The doctor "never met in many respects a more estimable young man." He "was introduced to me by his friend the Duke Kwen," and a bright pair of drunken, opium-smoking, debilitated blackguards, the Prince and Duke appear to have been. In his charity the writer finds excuses for his princely patient's predilection for a daily allowance of twenty-five pints of champagne (!) and one tael's weight of opium (!!). Brought back from impotence and paralysis to health and movement, this "estimable" young Tartar, after having ordered his servant to obey, under pain of

death, his physician in all respects in preference to himself, and after having handed the whole of his valuable smoking apparatus into the hand of his guardian, subsequently obtained a cheap pipe and the drug from one of his retainers, whose non-compliance with his master's order would have been instant annihilation. Once more cured, this Ill ruler again relapsed into his former habits, and "suffered the penalty by his early removal." The Mongol Prince of Alashan appears to have been little better than the Tourgouth potentate. He was "a slave to the pipe;" and his wife shared his weakness, dying, at the full period of ntero-gestation, drunk with the oblivious fumes. The three remaining deceased "distinguished patients" have not so much interest attached to them as the others have. One was fond of photography and gas-works: the second admired photography; and the third esteemed western science and scientific apparatus and got drunk after dinner. On the whole the value of the brochure is not increased by the parade made therein of the author's connection with lofty personages. It is, however, to be hoped that the efforts made to amend their physical and moral condition may redound to the one end that the doctor no doubt has in view—the increase in favor of his noble profession among the natives of all ranks and classes in the empire. That he is valued among those for whom he works is evident from the numerous complimentary tablets presented to him by those who have derived benefit from his knowledge and skill.

The supply of translations of European works seems to be below the demand. This in itself is a hopeful sign; nor are such minor indices as the sale of trusses and the increasing use of the feeding-bottle unimportant. It is even something that "the living Buddha bought one" of the latter articles "out of which to imbibe his samshu." What, however, is specially noteworthy is the alleged annually augmenting demand for foreign medicines. Quinine, iron, santaline, ammonia, calomel, &c., are in request even among the native doctors. These, it is melancholy to notice, "show little or no improvement. They try to imitate our practice in a variety of ways; and a few who have read our books possess themselves of western simples."

With varying success and difficulty an opium refuge has been founded in the Tartar city, under the auspices of the five resident Protestant Missionary bodies. In it are treated both out and in-patients; and its project, though not yet conducted on a very extensive scale, may be said to be fairly inaugurated. By the sale of anti-opium medicines the institution is rendered self-supporting, a satisfactory and gratifying result.

**T**HE statement we made some time since that there is a large and constantly increasing class who consider that the circumstances of the particular country should be considered in shaping its fiscal policy, has received confirmation in a speech made recently by Sir John Macdonald, K.C.B., the Prime Minister of the Dominion of Canada. A deputation from the Manchester Chamber of Commerce waited upon Sir John to urge the desirableness of "effecting a reduction in the present hostile tariff of Canada," meaning that the Dominion had adopted a protective system of duties, which these Manchester gentlemen found to interfere materially with their business. After recording what the spokesman of the deputation had to say, the *Times* report continues:—

"Sir John Macdonald replied that the chief difficulty was that England had nothing to give Canada in the way of

reciprocity. Everything had already been given away. The protective system was accepted by the greater part of the civilized world, England being almost the exception in adhering in principle and in practice to free trade in all circumstances. As Free traders they went further than John Stuart Mill, who in his last edition of 'Political Economy' held that it was justifiable for a young nation with infant industries to give them temporary protection until they arrived at some degree of maturity.

"Mr. Slagg observed that John Stuart Mill recanted that monstrous doctrine, and that he did not die entertaining such a sentiment.

"Sir John Macdonald thought Mr. Slagg was misinformed, for Mill wrote a letter to Horace Grebley pointing out that his opinion on the point had been to some extent misapprehended, misrepresented, and misapplied, and he never receded from the assertion in his celebrated work. The tariff of Canada had been adopted with enthusiasm by both agriculturists and manufacturers. It was imposed to benefit the revenue, and the first year's experience showed that was the result. In its readjustment care was taken that it should be the means of assisting their infant manufactures, and also of preventing the American 'rings' and 'corners' which disturbed the trade of the country. They had not been unmindful of their obligations to the mother country in making the readjustment, for they had put heavier duties by classification upon articles which the United States produced, and which Canada ought to produce, and reduced the duties upon those articles which they principally got from England. Since the adoption of the tariff the proportion of imports from England had increased, while the proportion from the United States had decreased. The tariff was, of course, an experimental one, but so far they had no cause to complain of it. It was in consequence of the protective system that the United States had to a very large degree developed their manufactures. If the question of the accumulation of wealth, of buying in the cheapest and selling in the dearest markets, were the only principle to be regarded in the life of a nation, then he would say that the Canadian tariff was a mistake; but they had other considerations, such as national strength and national development. Until the tariff was adopted American 'rings' and 'corners' crushed Canadian manufactures; but this was now prevented by the exclusion of United States merchants, and as a consequence America was now seeking a renewal of the reciprocal relations which formerly existed. The day might come, notwithstanding that free trade was a religion in England—he had almost said a superstition (laughter)—when the logic of events would induce a modification sooner or later; and if it did not come from above it would come from below."

Some further remarks were made, also, which do not affect the main question and the deputation withdrew. It is rather a remarkable circumstance that the countries and colonies whose extraordinary development is constantly flaunted before the Japanese Government are, with scarcely an exception, strictly protective. Encouragement to newly established home industries is growing in favour daily, the events of past years having demonstrated the necessity of adopting that policy. The real danger has been proved to exist in continuing the parental protection of the State, after the time it is really needed has passed away.

**A** RATHER curious circumstance has come under our notice which almost leads one to the suspicion that

the laws of England are, at present, scarcely entitled to be considered as Blackstone grandiloquently put it, "the perfection of human wisdom." We are informed that British subjects residing in Tokio—Yokohama seems to be exempt—are compelled to go through a religious ceremony at the Legation and pay a fine of one sovereign to the Anglican Bishop of London, of all people in the world, when their good or evil fortune impels them to enter into the bonds or noose of matrimony. As far as members of the Episcopal Church is concerned, this law makes, of course, very little difference to anyone, except perhaps to his lordship of London, who pockets a fee on the transaction. With other denominations the case is different and there are vague rumours of a "scene" at the Legation recently on this very subject. With Roman Catholics the insistence upon the religious ceremony is a very serious matter indeed. Cardinal Manning in a letter recently to the clergy of the arch-diocese of Westminster says "that there may be no doubt as to the prohibition on the part of the Holy See of contracting marriage or renewing consent before a Protestant minister, it will be enough to refer you to the appendix of the fourth Provincial Council of Westminster, page 155, which contains the instructions given in 1804 on the subject of mixed marriages in Hanover. It is there declared that the act of a Catholic in going before a non-Catholic minister, as a minister of religion, and making the marriage contract before him, thereby unites himself to a heretical ritual, from whence would arise an implicit adhesion to heresy; and that it is illicit and sacrilegious, as a communication *divinis* with the same. It further adds that Benedict XIV declares all such Catholics *peccare mortaliter*." If what we hear is correct, Roman Catholic subjects of Great Britain, if married in Tokio, are compelled to commit what they are taught to believe is mortal sin, while Nonconformists have to contribute towards the support of a system which is utterly repugnant to their ideas.

THE absolute necessity of occasionally having to leave home to learn news, is to some extent demonstrated by the following item of intelligence which appeared in the *Times* of the 12th of last August:—An extensive coal-bed, estimated as capable of yielding 3,000,000 lb. daily for a century, is now being worked near Kinsgashe, on the Kion Kads, Japan. The Minister of Public Works has visited it with an English engineer, in order to examine the feasibility of a railway therefrom to Modji, a town on the inland sea, and the works are to be commenced this summer. There is also an idea of making Modji a naval station, that Indian and other foreign vessels stopping at Akamagasaki might coal there.

THE three Bible Societies working in Japan recently issued a standard edition of the New Testament in Japanese. The American Bible Society has now brought out another edition of the same work in Roman letters, transliterated by J. C. Hepburn, M.D., LL.D. The system of Dr. Hepburn is admittedly that which the Japanese themselves consider far and away the best for all practical purposes and, although utility is naturally unattractive to some of the crochety authors of the fantastic opposition methods of transliteration, the public will doubtless be unanimous in considering the Society has acted wisely in adopting a system of Romanizing the Japanese language, which meets with such general approval. This edition of the New Testament is a neat, handy volume of some 659 pages. The typographical execution is excellent and, altogether, the work reflects no ordinary degree of credit upon the Society, Dr. Hepburn, and the publisher.

## THE REVENUE AND EXPENDITURE FOR THE 9TH FISCAL YEAR, 1876-77.

(Continued from the 16th of October.)

**PUBLIC WORKS DEPARTMENT:**—The amount in the definitive account when compared with the estimates shows a decrease of 556,704.517 yen, which is owing to the fact that a considerable reform and general economy was effected in the Civil Service in the 1st month of the 10th year of Meiji, and also to various changes in the working of such undertakings as mines, railways, lighthouses, telegraphs, and similar operations, the expenses of all of which have been greatly reduced. Looking more into detail, we find that in mining industries there is a decrease of over 302,900 yen. Of this sum over 40,900 yen was due to the fact that the food supplied to the miners at Ani and Innai was paid for out of the Reserve Fund, although this expenditure had been included in the estimates for the Public Works Department. There was a saving of 62,300 yen owing to the cessation of operations in the Hachimori mine (part of the Ani mine) and the Kawaguchi mine, as briefly explained under the heading of "Mines under the Public Works Department" in the part of this report which deals with the Revenue. There was also a saving by the transfer to a private firm of the Arakawa mine, and in the small out-turn of ore. All these circumstances tended to diminish working expenses. 54,400 yen was saved by the transfer of Towada mine to a private firm; over 20,600 yen by the diminished out-turn of ore at the Okuzo and Kosaka mines; over 29,300 yen, as the works at the Sado mine were not pushed forward as rapidly as expected; over 36,000 yen by contracting mining operations at Ikuno, and by abandoning the idea of opening out a new coppermine there; and finally over 59,100 yen owing to the temporary suspension of work at Miike during the Satsuma rebellion.

In the item of Railways there appears a diminution of over 42,900 yen, which is attributable to the purchases of various kinds of machinery being lessened, while the opening of the line between Kioto and Osaka, after the 7th month of the 9th year of Meiji, necessitated an increase of over 26,000 yen for working expenses.

In Lighthouses a saving of over 45,600 yen was effected by the decreased purchases of various stores.

In Industrial Undertakings there was an augmentation of over 15,600 yen in consequence of the transfer, in the 1st month of the 10th year of Meiji, of the Laboratory for Experimental Purposes from the Home Department to the Public Works Department. Against this, however, there was a diminution of over 206,800 yen due to the Civil Service reform, and to sundry other decreases of expenditure. By balancing these increases and decreases we have the nett decrease given above and, when we compare the definitive account with the corresponding amount for the previous fiscal year, we find a decrease of 287,770.799 yen. This is due to the great economy effected by the Civil Service reform introduced in the 1st month of the 10th year of Meiji, and the changes made in various undertakings, as will be explained in the following remarks.

In the Mining Industries, the total decrease amounted to more than 247,800 yen. Of this sum, over 163,500 yen was saved by the purchase money for machinery, &c., connected with the Ani and Innai Mines not being required, as the payment for these undertakings to Messrs. Ono & Co., had been completed in the previous fiscal year; over 66,500 yen was saved at the Kosaka and Akuzu mines by their transfer to a private company; over 17,700 yen was saved by giving up work at the Hachimori and Kawaguchi mines (which were connected with the Ani and Innai mines) and by the transfer of the Arakawa and Hosochi mines to a private company and by various lesser causes. On the other hand, there appears an increase of more than 339,900 yen, of which sum over 259,900 yen was attributed to the enormous extension of operations at the Kamaishi mine, which involved the purchase of machinery, repairs of tramways, the construction of furnaces, building of ships to carry the ore, and some other causes. There was also an increase of over 79,900 yen due to the opening and repairing of drifts, &c., in the Miike mine, the working of which has been annually extended.

In Railways, the total increase amounted to over 185,600 yen, as the construction of the iron bridge across the river Rokugo between Tokio and Yokohama involved an expense of 81,700 yen more than in the previous year, and over 74,900 yen was expended in the working expenses of the Kioto-Osaka line which had just been opened. On the other hand, however, the total decrease under this head amounted to over 559,800 yen, which is made up as follows: 473,000 yen owing to the completion of the Kioto-Osaka railway, and the approaching completion of the Kobe-Osaka branch; over 50,600 yen which was not required for surveying the line eastward from Kioto as was the case in the preceding year, and lastly a sum of over 36,100 yen was saved by the reduction of the staff of foreign employés, and a diminution in the cost of rolling stock and line maintenance.

In Telegraphs, the total increase amounted to over 185,600 yen owing to the fact that the lines have been gradually extended to every part of the country year by year, which has accordingly necessitated a greater outlay for repairs, and the extension during the year under notice involved some extra expense.

In the Industrial Undertakings there appears a diminution of 60,400 yen. Of this sum over 30,400 yen was attributable to a contraction of operations in the Branch Office at Hiogo, and over 30,000 yen owing to the Glass Factory having been purchased in the previous fiscal year, so that a repetition of that item was unnecessary. On the other hand, there was a total increase of more than 103,800 yen. Of this amount over 88,200 yen was due to an increase in cost of workshops for the Shinagawa Branch Office, and the dockyard at Nagasaki, both of which works involved a greater outlay during the year under review than in the previous one; while there was another increase of 15,600 yen attributable to the transfer of the laboratory for experimental purposes at Uchiyamashitamachi, Tokio, from the Home Department to the control of the Public Works Department. Moreover, by the Civil Service reform introduced in the 1st month of the 10th year of Meiji, and various other causes, a diminution of over 205,600 yen was effected. When these increases and decreases are set against one another, the result will be the net decrease given above.

The following table shows the increase and decrease in the definitive and estimated accounts:—

	DEFINITIVE.	ESTIMATED.	INCREASE OR DECREASE.
	Yen.	Yen.	Yen.
Salaries .....	371,750.183	527,734.000	Dec. 155,983.817
Grants .....	267,063.015	262,615.980	Inc. 4,447.035
Travelling Expenses .....	68,256.834	74,813.200	Dec. 6,556.366
Cost of assaying ores .....	1,056,212.195	1,187,738.483	Dec. 131,526.288
Cost of Construction of new Railroads .....	273,207.058	325,070.000	Dec. 51,862.942
Maintenance of Railways and Rolling Stock .....	255,287.362	188,637.563	Inc. 66,649.799
Working Expenses of Rolling Stock .....	26,868.169	31,550.000	Dec. 4,681.831
Expenses for the Extension of Telegraphic Line and repairs of the same .....	306,625.434	200,240.000	Inc. 106,385.434
Expense for Construction and repairs of Light-houses and Buoys .....	41,545.995	38,039.500	Inc. 3,506.495
Cost of Construction of Dockyards .....	138,881.330	89,664.453	Inc. 49,216.877

Maintenance .....	55,928.795	84,649.090	Dec. 28,720.295
Total .....	4,343,295.483	4,900,000.000	Dec. 556,704.517

JUDICIAL DEPARTMENT:—The definitive accounts when compared with the estimates exhibit a decrease of 35,040.660 yen, due to the Civil Service reform introduced in the 1st month of the 10th year of Meiji, and to various other causes. Again, the amount in the definitive account when compared with the corresponding sum for the previous year shows an increase of 273,954.46 yen. Of this increase over 399,600 yen is owing to establishment of numerous local courts, or the removal to more convenient localities of some courts which already existed. On the other hand, there were certain decreases: over 24,800 yen was saved by the introduction of the Civil Service reform in the 1st month of the 10th year of Meiji, by which a great economy was effected, and by various minor causes; more than 45,300 yen by the superintendence of the penal establishment being transferred to the Home Department; over 55,500 yen because the cost of repairing and maintaining the various buildings occupied by the Supreme Courts and Courts of Appeal, was very small. These several items make an aggregate decrease of over 125,700 yen, and when deducted from the increase will give the net augmentation mentioned above.

The following table shows the increases and decreases in the estimated and definitive accounts:—

	DEFINITIVE.	ESTIMATED.	INCREASE OR DECREASE.
	Yen.	Yen.	Yen.
Salaries .....	799,815.651	914,437.385	Dec. 114,621.734
Grants in aid .....	123,286.070	117,963.678	Inc. 5,322.392
Travelling Expenses .....	79,307.233	73,298.000	Inc. 6,009.233
Cost of construction and repairs .....	175,790.051	119,035.019	Inc. 56,755.032
Expenses of Students .....	10,959.920	10,744.305	Inc. 215.615
Expenses of Student abroad .....	12,273.210	13,717.455	Dec. 1,444.245
Cost of foreign Employés .....	43,839.957	44,038.235	Dec. 198.278
Miscellaneous Expenses .....	140,187.248	127,245.923	Inc. 12,941.325
Total .....	1,385,469.340	1,420,500.000	Dec. 35,040.660

The sums are distributed among the several offices as follows:—

	DEFINITIVE.	ESTIMATED.	INCREASE OR DECREASE.
	Yen.	Yen.	Yen.
Judicial Department (proper) .....	229,005.530	224,326.169	Inc. 4,679.361
Taishin In .....	59,419.087	59,289.495	Inc. 129.592
Judicial Courts .....	1,097,034.723	1,136,884.336	Dec. 39,849.613
Total .....	1,385,459.340	1,420,500.000	Dec. 35,040.660

IMPERIAL HOUSEHOLD DEPARTMENT:—The amount of the definitive account as compared with the estimate, shows a decrease of 25,362.807 yen. This is to some extent due to the introduction of the Civil Service reform in the 1st month of the 10th year of Meiji, and partly to the absence of the Emperor and Empress from the capital during their tour to Yamato and Kioto, the cost of this Progress being made the subject of a special appropriation.

When compared with the corresponding sum in the previous fiscal year, the present account shows a decrease of 642,573.826 yen. This is due to the following causes:—Over 616,000 yen was saved through the Civil List and Appanages being transferred to another section; and over 25,900 yen by the transfer of the Bureau of Ceremony to the Council of State, according to Notification No. 182, issued in the 12th month of the 8th year of Meiji; several other items also contributed to the decrease.

The following table shows the increases and decreases in the estimated and definitive accounts :—

	DEFINITIVE. Yen.	ESTIMATED. Yen.	INCREASE OR DECREASE. Yen.
Salaries.....	219,383.750	235,116.000	Dec. 15,732.250
Grants.....	44,675.856	47,970.000	Dec. 3,294.144
Travelling Expenses.....	10,405.337	15,000.000	Dec. 4,594.663
Expenses for Con- structions and Re- pairs.....	2,390.437	3,000.000	Dec. 609.563
Miscellaneous Ex- penses.....	13,781.813	14,914.000	Dec. 1,132.187
Total.....	290,637.193	316,000.000	Dec. 25,362.807

**COLONIZATION DEPARTMENT :—**The amount in the definitive account compared with the estimate, shows a decrease of 1,791,605 yen. This we attribute in a great measure to the fact that there was a saving of over 18,900 yen, by the transfer of the taxes on deer-horns and hides, and the ice monopoly, to the item of local taxes ; some other minor causes also contributed to the result. There was, however, an increase of over 17,100 yen caused by the newly imposed tax on boats of under 50 koku measurement, and by the gradual increase of the products of the Hokkaido. The nature of the expenditure of this Department, as given in the report on the definitive account of the previous year, is worthy of notice. The sum of 10,000,000 yen was appropriated to the use of the Department for ten years from the 5th year of Meiji, and subsequently there was another appropriation of 680,000 yen, to defray the costs of the militia for three years commencing from the 7th year of Meiji. There were also several taxes levied and miscellaneous amounts collected by this Department, and appropriated to its use according to law ; although the sums so received were temporarily deposited in the public treasury.

The present definitive account as compared with that for the previous year, shows a decrease of 26,600,373 yen. In the former fiscal year there appeared a sum of 74,600 yen for expenses connected with the exchange of Saghalien for the Kurile islands ; this amount was not required during the present year. There has been a decrease of 73,900 yen owing to the reduction in the freights earned by ships belonging to the Department, and there has also been a falling off in the proceeds from the sale of land. These sums, together with sundry other minor items, amount in all to over 148,600 yen. Again, the sum of 80,000 yen was paid to the Department in the fiscal year under review for the yearly charges of the militia mentioned above, and there was an increase of over 42,000 yen in the taxes received on the products of the Hokkaido, as briefly explained in the former portion of this report under the heading of Revenue. Both these items exhibit a total increase of something over 122,000 yen. When the increases and decreases mentioned are set against each other, the nett result already mentioned will be attained.

In the following table are given the differences between the definitive and estimated accounts. It must, however, be observed that this table shows the sums actually disbursed by the Department, while Table II gives the sums paid to it by the Government. It is due to this circumstance that the difference of over 110,000 yen appears between the definitive amount of over 1,780,000 yen in the following table, and the definite amount of over 1,900,000 yen which appears in Table II. It must also be borne in mind that, after the ten years for which the appropriation has been granted have elapsed, there will be no difference between the amounts granted by the Government and those expended by the Department.

**LAND TAX REFORM OFFICE :—**The amount of the definite account shows a decrease of 365,541.27 yen when compared with the estimates. This is due to the fact that, although there was a decrease of over 383,200 yen in consequence of the reform in the land tax not having made the progress that that was anticipated on account of the outbreak of the Satsuma rebellion, and various other causes, yet, on the other hand, there was an augmentation of over 17,600 yen owing to the permanent appointment from the Finance and Home Departments to this Department, of officials who consequently drew their salaries from this bureau.

Again, this definitive account as compared with that for the previous year shows an increase of 43,014.877 yen. This is attributable to the following causes ;—21,000 yen for expenses connected with the transfer of title-deeds which were to be granted at once, owing to the gradual completion of the land tax reform ; and 21,900 yen owing to the transfer of officials who had formerly been connected with the Home and Finance Departments to this bureau, from which they have received their salaries since the 1st month of the 10th year of Meiji.

The following table shows the increases and decreases in the estimated and definitive accounts :—

	DEFINITIVE. Yen.	ESTIMATED. Yen.	INCREASE OR DECREASE. Yen.
Salaries.....	26,771.500	22,092.000	Inc. 4,679.500

Miscellaneous Expenses	3,899.054	7,248.653	Dec. 3,349.599
Total.....	105,458.730	471,000.000	Dec. 365,541.270

**CITIES AND PREFECTURES :—**The amount of the definitive accounts when compared with the estimates shows a decrease of 453,161.959 yen. This saving was obtained as follows :—Over 184,700 yen by the abolition and amalgamation of Cities and Prefectures by Notification No. 112, issued in the 8th month of the 9th year of Meiji ; over 87,300 yen by the transfer of the salaries of police sergeants and all other expenses connected with the police to the heading, " Expenses for the Police in Cities and Prefectures," after the 1st month of the 10th year of Meiji ; over 231,100 yen by transactions connected with the purchase of ground for public buildings, the erection of telegraph posts, dykes, &c., not having been settled, and various other minor items. The amount in the present definitive account, when compared with the corresponding sum in the previous fiscal year, shows a decrease of 1,366,084.671 yen. There was, it is true, an increase of 1,608,000 yen owing to the following causes :—550,200 yen to the abolition and amalgamation of Cities and Prefectures under Notifications No. 53, of the 4th month of the 9th year of Meiji, and No. 112, of the 8th month of the same year ; over 461,500 yen to there having been in the last fiscal year such contingent disbursements as expenses for constructing

embankments to protect the rice-fields in portions of Kanagawa Ken, the cost of purchasing the ground owned by the inhabitants of Suwa Street, Kitakata Mura, Yokohama, which locality was destroyed by fire, and the relief of those who suffered from inundations in the prefectures of Niigata, Miyagi and Iwai, expenses not needed in this year; over 94,600 yen was expended in connection with the transfer of the Courts (which were formerly included in the expenditure of Cities and Prefectures) to the District Courts under the Ministry of Justice; over 87,300 yen due to transferring the item "Salaries of Police Sergeants" and all expenses connected with the police to the item "Expenses for the Police in Cities and Prefectures" since the 1st month of the 10th year of Meiji; over 83,600 yen by the transfer of the Custom House at Niigata to the control of the Finance Department in the 9th month of the 8th year of Meiji, and the abolition of the office for the inspection of ships by Notification No. 163 in the 11th month of the eighth year of Meiji, and the transfer of matters connected with the prisons in Tokio to the Central Police Department; over 53,300 yen by the diminution of expenses incurred in purchasing land for public purposes in this fiscal year as compared with the last; over 277,200 yen by the abolition of the practice of granting rent since the 1st month of the 9th year of Meiji, by Notification No. 178 of the 10th month of the 8th year of Meiji, and by the amendments in the regulation of "Travelling Allowances" in accordance with Notification No. 64 of the 6th month of the same year, and by certain other items. There was, however, an increase of over 241,900 yen, of which sum over 15,300 yen was caused by alterations in the amounts of the salaries of subordinate officials in the middle of the last fiscal year, and by transferring the affairs connected with the prisons, under the control of the Judicial Department, to the item "Cities and Prefectures," and also by the payments for ruled paper for petitions in the Courts, and for weights and measures, being for the whole twelve months during this fiscal year; over 86,200 yen owing to the greater cost during this period of land purchased from the public for the purpose of building brick houses to the south of the Kio-bashi in Tokio, and by the expense of repairing roads, which was heavier than in the preceding year; over 50,400 yen was also granted in aid of industries established for the benefit of the shizoku of Wakamatsu Ken.

The following table will exhibit the increases and decreases of the definitive and estimated accounts. In this table although there are some items in the definitive accounts which exceed the estimates, the deficiencies were supplied out of the estimated sum required to make good deficiencies (Hojiukin) which appears as the last item in the table. This item was inserted when the estimates were framed in view of possible deficits in the amounts appropriated, but the sum thus estimated was not needed, so that in the final result we find a decrease of over 450,000 yen. Whenever this item appears hereafter, the explanation now given will apply.

POLICE DEPARTMENT:—The amount of the present definitive account when compared with the estimates shews an increase of 51,758.006 yen. This augmentation is due to the following causes:—over 35,100 yen was spent on travelling expenses for police inspectors and subordinate officials attached to the Imperial *entourage* during the progress to Yamato and Kioto, in the 1st month of the 10th year of Meiji; over 16,500 yen was incurred by the transfer to this Department of the expense connected with the construction and repairs of the gaols and penal establishments, which had previously been included in the expenses of Cities and Prefectures, and several other causes.

The amount in the definitive account when compared with the corresponding sum for the previous year shews an increase of 154,764.83 yen, due to the fact that a sum of over 46,900 yen was incurred by the transfer from the Tokio Fu to this Department of all charges connected with prisoners and penal establishments, in the 12th month of the 8th year of Meiji; the cost of the suppression of vagrancy was transferred to this Department in the 10th month of the 9th year of Meiji and the superintendence of the gaols, hitherto under the Judicial Department, was made over in the 2nd month of the same year. We also find that over 35,100 yen was expended in the pay of guards attached to the Imperial Progress to Yamato and Kioto; over 18,800 yen was spent in constructing telegraph lines connecting the police stations in Tokio, and over 53,700 yen by establishing the water-police and in some minor items. The following table will show the

increases and decreases in the definitive and estimated accounts :—

	DEFINITIVE.	ESTIMATED.	INCREASE OR DECREASE.
	Yen.	Yen.	Yen.
Salaries .....	671,537.168	663,390.000	Inc. 8,147.168

Cost of Constructions and Repairs .....	43,934.252	36,154.026	Inc. 7,780.226
Cost of Foreign Employees .....	12,144.194	12,144.194	.....
Miscellaneous Expenses .....	131,427.788	128,672.000	Inc. 2,755.788
Total .....	1,246,758.006	1,195,000.000	Inc. 51,758.006

**POLICE IN CITIES AND PREFECTURES :—**The amount in the definitive account compared with the estimates, shews an increase of 84,445.73 yen. This has been caused by the transfer to this section of the salaries of police sergeants and all other expenses connected with the police, charges which were formerly included in and paid out of the expenditures appropriated to the Cities and Prefectures. The increase also is owing in some degree to the expenses of the guards attached to the Imperial Progress to Kioto.

The amount in the definitive account, compared with the corresponding sum for the previous fiscal year, shews an increase of 240,402.454 yen. This was due to the increase in the police force in the Cities and Prefectures, and to the facts already stated, that the salaries of the police sergeants and all other expenses of the guards attached to the Progress of Their Majesties the Empress and Empress Dowager to Kioto were paid as mentioned above.

The following table will shew the increase and decrease of the definitive and estimated accounts :—

	DEFINITIVE.	ESTIMATED.	INCREASE OR DECREASE.
	Yen.	Yen.	Yen.
Salaries .....	527,529.679	.....	.....
Grants .....	146,210.775	.....	.....

Cost of Foreign Employees .....	4,381.811	.....	.....
Miscellaneous Expenses .....	59,122.044	.....	.....
Total .....	834,445.730	750,000.000	Inc. 84,445.730

**SHRINES :—**The amount in the definitive accounts compared with the estimates shews a decrease of 21,739.288 yen. This was due to the fact that although there was an augmentation by the establishment of special Government shrines, there was, on the other hand, a considerable decrease owing to there being fewer priests receiving Government support, and to the general economy practised as regards the expenditure under this item.

The definitive accounts, compared with the corresponding sum for the previous fiscal year exhibit a diminution of 12,246,427 yen due to the causes already stated.

The following table shews the increase and decrease in the definitive and estimated accounts.

Although the expenses of the Board of Shrines were derived from two sources they were, however, disbursed without any distinction being made. The amount under this item gives only the Government disbursements :—

	DEFINITIVE.	ESTIMATED.	INCREASE OR DECREASE.
	Yen.	Yen.	Yen.
Board of Shrines ...	15,000.000	15,000.000	.....

Total .....	198,260.792	220,000.000	Dec. 21,739.208

**CONSTRUCTIONS AND REPAIRS IN CITIES AND PREFECTURES :—**The definitive accounts as compared with the

estimates shew a decrease of 99,378.620 yen. This is due to the facts that there was a decrease of over 91,200 yen owing to the amalgamation of a number of the local Governments in accordance with Notification No. 112, issued in the 8th month of the 9th year of Meiji, by which the expenses of repairs to buildings charged by local Governments were reduced, and to the postponement of the establishment of gaols, shrines and other buildings, after due consideration as their absolute immediate necessity. A further decrease of over 8,100 yen was effected by the transfer of the expenses of gaols and penal establishments to the Central Police Department in whose charge they now are.

The amount of the definitive accounts compared with the corresponding sum in those of the previous year exhibits an augmentation of 7,156.323 yen, which is explained by the fact that a far greater number of prisons were established in the present, than in the previous year.

The following table shews the increases or decreases in the definitive and estimated accounts :—

	DEFINITIVE.	ESTIMATED.	INCREASE OR DECREASE.
	Yen.	Yen.	Yen.
Repairing the Imperial Mausoleum .....	2,129.605	2,475.811	Dec. 345.706

Total .....	139,621.380	239,000.000	Dec. 99,378.620

**EMBANKMENTS IN CITIES AND PREFECTURES :—**The definitive accounts as compared with the estimates shew a decrease of 6.144 yen. Although the outlay was so large that there was an increase of over 402,100 yen, owing to the floods which had destroyed the banks of the rivers in Kioto Fu, Kanagawa and ten other prefectures, and also by the opening of new roads; fortunately, however, the estimated sum required to make good deficiencies (Hojiakin) amounted to over 402,200 yen. The deficit was paid from this source and the amount above mentioned was left over.

The amount in the definitive account, compared with the corresponding sum for the previous fiscal year shews a decrease of 33,927 yen, due to the fact that the digging of canals from the River Shinano in the prefecture of Niigata, which required a temporary outlay last year, was suspended for a time and consequently the expense of purchasing the land required was not incurred in the present fiscal year.

The following table shews the increases and decreases in the estimated and definitive accounts :—

	DEFINITIVE.	ESTIMATED.	INCREASE OR DECREASE.
	Yen.	Yen.	Yen.

Total .....	1,399,993.856	1,400,000.000	Dec. 6.144

**LEGATIONS AND CONSULATES :—**The definitive account when compared with the estimates, shews a decrease of 167,068.446 yen. This saving is owing to the following causes; over 87,000 yen to there being no Minister for Japan in France, Italy, Austria or China, and to various other vacancies at our diplomatic posts, and to the salaries for

these offices having been provided for in the estimates; 80,000 yen was saved as there was seldom occasion to send officials abroad to transact public affairs; and in some minor items a considerably reduced expenditure was apparent.

Again, the amount of the definitive account as compared with the corresponding sum for the previous year shews a decrease of 99,291.383 yen, which is attributable to the following causes:—An increment of over 26,900 yen was incurred by the establishment of consulates at London, Karsatsu, Russia, Tientsin and Hawaii in the preceding year, the expenses of all of which appear in the present fiscal year, and another increment of over 11,600 yen was incurred in the present fiscal year by the establishment of the office of Commissioner of Commercial Affairs at Vladivostock, and of the Consulate at Chefoo, and the Consular hospital in Corea. Against this, however, there appears a diminution of over 55,000 yen, because there were no large sums of money required (as in the previous fiscal year) for the purchase of land for the Consulate at Shanghai, the erection of the Consulate at Tientsin, the purchase of furniture, &c., for those offices, and travelling expenses of Consuls to their posts. There was a further diminution of over 86,800 yen by the amendments in the regulations affecting Expenses for Legations and Consulates. These amounts combined give a total decrease of 137,900 yen, and by balancing this sum against the total increase above mentioned we obtain the result already stated:—

The following table will shew the increases and decreases in the definitive and estimated accounts:—

	DEFINITIVE.	ESTIMATED.	INCREASE OR DECREASE.
	Yen.	Yen.	Yen.
Salaries .....	274,969.549	362,016.876	Dec. 87,047.327
Rewards and Grants..	4,993.440	5,939.124	Dec. 945.684
Travelling Expenses..	21,333.776	37,530.000	Dec. 16,196.224
Construction and Repairs .....	7,097.027	7,470.335	Dec. 373.308
Cost of Foreign Employes .....	23,411.264	35,204.000	Dec. 11,792.736
Miscellaneous Expenses .....	49,426.498	100,139.665	Dec. 50,713.167
Total .....	381,231.554	548,300.000	Dec. 167,068.446

**CONSTRUCTION OF THE NEW PALACE:**—Owing to this undertaking having been suspended for some time, this item does not appear in the definitive accounts of the year under review.

**ADVANCES FOR RELIEF WORKS AND THE ENCOURAGEMENT OF INDUSTRIES:**—The definitive accounts as compared with the estimates shew an increase of 673,940.769 yen mainly due to the large amount advanced for Relief Works. This was owing to the great damage wrought by drought and flood in the prefectures of Hiogo, Shizuoka, Okayama, Yamanashi, Shimane, &c.

Again, the amount of the definitive account, compared with the corresponding sum for the previous year, shews a decrease of 523,027.245 yen. Despite the increase which we have already mentioned, the expenditure in connection with those localities in which the land tax reform was being introduced, the payments to miners, etc., were all accounted for in the estimates under the item of "Temporary Advances" as explained in paragraph VII. of the preliminary remarks to the estimates for the present fiscal term. They have, therefore, been eliminated from the main accounts of ordinary disbursements, having in fact been advanced temporarily from the Reserve Fund.

The following table shews the increase and decrease of the estimated and definitive accounts:—

	DEFINITIVE.	ESTIMATED.	INCREASE OR DECREASE.
	Yen.	Yen.	Yen.
Advances for Relief...	1,093,589.769	.....	.....
Advances for the encouragement of Industries .....	80,351.000	.....	.....
Total .....	1,173,940.769	500,000.000	Inc. 673,940.769

**THE HIROSHIMA MINE:**—The amount in the present definitive account under this head is 159,293.432 yen. As mentioned in that portion of this report dealing with the Revenue, it was not ascertained at the time when the estimates were drawn up what would be the correct sum to provide, and consequently only the actual amount expended has been stated.

The amount in this definitive account when compared with the estimates shews a decrease of 57,059.013 yen, which is due to the fact that, although as was briefly explained under the Revenue, this undertaking was commenced in the middle of the preceding year—thus involving the expense for a whole year in this present term—still in the previous year a large sum of money was required to purchase ore from the then proprietor of the mine.

**THE IMPERIAL PROGRESS TO YAMATO AND KIOTO:**—The actual amount under this heading is 119,962.451 yen.

This item was introduced in accordance with the Notification issued in the 11th month of the 9th year of Meiji. This was subsequent to the framing of the estimates in which, consequently, the item does not appear, and only the sum actually disbursed is stated.

**MISCELLANEOUS EXPENDITURE:**—The definitive accounts as compared with the estimates shew an increase of 581,383.125 yen. This is explained as follows, a decrease of over 297,900 yen occurring in the items mentioned:—the printing of the new paper money to be exchanged for old, and of Capitalized Pension Bonds, was not carried out as first anticipated, thereby effecting a saving of over 193,300 yen; over 59,500 yen was saved by paying the expenses for refining gold and silver, which were included under this item in the estimates, out of the profits of the operation; and the remaining sum of over 45,000 yen by deferring the construction of the four large bridges in Tokio to a subsequent year. In spite, however, of all these reductions, there was an ultimate increase of over 599,600 yen caused by expenses incurred in crushing the riots in Ibaraki and six other prefectures; of over 128,400 yen by a transfer to the Expenditure Funds to make good losses by fire or robbery; and of over 90,000 yen for the purchase of forest land owned by the people. Over 61,200 yen was paid as compensation to Inada Kunitane a shizoku in the territory under the Kaitakushi, and two other persons, for their outlay in cultivating ground formerly belonging to them in the Hokkaido. Some other causes also arose which made altogether an aggregate total of over 879,300 yen. If the above decrease be deducted from this amount it will give the increase stated before.

Again, the amount of the definitive account, when compared with the corresponding sum for the previous fiscal year, shews an increase of 275,903.575 yen. Such increase is thus explained. There is a decrease of over 523,200 yen in consequence of the following charges which appeared in the accounts for the last fiscal year not being required in that now under consideration, viz:—over 325,000 yen for the purchase of steamers and other property of the Mail Steamship Company; over 81,600 yen for commission allowed for withdrawing redeemable paper money; over 75,800 yen for the final settlement of the accounts relating to the late Han and Ken; over 25,500 yen granted to the former proprietor of the Takashima coal mine; and finally over 20,200 yen granted as compensation to those who formerly had the privilege of paying a low rate of land tax, which however was abolished in order to simplify the land tax under the new assessment. However, there was a total increase of over 804,100 yen in this fiscal year owing to the causes already mentioned, viz: over 596,800 yen for suppressing the riots, over 90,000 yen for purchasing forest land owned by the people, over 80,000 yen for expenses incurred in printing the Capitalized Pension Bonds and new paper money; over 37,200 yen for grants to Inada Kunitane, a shizoku of Kaitakushi, and to other persons, and certain other minor causes. In all these sums make a grand total of over 804,100 yen.

Deducting from this sum the decrease above mentioned, we find the nett increase already stated.

**RESERVE FUND FOR UNFORESEEN CONTINGENCIES:**—All sums applied from this fund to make good deficiencies appear under their respective proper headings. The item therefore requires no farther comment.

**THE PHILADELPHIA CENTENNIAL EXHIBITION:**—There were no payments under this heading during the fiscal year under review, and the item appearing in the accounts belongs to the previous term.

**REFINING GOLD AND SILVER:**—Nothing was disbursed under this item, as the expenses for refining were included under the heading of "Miscellaneous Expenditure."

**GRANTS TO THOSE WHO SURRENDERED THEIR PENSIONS:**—Nothing appears under this heading, as the grants were fully paid up in the preceding fiscal year.

**CONSTRUCTION OF THE FOUR LARGE BRIDGES IN TOKIO:—** There was no payment made on this account either, as the disbursements were included under the "Miscellaneous Expenditure."

**ADVANCES FOR BUILDING BRICK RESIDENCES IN TOKIO:—** No disbursements were made under this heading, as the advances came out of the Reserve Fund and were not included in the ordinary accounts for this fiscal year. This has been already explained in paragraph VII. of the "Preliminary Remarks on the Estimates."

**ADVANCES TO THE MITSU BISHI COMPANY:—** The explanation given in the report on the accounts for the previous fiscal year, applies equally to the statement for the year now under consideration.

**ADVANCES TO THE TOKIO EXCHANGE:—** This item was also dealt with in the report for the previous fiscal year, and the remarks then made still hold good.

**EXPENSES CONNECTED WITH COREAN AFFAIRS:—** There were no payments under this heading during the fiscal year now under review, and the item appearing in the accounts belongs to the previous year.

**THE AKITA MINE:—** Nothing appears under this heading, as the expenses were included under the general expenditure of the Public Works Department, to the control of which the mine was transferred in the 11th month of the 8th year of Meiji.

**THE IMPERIAL PROGRESS TO THE NORTH-EASTERN PROVINCES:—** There were no payments under this heading during the present fiscal year, and the item appearing in the accounts belongs to the former period.

**THE NATIONAL DEBT, RESERVE FUND, AND ADVANCES:—** At the beginning of the 9th fiscal year of Meiji, the total amount of the National Debt was 148,914,118.346 yen, and at the end of the same year it was 147,083,837.065 yen, thus shewing a diminution of 1,830,281.281 yen.

At the beginning of the 9th fiscal year of Meiji, the total amount of the Reserve Funds and Advances was 37,453,818.322 yen, and at the end of the same year 47,098,833.808 yen, which exhibits an increase of 9,645,015.486 yen.

The following table shews the increases and decreases in the National Debt, Reserve Funds, and Advances, during the year commencing with the 1st day of the 7th month of the 9th year of Meiji, and ending with the 30th day of the 6th month of the 10th year of Meiji.

TABLE III.

Comparative table of the National Debt, Reserve Fund, and Advances, shewing the increases and decreases during the fiscal year, beginning with the 7th month of the 9th year of Meiji and ending with the 6th month of the 10th year of Meiji.

	NATIONAL DEBT.		
	ACTUAL SUM AT THE BEGINNING OF THE YEAR.	ACTUAL SUM AT THE END OF THE YEAR.	INCREASE OR DECREASE.
	Yen.	Yen.	Yen.
<b>DOMESTIC DEBT:—</b>

Voluntarily capital- ized Pension bonds at 8% ...	16,641,850.000	16,204,725.000	Dec. 437,125.000
Paper money in circulation.....	94,054,731.065	94,054,731.065	.....
<b>Total .....</b>	<b>134,758,702.346</b>	<b>133,684,821.065</b>	<b>Dec. 1,073,881.281</b>
<b>FOREIGN DEBT:—</b>			
Old loan at 9 per cent .....	2,928,000.000	2,440,000.000	Dec. 488,000.000
New loan at 7 per cent.....	11,227,416.000	10,959,016.000	Dec. 268,400.000
<b>Total .....</b>	<b>14,155,416.000</b>	<b>13,399,016.000</b>	<b>Dec. 756,400.000</b>
<b>Grand total of Domestic and Foreign Debts:</b>	<b>148,914,118.346</b>	<b>147,083,837.065</b>	<b>Dec. 1,830,281.281</b>

	ACTUAL SUM AT THE BE- GINNING OF THE YEAR.	ACTUAL SUM AT THE END OF THE YEAR.	INCREASE OR DECREASE.
	Yen.	Yen.	Yen.
Reserve Fund...	28,341,416.804	39,031,538.059	Inc. 10,690,121.255
Various advan- ces.....	9,112,401.518	8,067,295.749	Dec. 1,045,105.769
<b>Total.....</b>	<b>37,453,818.322</b>	<b>47,098,833.808</b>	<b>Inc. 9,645,015.486</b>

The increases and decreases of the various items given above are clearly explained as follows:—Old Domestic Debt bearing no interest:—The actual decrease during the first portion of the 9th fiscal year amounts to 157,185.969 yen, as the following figures shew:—

Repayments .....	Yen 223,830.179
Old loan, additional issue.....	„ 66,644.210

Total decrease ..... Yen 157,185.969

The increase above mentioned was occasioned by the fact that, although these accounts were almost entirely settled in the 6th and 7th years of Meiji, there were still a few outstanding, and some delay was caused in the investigation of the actual state of affairs. The repayment was made in accordance with the regulation that a portion of the debt payable in yearly drawings, should be paid in this term. The debts of the Imperial Princes, and sundry small bonds not exceeding twenty-five yen each, were also settled. It should be noticed that the difference in the repayments shown above, as compared with the corresponding sum in Table II., is explained by the fact that the former is the amount actually repaid during one complete year, while the latter was the sum which was estimated to be paid back during the fiscal year. The same explanation applies to the differences between the items in Tables I. and II. under such headings as "Repayment of National Debts," "Repayment of Advances," and "Rents due to the Government."

**NEW DOMESTIC LOAN AT FOUR PER CENT:—** At the end of the financial year this item shewed a decrease of 346,970.312 yen as compared with the beginning. The account at present stands as follows:—

Repayment.....	yen 404,082.084
Additional issue.....	„ 57,111.772

Decrease..... yen 346,970.312

The explanation given under the heading of the "Old Domestic Debt" applies equally to the increase and decrease in this item.

**BONDS AT SIX PER CENT FOR WITHDRAWAL OF THE OLD PAPER CURRENCY:—** An actual decrease of 132,600 yen appeared at the end of the financial year, as compared with the commencement. This reduction was effected under the regulations for repayment.

**VOLUNTARILY CAPITALIZED PENSION BONDS AT EIGHT PER CENT:—** At the end of the financial year there was a decrease of 437,125.000 yen, as compared with the commencement. At the close the account stood as follows:—

Repayments.....	yen 399,850.000
Bonds surrendered .....	„ 37,275.000

Total.....yen 437,125.000

The repayment was made in conformity with the regulations, which require a portion of these bonds to be redeemed annually. The remainder of the decrease was due to the voluntary surrender of certain bonds issued some years since.

**THE OLD FOREIGN LOAN BEARING NINE PER CENT:—** During the financial year there was an actual decrease of 488,000 yen. This is attributable to the fact that a portion of the said loan was paid back in accordance with the regulations. It must be noted, however, that the English pound sterling was calculated at 4.880 yen, but when the repayment was made the rate of exchange was 4.992 yen, and the actual amount expended in repayment was 499,298.070 yen. The reason why this last mentioned sum does not appear in the account is, that there would then have been a discrepancy in the total of the loan as explained in the definitive account for the previous fiscal year.

**THE NEW FOREIGN LOAN BEARING SEVEN PER CENT :—**  
At the end of the financial year there was an actual decrease of 208,400 yen as compared with the commencement, and the explanations given relative to the old Foreign Loan equally apply to this item.

**RESERVE FUND :—**The end of the financial year discloses an increase in this item of 10,690,121.255 yen, as compared with the former year, the account standing thus :—

Surplus of revenue transferred to the Reserve Fund .....	yen 9,821,813.923
Advances transferred to the Reserve Fund.....	„ 868,307.332

Total..... yen 10,690,121.255

The surplus of Revenue transferred to the Reserve Fund was the saving effected prior to the 6th month of the 8th year of Meiji. It must be noted that the sum of 312,675.534 yen, available for temporary advances under the heading "Ordinary Advances," was not required. It was intended as accommodation to local authorities for expenses connected with the land tax reform and transferred to the Reserve Fund, as it formed a portion of the surplus Revenue of the period prior to the 6th month of the 8th year of Meiji.

With regard to the other amount transferred to the Reserve Fund. It was hitherto the rule to make various advances out of Revenue, but regulations were issued that these payments should be made in future out of the Reserve Fund. In consequence, repayment of the amounts advanced out of the Revenue, in the preceding fiscal year, was ordered to be transferred to the Reserve Fund.

**VARIOUS ADVANCES :—**At the end of the financial year a decrease was found to have taken place of 1,045,105.769 yen. At the end of the year the account stood as follows :—

Advances already made.....	869,911.595	
New Advances.....	238,157.867	1,108,069.462
		Yen.
Repayments .....		1,431,304.306
Written off.....		612,915.125
Depreciation .....		108,955.800
		2,153,175.231
Decrease .....		1,045,105.769

The item of advances already made was the amount granted for the support of the poor, and the encouragement of industries during the fiscal year now under review. The new grants were the amounts lent to those who had arranged to borrow money from the late Hans, but had not received the full amount of the loans, or had some other equitable claims against the former local Governments. The Repayments arose from the receipt of instalments according to the terms of the several loans, the amount repaid in bonds, and the sums received under the method introduced by Government under which annual instalments of ten per cent. are paid upon certain loans. The item "Written off" refers to advances abandoned in consequence of the bankruptcy of the debtors, and the postponement of claims by extension of the terms of payment. The last item "Depreciation" refers to the circumstance that the price of rice and Mexican dollars, both of which had advanced, fell at the period of repayment, as did also the price of certain Government Bonds at the time when they were taken back in repayment of loans. Certain advances also were allowed to be discharged in one sum instead of by instalments extending over five, ten, or twenty years as the case might be, under the system already referred to of receiving payment at various periods.

#### REUTERS'S TELEGRAMS.

FROM THE "HONGKONG DAILY PRESS."

LONDON, 6th October, 1880.

Letters from the Russian camp near Kuldja state that hostilities are impracticable before the spring.

LONDON, 18th October, 1880.

The Government has ordered the leaders of the Irish Land League to be prosecuted for seditious speeches.

LONDON, 21st October, 1880.

It is rumoured that the Czar will appoint the Czarowitz co-regent, and then retire to Livadia.

YOKOHAMA : SATURDAY, 23rd OCTOBER, 1880.

JAPANESE ERA 2540, MEIJI 13TH YEAR, 10TH MONTH, 23RD DAY, DO-YO-III.

### NOTES OF THE WEEK.

The O. & O. steamer *Belgic* arrived in port from San Francisco on Friday morning; she brought American dates up to the 2nd of October. The homeward mails were sent forward by the M. M. steamer *Volga* on the 17th instant, via Hongkong, and the O. & O. steamer *Oceanic*, via San Francisco, on Friday last.

We have been informed that the Mitsu Bishi Company's steamer *Niigata Maru*, left Hongkong on Monday last, with the European mails for Kobe and Yokohama. The *Niigata* may be looked for on Wednesday next at daylight.

The barque *N. Boynton* sailed from New York for Shanghai on the 14th of last month. No other vessel left that port for the Far East during the interval between the 13th and 26th of September, nor was there any vessel on the berth for either China or Japan at the latter date.

The *London and China Express* says that "the *Bacchante*, Captain Lord Charles Scott, is ordered to be out of Portsmouth Dockyard by the 8th September instant, when she will leave for Vigo, with the Royal midshipmen on board, and await the arrival of the Flying Squadron, which she will join. The *Inconstant*, flagship of Rear-Admiral Lord Clanwillian; the *Cleopatra*, Captain Durrant; the *Bacchante*, and the *Tourmaline*, Captain R. P. Dennistoun (if she returns in time from the West Indies) will be the vessels forming the Flying Squadron. The cruise will be exceptionally protracted, as they will sail first to the Pacific, thence proceeding to Rio de Janeiro, Monte Video, and the Falkland Islands. After touching at the Sandwich Islands they proceed to Japan to await further sailing orders, the arrival there taking place in all probability in September of next year."

On Sunday afternoon the Mitsu Bishi Company's steamer *Tsuruga Maru*, from Kobe, came into port towing the dismantled barque *Taihei Maru*. From what we can gather, the unlucky vessel experienced the full power of the typhoon of the 3rd instant, at a much earlier hour than either the *Scottish Fairy* at sea, or people on shore. The gale was at its worst between noon and 4 p.m. on Sunday, during which time the vessel was thrown on her beam-ends and it was found necessary, as in the case of the *Scottish Fairy*, to cut away the fore and mainmasts, in order to save both ship and crew. The jib-boom has snapped off short by the bowsprit, the bulwarks are smashed and the vessel generally shows signs of having had a very bad time of it.

A match of base-ball was played on Saturday last between the U. S. Navy and the Y. B. B. Club, resulting in a victory for the former by 22 runs against 14. The play was not particularly good on either side.

The third meeting of the Société Suisse de Tir will be held on Saturday the 30th instant, or, should the weather prove unfavourable, on Sunday the 31st instant. The contest will commence at 1.30. Nine prizes will be given and, as on the last occasion, competitors will be handicapped.

A match for \$50 aside, distance one mile, was run last Wednesday morning on the racecourse between the ponies *Honnie Donn* and *Kingfisher*, and resulted in an easy victory for the former. We are inclined to think, however, that with owners up the re-

sult might have been different, as *Kingfisher's* jockey pushed his pony injudiciously at the bill. The time was 2 min. 28 sec. Quite a crowd had assembled to see the race.

We learn from a paragraph in the *North China Herald* that M. J. de Bielle, Interpreter at the French Consulate-General here, according to the *Journal de la Republique Francaise* of the 19th August, has been promoted to the position of second Interpreter to the French Legation at Tokio. We understand, however, that it is not probable that he will leave Shanghai until the arrival of his successor. The same paper announces the appointment of M. Pernet, "Chancelier de 2 classe" at Yokohama to be Chancellor at the French Consulate at San Francisco. M. Larouy, "Chancellerie du consulat à Odessa, non installé," will be promoted to the position vacated by M. Pernet at Yokohama.

The *North-China Herald* reports that a meeting of the directors of the China Shipowners' Association was held on Saturday, the 2nd of October, at the office of the general agents, Messrs. Morris & Co. An interim dividend of Tls. 5 per share was declared for the half-year ended 30th June, 1880, the accounts showing a credit freight balance of Tls. 12,000, exclusive of the freights of several vessels. For the information of the public, we may mention that the fleet belonging to the Association consists of the following vessels:—British—ship *Martha*, barques *M. A. Dixon*, *John Potts* and *Sakuma*, and schooner *Aberlarian*; American—*Benjamin Aymar* and barquentine *Almatia*.

The evidence in the recent stabbing case affords a strong comment upon the usefulness of the Japanese police. One of the witnesses stated that from the very first, when he saw the prisoner breaking into the house, and until the struggle and stabbing were over, the Japanese policeman on duty stood there calmly looking on blowing his whistle, although he might have easily prevented the man from entering the shop in question.

In a police-court in America recently, a woman was charged with having committed an assault upon her husband. The weapon used was produced in court, and found to be a board having on one side the text—beautifully illuminated—"God bless our home."

We are informed that Minister Angell, and Messrs. Swift and Trencott, have been very cordially received by the Chinese authorities. Bao Hsun, Superintendent of the Board of Civil office, and Li Hung Tsao, formerly tutor to the last Emperor, are the two members of the Tsung li Yamen appointed to confer with the commissioners.

Last Thursday morning at about eight o'clock, as a small boat belonging to Mr. Watts, carpenter, was under sail about a mile and a quarter from the shore, she was observed suddenly to capsize. As the boat was heavily ballasted it sank at once leaving the crew—two Manila men and one Japanese—struggling in the water. Two boats from a Japanese man-of-war, and a launch from Messrs. Whitfield and Dowson's went at once to their assistance, but only saved two of them—one of the Manila men being drowned. The top of the boat's mast was just visible above the water, and she was raised and towed into the creek.

From a private letter received by the *Tokio Maru*, we regret to learn of the death of Don Carlos A. de España, the Minister for Spain at Peking. Don Carlos, who was an experienced and daring horseman, was thrown from the animal he was riding on Monday night the 27th of September. His spine was fractured in several places and it was immediately seen that the unfortunate gentleman could not possibly survive. All the Foreign Ministers called frequently upon His Excellency, who lingered in great agony until Friday the 1st of October instant. On the following day he was buried with great pomp in the French cemetery, which is situated about six miles west of Peking. All the members of the diplomatic body and the few unofficial visitors to Peking, followed the remains to the grave.

The Spanish Consul at Shanghai has been accidentally drowned. The *Courier* thus alludes to the unfortunate occurrence:—We much regret to announce the death by drowning of

Senor Alberto de Garay, the Spanish Consul at this port. The deceased gentleman had been on a visit to the Commander of the *Dona Maria de Molina*, the Spanish man-of-war, and was returning about 12 o'clock to shore, when he missed his footing while stepping from the sampan on to the jetty near the Mitsui Bishi Company's office, and fell into the water. Being rather stout and unable to swim, he was carried away by the tide, and though an alarm was given and the drags were speedily requisitioned, his body had not been recovered up to five o'clock. The unfortunate gentleman was thirty-six years of age, and had been in Shanghai about six years. He leaves a widow and her mother and a large circle of friends here to mourn his loss. It is indeed sad, and hardly less sad than remarkable, that Spain should lose two of her representatives in China—the Spanish Minister at Peking and Senor de Garay—by accidents within a few days of each other.

A party of tourists arrived on Friday and are stopping at the International Hotel. They left England about the middle of August, and are making a tour of the world under the arrangements of the well-known tourist firm, Thos. Cook & Son, of Ludgate Circus, London, England, and 261 Broadway, New York. They are accompanied by Mr. G. Dattari, one of the firm's efficient representatives. The party will sail from Yokohama for the Inland Sea on Wednesday, the 27th of October instant.

The *Times* says that "Nations should not only take a decennial census of population, but also draw up a balance-sheet every ten years of what progress they may have made in industry, wealth, commerce, instruction, and morality. We have only to compare the returns of Trade for 1879-80 with those of ten years ago to see the advancement of the United Kingdom as follows:—Increase.—Population, 11 per cent.; revenue, 8 per cent.; public wealth, 30 per cent.; commerce, 13 per cent.; shipping, 16 per cent.; textile manufactures, 29 per cent.; minerals 45 per cent.; railway traffic, 45 per cent.; Post Office, 45 per cent.; schools, 122 per cent.; public morality, 13 per cent.; welfare of poor, 18 per cent. Population has not grown so fast as in previous decades, but the ratio of increase is still much higher than the European average. It was 13 per cent. in England and ten in Scotland, while Ireland showed a decline of 1 per cent., owing to emigration. The total number of British emigrants was 1,654,000, from which, deducting those who returned, the balance or net loss would be 875,000, and if these were added to the actual population the increase would reach 14 per cent. Revenue or taxation is lighter now than it was ten years ago, the average for last year being 48s. per inhabitant. In the same interval the National Debt has been reduced by 24 millions sterling. Public wealth is pretty accurately measured by the income-tax valuation, which is now £134,000,000 higher than in 1869, an increase of £4 per inhabitant; even in Ireland the ratio is higher by £2 per head. It seems that the average income varies in the three kingdoms as follows:—£19 in England, £15 in Scotland, £7 in Ireland, and £17 for the whole United Kingdom. The accumulation of wealth among the working classes, as represented by deposits in saving banks, has risen from 51 to 76 millions sterling, being almost 50 per cent. Compared with population, the savings deposited since 1869 have been 18s. per inhabitant in England, the same in Scotland, and 4s. in Ireland. It is, furthermore, worthy of observation that the deposits in the Bank of England reached 39½ millions sterling in 1879 against 22 millions in 1869, the increase being relatively almost double as great as in the saving banks. Commerce has likewise grown faster than population, last year a ratio of £17 18s. 3d. per inhabitant against £17 4s. 6d. in 1869. Many people erroneously suppose that it is only our imports that increase, while our exports decline. Suffice it to say that the exports of 1879 were 12 millions sterling over those of 1869, being an increase of 5 per cent. Our merchant shipping (not including colonial) has risen 860,000 tons, but the effective carrying power is almost doubled, owing to the enormous development of steam traffic. In 1869 steamers were 17 per cent. of our shipping, the present ratio being 38 per cent., and, if we count them as four times the power of sailing vessels, we find our carrying power is now 14 million tons, as against 8½ million

tons ten years ago. If we include colonial, the total British tonnage would be equivalent to 19½ million tons, the total for all nations being a little over 40 millions. Manufactures, minerals, and railway returns show at a glance the progress of internal industry. Our mills in 1879 consumed 1,615 million pounds of cotton and wool, against 1,248 millions in 1869, an increase of 29 per cent; while our mining industry rose 45 per cent., the value of coal, iron, &c., extracted last year amounting to 64 millions, against 44 millions in 1869. By a remarkable coincidence, our railway traffic has grown in the same ratio as minerals, the gross earnings having risen from £41,100,000 to £59,400,000. Another coincidence is the Post Office increase, also 45 per cent.—viz, 847 million letters in 1869, and 1,239 millions last year. All the above items show material progress, and if we turn to the indications of moral improvement we find the figures no less satisfactory. The number of criminals convicted in the three kingdoms has declined from 14,340 to 12,525—a fall of 13 per cent., and it may therefore be said that public morality has advanced in the same degree. School statistics show that the average attendance in Great Britain has risen from 1,333,000 to 2,980,000 children, the increase being 11 times greater than that of population. Finally, we may gauge the condition of the poor by the number of paupers relieved; and as this has fallen from 1,281,000 to 1,037,000, it follows that there is an improvement equal to 19 per cent. There is but one branch of national wealth or industry that shows a decline—namely, agriculture, the area under corn and green crops having fallen in ten years from 17,096,000 to 15,650,000 acres, a decline of 8 per cent. for the United Kingdom, although the figures for Ireland show that the falling-off in that country was as much as 16 per cent. It may be questioned, however, whether the rural products of the United Kingdom have at all declined in the last ten years, seeing the increase in the number of cattle—viz., 8 per cent. in cows, 12 per cent. in horses, 6 per cent. in pigs: the only set-off being a loss of 6 per cent. in sheep. Even in Ireland (counting ten sheep for one head of cattle) we find the farming stock increased 8 per cent. Thus the growth of pastoral interests has probably compensated the loss in tillage. Summing up the condition of the United Kingdom at present as compared with ten years ago, we have every reason to be proud of the progress we have made. If we had only increased in wealth, manufactures, commerce, and public instruction in the same ratio as the number of inhabitants—namely, 11 per cent.—we should present to the world a very favorable balance-sheet of our affairs in the past decade. But it is manifest that we have grown in prosperity much more than in population, and that every succeeding decade, in spite of an occasional crisis or reverse, sees Great Britain richer, wiser, and happier, thanks to the industry and civic virtues of her people.

A fire broke out in the native town near the railway station at about three o'clock on Friday morning. We have not yet learnt the extent of damage done, but believe it was not serious.

On Sunday the 28th of August, Emperor Francis Joseph left Vienna on a visit to Hungary, Moravia, Galicia, and Bukowina. With the exception of the Minister of War, his Majesty is unaccompanied by any of the Ministry. He arrived at Olmütz in the afternoon to attend a series of military manoeuvres. The Vienna correspondent of the *Daily News* states that the Emperor was enthusiastically received by about 80,000 persons. The same correspondent says that some manoeuvres witnessed by the Emperor on Monday night succeeded splendidly. The fortresses were shelled with the aid of the electric light. The troops retired at daybreak, and at seven in the morning the cannonade recommenced. The Emperor was present all the time. After the manoeuvres the Emperor reviewed the troops, and expressed his entire satisfaction with all the proceedings, including the torchlight procession, which comprised 2,000 torch-bearers, and a number of male singers. On Tuesday, after witnessing manoeuvres executed by two corps d'armée of 18,500 men each, the Emperor left Olmütz for Cracow. At all the stations through which the train passed his Majesty met with an enthusiastic reception, and a telegram says that his entry into Cracow from the railway station "partook of the character of a triumphal procession; flowers were thrown along the route,

and the cheering was loud and incessant." Half an hour after his arrival the Emperor, in a Russian military uniform, received Prince Albedinski the Governor-General of Warsaw.

We publish some statistics showing the advances made by Great Britain in prosperity during the past ten years. The following table of figures extracted from a speech delivered recently at Cleveland, Ohio, by the Hon. J. Hay, Assistant Secretary of State for the United States, shows the increased production throughout that country for the last twenty years, and is interesting from the fact that the results disclosed are unequalled in the history of nations:—

TWENTY YEAR'S INCREASED PRODUCTION THROUGHOUT THE UNITED STATES.

	1860.	1880.	Increase per cent.
Population .....	31,443,321	48,500,000	55
Wheat produced, bushels.....	173,104,924	440,000,000	154.2
Wheat exported, bushels.....	4,155,153	175,000,000	4,111.8
Maize produced, bushels.....	838,792,740	1,450,000,000	72.9
Maize exported, bushels.....	3,314,305	100,000,000	2,017.3
Wool produced, lbs.....	60,264,912	232,508,000	285.8
Cotton produced, bales.....	4,823,770	5,675,000	17.6
Petroleum produced, brls. ...	500,000	19,741,661	3,848.3
Iron produced, tons.....	919,770	3,070,875	234.1
Rails produced, tons.....	205,038	1,113,273	442.9
Hogs, packed.....	2,350,822	6,950,451	195.7
Butter exported, lb.....	7,640,914	38,248,016	400.6
Cheese exported, lb.....	15,315,799	141,654,474	813.5
Merchandise imports.....	\$336,282,485	\$670,000,000	99.3
Merchandise exports.....	\$316,242,423	\$835,000,000	164.2
Gold and silver produced.....	\$46,150,000	\$79,711,990	72.9
Gold and silver exported.....	\$57,996,104	—	—
Gold and silver imported.....	—	\$75,713,531	—

The financial difficulties which caused the closing of the Shintomiza Theatre have, we understand, been arranged and this celebrated establishment will shortly recommence giving dramatic representations.

We learn from the *Nichi Nichi Shinbun* that eight more telegraph stations will be opened in Yezo early next year. The total length of the telegraphs within the Empire is over 1850 ri (the ri is nearly 2½ miles) while the total of the wires is about 3900 ri.

We are sorry to notice in the *Mainichi Shinbun* a paragraph announcing that large numbers of cartons are arriving in Yokohama until there are at present from 220,000 to 230,000 in the market. The trade is said to be very brisk and prices good, so that sellers are recovering some of the losses made in recent seasons. It appears quite hopeless to expect the native producers to exercise the slightest common sense in regard to this suicidal industry.

We learn from the *Choya Shinbun* that it has been decided to grant the sum of 22,707 yen to assist the inhabitants of Nasunogahara to obtain a good supply of water, which is at present very scarce in that locality.

The *Cincinnati Commercial*, which it will be hardly necessary to remark is violently republican in politics, has the following anecdote of the democratic candidate for the vice-Presidency:—Judge D. W. McClung has a good memory, and he is a good story-teller. He was standing in a group of gentlemen in front of the Gibson House, yesterday, when one of the party recently returned from the East was telling of the sensation the *Commercial's* exposé of Bill English, the "Poor Man's Friend," in his real estate transactions, was creating throughout the State of New York. It reminded the Judge of a newspaper item he had read about Bill English over twenty years ago. It was in relation to English's bill in congress to withdraw the school land grant from the Territory of Kansas unless it voted for the infamous Nebraska Compromise. A paper spoke of it as the meanest bill that had ever been framed on God's earth. Prentice of the *Louisville Journal* copied the paragraph, and simply added the brief editorial comment: "No, the author of the meanest 'Bill' ever created was English's father."

"Prentice is dead now," added the Judge, "but if he was alive his opinion of the man would be just as emphatic to-day as then."

According to a Monday correspondent of the *Times of India*, King Tseebaw and his Council have hit upon a bright idea. In future the King may be seen by a British representative, or

any foreign mission, in proper style without unbooting. A large building is to be erected within the palace enclosure to be called the Foreign Office. The Pakhan Menghee will be Foreign Minister, with the Myotha as Secretary for Foreign Affairs. There will be an audience hall in the centre of the building. At the end of this room, a handsome dais will be raised, and on this the King will appear. The Embassy will be seated on chairs *with their shoes on*, and must be seated before the King appears, will remain seated when his Majesty appears and must not stir from their chairs until His Majesty is gone. The King will not see anybody's feet, as long ranges of planking, like boxes, will completely conceal the bodies of the mission from the King, who will thus see only their heads. The arrangement, though not uncomfortable by any means, or in any way very humiliating, will give the occupants a feeling very much as if they were about to have an after-dinner chat with the King. Mr. Richie, an Italian Engineer, has drawn out a plan for the proposed building, and Rs. 50,000 will shortly be sanctioned. The gilding and painting will be in Burmese style; but tapestry carpets and a quantity of upholstery will have to be indented for, so that no doubt the King's agent in Calcutta will be commissioned by the King.

Captain H. H. Parr has published an interesting and modest little book upon the Zulu campaign entitled "From Guadana to Isandhlwana." Captain Parr's contribution to the history of that humiliating episode in the military annals of Great Britain, is valuable from the exceptional advantages the author enjoyed as military secretary on the personal staff of Sir Bartle Frere. There will be a proud satisfaction too in reading the Zulu testimony to the heroism of our countrymen, which Captain Parr has collected, and which we think has now been published for the first time. "The red soldiers all fought till they died. They were hard to kill; not one tried to escape." The only sailor in camp was seen with his back against a wagon-wheel keeping the Zulus at bay with a cutlass, but was at last stabbed in the back through the spokes of the wheel. The last company of the 24th formed square on the ground on which it meant to die. The Zulus attacked it again and again, but were always driven back with tremendous loss. At last they flung assegais in showers upon the square, and rushed in to finish the one-sided fight. "Ah! those red soldiers at Isandhlwana," many Zulus have said. "How few they were and how they fought! They fell like stones, each man in his place."

Some of the citizens of Melbourne do not seem to appreciate properly the excellent fare provided at the cheap restaurants in that city. "Ægles" in the *Australasian* mentions that "Shuckwood, the banker, was one day so busy discounting and explaining most satisfactorily a few severe losses to his directors at a distance, that he had no time to go to lunch. So he rang for the new messenger and told him to bring to the office something to eat at 1 o'clock. Punctually the tray arrived, plentifully laden with meat, potatoes, vegetables, pudding, &c. Shuckwood had breakfasted early, and with keen appetite soon made disastrous havoc amongst the viands; so much so that he found the massive pudding supererogatory. The messenger coming in to remove, said Shuckwood, 'What have I to pay, James?' 'Fourpence, sir,' said James, glancing at the tray, 'without the pudding.' 'Good heavens, fourpence! Where did you bring this from?' 'Oh,' just said James, pleasantly, 'where I lunch myself, at the Stuff and Fill 'em in Elizabeth-street, and, faith, you've done it justice!' Thus it came about that James was next day seeking another engagement."

A writer in a Melbourne paper says that "there could scarcely be a more striking (or more brutal) example of the gambling spirit of a certain section of the community than is evinced in a letter which now lies before me. It is addressed to the leading bookmaker in Melbourne, and runs thus:—

'Mr.——

'Dear Sir,—I hear you are offering a bet of £10 to £1 that Edward Kelly will not be hung; if so, I am open to speculate in £1's-worth with you. P.S.—Write soon and let me know,' &c.

The callous unconsciousness of the utter impropriety of the cold-blooded proposal as displayed in this letter is, perhaps, its most repulsive characteristic."

## ECCLESIASTIC AND MISSIONARY NOTES.

THE UNITED PRESBYTERIAN (SCOTLAND) MISSION TO JAPAN:—This enterprise was projected by the late Rev. Dr. Hamilton MacGill, a name well known to lovers of Latin hymnology. The first Missionaries were Messrs. Davidson and Henry Faulds who, with Mrs. Faulds, arrived in Japan on the 5th of March 1874, and proceeded at once to Tokio. Mr. Davidson was soon able to devote himself to preaching and now takes part in the translation of the Old Testament into Japanese. He has also built up a congregation now organised at Biogokubashi, and has other meetings under his care in Tokio and its suburbs. A medical dispensary was begun in May 1874, and early in 1875 Tsukiji Hospital was opened. The out-door patients now reach 14,000 annually, and the in-door accommodation is always fully taken advantage of. A large number of operations on the eye have been performed, besides many of the major operations of general surgery. The Rev. Hugh Waddell, B.A., and Mrs. Waddell, landed here on the 10th of June 1874. Mr. Waddell has been from the first fully engaged in preaching, and in conducting a boys' school in the city. He has also read some suggestive and valuable papers on the psychological terminology of Japan, at a Mission Conference, which is held monthly in Tokio. In connection with Mr. Waddell's labours a Church has been organised and other meeting places are superintended. The Rev. S. J. MacLaren, and Mrs. MacLaren reached these shores on the 4th of October 1875. The Presbyterians of America and Scotland having decided to coöperate in establishing a fully equipped college, with a staff of professors, Mr. MacLaren was elected to the chair of Sacred History and Bible Literature. Miss Gamble joined the Mission staff on the 30th of September 1875, and after conducting a girls' school in the city for some time removed to the school in Tsukiji, which had been specially built for the purpose. A society of Scottish students who had become interested in the progress of Japan, collected during 1879-80 a large sum of money, and were thus enabled to send out to this country in connection with the Mission of the United Presbyterian Church, the Rev. R. E. Welsh M. A. who, with Mrs. Welsh, arrived here on the 24th of June 1880. The ordained missionaries all preach in their turn to the foreign congregation in Tsukiji Union Church. There have been some Evangelistic tours undertaken in the neighbourhood of Tokio, but these have been confined chiefly to the native Evangelists. In connection with the hospital there is a school and library for the blind. A special type has now been prepared which meets the difficulties hitherto felt in dealing with the subject in Japan. Tracts have been issued, and lectures on scientific subjects bearing on religion have been delivered in the city. A number of pupils are being instructed in practical medicine and surgery, and in winter there is a special class for the study of Biology. In association with the other Presbyterian Missions—American Presbyterian and Dutch Reformed of America—there has been organised a native ecclesiastical assembly or Presbytery (*chiu-kuwai*) in which appeals from sessions of Churches (*sho-kuwai*) are heard, and all matters of general importance are decided by a majority vote of clerical and lay representatives of congregations. The *sho-kuwai* or session is composed of the pastor (*bokushi*) and elder (*chôrô*). There are also deacons (*shitsaji*) who attend to the more secular duties. These assemblies are quite independent of foreign jurisdiction, but the Missionaries have, *ex-officio*, the right to vote, and one of them may be chosen to preside as moderator (*gicho*). The *chiu-kuwai* meets twice a year in Tokio. The Rev. Mr. Inagaki of Yokohama is the present *gicho*. In a country so unused to the representative mode of Government, the system has worked much more smoothly than might have been anticipated, and its working very noticeably improves as the advantages of established forms and precedents become familiar.

NOTHING IS BETTER CALCULATED, says the *Missionary Record*, to revive and sustain interest in Foreign Missions than an intelligent acquaintance with what the Churches are attempting and achieving in that department of Christian work. We therefore heartily welcome Mr. Groom's translation of Professor Christlieb's work entitled *Protestant Foreign Missions: Their Present State*. Few of our readers need be told that the present century has been distinguished for a remarkable extension of Missionary operations; but many of them will be astonished to learn the greatness of the progress which has been made in eighty years. "At the close of the last century there were only seven Protestant Missionary Societies, properly so called. . . . To-day, the seven have, in Europe and America alone, become seventy. . . . At the beginning of the present century the number of male Missionaries in the field, supported by those seven Societies, together amounted to about 170, of whom about 100 were connected with the Moravians alone. To-day there are employed by the seventy Societies about 2100 ordained Europeans and Americans; hundreds of ordained native preachers (in the East Indies alone there are more than 1600, and about as many in the South Seas), upwards of 23,000 native assistants, catechists, evangelists, teachers, exclusive of the countless female Missionary Agents, private Missionaries, lay-

helpers, colporteurs of the Bible Societies in heathen lands, and the thousands of voluntary unpaid Sunday-school teachers. . . . Eighty years ago the total sum contributed for Protestant Missions hardly amounted to £50,000; now the amount raised for this object is from £1,200,000 to £1,250,000 (about five times as much as that of the whole Romish Propaganda), of which:—

England contributes .....	£700,000
America .....	£300,000
Germany and Switzerland from .....	£100,000 to £150,000

Eighty years ago the number of Protestant *Missionary Schools* cannot have exceeded seventy; to-day, according to reliable statistics, it amounts to 12,000 with far beyond 400,000 scholars, and amongst these are hundreds of native candidates for the Ministry, receiving instruction in some of the many High Schools and Theological Seminaries." In several of the Mission fields the last two or three years have been crowned with unexampled fruits. "American Baptists in Nellore, within six weeks (June 16 to July 31, 1878) baptized 8691 heathen. In the *Tinnevely* district, where the Church Missionary Society carries on operations, 11,000 heathen applied in 1878, to Bishop Sargent and the native clergy for instruction, with a view to baptism. In the same district, but in connection with the Propagation Society, from July 1877 to the end of June 1878, 23,564 persons betook themselves to Bishop Caldwell and his fellow-labourers for Christian teaching. Thus the *English Church Mission* in *Tinnevely* and *Ramanath* (southern point), in hardly a year and a half, received an increase of 35,000 souls; whilst previous to that, the average growth of the Church Missionary and Propagation Societies, in *Tinnevely* and *Travancore*, had only been at the rate of 2000 to 3000 per annum. The Propagation Society is now proclaiming the Gospel in some 631 villages in the *Tinnevely* district."

**LUTHER'S TRANSLATION OF THE BIBLE:**—According to a notice in the *Berlin National Zeitung*, Dr. Martin Luther's own copy of the Vulgate, from which he translated the Bible into German, while living at Finken Förg, on the Wartburg (1521-22), has been discovered. The director of a little watering-place in Bohemia, Dr. Schlechta Ritter von Sedmiborsky, is said to be in the possession of the precious volume, for which so many Lutheran scholars have made the most diligent search. The margins of the single leaves of the Latin volume are covered with a great many corrections, conjectures, glosses, &c., made by Luther, and written in his own hand. A Bohemian paper states that this interesting book was formerly possessed by the Royal Saxon Library, from which it passed a long time ago into the hands of the poet, Fanz Hvědý. From the latter Dr. Schlechta received the valuable "*Handeemper*" as a present. There is a rumour that Professor Curtius, of the University of Leipzig, has offered Dr. Schlechta a sum of 15,000 marks for the book, but whether the offer has been accepted we do not know.

**THE RUSSIAN BIBLE SOCIETY:**—The report for 1879 of the Russian Society, just issued, shows that 601 members belong to the association, of which 196 are priests. During the year 612,011 copies of the Scriptures were distributed. The receipts of the Society amounted to 9,684 roubles, and the expenditure to 8,992 roubles.

**A Papyrus Manuscript** recently discovered in the cave of a hermit near Jerusalem, and said to be the work of St. Peter, has been submitted to a committee sent out by the Biblical Society of London, and they have come to the conclusion that the papyrus is in reality the work of the great Apostle. They have offered 500,000 francs to the heirs of the hermit for the document, but the offer has been refused.

**RELIGIOUS BEQUESTS.**—The late Mr. Edward Pease, whose will has just been proved, the personal estate being affirmed under £500,000, has bequeathed the following charitable legacies, namely:—To the British and Foreign Bible Society, £1,000; to the British and Foreign School Society, £1,000; to Friends' Foreign Mission Association, £1,000; to the Peace Society, London, £1,000; to the British and Foreign Anti-Slavery Society, London, £1,000; to the proprietors of the Saltburn Convalescent Home, £1,000; for the education of the poorer classes in the borough of Darlington, either by establishing or founding, or assisting in establishing, a free library or scholarships, from elementary schools for boys and girls, or in such other way as his trustees should think fit, £10,000.

**THE BOMBAY MISSIONARY CONFERENCE:**—The first of a series of public meetings in connection with the Missionary Conference was held, says the *Bombay Gazette*, on Wednesday evening the 25th of last August in the Framjee Cowasjee Institute. The preacher was the Rev. J. M. Douglas, of the Canadian Presbyterian Mission at Indore, Central India. The sermon had two texts,—Luke 12-19, "The Son of Man is come to seek and to gain that which was lost," and Acts 26, 17 and 18, "I send thee to open thine eyes, and to turn them from darkness unto light, and from the power of Satan unto God, that they may receive forgiveness of sins, and inheritance among them which are sanctified by faith that is in me." The Rev. Mr. Douglas' discourse was delivered in an impressive manner,

and was attentively listened to by the large audience which had gathered to hear it. The Rev. J. W. Sibley, of Ellichpur, assisted in the conduct of the service. The musical arrangements were in the hands of Mr. William Simpson.

**THE SECOND PUBLIC MEETING** was held on Thursday evening in the Framjee Institute, the Rev. G. Bowen, chairman of the conference, presiding. The attendance completely filled the large body of the hall, and a large number of native ladies were present. Service commenced by the choir, composed of nine ladies and seven gentlemen, singing the anthem, "Sing unto God." The Rev. D. O. Fox delivered a prayer, in which he invoked the Divine aid for the rapid termination of the campaign in Afghanistan, and then proceeded to read a portion of the second chapter of the book of Daniel. A hymn followed, and the Rev. Dr. Bissell, D. D., of Ahmednuggur, delivered an address entitled, "Twenty-nine years in the Deccan." The Rev. Dhanjibhai Nowrojee delivered an address entitled "Christianity in the Native Church."

**WE ARE INFORMED**, writes the *Friend of India*, that the Church Missionary Society have abandoned their intention of withdrawing all European supervision from their mission at Lucknow.

**AN OLD WELSH CHURCH:**—The *Rock* says that the old parish church of Bala was on Wednesday reopened after restoration, the preachers being the Bishop of St. Asaph, Archdeacon Ffoulkes, and the Rev. D. Howell, vicar of Wrexham. The church is one of the oldest in North Wales, and its restoration is chiefly due to the munificence of Sir Watkin Wynn, Bart., M.P. The Rev. Thomas Charles, the founder of the British and Foreign Bible Society, was buried in the graveyard.

**WESLEY'S HYMNS:**—The *Belfast News Letter* says:—"Charles Wesley wrote about 6,000 hymns. Even the Wesleys do not sing all these—probably not more than 200. Not more than thirty of Charles Wesley's have passed into general hymnology. John Wesley's translations from the German are among the best hymns in the English language. There are, say, 40,000 passable hymns in our language—mostly forgotten."

**THE REV. J. SHARP, M. A.:**—The friends of this gentleman in Madras will be glad to learn he has been permanently elected to the Secretariat of the Bible Society, filling the vacancy caused by the resignation of the Rev. C. Jackson, after eighteen years' faithful and efficient service. Mr. Sharp was educated at Rugby School and Oxford University, where he graduated in 1860. In 1861 he came out to India as Rugby Fox Master in the C. M. S. High School at Masulipatam. He succeeded the Rev. R. T. Noble as Head Master in 1865, and held that post until his return to England in 1878. Since then he has held the office of Lecturer in Telugu in the University of Cambridge, and has acted as Association Secretary for Cambridgeshire in connection with the Church Missionary Society.—*Madras Mail*.

#### ASIATIC SOCIETY OF JAPAN.

The first general meeting of the Asiatic Society for the session 1880-81 was held at the Shoheikawan, Seido, Tokio, on the 12th instant; Dr. Divers, the President of the Society, in the chair. After the usual formal business, a paper by Mr. John J. Quin, on the Lacquer Industry of Japan, was read by the Corresponding Secretary, Mr. Satow, in the absence of the author. The paper, which was of great length, was divided under the following headings:—

- 1.—History and origin of lacquer-ware.
- 2.—The various changes that have taken place in the styles of gold lacquer.
- 3.—Names of the principal kinds of lacquer, and the localities in which they flourished.
- 4.—Various kinds of lacquer.
- 5.—Cultivation of the lacquer tree and the mode of obtaining the lacquer varnish.
- 6.—Various woods used in making lacquer-ware.
- 7.—Method of making lacquer-ware, namely:—(1) Black Lacquer, (2) Red Lacquer, (3) Hira-makiye, (4) Togi-dashi and (5) Taka-makiye.
- 8.—Various kinds of gold-dust, etc., used in the ornamentation of lacquer-ware.
- 9.—Tools and other articles used in the manufacture of lacquer-ware.
- 10.—Noted workers in lacquer, and the period in which they lived.
- 11.—A few noted pieces of old lacquer.

The first mention of lacquer in the old records of Japan occurs (the author said) in the reign of the Emperor Kōan (n.c. 392), when the office of "Chief of the Imperial Lacquer Department" was instituted. About the middle of the seventh century of the Christian era lacquered articles were received by the Government in lieu of taxes, and a notification was issued that in future the joints of the Imperial coffins should be covered with lacquer. The art of making red lacquer was discovered a few years later, in the reign of Temmu (A.D. 673-686.) At the close of the century, the number of workmen in the lacquer department was fixed at twenty, and orders were given that all articles manufactured by them should be certified by their names, while a prohibition was issued by the Government against the manufacture of lacquer except by these workmen. During the first half of the eighth century great progress was made in the art, and gold lacquer was first introduced. In the reign of the Emperor Daigo (A.D. 898-931) lacquered articles were largely received in payment of taxes, from which the author inferred that the restriction of the manufacture to the official workmen must have been withdrawn, although the records of that time give no special mention of the fact. After this, civil wars checked for a time the growth of the industry in its more artistic forms, except at Kioto, where the lacquer trade continued to prosper on account of the luxuriousness of the Kuge, and their growing fondness for display. On the establishment of the Shogunate at Kamakura at the close of the 12th century, many workers in lacquer flocked thither but, with the exception of Sakai, in the province of Idzumi, no place could for a long time approach Kioto in the excellence of its lacquer-ware. Civil disturbances again checked the growth of the industry until peace was restored by the conquest of the whole country by Hideyoshi, after which it spread in a manner before unknown.

The lacquer-tree, formerly grown wild, was first cultivated systematically in the beginning of the 8th century, when it was decreed that every farmer should grow a certain number of trees, according to the number of labourers employed on his land. Sap is obtained each year by making four horizontal incisions in the bark near the bottom, on one side. The sap as it exudes from these is removed by an iron hook, and put for preservation into a bamboo tube. Next year the lines are cut on the other side and a little higher up, and so on. The yield is at its best, as regards quality, when the tree is fourteen years old. After the tree is cut down, lacquer is also extracted by steeping the branches in water.

The author described very fully the laborious methods by which the successive coats of lacquer are laid on, and the ornamentation applied in the manufacture of the various sorts of ware, as well as the implements which are used.

Amongst the names of noted workers in lacquer the following workmen of the present day were mentioned:—Shibata Zeshin, Watanabe Tosen, Ikeda Taishin, Nakayama Komin, Ogawa Shomin. Watanabe Tosen is at present at work on a tobacco-box for the Empress, which has been six months in hand, and will probably be completed in two months more. Its dimensions are about ten inches, by six inches, by eight inches, and its estimated cost is three hundred yen. Of the noted pieces of old lacquer mentioned, the oldest was a Kesa-bako, whose former owner lived in the reign of Kinmei (A.D. 540-572). This is preserved in the temple of Todaiji at Nara.

After the President had expressed the Society's thanks for Mr. Quin's exhaustive paper.

Mr. Atkinson observed that no one had explained why lacquer dries most quickly in a moist atmosphere. It had been shown that the influence of light is unnecessary in the blackening of lacquer by exposure. Air alone appears to cause this change, for lacquer turns black in a dark box, and on the other hand, when shielded from the air by a glass plate, it does not change colour.

The President pointed out that linseed-oil paints also dry most quickly in damp air, and that coal tar, like lacquer, changes colour on exposure, and becomes blacker than it is when freshly distilled.

The meeting was then adjourned.

## PARIS LETTER.

PARIS, 28th August, 1880.

The summer continues to be very lovely. That which makes everybody very happy—continued sunshine—means continued gaiety. There is a general resolution to prolong residences at the sea-side, the difficulty is rendered less insurmountable, owing to the "latest Fashion," of ladies taking occasional runs up to Paris, to have a chat with dress-makers and milliners, and to see if Paris be in the same place still. In this fancy trip one is understood not to put up at their own apartments, but at an hotel, to live like a tourist, breakfasting at this restaurant and dining at that—in fact doing Paris. The opportunity is seized for making changes in the furnishing of the fixed residence; what's old is sold off, and at fair prices, because there is a demand for what is second hand to furnish villas on speculation, and new furniture can be had cheap, as it is the dull season with upholsterers. This mild form of Bohemian life is very agreeable; you are neither expected to visit or to receive: your baggage is limited to military allowance in war time, and there is not a little fun in shopkeepers and restaurateurs taking you for foreigners or provincials, but finding later, you are not the real pigeon to be plucked. During the last few weeks I have made the tour of the Normandy sea-coast. It is in a fair way of being transformed into a network of bathing stations: the old haunts, from Boulogne to St Malo retain their popularity and new rivals are flourishing. But there is this peculiarity, that hamlets are sought out with the determination of an African explorer, to be converted into a summer resort. It is not that individuals content themselves with a villa for their exclusive use; no, a few old cronies wish to monopolize the spot, and bar out others as interlopers. It is not a spirit of caste which dictates this selfishness, so much as the desire to be exempt from the hurly-burly of fast life and cosmopolitanism—to be in a word, able to take "my ease at my inn"; to live independent, that is, unsubjected to fashion in point of dress, and exempted from the calls of society. The Upper Ten desire seclusion—but only from those lower down in the social ladder,—hence, Deauville-Trouville, a branch of the Faubourg St. Germain, is next to in mourning this year, because their sea-side haunt has been invaded by the new strata—rich in brains, the ways and means of life, and animated with the modern idea that it is not good for man to live alone. The heroes and heroines of the moment continue to be the children given up by colleges and boarding-schools; the house is a Babel, grandmothers are enchanted, servants are in a perpetual rage, while parents are charmed to see the young people back, and will not be the less delighted when October summons them to grammars and blackboards. The girls will be found to have made satisfactory progress, but the boys will be open to the accusation of having lost all the elements of submission and perhaps of civility, that have been imparted to them. They keep the table in a roar by describing tricks played on ushers, reciting with bravery their dietary misfortunes, and making up for all hardships under that head by a vigorous patronage of home delicacies. Despite a few drawbacks, the vacation strengthens the ties of the fire-side: these big boys will be men to-morrow: the girls must be married some day, hence, in the din of play and juvenile uproar, parents have not the less grave subjects for reflection.

The death of Mlle. Neilsson caused some emotion here, where her talent had many admirers. After lunch she drove to the Bois de Boulogne with some friends, enjoyed a game of romps, and when perspiring profusely could not resist drinking a bowl of "deliciously iced milk"; cramps followed and next death. Twelve hours had hardly elapsed from her arrival in a splendid equipage, when her remains were corded up in sackings and conveyed in a cart, escorted by two policemen, to the Morgue for *post mortem* examination, for the rumour—unfounded—was, that she had been poisoned. Another lady for whom much pity is expressed is the Comtesse de Tilly, a model wife, and the model mother of three children: she had been brutally treated by her worthless husband, who broke her health, deserted her for a young dressmaker, whom he promised to marry, when the Countess died. To prevent that insult to her memory, and shame for her children, she threw vitriol in the face of the mistress to disfigure her. She was instantly acquitted by the jury and before the trial voluntarily settled 28,000 francs compensation on the unfortunate girl. The Countess is in the last state of consumption, and had to be supported during the trial, where it was every moment expected she would cough her life away: the recital of her domestic wrongs plunged the jury into tears. An adventuress who gave herself the title of the "Duchess of Hamilton," has just been sentenced to five years imprisonment for swindling. She led a most sumptuous life—on nothing, and put up at the first-class hotels. She had even apartments in the Champs Elysées at fr. 28,000 a year: tradesmen supplied her with all she ordered, and felt it an honor to personally deposit her purchases in her carriage. She gave splendid dinner parties, but had always to be assisted by two maids to her bed-room: the waiters saw nothing extraordinary in this, believing it to be "a weakness common to the

English aristocracy." When pressed for a settlement of bills, the "Duchess" stated she "daily expected her mamma the Duchess Dowager to arrive in Paris, along with her brother-in-law, the Duke." She could neither read nor write, having never been taught and her memory was so short, that she forgot when and where she was married. The police reports aided her: she was the daughter of one Horsfall, a school-master at Boulogne-sur-mer, was a needlewoman by profession, and was married in 1868 to a boot-maker; from 1872 to 1879 she led a very regular life,—in Maidstone gaol.

As amusements and temperature are not the same in the thermal stations of the Pyrenees, on the borders of the ocean, in the valleys of Savoy, or in the beautiful sites in Switzerland, so will fashions vary; like manners, they change with climes. Travelling costumes are characterised by great simplicity: the jackets have no longer the monotonous tailor's cut: they are slightly eccentric, while preserving the marked lines of severity. They fasten at the sides, forming two angles in front, one pointing towards the left shoulder, the other to the hip, both being fixed by satin ribbon. The basque collar, and sleeves retain their accustomed form; they are generally made up in a light stuff, having the appearance of cloth; the dust coat, in grey mohair, is a necessity. The niniche hat is preferred, with large strings and the Alsatian bow enveloped in a red gauze veil. Boots are in chamois or grey cloth; stockings colored. A little sac in Russian leather hangs from the side, and a colored handkerchief peeps out of the jacket. Mauve surah is a favorite material at present and also slate-colored foulard, heliotrope colors continue to be favorites, they go well also with eglantine surah. Cambric is in request for the country—like all light materials—and sky and Prussian blues are the shades preferred. At the casinos, plain and embroidered China satins have many admirers, and for balls, amber faille and silk, trimmed with Alençon lace, make up a pretty toilette. Raisin-colored cambric and old gold; grenadine madras with white, rose, and lilac borders, are in vogue for town costumes, while house-dresses seem to disappear under lace. A trimming much in favor consists of pearl embroidery on tulle: every elegant robe is trimmed with embroidered quilles, and black dresses look very distinguished with such black garniture. The fashion leans decidedly to pearls; one error deserves to be mentioned; abuse of lace on the bodice, and of muslin under the jupons: it is no longer a modest *balayouse* that is placed on the borders of the jupes, but row upon row of lace. The *Anne of Austria* wash, commencing from the seams below the arm and falling below the waist to unite so as to form a bouquet, is a marked success: there is a careless elegance in the novelty: it lengthens the figure, and ladies inclined to embonpoint need have no hesitation in adopting it. Every kind of imitation lace is in favor, but this does not prevent the old points of which our grandmothers were so proud from being also fashionable. There is nothing new in hats: always the same large shapes turned up in the most eccentric style, or the bell-glass, shading the face and descending even to the ears: the latter produces often an innocent and timid air on many features, quite becoming. Black straw, lined with red satin, with surah and gold lace, having a puff of red roses and leaves on the side, is a bonnet in vogue for travelling. The coquettish and rich capeline called *Fontanges*, is in great request: it recalls that of the baby's: it is in lace, or embroidered muslin lined with colored silk: it cannot be worn in public, except in the evening on leaving a concert: it is for fresh evenings, in a park or garden, or during a sunny day. There is nothing definite respecting sunshades, the large ombrelle is inconvenient, heavy, and ungraceful, the other is too short, and is called "*King Charles*," because carried under the arm like the pets of that name. The shape most in vogue is neither too long nor too short, and rather thick than fine. For the country, nothing is better than the parasol in China silk, with silk fringe or lace border.

Little folks prefer the shelter of a red parasol. Their costume for travelling is the pilgrim shape, without the hood and in mohair; the hems are in assorted silks, and the buttons in silver or mother of pearl. For girls up to twelve years, the sailor's costume, in flannel or cambric of all colours, is the *mode*: jupe, plaited; hat, straw and sailor style, lined with material the same as the dress. Babies prefer their robes in rose or blue cambric, with insertions of embroidery, and in front, a lace flounce; indeed their fashions are only the reduced editions of those of their mamma's. Ladies with fine hands and valuable rings to display, ought to remember that white lace mittens are generally worn. There is a jacket in white linen, such as gentlemen patronize, greatly in favor. It has large mother-of-pearl buttons, and is also made up in cream-colored flannel, with vest to match.

The Hippodrome is the favorite circus, because it has the advantage of an opera roof and the electric light, in addition to the usual feats of horsemanship and clownship. There is a fairy spectacle of "*Puss in Boots*," that sets old and young laughing to tears: puss dresses well, fights the ogre bravely, and also the rats and mice that swarm round her. At last the Marquis de Carabas, the owner of pussy, receives the hand of

the princess, and all are made happy. All the nations defile at the wedding, and the costumes are very gorgeous.

Warblers and actors are at the sea side, where they will remain for a few weeks more, combining money-making with health renovation. The Hungarian minstrels have seized the occasion to give us their inimitable Rakotsky march, called the Marseillaise on horseback, for one can almost hear the noise of the stirrups and the grinding of the spurs: they bring with them their *cymbalum*, the strange union of the piano and harp whose crystalline notes, recall the clinking of wine glasses and the dirge of a church bell. The leader Pattikams is no longer here. He was six times less stout than Sarah Bernhardt, and devoted fifteen hours to preparing a mutton hash. His violin playing so enraptured George Sand, that she at once presented him with her cigar case.

A lady complains bitterly of the police regulations concerning stray dogs. Her poor poodle qualified for this category and she went to the pound to find it—where if not reclaimed, it would be hanged in twenty-four hours—but the darling was not there. Next morning she drove up, and was in time to see poor Tray in a cart, along with several other hanged dogs, going to be converted into gloves. By mistake he wandered into the condemned yard, and was executed twelve hours too soon. Dogs are the rage as pets, they have out out angora cats, parrots, canaries, cockatoos and such favorites, and are taxed ten francs a year.

## JAPANESE NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as make them readable and intelligible.]

### COURT, POLITICAL AND OFFICIAL.

The *Akebono Shinbun* states that His Excellency Sano, Minister of Finance, will shortly leave for the prefecture of Chiba.

The same paper informs us that the Italian Minister paid an official visit to the Home Department on the morning of the 21st instant, and had an interview with His Excellency Matsukata, the Home Minister.

The *Nichi Nichi Shinbun* says that His Majesty the Emperor is about to have his photograph taken in full uniform, in order to present copies to the Chokunin and Sōnin officials, and the Kazoku. The likenesses previously given are to be returned.

A native paper reports that owing to the determination of the Government to reduce expenses, the Central Police Station has effected a saving of 4,300 yen by making the constables' uniforms out of cloth manufactured at Senji instead of imported material, and by abolishing the distinguishing marks of various grades, except on the uniform cap.

The tide-waiters in the Yokohama Custom House, will in future only receive uniforms once in every two years instead of every six months, as hitherto. The cloth will be manufactured in Japan.

The *Hochi Shinbun* says that ten portraits of the late General Kawaji, executed by the lithographic process in Europe, were purchased by Vice Inspector Sawa when abroad, and will be forwarded to the various police stations in the capital and hung up in a conspicuous position.

The *Choya Shinbun* states that in Osaka no less than three hundred police have been dismissed, and their places filled by men from Kagoshima and other districts of Kiushiu.

A native paper states that General Kuroda, head of the Colonization Department, applied lately for leave to take a tour in the north in order to inspect personally the state of affairs there, but without success. He is also reported to have stated that it had been intended to abolish the department next year, but in consequence of his request, it was decided to continue it for another three years, during which he urged his subordinates to fulfil their duties diligently.

A vernacular journal says that the salaries of Japanese Ministers abroad, and of Consuls and Secretaries at foreign ports and cities, are to undergo a thorough revision.

The *Nichi Nichi Shinbun* states that His Excellency Sano, Minister of Finance, attended by two subordinate officials, paid a visit to the match manufactory at Yamagawara-cho, Honjo, on the 19th instant.

After the first of next month the Tokio Saibansho will be opened at 9 a.m. and closed at 3 p.m.

The *Nichi Nichi Shinbun* states that some time ago the Staff

Office of the War Department commenced the compilation of a map of Japan, and the plan of the district under the jurisdiction of the Tokio Fu is now announced to be ready. It is intended to despatch a number of officials to the four prefectures of Kana-gawa, Chiba, Saitama and Ibaraki, to collect minute information. Fifteen officials have been sent to each of these four prefectures for this purpose, and the same number will be despatched by degrees to the other prefectures.

The *Nichi Nichi Shinbun* says that the Constitutional Law which has lately undergone an examination in the Senate, has been forwarded to the authorities by President Oki, but as some portions of it have not met with their approval, it will not be issued just at present.

A native paper reports the arrival in Tokio of Governor Kunisada, from Aichi on the 19th instant, and of Governor Funakoshi from Chiba. Both attended the Home Department on official business on the 19th instant.

Another journal informs its readers that the office of Inspection intends despatching a number of officials in January next to all the Government Departments and the local offices in the various Cities and Prefectures, to investigate the actual state of their revenue and expenditure for the first six months of the 13th fiscal year.

The same paper states that His Excellency Inouye, Privy Councillor, visited Yokohama on the 20th instant.

A native paper mentions that the Chinese Minister visited Yokohama on the 20th instant, where he entertained the Ministers and Consuls of the Treaty Powers.

We learn from the *Nichi Nichi Shinbun* that the Judges are holding meetings at the Daishin-in and the Tokio Saibansho, to compare the existing criminal code with the new code about to be put into force.

The same paper says that the penal code affecting Government officers is about to be revised.

#### NAVAL AND MILITARY.

A native paper mentions that the vessels of the Imperial Navy have hitherto only been inspected when leaving for or returning from a cruise. Consequently many men-of-war, engaged in harbour duty escape examination for lengthened periods, and orders have now been issued that these vessels are to be inspected at regular intervals.

All the old-fashioned cannon now in the possession of the Government are to be broken up. Whatever gun metal there is will be recast according to modern pattern, while the iron will be made into projectiles.

As the encampment was greatly injured in the recent typhoon, the artillery of the Imperial Guard have had to postpone the intended manoeuvres.

In the *Hochi Shinbun* we read that a Western naval station will shortly be established. Vice-Admiral Nakamura is reported to have been appointed to take command.

The naval criminal code has been completed and referred to the Cabinet for approval.

His Majesty the Emperor has subscribed one hundred yen to the fund being raised by the officers and men stationed in the barracks at Kanazawa, for the erection of a monument in the Kanazawa gardens in memory of those who were killed in the south-western rebellion.

The *Nichi Nichi Shinbun* states that on Monday the Senate held their second meeting to deliberate on the Military Criminal Code. The sections which provoked a great amount of discussion were those which condemn officers to death for inability to handle their troops properly when in action, and for surrendering without any attempt at defence. The clause condemning officers, who surrender to the enemy after first leading on their men, to confinement in their quarters for periods varying from one to six months, also caused great discussion.

The *Nichi Nichi Shinbun* informs us that General Miura, Military Inspector for the eastern district, arrived at Hakodate on the afternoon of the 12th instant in the *Nobunmaru*, and left for Aomori on the following day.

His Excellency General Kuroda, Privy Councillor, has gone on a sporting expedition to Urawa, in the prefecture of Saitama.

According to the *Nichi Nichi Shinbun*, Commander Kimotsuki has been appointed Captain of the *Fujiyama Kan*.

The committee selected to compile the new naval code will, according to a native contemporary, be dissolved in the course of this month.

Another native journal states that it is intended to send a number of naval cadets to sea in a training ship for a ten months' cruise, about the end of February next. A vessel is now being prepared by the Naval College for this trip.

A vernacular journal states that two sub-lieutenants of the Japanese army have been ordered to China.

New barracks for the 3rd battalion of the Tokio garrison are to be established in the premises of the old Akita yashiki, situated inside the Gofuku-bashi.

The *Mainichi Shinbun* says that Their Excellencies Sanjo, Prime Minister, and General Saigo, Privy Councillor, with Mr. Secretary Tanimori of the Daijo-kwan, accompanied His Imperial Highness Field Marshal Prince Arisugawa to the Narashi and Shimoshitsu plains, the day before yesterday.

#### INDUSTRIES, TRADE AND FINANCE.

According to the *Hochi Shinbun* a new weaving machine has recently been invented by a man named Hosobushi, an artisan in the employ of Mr. Nakatsugawa of Odawara, and the leading men of that locality have raised subscriptions and established a weaving manufactory at Itabashi mura. The works were inaugurated on the 17th instant, under the auspices of officials from the Industrial Departments and the Mayors and Secretaries of the neighbouring districts. The artisans of the factory were all present, making a total of over one hundred persons. The inventor and his employer, who assisted him in his invention, both received rewards in money from the Kencho authorities.

A native paper states that the Bureau of Agriculture has ordered a number of implements from Berlin.

According to the *Choya Shinbun*, the Director of the Agricultural Implement Factory, is about to establish branch works at Taimengahara, and has left Tokio to choose the site for the buildings.

The *Mainichi Shinbun* states that a number of shizoku living in Idsumi have formed a company for the purpose of establishing large sugar works. Several of the employes of the company are to visit Formosa for the purpose of learning the method of manufacture followed in that country.

A native paper (the *Bukka Shinpo*) says a rumour is current that the two Rice Guilds in Tokio will shortly amalgamate. Since the authorities permitted the resumption of business transactions in rice have been insignificant. Dealings in Government securities have, on the other hand, been very large.

The *Akebono Shinbun* contains a return issued by the Finance Department stating that the paper money burnt in the Government Printing Office from the 7th to the 13th instant, consisted of the remainder of the kinsatsu set aside to put down the south-western rebellion; the kinsatsu withdrawn from circulation in 1878 and 1879 to reduce the National Debt; and also the kinsatsu withdrawn from circulation by the issue in lieu thereof of Government Bonds. The total value of the notes destroyed comprised under these headings was 2,994,776.20 yen. In addition, torn and mutilated notes of the value of 1,102,366.05 yen were also burnt, making a gross total of 4,097,142.25 yen withdrawn from circulation during the period mentioned.

The *Nichi Nichi Shinbun* states that a competitive exhibition of silk cocoons and tea was opened on the 10th instant, in the museum of the public gardens in Kanazawa, Ishikawa.

The *Hochi Shinbun* writes as follows:—The Moranai coal mine in Yesso has greatly disappointed anticipations, only small quantities of coal being obtained. However, new mines containing coal of excellent quality have been discovered at Honbetsu and Ikushibetsu; they are considered likely to prove abundant and work is to be commenced at once.

A native paper states that the Mitsui Bishi Company's steamer *Akitashima Maru* brought on her last trip 22,000 bags of rice from Fushiki in the province of Echiu, and the same company's steamer *Higo Maru*, 6,000 bags from Niigata in the province of Echigo.

The *Nichi Nichi Shinbun* states that in Osaka Fu there are over three thousand sake brewers. In spite of their diligence the examining officers are insufficient, and the brewers have applied to the authorities to increase the number of

inspectors. It is expected that over 44,821 koku of saké will be brewed this year, which is an increase of ten per cent compared with 1879.

A native paper reports the discovery of a counterfeit note of two yen, in the office of the 45th National Bank, on the 19th instant. The matter was reported to the authorities.

#### MISCELLANEOUS.

A native paper says that a competitive exhibition of rice and beans will be held in the prefecture of Miyagi, from the 15th of January until the 3rd of February, 1881.

The *Nichi Nichi Shinbun* asserts that the sale of a small pamphlet entitled "The Composition of a National Assembly," written by Mr. Nakashima Katsuyoshi, was forbidden by the authorities on the 19th instant. All copies remaining unsold have been confiscated, and the author has been ordered not to leave Tokio for the present.

We read in a vernacular journal that a naval doctor has been ordered to leave at once for Corea.

From the same source we gather that the use of European umbrellas, which some Coreans had purchased as curiosities, was strictly prohibited by the authorities until recently, when the prohibition was removed.

The 18th instant, being the third anniversary of the opening of the nobles school, there has been an entertainment in honour of the occasion, and polo has been played by the guests.

The *Fukuoka Nichi Nichi Shinbun* was ordered to suspend publication on the 8th instant.

A vernacular journal mentions that Mr. Mutsu Munemitsu, formerly Governor of the prefecture of Kanagawa, but now a political prisoner, will probably be released shortly. He rendered great service in suppressing a fire which broke out in the penal establishment in Miyagi, and the Governor of that prefecture has applied to the Minister of Justice for a remission of the remainder of Mr. Mutsu's sentence. The Cabinet have now the matter under consideration.

In the *Mainichi Shinbun* we read that the work-shops in the arsenal at Osaka, are turning out quantities of hardware ordered by private individuals. Printing presses are also made and orders canvassed for by agents appointed for the purpose.

The editor of the *Troha Shinbun* was fined twenty-five yen the other day for a breach of the Press Act. The penalty was, however, reduced to five yen, as the delinquent had paid twenty yen on a similar score a short time previously. The editor of the *Chogyu Shinbun* has been more fortunate. He was fined forty yen for reflecting upon the conduct of some police officers but, as there happens to be another charge pending against him, he has been let off the forty yen altogether.

From the census recently taken of the fifteen divisions into which the city of Tokio is divided the population, according to the *Nichi Nichi Shinbun*, was ascertained to amount to 911,520 without including the suburbs.

A native paper states that on the 6th proximo, the usual religious ceremonies will be performed at the Yasukuni-shinsha (or shrine erected to the memory of soldiers killed in battle) at Kudan. An Imperial messenger will attend, and officers of the army, navy and police, will also be present. Horse-races will be held on the day itself, and on the 7th the naval band will give a performance, and an exhibition of wrestling and theatricals will take place. On the 8th there is to be a performance of native music, wrestling matches and theatricals.

The *Mainichi Shinbun* states that there is to be a great assembly of priests of the Shinto religion, from all parts of the Empire, at the Shinto Office at Hibiya, Tokio, in February next year.

The following are the names of the horses that won races at the Toyama meeting on the 16th and 17th instant:—Riubi, Koma-ga-take, Satsuma, Paradoxe, Otaki, Kirin, Matsuo, Kioso, Oshima, Oikaze, Togawa and Rincho.

There are to be horse races at the nursery gardens at Mita, Tokio, on the 14th and 15th proximo, under the presidency of His Excellency Matsukata, Home Minister.

Mr. Sakuma, editor of the *Mainichi Shinbun*, has been sentenced to thirty days imprisonment, in conformity with the 4th article of the law of 1868, for having reflected upon the acts of the Cabinet.

A telegram from Yamagata, published in the *Hochi Shinbun*, announces that the new tunnel at Kuriko-yama of over five hundred ken in length has been successfully completed. This proves that the construction of the new road is progressing very successfully.

#### ARRIVAL OF THE AMERICAN MAIL.

London, Oct. 1st.—The *Daily News*, in an editorial says: "The Cabinet Council yesterday had before it a request of the Porte that no further action be taken by the Powers before Sunday. This interval of grace will probably be granted. There is not the slightest intention on the part of the British Government to swerve from their declared policy, but the other Powers must be consulted regarding the course to be taken if the Porte's decision on Sunday shall prove to be unsatisfactory. Much depends upon the attitude of Austria, which will control that of Germany. Should they go with the other Powers, Italy would probably coöperate, France would at least not hamper their action, and Russia would be unable to develop any adverse policy of her own; but even if the great Powers do not agree, we do not believe the British Government would hold themselves relieved from the necessity for further action."

The *Times*, in a leading article this morning, says: "The aspect of affairs in the East gives reasonable grounds to hope that a pacific execution of the Treaty of Berlin will be found in the united action of the Powers. The pressure on Turkey will now cease to be merely local, but will be the object of united Cabinets, through their representatives in Constantinople, to extort from the Porte the concessions granted by the Treaty of Berlin. Meanwhile, it is a matter full of significance that the present alliance of the Powers, so far from losing strength through the interposition of obstacles imperfectly foreseen, has probably acquired new force from trial."

Paris, Oct. 1st.—There is reason to believe that Chalmers Lacombe, the French Ambassador, has visited Lord Granville, and informed him that France will not participate in any

further acts of coercion which England may contemplate against Turkey. It is semi-officially declared that the French Government, while adhering to its present reserved attitude with reference to the action of the Powers in the East, is perfectly resolved not to separate from the European contest.

Gravosa, Oct. 1st.—The British torpedo-depot ship *Hecla* has arrived with eight torpedo boats.

Cettinje, Oct. 1st.—The Montenegrins living near Camp Sutorman have been permitted to return home on leave. There is no prospect of military operations for ten days.

Ragusa, Oct. 1st.—The Albanians continue to assemble in the neighborhood of Dulcigno in such numbers as to render its occupation more difficult than at the outset. Riza Pasha has advised the inhabitants of Dulcigno to remove their families to a place of safety in case of bombardment, but the people refused, saying they would rather die than submit to the Montenegrins.

London, Oct. 1st.—A dispatch from Montenegrin sources says that a hundred cases of rifles, a quantity of provisions, and 200 soldiers have been landed at Dulcigno.

Gravosa, Oct. 1st.—The Russian corvette *Zemcog* has gone to Cattaro. The *Temeraire* and *Svetlana* will follow on October 2nd. The rest of the fleet will probably follow on Sunday.

London, Oct. 1st.—In regard to Irish affairs, the *Daily News* says: "A report upon the condition of Ireland was made by Forster, but we believe no decision was taken by the Cabinet Council, and none was asked for. Forster does not believe the present grave and anxious condition of Ireland will be bettered by the reëmentment of peace preservation measures, and the Government will not be counselled, frightened or defied into any inconsiderate and headlong course. If Parnell really breaks the law he will be prosecuted, but the Government will make no wild plunges as their predecessors did. They have no passion for state prosecutions, and are not likely to commit any blunders in that way. The Candahar questions probably did not come under the Cabinet's consideration yesterday. The Government decided a month ago that Candahar should not be retained. No change has taken place in the views of the Ministers on this subject. Though some delay has occurred in putting them into action, those views remain unaltered and will be carried out, unless some unexpected events create an entirely new situation."

City of Mexico, Sept. 21st (via Havana, Oct. 1st).—Congress opened on the 16th, and referred the disturbing question of double credentials to the proper District judge for decision. President Diaz, in his opening speech, expressed great satisfaction at the political and moral advancement of the Republic. He said the negotiations for the reëstablishment of diplomatic relations with France had resulted satisfactorily. He did not specially mention the United States. The President expressed the hope that the present Congress would find a solution for the financial difficulties of the Government, and place the national credit on a sound basis.

The Government of Chihuahua offers \$2,500 for the scalp of Victorio.

Guerrero Y. Terereo, a Spaniard, has been expelled from Sonora as a pernicious foreigner.

The receipts at the Custom House at Vera Cruz, for eleven months, show an increase of more than \$1,000,000 over the corresponding months of the previous year.

About 1,000 religious pilgrims from Pueblo have visited the Guadalupe shrine, near the capital.

Melbourne, October 1st.—The Australian Exhibition opened to-day. The Marquis of Normandy, the Governor and Commander-in-Chief of Victoria, the Governors of South Australia, New South Wales, Western Australia, and Tasmania, and the Mayor of the municipality, escorted by the Colonial troops, the Fire Brigade, and friendly societies proceeded to the Exhibition building, where they were received by the Commissioners of the Exhibition. The Marquis of Normandy, in the presence of the Duke of Manchester, the Ministry, Consuls, and members of the Assembly, received the report of the Commissioners. In replying to the report, the Marquis said that any country might be proud of the display, and the foresight, energy, and ability of all concerned in the work. The Imperial Government and principal States of the world had promptly responded to the invitation to participate in the Exhibition,

thus assuring it a rank corresponding with the previous Exhibitions. He then declared the Exhibition open, whereupon the royal standard was hoisted and salutes were fired. The Exhibition was then inspected. The proceedings passed off with great eclat. The exhibits require but little final arrangement to render the display complete.

Rome, Oct. 1st.—A large representation of Garibaldi's comrades in arms started from Marsala for Capri aboard a tug-boat, in which General Garibaldi was to embark, for Genoa. Garibaldi, in spite of the urgent advice of his best friends, is determined to carry out his intention, and will probably leave Capri to-morrow and arrive at Genoa on Sunday. The situation is rife with most serious possibilities. No doubt Gen. Garibaldi will be received on landing by the Extreme radicals of Genoa in all their strength, and should he, as some think likely, go at their head to the Prefecture and prison and demand of the Mayor the release of Canzoes, we shall probably have such an affair as that of Aspromonte over again, for Premier Cairoli, bitter as it may be for him to act vigorously against his old leader, will faithfully do his duty and cause the laws to be respected.

Bruges, Oct. 1st.—A disturbance occurred in this city to-day. Many peasants assembled and attempted to eject a Government Commissioner, who was sent to carry out a provision of the school law. The gendarmes were obliged to fire on the mob, killing one man and wounding another severely.

Belgium, Oct. 1st.—Belgium having given notice of her intention of introducing modifications in the shipping dues levied at Antwerp, Bismarck has addressed a communication to the Bundesrath, requesting the latter to decide on a reply to Belgium, and declaring his opinion that it is expedient to assent to the proposed alteration.

Havana, Oct. 1st.—Luis Marengo, Chief of the Staff, has died of yellow fever. There were sixteen deaths from yellow fever and ten from small-pox for the week ending on Friday last.

The Minister of the Colonies has ordered that the Havana Spanish Bank shall be governed by the statutes and rules of the Bank of Spain.

London, Oct. 1st.—One thousand tons of the cargo of the *Canopus* have been discharged. Divers report that the steamer is firmly imbedded on the rocks. She does not leak much at present. Her passengers will leave Liverpool in the steamer *Pharo* on Saturday.

Madrid, Oct. 1st.—The Government has resolved to proceed against all the priests who introduce politics in their sermons, and dismiss all Mayors who are Carlists.

Madrid, Oct. 1st.—In court circles it is stated that Queen Isabella is now more inclined to stay in Spain at the request of her children, and fix her residence in Seville.

Dublin, Oct. 1st.—A proclamation has been issued offering £1,000 reward for the apprehension of the murderers of Lord Mountmorris. Sweeney and Gannon were examined to-day, and were remanded for a week at the request of the police.

London, Sept. 30th.—Haulan took walking exercise this morning, during which he met and greeted Trickett. At eleven o'clock he launched his boat, built at Newcastle, and pulled from Putney to Hammersmith and back alone, and then repeated the journey with Harry Thomas. He was afloat, in all, one hour and twenty minutes. He is well satisfied with the Newcastle boat, but will row the race in that built at Toronto. There was a heavy mist on the river, but Haulan, pulling a leisurely stroke, seemed able to get any amount of way on the boat. The opinion is loudly expressed that his style is the prettiest ever seen.

London, Sept. 30th.—The *Times*, in an editorial, says: There is good ground for the belief that information was received and considered by yesterday's Cabinet Council which justified the hope of a satisfactory solution of the affairs in the East. France has no intention to isolate herself. Moreover, there are signs that the Porte is becoming alarmed, and now feels it has relied too confidently on the apparent disturbance of the European concert.

Candahar, September 30th.—All the relatives and supporters of Yakub Khan have assembled at Farrah. They intend to organize attacks on the British until Yakub is proclaimed Amir.

Rome, Sept. 30th.—Fourteen Deputies from Liguria have petitioned Signor Viola, Minister of the Interior, for

amnesty, in order to effect the release of Major Canzis, General Garibaldi's son-in-law.

London, Sept. 29th.—The *Times*, in an editorial, says: "If France draws back from giving reality to the demonstration, the concert of the Powers is for the present at an end. The ridicule of having sailed to Gravosa, for the purpose of sailing back again, will attach in the first instance to the French, but the other Powers must take their share of it. They have been misled by France, and thus have been induced to commit themselves to a game of brag, which has not succeeded, and could not have been expected to succeed. Even a weaker Power than Turkey might safely venture to snap her fingers at a demonstration which is to bark, but not on any account to bite."

Berlin, Sept. 29th.—It is declared in well-informed circles that no intelligence has reached here of the abandonment of the naval demonstration. The incident of the Sultan addressing an appeal to Emperor William occurred last week, and, therefore, before the Dulcigno question reached its present crisis. Germany, in conjunction with all the Powers, adheres to the protest against Riza Pasha.

Paris, Sept. 29th.—The instructions to the French Admiral not to fire a shot, in the event of the bombardment of Dulcigno, have not been plainly avowed until this evening. They are justified on the ground that the Constitution forbids the President from declaring war without the assent of the Chambers. This, evidently an after-thought, was adopted in deference to the lately manifested repugnance of the public to French intervention in the East.

Rugusa, Sept. 29th.—It is reported here through the Austrian authorities at Cattaro, that Dulcigno is in flames.

Buda Pesth, Sept. 29th.—A telegram from Antivari reports that Dulcigno has been destroyed by fire.

London, Sept. 29th.—The *Times* has the following from Ragusa: At four o'clock this afternoon news was received here that Dulcigno had been burned by order of the Albanian League. The latter portion of the news is not confirmed.

New York, Sept. 29th.—The *Herald's* London special says: Schwatka's discoveries and Polar matters generally continue to be the leading topics of discussion in the English journals. Among the latest contributions to the literature on the subject is a letter from Commander Cheyne in reply to an article in the *Standard*. "It was not the Arctic regions," says Commander Cheyne, "that sent Franklin's men to the next world. They were murdered by the contractor who supplied the expedition with preserved meats. The same contractor supplied Sir James Ross's expedition, to which I belonged and the tins labelled 'Beef' and 'Mutton' contained nothing but offal. Some of the tins when opened contained nothing but big knuckles of bone. Everything belonging to the animals was put into the tins except the horns, hoofs and hides. The very entrails were there, and when they ate them, having nothing else, they had to hold their noses, so offensive was the stench. If Sir James Ross and his party had been out another winter they would have starved. I have repeatedly, in my lectures throughout England, denounced this contractor as a murderer, and dared him to bring an action for libel. I should be glad to have him do so, for I could establish the truth of what I say."

Dublin, Sept. 29th.—The state of the country has been anxiously considered by the Executive. Daily conferences have been held between the members of the Government, but no decided action will be taken before a Cabinet Council is held. Private accounts say that the state of the west is very alarming. It is well known that other landlords are marked for assassination, and will be shot on the first opportunity. Large quantities of arms have been brought into the country.

Berlin, Sept. 29th.—The result of Bismarck's recent correspondence and interview at Friedrichsruhe with skilled economists and commercial experts in the projection of the bill to be presented probably at the next session of the Prussian Parliament, aims at the formation of a State Workmen's Assurance and Mutual Assistance Society, to which laborers and employers will be bound to contribute. The system will be first tried in Prussia.

Candahar, Sept. 29th.—It is a mistake to suppose that the country is completely pacified. Ayub Khan's victory gave a great impulse to fanaticism. The Mollahs are everywhere preaching a fresh rising, and are urging that the de-

feat of Ayub Khan by General Roberts was owing to the reliance the Afghan leader placed on his regulars, and their desertion at the critical moment.

Dublin, Sept. 29th.—Parnell addressed the Land League here to-day. He commented favorably on the proposal to give tenant-farmers perpetual possession at a fair, fixed rent, in the hope that in their position of rent-chargers the landlords would be frequently induced to sell their interests to tenants.

London, Sept. 29th.—A man named Gannon has been arrested on suspicion of being concerned in the murder of Lord Mountmorris, and was remanded to jail. Forster, Chief Secretary for Ireland, has left Dublin for London.

Berlin, Sept. 29th.—The Prussian Government has requested a state of siege to be proclaimed at Leipzig and Hamburg, as those cities are considered the hotbeds of the Socialists.

Paris, Sept. 28th.—The *Republique Française* approves the fresh delay in the naval demonstration, but says that at its expiration the Powers must take energetic action. The same journal also says it would be dangerous for any of the Powers to act separately, and declares that Turkey's duplicity will strengthen European concert.

Rugusa, Sept. 28th.—It is stated that the English and Russian Governments would be disposed to accede to the Montenegrin request for support on land, but the concurrence of the other Governments is considered doubtful. In view of these difficulties, it is thought improbable that the naval demonstration will take place, and the departure of the squadrons is shortly expected. This demand is universally regarded as reasonable. The council of war called on the arrival of the fleet decided to postpone action until the Admirals had again consulted with their respective Governments. Great indignation is expressed at the insulting defiance of the Porte, and it is believed that the Turkish frigate off Dulcigno is employing the time gained by the negotiations in laying torpedoes. The Montenegrin Envoy brought a copy of a written formal statement from Riza Pasha, the Turkish commander, declaring that he would use force in the event of a violation of Turkish territory. The British Consul, on leaving Scutari, received a most important communication from the Albanian chiefs, declaring that the instant the Porte ceased to act with them they would submit to the will of Europe. Riza Pasha's notes to the Admirals are sippant and insulting.

Gravosa, Sept. 28th.—The Turkish frigate at Dulcigno got up steam when the *Helican* approached on a reconnoitring expedition, from which it is inferred that the frigate has orders to withdraw on the approach of combined fleets. Sentari advices state that the Turks are prepared to take the offensive in the direction of Podgoritza.

Vienna, Sept. 28th.—Three more battalions of Turkish regulars have landed at San Giovanni in Medina, south of Dulcigno, bringing Riza Pasha's force up to 9,000.

Paris, Sept. 28th.—On the Dulcigno question the French commander has been ordered to abstain from all hostility.

London, Sept. 28th.—A letter from Dublin says: The arm of authority seems paralyzed and the Executive is utterly helpless. Although at present the panic is felt most keenly by land-owners, it is shared by employers of labor who see the growth of a refractory spirit among the subordinate class. The scene of the last murder is in a district which is the very centre of the land agitation. It is the result of the communistic conspiracy of the worst type. It is idle to pretend that the murder was not agrarian. It is in vain that land agitators now repudiate all responsibility for the crime. Let them unteach, if they can, the lessons that for eighteen months they have been impressing upon ignorant and excitable people. Let them restore, if they can, the moral sense they have depraved and the conscience they have deadened. Let them endeavour to revive the principles of honesty and the instinct of humanity which they have helped to stifle by appeals to the base passions of enmity and revenge. The country will now hold the agitators accountable for the atrocities which have been the natural result of the inflammatory language which they have delivered, and the pernicious doctrines they have taught.

New York, Sept. 28th.—The *Herald's* correspondent at Peking sends an interesting report of conversations between Angell, our new Minister to China, and Li Hung Chang, in which the latter, after expressing his disappointment that

Grant was not renominated for the Presidency proceeded to criticize the Consular Diplomatic Service of the United States in the East. He spoke of the irregularities and scandals which had occurred, and laid the blame of them mainly on the insufficient salaries paid to our representatives in his country. He evidently thought is rather creditable to them, considering their small pay, that they do no worse. Li Hung Chang was, at the time, busily engaged with Brazilian, Spanish and Peruvian diplomatists, all of whom ask leave to carry Chinese to their country. "We will have no more coolie treaties," he remarked, but shrewdly, though of course jokingly, suggested to Angell, "Why should not those communities which want coolies draw upon your country for those you desire to dispose of?"

New York, Sept. 28th.—The *Herald's* London special says: Sir George Nares and Mr. Markham, with both of whom I had a further conversation to-day on the subject of the *Jeannette* expedition, express the opinion that if news is not received from Captain De Long by the end of October, it would be the duty of the Government to send out a search expedition in the Spring. Neither of these gentlemen however, entertains any anxiety in regard to the safety of the expedition, but in so hazardous an enterprise too many precautions cannot be taken and too much foresight cannot be exercised.

London, Sept. 28th.—Parnell left New Ross for Dublin to-day, to hold a special meeting of the Executive Committee of the Land League, at which a scheme for obtaining more detailed information with regard to the management of estates will be discussed. Parnell does not fear any prosecution against speakers of the Land League, as they doubtless would be abortive. Illegal drilling continues at Armagh.

London, Sept. 27th.—Parnell, in his speech at the land meeting at New Ross yesterday, referring to the murder of Boyd some months ago, said, "With reference to the and occurrence of the shooting of a land agent in this neighbourhood, I will point out that a recourse to such methods of procedure is entirely unnecessary and absolutely prejudicial, where there is a suitable organization among the tenants. I believe that if Kilkenny County had been organized, young Boyd would never have been shot, because his father, in the face of a strong and organized public opinion, would not have ventured to abuse his rights as a landlord."

A meeting of 500 Orangemen at Gifford, County Down, to-day passed resolutions calling upon the Government to suspend trial by jury, and declaring that citizens of the United States and other foreigners abusing the hospitality of the country by denouncing the institutions of the United Kingdom, should be expelled.

The meeting of magistrates, which was attended by Lord Mountmorris, just previous to his death, had passed a resolution calling on the Government to adopt coercive measures in Ireland.

London, Sept. 27th.—The obstinacy of the Cape Government, backed up by Sir Bartle Frere, has brought on another native war. Lord Kimberley, the Colonial Secretary, has declared that not an Imperial soldier will ever be employed in so unjustifiable a proceeding as disarming the Basutos. Should, however, this powerful semi-civilized tribe defeat the Cape troops—not an unlikely result—then England must interfere. If she does, the constitutional relationship between England and the Cape colony will be revised, and a tight hold will be kept over the colonial policy toward the natives. The affair is regarded as another crushing censure on Sir Bartle Frere.

Montreal, Sept. 27th.—Sir John Macdonald to-day replied to an address of welcome, that the syndicate had bound itself to complete the Canada Pacific in ten years, and had given a money security, also, to operate it for ten years after completion. The syndicate was bound to place the lands in market at once and carry out a systematic scheme of immigration. The road would not cost the old provinces of Canada a cent. He was enthusiastic of the German capitalists aiding in directing a stream of immigration to Canada. The English capitalists were in a fever to buy land in the North-west. He had accepted an offer of Thos. Brassey, M. P., and a member of the British Government, for 64,000 acres near the base of the Rocky Mountains.

Ragusa, Sept. 27th.—The Albanians are encamped on the summit of Mount Mazenrah, where they have formed

five lines of entrenchments connected by covered ways. It is rumored that Mountpar Pasha has arrived in the vicinity of Scutari. A trustworthy report is just received that in consequence of the arrival of a French courier the fleet will not start for Duleigno for 48 hours.

Gravosa, Sept. 27th.—Yesterday the Prince of Montenegro received official information that an advance to Duleigno would be regarded as a declaration of war. The Prince of Montenegro consequently has telegraphed to Admiral Seymour that he is not prepared without the aid of the land troops of the powers to attack the Albanians, reinforced as they are by the Turkish regulars and artillery. This step of the Porte must be regarded as tantamount to a declaration of war against Europe.

London, Sept. 27th.—The *Globe* says: We understand that an indignation meeting, under influential auspices, will be held this week against the un-English developments of the Ministry's foreign policy in conjunction with the naval demonstrations in Turkish waters.

Gravosa, Sept. 27th.—The Ottoman frigate *Schlimanich* lies off Duleigno, and she will be summoned to withdraw, and if she offers resistance, must unavoidably be destroyed or sunk.

Constantinople, Sept. 27th.—The last note of the Porte, refusing to surrender Duleigno unless the naval demonstration is abandoned, was in great part the Sultan's own adposition. It required as a condition for the surrender of Duleigno, not only that the demonstration be abandoned, but that no demonstration shall be employed in connection with the Greek frontier, or any other question, and that no other concession in the future shall be demanded for Montenegro.

Cettinje, Sept. 27th.—Riza Pasha has notified Prince Nikita that if the Montenegrins assume the offensive, Turkey will regard it as an act of war.

Ragusa, Sept. 27th.—A conference was held to-day by the Montenegrin Minister of War and the European Admirals, which lasted two hours. The question is ventilated whether the landing of troops would assist the Montenegrins in the occupation of Duleigno. It is rumored that the Albanians at Scutari have prevented the foreign Consuls from leaving town. The French commander has declined active participation in hostilities.

Constantinople, Sept. 27th.—The Ambassadors' reply to the Porte's circular on the Montenegrin question has been delivered to the Porte. The reply declines to grant more time or abandon the demonstration.

Ragusa, Sept. 27th.—The squadron which actually will take part in the demonstration will be divided into three columns—first, of the English and Italian ships; second, of the Austrian and French; and third, of the Russian and German ships.

Berlin, Sept. 27th.—Montenegro has asked for a postponement of the action against Duleigno beyond Wednesday, in order that she may complete her armaments.

Copenhagen, Sept. 27th.—The Swedish and Norwegian Press are hotly discussing the question of a repeal of the Act of Union, and the establishment of a Norwegian Republic. The Swedish journals maintain that the honor of Sweden is involved, and strong measures should be employed, if necessary. The relations between the King and Norwegian Storting are very strained, a large majority having denied the King's right to an official veto.

St. Petersburg, Sept. 27th.—A fire broke out to-day among a large number of barges on the Neva, above the bridges. The barges, which were laden with hay, broke loose, and twenty enormous flaming heaps floated down the stream, endangering all the shipping in the river. The police however, guided the burning mass clear of the vessels, and there was no further destruction.

St. Petersburg, Sept. 27th.—The *Notæ Vremja* says: "It is rumored that General Todleben has been appointed Chief Inspector of Engineers, in place of the Grand Duke Nicholas, and that General Tchertkeff will succeed in replacing General Todleben as Governor of Wilna."

Berlin, Sept. 27th.—The strike among the workmen here, which began recently with the carpenters, has now extended to the turners, weavers and other workmen, and is assuming a serious phase.

Dublin, Sept. 27th.—A tenant farmer named Sweeny, under notice to quit, has been arrested in connection with the murder of Lord Mountmorris.

New York, Sept. 27th.—A dispatch from Glasgow announces that a plot of Nihilists to blow up the Czar's new yacht *Livadia*, which was preparing for sea at Glasgow, has just been discovered. The first hint of the plot came from the authorities at St Petersburg, to the effect that Nihilists had sent members of their Order to Glasgow for that purpose, and that persons had left London a few days ago with two nitro-glycerine clocks intended to be hidden among the coals. Measures were promptly taken to frustrate the scheme. Constables were stationed on the yacht. The hotels at Glasgow were watched and all lodging-houses were searched to-night.

#### REMAINS OF FRANKLIN'S EXPEDITION.

The continuation in the New York *Herald* of the 27th of September, of the story of Lieutenant Schwatka's Arctic expedition presents some points of thrilling interest. The writer says: On the 27th of September 1879, a heavy snow-storm set in, and the next morning the snow was knee deep on the level ice. The winter wind soon blew it around and packed it down so as to be almost solid. On the 14th of October sledging was sufficiently good for Toolooah to go to Cape Herschel and Terror Bay, for the sled and others articles that were left there during the summer for want of transportation. Toolooah exchanged wives with Joe for the trip, a very usual and convenient custom among the Esquimaux. The ice was sufficiently strong for the reindeer to commence crossing to the mainland about the 1st of October, and in a few days their number had perceptibly diminished, and after the 14th we saw none at all. On October 1st, Lieutenant Schwatka's Joe and I started to get supplies of fish to last until the reindeer country was reached. We did not succeed in getting further than about three miles from camp, owing to the heavy sleds, and the dogs being so fat that they were lazy. We only reached the native camp near Herman Inlet on the 12th. There was quite a large camp of Esquimaux on Big Lake, the largest camp we had yet seen. The sled was pulling heavily and slowly across the lake, and I went ahead toward the igloos. All the men were standing outside awaiting our arrival and among them were some of the Netchilliks we had met during the Spring. As soon as they recognized me they set up a shout of welcome. They seemed very glad we were coming among them again, and hurried me into the big igloo, while most of the men of the camp ran out and helped the sled in. They built our igloo in short order, and during the time we were with them they did everything in their power to contribute to our comfort. We found but few interesting relics among them, and only a piece of the bow found in Wilnot after the big ship sank, and part of the block braided either "ro" or "or," with part of the "r" obliterated. If the ship's blocks were braided with the name of the vessel to which they were attached, these would be important as establishing the identity of the ship that drifted down as the *Terror*. We found among them a piece of wax candle that they had preserved all these years, while every scrap of paper had perished. We met a sled with a few natives coming from Kigmaktoo to join the rest of the tribe, and with them was an aged crone named Toolooah, who had seen white men in Boothia Isthmus when a young woman, and had also been with a party who found the boat and skeletons in Starvation Cove near Richardson Point. This confirmed previous testimony. We marched in a south-east direction on the inlet five days, during which we travelled up about forty-five miles, and when we left I could still see it running in a southerly direction for about ten or fifteen miles further. The sun was so low now that we had either sunrise or sunset during the whole time it was above the horizon. About five miles inland from Starvation Cove, the natives had found, during the summer, the skeleton of a white man, which no one had ever seen before. On the way down, Henry visited the place, and erected a monument over the remains. Pieces of clothing found indicated that the deceased was a sailor, not an officer. The finding of this grave is worthy of notice as showing that the natives were thoroughly aroused by our visit and its object. We had promised liberal rewards for everything of importance found, and for valuable information, and were always particular to keep our promises. The consequence was that they had greatly aided us by searching everywhere within reach of their camps or hunting-grounds.

The largest fish caught here are something like a very large herring and the flesh much coarser than salmon or trout. We bought several bags of salmon oil from the natives which we used as long as it lasted as a substitute for reindeer tallow. The weather was sixty-two degrees below zero, Fahrenheit. Before reaching Depot Island we lost twenty-seven dogs by privation. On December 28th the thermometer ranged from sixty-four to sixty-nine degrees below zero. The lowest point reached was 101 degrees below the freezing point. Our meat had to be eaten cold, that is, frozen so solid that it had to be sawed and then broken into convenient sized lumps, which, when put into the mouth, were like the stones, or cooked with moss gathered from the hillside, and the snow beaten off with a stick. The country began to swarm with wolves now as well as with reindeer, and we would meet them daily. Often they would come close to our igloos and one night Toolooah shot one of three that were eating with our dogs the meat he had thrown out to them for food. They killed and ate four of Equeesik's dogs, and attacked him when he went out of the igloo to drive them off. He killed two of his assailants with his rifle, and two others by the most infernal trap ever devised. He set two keenly-sharpened knife-blades in the ice and covered them with blood, which the wolves licked, at the same time slicing their tongue, the cold keeping them from feeling the wounds at the time, and their own blood tempting them to continue until their tongues were so scarified that death was inevitable.

The mean temperature of the past month had been forty-four degrees above zero. We still knew nothing about the Hudson Bay ships since we last left, a year before, Tedslone having seen no one since he came to the camp where we found him. The great question with us was, "Were any ships in the bay?" At any rate, we felt sure of finding our hard bread, pork and molasses, together with some other provisions that Captain Barry said he could spare and would leave with Arom, the native who had charge of our stuff at Depot Island. The prospect of again eating some civilized food was most cheering. We soon arrived in sight of Depot Island, and looked anxiously for sledge-tracks, which we felt sure would be abundant here if the ships were near by. At noon we were within four or five miles of the island, and saw some natives on the ice in the dim distance. Then all was excitement in our party, and it increased as the distance diminished. At last the sledges drew near enough to recognize Arom, who was hastening up to us ahead of the others. From Arom we learned that there was only one ship in the bay, and that it was at Marble Harbor, and furthermore, that there were no provisions for us at Depot Island. This seemed utterly incomprehensible to us, as Captain Barry had about a thousand pounds of hard bread on board the *Eothen* that belonged to us, besides some other provisions, and had promised to leave them with Arom at Depot Island for us, well knowing that we would need them. We found a note from Captain Fisher, giving some excuse for not leaving some things that he had expected to. The inevitable conclusion was then forced upon us that Barry had absolutely gone away with the food for us without a word of explanation, though he had landed at Depot Island and taken off the casks that held our bread when we came ashore. The storm and wind now kept our builders indoors, and with short rations their condition began to grow desperate. It was a mournful camp after the hunters got in on Friday night, empty handed. They all felt that danger of starvation again threatened them, as it had done there before during the winter, when they had to kill and eat some of their starving dogs. People spoke to each other in whispers, and everything was quiet, save for the never-ceasing and piteous cries of hungry children begging for food which their parents could not give them. Most of the time I stayed in bed, trying to keep warm and avoid exercise, that would only make me more hungry. It was impossible to keep warm this night, and my aching limbs drove sleep from my eyes. The wind was from the east on Saturday, and a little better for hunting, so the men were off bright and early. About noon there was a joyful sound in camp. The women and children ran into our igloo, shouting "Walrus killed!" and fairly jumped up and down in their joy. I reached the *George and Mary* (a ship on Marble Island), on the 21st, and was kindly received. During the year we were absent from civilization, we travelled 2,819 geograph-

ical or 3,251 statute miles, by sleds, over an entirely unexplored country, through the entire course of an Arctic Winter regarded by the natives as exceptionally cold. The party successfully withstood the lowest temperature experienced by white men, recording observations of 71 degrees Fahrenheit below zero, sixteen days whose average was 100 degrees below the freezing point, and twenty-seven which registered below 60 degrees Fahrenheit, during the most of which part we travelled. In fact, the expedition never took the cold into consideration, or halted a single day on that account. During the entire journey, our reliance for food, both for man and beast, may be said to have been solely upon the resources of the country, as the expedition started with less than a month's rations, and it is the first in which the white men of the expedition voluntarily lived exclusively upon the same fare as its Esquimaux assistants, thus showing that white men can safely adapt themselves to the climate and life of the Esquimaux, and prosecute their journeys in any season, or under such circumstances as the natives of the country themselves. The expedition was the first to make a Summer search over the route of the lost crews of the *Erebus* and *Terror*, and while so doing, buried the remains of every member of the ill-fated party above ground. The most important direct result of the labors of the expedition will undoubtedly be considered the establishing of the loss of the Franklin records at the boat place in Starvation Cove, and, as ever since Dr. Rae's expedition of 1854, which ascertained the fate of the party, the recovery of its records has been the main object of subsequent explorations in this direction, the history of the Franklin expedition may now be considered as closed, as ascertaining the fate of the party was not so gratifying as would have been their rescue, or the relief of a member thereof; so is it in establishing the fate of the record of their labors. Next in importance to their recovery must be considered the knowledge of their irrecoverable loss.

## LAW REPORTS.

## IN H. I. R. M.'S CONSULAR COURT.

Before A. PELIKAN, Esq., Consul and Judge.  
Messrs. S. CARCANO and REYNAUD, Assessors.

Tuesday, the 19th day of October, 1880.

JAN DE BOER v. S. SEREBRENIKOFF, agent for the owners of the Russian steamer *Nordenskjöld*.

This was a claim to recover the sum of \$8,992.70 salvage expenses, &c., and \$1,283 commission on the value saved. The defendant admitted his indebtedness to the extent of \$2,189.49 salvage, but disputed the commission claimed and left that to be settled by the Court.

Mr. Kirkwood appeared for the plaintiff and Mr. Dallas for the defendant.

On the opening of the court, Mr. Reynaud read the plaintiff's petition, and the defendant's answer.

A considerable discussion took place as to the method in which the case was to be conducted. Mr. Kirkwood said he should like to know what points in the petition the defendant denied, as in law everything not denied was accepted as admitted.

His Honour considered that Mr. Kirkwood ought to go through his case and prove each statement.

Mr. Kirkwood asked the defendant if he admitted or denied the alleged facts in the first two articles in the petition, which referred to certain conversations held at the Consulate.

Mr. Dallas considered that the written contract did away with all verbal arrangements.

Mr. Kirkwood said that unfortunately all the witnesses to these conversations had left Japan except the Consul and the plaintiff. He wished his client to make a statement.

Mr. Dallas said that to simplify matters his client had no objection to admit the two first articles of the petition.

The court here retired to consult and on return, after further discussion, the Court retired to consult and on return.

His Honour said that he would quote the law, which was, that the petitioner was obliged to prove the statements in his petition, and that the defendant was obliged in his turn to prove his denials. The plaintiff could now make his deposition.

Jan de Boer, the plaintiff, then made the following statement:—As soon as the contract was signed, I at once commenced to make all necessary preparations for starting without delay. I went Messrs. Whitfield and Dowson's to get my new pumps fitted, and asked the Russian consul if I should start at once. The Consul told me that he had received a telegram to the effect that I could get two hundred workmen at Nemoro, as times up there were slack owing to its being winter, and very little fishing doing.

His Honour here suggested that the witness, who had hitherto spoken so far only in reply to questions put by his counsel should make his statement direct, and if he happened to forget anything Mr. Kirkwood might jog his memory. He might even read his statement as set forth in the petition.

Mr. Kirkwood explained that the witness, being unacquainted with the French language, in which the petition was drawn up, could not do as suggested, and it was on that account he asked the questions.

The witness said that he would prefer to continue his statement as he had commenced; the events he had to describe extended over a period of several days and it was very possible he might omit something.

It was finally decided that an unbroken statement should be made and the witness continued:—I went to the Russian Consul and asked him if I should engage a schooner to bring down the stores and men; he told me to wait a little as he might be able to get a man-of-war. Next day, he said he could not; but he went to Messrs. Walsh, Hall & Co. to try to charter the American steamer *Courier*. They asked \$200 per day, which he considered too dear, and he recommended me to go to the Kaitakushi at Tokio. I went there, but with no definite result. After some three or four days the Russian Consul told me again that he might get a man-of-war. I told the Consul that I was going to charter a schooner and went to Mr. Bohm to see about it, but told him that I could not make a contract without first seeing the Consul. There was some difficulty about price; Mr. Bohm raised his price from what he had mentioned at first, and so the Consul refused to have anything to do with him. I was idle all this time and pointed it out to the Consul who said "Go! go! go!" I then went and saw Mr. Snow about employing his schooner the *Otome*: he accompanied me to the Consul, who proposed to draw up the charter. I don't know who actually did it, but when it was done, we made all possible expedition. I was anxious to go away, as each day's delay made a great difference in the time I had to work in, when I reached the spot where the *Nordenskjöld* was.

At this point the Court adjourned until Thursday the 21st instant at 10 a.m.

Thursday, the 21st day of October, 1880.

On the opening of the Court, Mr. Kirkwood stated that he had had several conversations with Mr. Dallas who had agreed, in order to facilitate the progress of the case, to admit the facts stated in paragraphs 4 to 18 (with the exception in this last article of the expression "the sloop of the *Nordenskjöld*" as it did not belong to this vessel) and paragraphs 19 to 22, and 24 to 29, except in some cases where the facts as stated in the petition differ from those in the reply. Mr. Kirkwood would now, with the permission of the Court, enter into the following questions: 1st as to the pumps and diving machinery. Whether this was engaged for the time or the job, and as his client claimed that it was damaged, whether it ought to be made good or purchased by the defendants. 2nd, Whether the *Nordenskjöld* ought to pay the expenses of the schooner *Otome*. 3rd, was what to be the commission of Mr. Jan de Boer. When he (counsel) called a witness to give evidence upon the condition of the pumps, he would like also, if permitted, to ask his opinion on the subject of his competence and other details. He wished to be allowed to summon as witnesses, Mr. Whitfield, Mr. Carst and Captain Johannsen, who was now en route from Nagasaki, and a Japanese.

Mr. Dallas in reply to the Court had no objection to these witnesses, and would like to call, Captain Johannsen, the first mate, and the carpenter of the *Nordenskjöld*.

The Court retired for discussion and on return granted Mr. Kirkwood's application to produce his witnesses.

Christian von der Gland stated:—I am a Danish subject, a Lutheran and aged 35. I was engaged from 22nd December

last as engineer by Mr. Jan de Boer, until the *Nordenskjöld* came to Yokosuka.

The witness was then sworn and stated:—The steam-pump was damaged on board the *Nordenskjöld*. It was sent on board in good condition; the injury was caused by hard work and ill handling by some coolies. The engines being worked with salt water became damaged, and the pump gear was injured by a coolie knocking against it, or dropping something on to it. The bottom cock is broken off the boiler. In consequence of this, a quantity of sand and seawater entered the boiler, and caused a pipe to burn up. I could not stop to clean the boiler, notwithstanding this, as the ship was being pumped out, and would have sunk if I had stopped working. The valve spindle of the pump is bent and one stud in a gland broken. The steam-pipe is broken and rendered useless. The flange and the fan of the centrifugal pump were also broken.

His Honour said that he wished to know more about how the damage was done, the pump had been inspected by an expert, who would give his report.

The witness stated that the pump had been damaged in the way described before, he considered that the damage was very slight for so important an undertaking.

To Mr. Kirkwood:—I am now employed by the Mitsui Bishi Company as a second engineer. I got my first certificate as engineer, from the Royal Dockyard, Copenhagen, in 1869.

Mr. Kirkwood wished to have this document marked.

His Honour said it could not be accepted unless accompanied by a copy.

Mr. Kirkwood said that he did not wish to have it accepted, but simply marked by the Court for purposes of identification, in case the witness should leave Yokohama before he had time to make a copy.

Mr. Dallas having no objection the Court agreed, and six certificates belonging to the witness were handed in.

His Honour now said, however, that he did not see how Mr. Kirkwood could continue his examination. He had summoned this witness to prove the damage, and that Mr. Jan de Boer had worked well. The fact of the witness's competence was not required.

Mr. Kirkwood said that on the contrary the whole point of damage done to the pump rested upon the question whether it was in competent hands. This the defendants asserted was not the case.

The Court ruled that the questions as to competency could not be allowed.

Witness:—I was with Mr. Jan de Boer during the whole time of my engagement until the vessel arrived at Yokosuka. All the machinery and gear connected with it, put on the *Otome*, were under my charge from the very day on which I was engaged. I have not now a list of what was put on board, but I have one of what was discharged. The machinery I know is the same as was embarked. The list that I have mentions the larger portions only. I didn't keep one of the smaller boxes but I have shipped them so often that I nearly know them by heart. That is the list (produced) that I took down when the *Otome* was discharged at Hamasaki.

Mr. Kirkwood said he would have a copy made and put it in.

Witness:—I saw the steam-pump before it went on board the *Otome*, and put it together myself on board the wreck, when it was in excellent condition. The flange of the centrifugal pump was broken on the night the ship floated, by the pump being shifted. This was done by the ship's carpenter who broke the flange in doing so. The fan was broken by coal and seaweed passing through the pump. It is very likely that such an accident might occur under the circumstances in which the work was being done. From the time I arrived at the *Nordenskjöld* until she reached Yokosuka, I had charge of all the machinery. I kept the engine log-book. Mr. Nielsen served under my orders in the engine-room until we arrived at Yokosuka. After I arrived at the *Nordenskjöld*, I received orders from Mr. de Boer to get the ship afloat; after that was done from Captain Johannsen.

Mr. Kirkwood said that there were some allegations in the reply which were untrue, and he would like to ask questions about them. Article 5 for instance.

His Honour said this could not be allowed; counsel must ask his witness to give his testimony.

Mr. Kirkwood said that he wished to show that there was no engineer on the *Nordenskjöld*, and that the captain did not arrive at the wreck until long after Mr. Jan de Boer. The defendant claimed to be allowed to pay the plaintiff less, owing to the manner in which the work was done; it was his (Mr. Kirkwood's) duty to prove that Mr. Jan de Boer had worked hard under the most adverse circumstances. If there was any delay, it was because when he asked the captain to go with him he refused, he wanted the engineer, and he had gone to San Francisco; it was an important point that the captain refused to go with Mr. Jan de Boer.

Mr. Dallas said that his client was quite prepared to admit that the captain did not accompany Mr. Jan de Boer, but asserted that he arrived in sufficient time at the scene of the wreck.

Witness:—After our arrival at Hakodate Mr. de Boer and I took all steps in our power to find out exactly where the ship was, and get some means of getting there, but it was impossible. After I had been to Hakodate, I came to the conclusion that Yokohama was a better place to obtain information, as I could see the Mitsui Bishi captains who navigated to Nemoro. I was told in Hakodate that at the scene of the wreck I could get boats and men for salvaging operations. An English firm there, Messrs. Schluter & Strandt, and the first officer of the *Takachiho Maru*, Mr. Fisher, all told me this. During the salvage operations I never saw Mr. Jan de Boer strike or kick any Japanese. We lived together in the same house, and were together the whole day; he could not have done it without my seeing him. I never saw anything between Mr. Jan de Boer and the watchman of the stores at the scene of the wreck. I myself disarmed the watchman, because he tried to shoot me. I was about to tie his hands, but did not, as he promised to go quietly. He pointed a loaded gun at me, I knocked it aside, and fired it off in the air after I took it from him. I was sent by Mr. Jan de Boer to take the provisions out of the shed, because it was in bad condition with snow, ice, &c. I was assisted by the watchman and another Japanese.

At this point the Court adjourned until 2 p.m.

On the Court re-opening the witness continued:—When I arrived at the shed, there were four strangers besides the watchman. I saw them using the ships provisions in the watchman's house. I requested the watchman to come and help me as I had sent the other men to cut wood to build a house. I had one man, and I saw the watchman trying to hand some preserved provisions to a woman close by. I waited until I actually saw him hand some six or seven bars of soap, belonging to the ship, to a youth who was looking on. My man was inside passing the provisions to the watchman who was outside. The boy ran off with the soap but I followed and caught him and made him bring it back. It was inside his clothes. I then accused the watchman of stealing whereupon he got angry and went into his hut. I followed him because I knew he had a loaded rifle there belonging to the *Nordenskjöld*. He aimed the gun at me and I seized it and fired it in the air while he still clung to it. I waited until my men returned and then said I would send him to Nemoro. He said that I had no authority, whereupon I put him down, tied a line to one wrist and was tying his hands together when he agreed to go quietly. I sent him to Agishi with two of the men and a letter to Mr. Jan de Boer, asking him to send him on to Nemoro, and afterwards took down there his gun and knife. There was a barrel about a quarter full of gin in the shed. I have drunk from it; I told the watchman to take it out of the shed and he did so. I had leave from Mr. Jan de Boer to do so. I was also under the impression that these provisions were for the use of those working at the ship and I had no time to go down every day for meals to Hamasaki.

Cross-examined by Mr. Dallas:—Both Mr. Serebrenikoff and the engineer of the *Nordenskjöld* saw the pumps working well on the first day they were used. I did not actually ask them to come and inspect the pumps. When the boiler arrived at the scene of the wreck, I put it up myself, tested it myself, had steam on it myself, and found it to be in perfect order. There was no crack in the tube that afterwards was burnt. I don't know how long the boiler had been used, but it was a good one, strong enough for any work. I think that the boiler was at work either with steam on or banked fires for perhaps six

days. I am certain that it was at least four days, because I slept on the boat at the time. I did not see the accident to the blow-cock but I know that it was put on in good order and was afterwards broken. A Japanese, the ship's blacksmith had charge of the furnace at the time of the accident; he didn't understand it even when I shewed it to him and I had to plug it up to prevent people getting scalded. I don't know which man broke the blow-cock; the coolies were working on deck with blocks and tackles at the time. I cannot say under whose orders they were working, whether it was under Mr. Jan de Boer or Captain Johannsen. They were all engaged by the former, but some of them may have been detailed off to the captain. I kept fire under the boiler about six hours. I strapped the cock back in its place but I saw it was getting dangerous. I went on for about one hour and a half and then stopped. The seawater was not pumped in direct from the sea, but from the sea into barrels and thence to the boilers. With a rough sea and a big swell on a sandy beach, there is always any quantity of sand in the water. I did my best by putting it first into the barrels to clear it. I had these on deck to save the strain of pumping up. It was a better position. Before the ship floated I was always at the boiler when it was working, the Japanese blacksmith being acting fireman. After the ship floated I went into the engine-room and the blacksmith took the boiler. I may have scolded him for not having too much water in the boiler sometimes, but never for not having too little. The steam-engine which supplied the motive power was as good as new and in perfect working order. I don't know how old it actually is. The mishap to it was a pure accident caused by the excessive work, and is insignificant, considering the amount of hardwork the machine has done; it was not due to any neglect. The steam-engine was damaged by something getting jammed between the stationary gland and the fork end of the valve-spindle, and both were damaged. I didn't see it but I know that something got in. I never knew the amount mentioned in the contract, as I didn't take much interest in it. I read a copy of it through once. I did not know that the owners of the *Nordenskjöld* were responsible for injuries done to the machine under certain circumstances. When I discovered these various accidents I spoke to Mr. Jan de Boer, and probably to the captain and the chief officer. I made no written report. After the ship arrived in Yokosuka I had nothing more to do with the steam pump. My contract with Mr. Jan de Boer was up. I was told by him that I was no longer needed, but could leave the machinery on board until it was surveyed. I was not allowed to survey it. There was some naval man came on board but I do not think he surveyed the machinery as it was in the hold, and he remained on deck all the time as far as I could see. When I was at Hakodate seeking information about the wreck, I asked among both Japanese and foreigners. I do not speak Japanese myself. Mr. Jan de Boer generally treated the Japanese too kindly in my opinion; when they would not work he spoke roughly, but he never hurt them. I have heard them complain of the hard work, but never of hard treatment. When I went to the shed in which the stores were, I found the place full of snow; there was a sort of straw cover over them. All the stores considered good were under this, and the damaged ones outside. I had a list of them, of which I made a translation; I gave it and the list to Mr. Jan de Boer. He himself told me to take these stores. I had no document authorizing me to take them. I believe that the watchman was expecting some one to come and work on the ship and he probably thought that it was I. Anyhow, he raised no objections, and in fact he was willing to assist me. The engine and machinery of the *Nordenskjöld* was in my charge on the 26th May last. I recollect Mr. Serebrenikoff arriving on board and finding that there was only so little water in the boiler that, if cold water had been put in, it would have exploded. I told him that if he was going to be chief engineer he had better tell me so. The boiler was perfectly safe and I wished him to leave the engine room and not to interfere with me.

By the Court:—There was a contract between me and Mr. Jan de Boer, but it got lost; he was to give me \$150 per month for my services. I have been paid some of the money, and received a note for the balance of the \$920, my

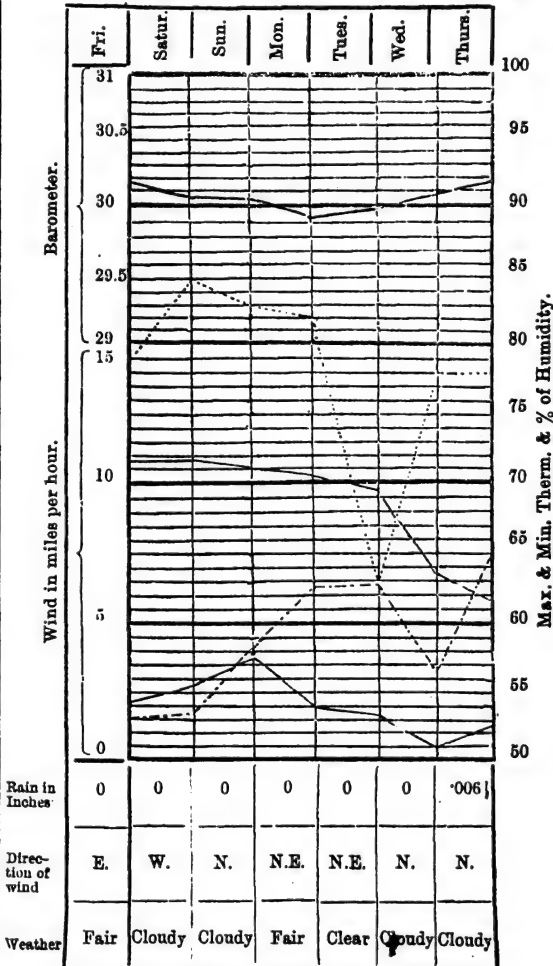

total wages due, as I have not settled up with Mr. Jan de Boer. He has given me perhaps 400 yen.

The Court here adjourned until Saturday the 23rd instant, at 10 a.m.

### METEOROLOGICAL REPORT

FOR WEEK BEGINNING FRIDAY, OCTOBER 15TH, 1880.

Observatory of Daigaku, Moto-Fujicho, Hongô, Tokio, Japan.

### REMARKS.

Heavy line represents barometer.

Light continuous line—max. & min. thermometers:

-----represents velocity of wind.

.....percentage of humidity.

Max. velocity of wind 13.0 miles per hour on Thursday, at 3 p.m.

The barometer is reduced to the freezing point and to the level of the sea.

The highest reading of the barometer for the week was 30.209 inches on Friday, at 7 a.m., and the lowest was 29.916 inches on Monday, at 2 p.m. The highest temperature was 71° 7' and the lowest was 51°; the maximum and minimum for the corresponding week of last year being 74° 9' and 59° respectively. The total rain for the week was .006 inches, against 1.820 inches for the corresponding week of last year.

### NATIVE CURRENCY QUOTATIONS.

## SHIPPING INTELLIGENCE.

## INWARDS.

- Oct. 17, Japanese steamer *Tsuruga Maru*, Cheetham, 661, from Kobe, Mails and General and towing *Taihei Maru*, to M. B. Co.  
 Oct. 17, British steamer *Malacca*, Seatou, 1,709, from Hongkong, Mails and General, to P. & O. Co.  
 Oct. 18, British steamer *Oceanic*, Metcalf, 2,440, from Hongkong, Mails and General, to O. & O. Co.  
 Oct. 17, Japanese steamer *Akitsu Maru*, Frahm, 1,146, from Hakodate, Mails and General, to M. B. Co.  
 Oct. 17, Japanese steamer *Hiogo Maru*, Moore, 896, from Niigata via Hakodate, Mails and General, to M. B. Co.  
 Oct. 18, Japanese steamer *Kokonoye Maru*, Dithlefsen, 1,133, from Hakodate, Mails and General, to M. B. Co.  
 Oct. 20, Japanese steamer *Tokai Maru*, Hogg, 1,042, from Kobe, Mails and General, to M. B. Co.  
 Oct. 20, Japanese steamer *Tokio Maru*, Swain, 1,146, from Shanghai and ports, Mails and General, to M. B. Co.  
 Oct. 21, French steamer *Tanais*, Reynier, 1,735, from Hongkong, Mails and General, to M. M. Co.  
 Oct. 22, British steamer *Belgic*, Davison, 2,627, from San Francisco, Mails and General, to O. & O. Co.  
 Oct. 22, British barque *Eme*, Green, 775, from London, General, to Malcolm & Co.

## PASSENGERS.

Per British steamer *Oceanic* from Hongkong:—For San Francisco:—Mr. and Mrs. A. Hufer, 3 children and servant, Messrs. C. E. Vansittart and servant, G. Austin, and Augustin Blasco in cabin; and 208 Chinese in steerage. For Yokohama:—Mrs. Leigh, Mr. Charles von Bate and Lee Yuen.

Per Japanese steamer *Tokai Maru* from Shanghai and way ports:—Mr. and Mrs. Bredon, Mrs. Kawakuni and child, Lieut. Drury, Messrs. E. Jamien, R. Galbraith, C. J. Strone, R. Smith, E. H. Hunter, H. D. Sinclair, Kawakami, Takashiro, Senzaki, Fudiyasu, Mayeda, Iwashita, Okuyama, Kawamura Furutani, Satigo, Shiraki, Honda, and Kojima in cabin: 1 European, 2 Chinese, and 39 Japanese in steerage.

Per French steamer *Tanis* from Hongkong:—Sisters Agathe and Anastasie, the Rev. Father Ligneul, Messrs. P. Sacconi, Janson, Domerque, 1 Chinese, and 10 Japanese.

Per British steamer *Belgic* from San Francisco:—For Yokohama: Mr. and Mrs. G. T. Smith, Captain and Mrs. Ashton, Mrs. S. D. Hepburn, Mrs. Poulard, Messrs. Carl Faltes, Richard Faltes, G. B. Bryan, G. Dattari and C. O. Paget in cabin, and two Europeans in the steerage. For Hongkong: three Europeans and 391 Chinese in steerage.

## OUTWARDS.

- Oct. 17, French steamer *Volga*, Guirand, 1,502, for Hongkong, Mails and General, despatched by M. M. Co.  
 Oct. 17, Japanese steamer *Toyoshima Maru*, Hubbard, 946, for Hakodate, Mails and General, despatched by M. B. Co.  
 Oct. 18, British steamer *Vortigern*, Alexander, 876, for Kobe, Tea, despatched by Wilkin & Robison.  
 Oct. 19, British steamer *Patroclus*, White, 1,380, for Kobe, Tea and General, despatched by Butterfield & Swire.  
 Oct. 20, Japanese steamer *Tsuruga Maru*, Cheetham, 661, for Kobe, Mails and General, despatched by M. B. Co.  
 Oct. 20, Japanese steamer *Hiroshima Maru*, Haswell, 1,200, for Shanghai and ports, Mails and General, despatched by M. B. Co.  
 Oct. 21, British steamer *Oceanic*, Metcalf, 2,440, for San Francisco, Mails and General, despatched by O. & O. Co.

## PASSENGERS.

Per French steamer *Volga* for Hongkong:—Mrs. Gulick and infant Miss Gulick, Messrs. Dousdebbs, Melisch, Marounaske, Bounske and Said.

Per Japanese steamer *Hiroshima Maru* for Shanghai and ports:—Mr. and Mrs. Deacon, Mr. and Mrs. H. Sylva, Mr. and Mrs. Yanigawara, Mrs. Valentine and child, Mrs. Farmer and child, Miss Van Buren, General Van Buren, General Le Gendre, Dr. Latham, Messrs. A. Mitchell, Lyall, Somodo, Davidson, Saunders, Angoshi, Kamiyama, Okuda, H. Hayer, and Dr. L. H. Gulick.

Per British steamer *Oceanic* for San Francisco:—Hon. Geo. F. Seward, wife, three children, and maid; Mr. A. Huber, wife, three children, and maid; Mrs. A. Madeheim, Messrs. G. Boomer, John Duncan, Henry Greey, H. H. J. Sinclair, A. Tillie, A. Blasco, G. Bustin, A. Josephs, B. A. Moran, Ornstein, L. Deville, J. Harrison, J. Seidenburg, Robt. Smith, and 9 Europeans in the steerage. For Liverpool:—Miss Gamble, Messrs. E. Gamman, C. E. Vansittart, S. Marsh, and A. Bellamy. For Queenstown:—Mr. and Mrs. R. E. Bradon. For Paris:—Mr. Janelet.

## CARGOES.

Per French steamer *Volga* for Hongkong:—  
 Silk for France ... .. 304 bales.  
 " " London ... .. 63 "

Total ... .. 367 bales.  
 Silkworm eggs ... .. 38 cases.

Per Japanese steamer *Hiroshima Maru* for Shanghai and ports:—  
 Treasure ... .. \$ 7,500.00

Per Japanese steamer *Tokio Maru* from Shanghai and ports:—  
 Treasure ... .. \$32,330.00

Per American steamer *Oceanic* for San Francisco:—

## TEA:

## MISCELLANEOUS.

THE GREATEST

WONDER OF MODERN TIMES  
HOLLOWAY'S PILLS.

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER.

in his work entitled "The Nile Tributaries in Abyssinia," says, "I ordered the druggist Mahomet to inform the Fakery that I was a Doctor, and that I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!  
HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse-feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock." Sold by all Chemists and Medicine Vendors throughout the World May 17th, 1873.

"HIGHEST AWARD & PRIZE MEDAL PHILADELPHIA  
EXHIBITION, 1876."

Yokohama, 4th May, 1880.

## MISCELLANEOUS.

**BUGS, FLEAS, MOTHS, BEETLES,**

and all other insects are destroyed by

**KEATING'S INSECT POWDER,**

which is quite harmless to Domestic Animals.

In exterminating Beetles the success of this Powder is extraordinary, and no one need be troubled by these pests. It is perfectly clean in application.

Ask for and be sure to obtain "KEATING'S POWDER," as Imitations are Noxious, and fail in giving satisfaction.

SOLD BY ALL CHEMISTS IN BOTTLES, 1/- & 2/6 each.

**KEATING'S WORM TABLETS,**

A PURELY VEGETABLE SWEETMEAT, both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for **INTESTINAL** or **THREAD WORMS**. It is a perfectly safe and mild preparation, and is especially adapted for Children.

## TESTIMONIAL.

Medical Hall, Gildersome, Nov. 28th, 1876.

MR. KEATING,

Dear Sir,—I think it nothing but my duty to inform you of the immense sale I have for your Worm Tablets, which I may justly say is enormous, and in every case gives the greatest satisfaction. I have now in stock two bottles containing the Round Worms brought me during the last few days by customers, one Worm 40 yards long. I dare not be without the remedy.—Yours respectfully,

M. A. WALKER.

SOLD IN BOTTLES, BY ALL CHEMISTS AND DRUGGISTS.

Proprietor—**THOMAS KEATING, London.**

**REWARD AND CAUTION.**—Whereas fraudulent imitations of this unsurpassed remedy have been sold, I hereby request anyone knowing of the vendor of the same to communicate with me, on conviction of the offender a liberal reward will be paid.

## A CONTRAST.

**F**REE TRADE is undeniably advantageous to every nation whose circumstances will permit of its adoption. It is therefore pleasing to notice how a country which at an early period of its existence found it necessary to protect its infant industries, has in course of time found itself able to discard the aid thus afforded to home production. By contrasting the present position of such a country with the present position of one which struggled into life under exactly similar circumstances, but clings to a rigid system of protection long after the benefit to be derived from such a course has passed away, we gain valuable experience, and a lesson is at the same time inculcated eminently calculated to promote the ultimate success of free trade principles.

The great colonies in the South Pacific afford at present the contrast to which we have alluded. Originally a portion of New South Wales—the parent colony as it is termed—Victoria and the elder settlement commenced life, as it were, under precisely similar circumstances. Neither were troubled with aboriginal inhabitants to any particular extent, and these were certainly very free traders indeed; they stole everything they could lay hand on and scorned the restriction of clothes. For years almost every article of use or ornament had to be imported from the mother country or elsewhere. The feeble attempts occasionally made to produce locally articles of the most ordinary consumption, failing miserably owing to the overwhelming competition from abroad. By-and-bye, and after many struggles, moderate protection to native industries was accorded by the colonial parliaments, for constitutional government had now been granted to the colonies by the mother country. The effect was

wonderful, instantaneous, and beyond expectation. Industrial undertakings sprang into existence all over both colonies until in a short time the colonists became—except as regards a few articles—practically independent. This point having been gained, divergence occurred in the fiscal policies of New South Wales and Victoria. The latter is ruled by a fierce and unthinking democracy, hence protection in its extreme form reigns supreme. In New South Wales, on the other hand, free trade has been gradually adopted, and now we find the manufacturing industries of that colony flourishing, although perfectly independent of adventitious assistance.

The contrast afforded between the two colonies is remarkable. It shews conclusively that, however essential legislative fostering is to young industries, the period when assistance is necessary soon passes away. A carefully prepared statement of the exports during the year 1879 of the two colonies, discloses some remarkable results. New South Wales exported produce of her own territory to the value of nearly ten and a half million pounds sterling, while Victorian products were only a little over eight millions. Taking population as a basis the difference is more distinct, as New South Wales exported to the value of £14.10.9½d. per head against £9.1.4½d. in Victoria. Of course a very large proportion of this vast amount is derived from pastoral produce, the last year's wool clip of New South Wales being valued at nearly six and a half millions, and of Victoria at rather more than three and a half millions. In Victoria even, the value of the pastoral products exceeds that of the mineral, agricultural, and manufacturing exports taken together; the total exports exceeding eight millions, and the pastoral products of all kinds nearly four millions and a half. To be sure Victoria has a slight advantage over New South Wales in mineral, agricultural, and manufacturing exports, but not to any great extent. In the first two classes the difference either absolutely or relatively is trifling. But the figures which relate exclusively to manufactured goods are of considerable interest in connection with our proposition—that protection, if continued too long, is pernicious in the extreme. New South Wales we find has exported manufactures to the amount of £355,000; Victoria to the amount of £894,000. Thus the gain to Victoria from the heavy protective duties—assuming the whole excess is due to that cause—is represented by the export of goods worth rather more than half a million of money. The sum of £539,000 represents the whole advantage which her heavy tariff gives Victoria in the export market, over the now unprotected manufactures of New South Wales.

But a further examination of the figures discloses some notable facts. There are several important branches of industry in which Victoria either equals or exceeds New South Wales, and it is instructive to find that, although originally protected, those industries are now unaided by the tariff.

From the experience, therefore, of these two colonies, so similar in their circumstances, their products, and requirements, a valuable lesson is to be learned. It is unmistakably demonstrated that useful as protection may be to foster infant and struggling industries, the point is soon reached when such adventitious assistance is not needed—further continuance of a protective tariff then becomes prejudicial.

#### ENGLAND'S LITTLE WARS.

**T**HE Corporation of the city of London should erect in some convenient position a temple to Janus, instead of blocking the Strand with a memorial to Temple Bar. Its open portals would then remind the spectator of how constantly Great Britain is engaged in a war of greater or less magnitude in some part or other of the globe. It is unfortunate, perhaps inevitable, but nevertheless true, that England is almost always carrying on hostilities with some state or tribe, or engaged in crushing some rising of subject people. These "little wars" have been singularly frequent in the Colonial possessions, not exactly when first taken possession of, but afterwards when the settlers have become sufficiently powerful to be aggressive, or the lands of the native inhabitants offer inducement for intrusion.

New Zealand affords a notable example of the difficulties attendant upon governing outlying dependencies, and how the mother country may insensibly become involved in formidable expenditure. South Africa only recently afforded a similar experience nor, according to all accounts, are the troubles of that unlucky part of the world yet over.

In the case of New Zealand the troubles were essentially quarrels respecting land. Vast tracts of magnificent country were held under treaty by the natives, to whom the land was practically useless but who stoutly refused to part with an acre. The ever increasing body of colonists was getting cooped up, and scope for their energies, agricultural and otherwise, was imperatively required. The routine was invariably the same. Aggressions on the one side were followed by reprisals on the other, until the colony was quickly in a blaze. Whatever few soldiers happened to be available marched against the "rebels," the usual result being the discomfort and retreat of the military. Urgent appeals for aid, and the massacre of a few outlying colonists invariably brought an influx of troops and then everything went on merrily, as far as the settlers were concerned. Lavish expenditure—out of the British tax-payer's pocket—was incurred on every side. The prices of all kinds of commodities rose enormously. Money flew about in all directions. Everyone participated in the golden stream. Of course in the long run the Maories got beaten and a quantity of land was confiscated, or else they became tired of fighting and acquiesced in the extension of the settlers domains. Peace then reigned until another native outbreak became a desideratum. The last war carried on in New Zealand under the auspices of the Home Government was, however, so absurdly extravagant that the Imperial authorities informed the colonists very plainly and decidedly that, if they wished to indulge in any more such amusements, they would have to fight it through themselves, and at their own expense. The result was curious. A fresh outbreak occurred, the customary appeal for aid went forth, but was sternly refused. After considerable difficulty the settlers succeeded in either quelling the natives or persuading them to keep the peace—but there have been no more Maori disturbances: in fact a

large Imperial expenditure was absolutely necessary to make these little wars interesting and profitable.

The experience of South Africa seems to present somewhat similar features. Not long since the disastrous Zulu campaign was ended, in which numbers of valuable lives were lost, much money squandered, and many military reputations shattered for ever. Reliable authorities, such as Bishop Colenso and a host of others well acquainted with the circumstances which led to the war, have most unhesitatingly declared from the very first, that hostilities were forced upon Cetewayo. It is admitted that the English soldiery invaded Zulu land, the excuse—since abundantly disproved—is, that this extreme step was actually taken in self-defence; in fact was only striking the first blow at an adversary who had made up his mind to fight. The result of the hostilities which followed are too fresh in the minds of everyone to need repetition here. It is, however, worthy of remark, that the proposal of the Imperial Government to make the colony liable for a portion—and a very small portion—of the costs of the campaign, was met with a perfect howl of indignation. Such a course was altogether contrary to precedent, and never entered into the calculations of the most pessimist colonial treasurer.

Again, as in the case of New Zealand, the colonists were warned that their future squabbles with the natives must be at local expense. History, we are told, repeats itself, and South Africa certainly appears to be following in the footsteps of New Zealand. Already another native war is in progress, and we observe from the tone of the English journals that the colonists will be left very much to their own devices. The only hope held out is, that, if the natives are triumphant, the Imperial authorities will step in, rescue the settlers, and in return resume all control over native affairs.

As far as we can judge at this distance and with the necessarily imperfect materials at our disposal, this latest South African war appears the most iniquitous of many similar undertakings, certainly not conspicuous for morality. The Basutos—the native nation with which the colony is now at strife—have long been the sincere friends and staunch allies of the settlers. When the Zulu forces seemed likely to spread like a torrent over the colony, the Basutos never wavered in their friendship. If they had even remained neutral the consequences would have been disastrous. But, as we have said, they never wavered, and fought gallantly side-by-side with the alien. How bitterly must they now repent their fidelity. The Zulus being overcome, the colonists resolved upon the complete disarmament of the faithful Basutos, and persisted in the ungrateful design, notwithstanding warnings from all sides. The result we know, and thus there is every probability of England being shortly engaged in another "little war."

**W**HAT a curious coincidence it would be, if it turned out that while the gifted editor of the *Herald* was enjoying the little dinner in Dr. Gardiner, Hill's private lunatic asylum of which the public first heard last Tuesday evening, his talented confrère of the *Gazette* was also sheltered by the same roof, but under slightly less agreeable conditions. More strange things have happened, unlikely as it may at first sight seem, and a paragraph in last night's *Gazette* robs the conjecture of much of its improbability. The *Gazette* formulates the monstrous proposition, that a journal which reproduces an acknowledged translation, is responsible for the truth or falsehood of every statement made in such transla-

tion! This is so utterly absurd, and the fallacy involved so apparent, that the contention carries its own refutation. But that is nothing new for the *Gazette*. It has been rather wild and rabid lately, and as to its statements, denunciations, and so-called arguments—*ex uno disce omnes*.

THAT India will at no distant period become a formidable competitor with Japan and China as a tea producing country, is a question that no longer admits of any doubt. The enormous increase in production during the last few years, and the energetic efforts made to bring Indian tea under the notice of consumers in all countries, can only have one result. We now learn that sericulture is again attracting the notice of the authorities who have, of late years, been doing a good deal towards stimulating the old industries of the peninsula, and introducing new outlets for capital and labour. Sericulture in India has been languishing since the state factories maintained by the East India Company passed into the hands of private capitalists, and as the *Celestial Empire* remarks "since then the export of silk from India can scarcely be said to have increased." The cost of production seems also to have been too great and the lively competition of the products of China and Japan exercised a very disheartening and prejudicial effect. The paper we have mentioned says also that "the attention of the Government and of private capitalists has recently been directed to the introduction of sericulture into Western India, and the reports and statements on the subject, which have been published, speak very favourably of its prospects. The cocoons of the Tusser moth are found in almost every district in Western India, and it is proposed to pay the natives a small fixed price for collecting and bringing them to agents. One pie, or less than half a farthing for one, or as some propose for two cocoons, does not appear to be any very great encouragement to the natives, but as there will be very little trouble in collecting them from the branches of trees, it may be sufficient to procure supplies. Tusser silk has long been an article of export from India to London, but never on a very large scale. It now appears, however, that experiments have proved that it can be used in the manufacture of many fabrics for which mulberry silk has hitherto solely been employed. French manufacturers of ribbon have sent out special agents to India to purchase the silks and cocoons, and are anxious that the production should be increased as much as possible. The hybridisation of the Tusser and Japanese worms has also been successful, and will no doubt improve the quality of the silk." As so much nonsense has been written, and such an enormous amount of simulated indignation expressed at the encouragement afforded by the Japanese Government to young industries, it is rather amusing to find that in order to stimulate such an old established business as that of silk culture in India, the Government—the ultra free trade Government of Great Britain—"has made grants of money to conduct further experiments in rearing the worms and treating the cocoons." The remarks of our contemporary upon the vast advantages which will accrue to the natives and Government if sericulture can be extended into Western India, are so applicable to Japan and fraught with warning, that we feel constrained to reproduce them in order to show how this important subject is considered elsewhere. The *Celestial Empire* says that if such extension takes place, "additional employment will be provided for the inhabitants, and large tracts of land which are now covered with jungle will be cleared, so that the trees

which grow on them may be made available as food for the silkworms. These trees are of several species, and are found in almost every district. It will take some years before this new trade in silks from the Bombay country can assume large proportions, even if the efforts now being made to introduce it are fully successful, but it is a menace on the part of India to our most important article of export. There is no reason, which we know of, why silk culture should not succeed in India, just as well as tea-planting. The quality of the silk may not be so fine as China's for the first few years, but with the efforts which will continually be made to improve it, by the introduction of silkworm-eggs from other countries, by the application of science in crossing and rearing worms, and above all by the care which will be given to reeling the silks, all difficulties in the way of introducing it to a high position in European markets will at last be overcome. When that has been effected, the Chinese may see that it would have been better for them not to have prevented foreigners from establishing filatures in the country, as they were entitled to do under the treaty made by Lord Elgin. But by that time the world may be able to do without China silks, at all events to a very large extent."

THE Shanghai papers have been informing their readers, that Mr. Cesar Celso Moreno who recently visited Honolulu in the *Ho chung*, had succeeded in obtaining for the China Merchants' Steam Navigation Company a subsidy from the Hawaiian Government. It is true that the King recommended the granting of an annual sum to the company, and that disclosure of the project resulted in a change of Ministry, Mr. Moreno being appointed Minister of Foreign Affairs in the new Cabinet. But the sequel should not be overlooked. Mr. Moreno's tenure of office lasted for one day and one hour, as he sensibly preferred resigning and leaving the island, to retaining his dignified position and accepting at the same time a promised coat of tar and feathers. It is almost unnecessary to add that simultaneously with the flight of the "Foreign Minister" came the surrender of their portfolios by his colleagues, and the unanimous rejection of the subsidy scheme by the Hawaiian Parliament. The *Ho chung* has not been a source of disturbance in Hawaii alone; the *Philadelphia North American* has discovered that the China Merchants' Company is owned by British subjects, and the tentative voyage part of a deep laid scheme to wrest the China trade from the Pacific Mail Company! Our contemporary says:—"The much-talked-of Chinese steamer, which recently arrived at San Francisco, turns out to be an iron vessel built on the Clyde in the usual style of British steamships, differing very little, if any, from hundreds of the same class now engaged in the trade between our Atlantic ports and Europe. She is only of eight hundred tons burden, and all of her officers are Danes or Englishmen, the crew being Chinese on account of cheapness. How much of the ownership of this vessel is really held by the Chinese no one appears to know. But in view of the commercial usages in reference to the ownership of vessels, it is quite possible for the Chinese to hold only a small fraction of the property for the sake of the nationality, the flag and the registry, the rest being held in England. This vessel brought from China a cargo of sixty tons of rice and some fruit from the Sandwich Islands. It is announced that she will ply regularly upon that route, which is well known to be that upon which the splendid vessels of the Pacific Mail Steamship line have established a profitable trade and laid the foundation of a flourishing commerce. These Pacific Mail steamers are of three or four thousand tons burden each, magnificent vessels in every respect, and built of iron at Chester, Pa. This

Chinese vessel comes to the United States ostensibly as the representative of purely Chinese enterprise, seeking to participate in a commerce already successfully and prosperously established and built up under the subsidy granted by the United States Government. But it will be observed that this initial vessel is a very small and inferior one in every respect for such a commerce and such a voyage. The obvious purpose is to break down the American line, if possible, by running a numerous fleet of these small steamers, cheaply built, cheaply manned, and backed by British capital, with a view of ultimately monopolizing the whole business as soon as the American steamers are ruined, and thus putting an end to a line that has done so much to stimulate iron shipbuilding on the Delaware river. The Pacific Mail Steamship Company is the greatest and most successful representative of American maritime enterprise now engaged in the commerce of the civilized world. It is the only live competitor against British shipping interests in the commerce of the Pacific Ocean. But if it can be crushed by any possible means, the supremacy of the British flag will be firmly established in the control of the Pacific beyond the possibility of a contest. The leading maritime interest of England in the Asiatic trade is the Peninsular and Oriental Steamship Company. If that corporation were opened to send steamers to San Francisco, the effort to break down the American line at that port would be clearly understood and properly provided against; but here is a beginning of a fleet of British steamers palmed off as Chinese, carrying the Chinese flag and registry, and claiming to be owned by a company of enterprising Chinese merchants, who are in all probability merely agents engaged for the purpose, in order the more effectually to deceive the United States Government and people." We doubt not that the *North American's* remarks will convey new and interesting information to residents here and in China. To no one, perhaps, will the assertion that the China Merchants' Company is British owned appear more astounding, than the Viceroy Li Hung-chang.

**T**HE anniversary of the battle of the Nile, of the battle of Waterloo, or even of the more recent (if less glorious) fall of Sevastopol, have ceased to have the slightest interest to the British people. We doubt if a single pulse now beats faster when it is recollected that at some more or less remote period, a great success attended the efforts of the English army or navy as the case might be. We know as a matter of fact that so little sentiment attaches to these reminiscences in the present day, that the French standards captured at Waterloo and on other fields, were removed from the Royal Chapel at Windsor, in order to avoid the possibility of wounding the tender susceptibilities of Napoleon III. when he visited Queen Victoria. In America, however, it is different. Whether or not the people have fewer pleasurable incidents to look back upon than in other countries we are unwilling to hazard an opinion, but it appears strange to find towards the close of the nineteenth century, frantic enthusiasm over events which took place during the eighteenth. Incredible as it may seem, the people of Tarrytown have celebrated with intensity of delight, the anniversary of the capture of Major André at that place during the revolutionary war! From the descriptions given in American journals, we are rather inclined to think that the writers felt strongly disposed to turn the whole proceedings into ridicule, but were forced to restrain their very natural inclinations. In one account of this glorious celebration we read that "in the windows of many of the stores are exposed photographs purporting to have been taken 'on the spot' of that pathetic but truly important scene in the drama of America's struggle

for independence, known (and to be better known after to-morrow than ever before) as the capture of André. These pictures represent in the foreground a group of four young men. One, with a slouch hat set well back on his head, a shot-pouch slung over his shoulder, and a long flint-lock musket resting between his knees, is seated on a flat stone a silent but interested spectator of an eloquent pantomimic appeal for mercy on the part of a handsome young gentleman in white stock, long coat and no shoes, to a coatless, bareheaded young American patriot, who with right hand deprecatingly extended is declining all solicitations to follow other than the strict path of duty. The fourth figure in the group leans listlessly against the body of a black horse, with one hand grasping the barrel of a long gun and with the other idly but with much suggestiveness upon an ammunition pouch which swings a this side. Beyond are unbraced trees, the exact nature or species of which, whether tulip or ash, the artist has wisely, as will presently be seen, left in doubt. There are about the picture no marked details of locality, no topographical earmarks, so to speak. There is a shimmer of white in the far background which may be intended for the shining surface of the broad Hudson, to be sure, but it is highly visionary and obscure. The figures are prominent, and the horse, saving that portion of him which is obscured by the long individual who leans against him, stands out boldly. In short, the landscape has been sacrificed by the artist to the animated characters in the foreground." The programme of ceremonies is too good to lose. It is as follows:—

5.49 o'clock a.m. (sunrise).—The celebration will be opened by a national salute. A park of artillery furnished by the United States Government, stationed on the hilltop, will be responded to by several national war vessels anchored off the town. The church bells of the village will be rung.

10 o'clock a.m. (the hour of the capture).—1. Salute by the artillery and war vessels. 2. Unveiling of the bronze statue of Patriotism, placed on the monument which marks the spot where the capture was made. 3. Presentation of the monument as remodelled. 4. Music.

11 o'clock a.m.—The grand procession, Major-General James W. Husted, grand marshal. The procession will be divided into three divisions.

1 o'clock p.m.—In the grand tent on Mount André the anniversary meeting will take place, Mr. Clarkson N. Potter presiding. The exercises will be as follows; 1. Music by the band—Overture, "William Tell," Rossini; grand aria, "The Lost Chord," Sullivan; march, "Boccaccio," Suppe. 2. Prayer by the Rev. Alexander Van Wart, a son of one of the captors. 3. Historical reading by Mr. Orlando B. Potter. 4. Oration by Mr. Chauncey M. Depew.

4.30 o'clock p.m.—Grand patriotic concert in the large tent by Gilmore's band. Free to all. The programme is appended: 1. Overture, "Semiramide," Rossini. 2. Trombone solo, "Once Again," Sullivan, Mr. T. Innes. 3. Grand selection, "Gems of Scottish Song," Godfrey. 4. Serenade, "Chinese," Fliege. 5. Sounds from home, "The German Fatherland," Hartmann. 6. Piccolo solo, "Spring, Gentle Spring," Rivière, Signor De Cario. 7. Turkish march, "Advance and Retreat," Michaelis. 8. New national anthem, "Columbia," Gilmore.

5.56 o'clock p.m.—A salute from hill-top and from ship-board. A gun for each one of the thirty-eight States and eleven Territories. The artillery will be stationed at a point remote from the grand tent.

7.30 o'clock p.m.—Grand display of fireworks.

We hope that the good people of Tarrytown were thoroughly comforted by the prayers, and greatly enjoyed the trombone solo and fireworks; such patriotism deserves some recompense, and stationing the artillery at a point remote from the grand

tent shows there was no want of consideration. At the same time it is unfortunate that so much enthusiasm was expended on an event so debatable. Some people actually argue that the capturers of André were mere marauders—it is certain they were not attached to the American army—and that the execution of the luckless British officer was nothing less than murder. This, however, is a very extreme view and, we think, altogether untenable. Nevertheless, there are very strong reasons for believing that Washington offered to exchange André for Arnold and, when the proposal was rejected as it must have been, the fate of the former was sealed. The death of Major André has evoked much discussion, and is often regarded as the sole possible stain upon the singularly spotless career of Washington.

**J**UDGING from the harbourmaster's report, the experiment of lighting the harbour of Montreal by electricity has had a thorough trial and proved a complete success. In the exhaustive account of the proceedings adopted to test the utility of the light in this new sphere of usefulness, it is stated that "the electric light apparatus was, after seven weeks' experience in actual service, accepted by the Board on the 8th of July, and since then has been continued in constant use and with very satisfactory results. The lamps with single pair of carbons, which were temporarily furnished at first, have been replaced by the permanent double lamps, which automatically switch the second pair of carbons into action when the first pair is consumed, and thus give a continuous light of fifteen hours without trimming. The apparatus as it now stands contains one Brush dynamo-electric machine, working a single circuit of 14,000 feet or 2½ miles in length, on which are arranged twenty-one lamps, any sixteen or lesser number of which may be used at once on such wharves as vessels desire to handle cargoes during the night, the remaining lamps being simply switched out as a gas-lamp may be turned off. The length of the district covered by the lamps is 1 1-12 miles, and the wharf frontage, including piers, is 9,100 lineal feet or nearly one and three fourth miles over which the light of the sixteen lamps may be distributed as desired."

## The Japan Weekly Mail.

'FAIS CE QUE DOIS; ADVIENNE QUE POURRA.'

### NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the JAPAN WEEKLY MAIL must be authenticated by the name and address of the writer, not for publication but as a guarantee of good faith.

It is particularly requested that all letters on business, relating to Advertisements, Job-printing, or Accounts, be addressed to the MANAGER.

And that literary contributions of every description be addressed to the EDITOR.

YOKOHAMA: SATURDAY, 30th OCTOBER, 1880.

JAPANESE ERA 2540, MEIJI 13TH YEAR, 10TH MONTH, 30TH DAY, DO-YO-BI.

### BIRTH.

On the 23rd October, at No. 56A, Main Street, the wife of C. V. MARTINHO MARQUES, of a son.

### DEATHS.

After great suffering EMILY MARIA, the beloved wife of John Charles Cheetham, M. B. M. S. S. Co., and daughter of Major Markham D. Kittoe, H. E. I. C. S.

At HIogo, on the 23rd October, CHARLES OXLEY, a native of London,—aged 36 years.

### NOTES OF THE WEEK.

The English Mails were delivered by the Mitsui Bishi Company's steamer *Nippon Jaru* early on Thursday. The Messageries Maritimes steamer *Jenatch* sails to-morrow morning with European despatches. The Shanghai steamers have arrived and departed as usual.

The account published in another portion of this issue, giving the experiences of the gallant band of American explorers who have so bravely and successfully determined the fate of Sir John Franklin and his unfortunate companions, appeared during the week in the *Daily Mail*. At the request of several readers who desired to possess the narrative in more convenient form, we have reproduced it.

A telegram was received yesterday morning announcing that the steamer *Breconshire* collided with the steamer *Breemar Castle* at Penang. The *Breemar Castle* was anchored in ten fathoms of water at the time and sank immediately. It is not known if any lives were lost nor does the telegram state what damage, if any, was sustained by the *Breconshire*. We notice in *Mitchell's Maritime Register* that the *Breemar Castle* left London on the 9th of September, the *Breconshire* being then loading. The latter vessel must have sailed almost immediately afterwards and, reaching Penang before the *Breemar Castle* left, ran into her as she lay at anchor.

The schooner *Mary C. Bohm* which returned last Sunday has had a very successful season. She brings back no less than seventy-nine otter pelts and over one thousand sealskins. We are told that her cargo may, at present rates, be calculated as worth about \$30,000.

Quite a crowd assembled on last Saturday afternoon to witness the match between *Checkmate* and *Daisy Chain* for three quarters of a mile; the event coming off in spite of the inclemency of the weather. The two ponies went away with a very fair start; *Checkmate* forged slightly ahead but did not retain his position long, and when they reached the straight both ponies were together. *Daisy Chain* then came away and won as he liked. Time 1m. 48 sec. It is not improbable that *Checkmate*, as frequently happens with China ponies, has been overtrained.

Communication with Europe and beyond via Siberia was interrupted for a few hours yesterday afternoon and evening. All the lines are in working order this morning.

There are two rather ludicrous errors in a note in the last issue of the *Weekly Mail*, on the subject of marriages of British subjects in Tokio. The singular is used for the plural in the first instance, and sacrilegious appears as "sacreligious." Anyone acquainted with newspaper work can readily understand how these sort of mistakes creep in.

Captain Cooper of the steamer *Courier*, which arrived last Sunday from Hakodate, informs us that the foundation for the rumoured loss of the *Lord of the Isles*, was a statement to that effect made by the master of the German brig *Gustav*.

His Excellency the Minister of Foreign Affairs and Madame Inouye will hold an official reception at the Enriokwan on the 3rd proximo, that day being the anniversary of the birth of His Majesty the Emperor. We understand that a special train will leave Shinbashi at half-past eleven o'clock for the convenience of guests from Yokohama.

There was a good attendance at the meeting of last Tuesday evening in the Gaiety Theatre. Mr. Heimann was called to the chair, and it was unanimously resolved that the Choral Society be reorganized under the direction of Mr. Griffin. The ballot for a committee resulted in the election of the following members:—Mr. Griffin, president; Mr. Heimann, accompanist; Mr. Emory, secretary; Mrs. D'Ifanger, Mrs. Heimann, Mrs. Wheeler and Mr. Enslie. After some discussion as to the place of meeting, it was ultimately decided that, for the present, the practices should be held in the Theatre every Tuesday evening at 5.30 p.m., commencing on Tuesday next the 2nd November. The Treasurer stated that he had a balance in hand from the old society, besides a large quantity of oratorios, cantatas, and part-music: the music was ordered to be placed in the custody of Mr. Keil, who has consented to act as librarian to the institution. A vote of thanks to the chairman closed the proceedings. We are very glad to see the revival of this old and favorite society: the election of such a strong committee is a guarantee of good things to come, and we hope that all our distinguished amateur musicians (and is not their name legion?) will be found heartily coöperating at the weekly meetings of the Yokohama Choral Society.

Quite a crowd of foreigners and natives gathered round a small elephant on the Bund Tuesday forenoon last. The animal is the survivor of the pair landed from Saigon a short time ago, and gives promise of attaining enormous bulk. It is quite a baby—some four years old—and shewed its docility by the gentle manner in which it took cakes from the hands of a charming little girl slightly, if at all, older than itself.

For the accommodation of such of the members of the Société Suisse de Tir as desire to attend the races, the committee has judiciously concluded to postpone the handicap matches recently announced, until half-past one o'clock on Saturday the 6th of November. In case the weather is unfavorable on that day, the competition will take place on the day following.

As we previously mentioned, negotiations have been in progress to arrange the financial difficulty which necessitated the temporary closing of the Shintomiza theatre. The proposals made have been accepted, and this renowned establishment will again be opened on the 5th of November,—Guy Fawkes day.

We have been informed that a German barque was off Vries Island on Thursday, fifty days out from Macao and bound for San Francisco with coals. The rumour we heard states that the barque is making for Yokohama in distress.

The rumoured sailing of the United States man-of-war *Sicatar* in order to render assistance to the British ship *Cilurnum* while Her Majesty's gun-vessel *Fly* remained quietly at anchor, is so unusual a departure from the ordinary course in similar circumstances, that it deserves more than mere passing notice. We refrained from commenting upon the action of Commander Adolphus F. St. Clair until we instituted inquiries, the result of which we now proceed to place before the public. It will be remembered that the barque *Eme* arrived on Friday morning, the 22nd instant, with news of having boarded the dismantled British ship *Cilurnum* off Tanegashima on the 8th instant, that is fourteen days previously. The *Cilurnum* was under jurmasts and staysails endeavoring to reach this port; and having taken on board a wounded man from the disabled vessel and received the master's "earnest" wishes to be reported, the *Eme* continued her voyage. The matter was, of course, mentioned immediately the barque arrived in Yokohama. The navigating officer of the *Sicatar* boarded the *Eme* and laid off on his own chart, the position of the *Cilurnum* when the *Eme* parted company with her. Admiral Clitz, with a prompt humanity which we trust will be remembered by our fellow-subjects, hearing that the commander of the only British war-vessel in port declined to proceed in search of the disabled *Cilurnum* and her helpless crew, placed the *Sicatar* at his disposal. The generous offer was refused for some reason altogether beyond our comprehension, but a telegram was sent to Captain East of the *Comus*, then laying in Kobe, asking him to proceed to the assistance of the unfortunate *Cilurnum*. As far as we can learn the refusal of Commander St. Clair to go in search of the *Cilurnum* was based on the *Fly*'s deficiency of engine-power. In the navy list for last June, we find that "*Fly*, 4. Double S. composite gun-vessel," has a weight of 584 tons with 489 indicated horse power of the engines which is, apparently, about the same as other vessels of similar class. These facts we shall not comment upon, but will leave the public to judge whether it is probable the Admiralty would maintain on the active list of the navy, a number of vessels unable to render the slightest assistance to a dismantled ship. It must also be recollected that when the *Fly* touched the ground during the recent typhoon, her engines were powerful enough to steam in the teeth of the gale to a place of safety. It is quite clear that the master of the *Cilurnum* would not have "earnestly" desired to be reported unless he anticipated difficulty and danger, and it is equally clear that whether the *Fly* could tow the *Cilurnum* or not, every instinct of humanity, if not duty, should have impelled Commander St. Clair—if his vessel could go to sea at all—to proceed to the assistance of the crew, who for ought that is known to the contrary, may have perished by this time for want of that very assistance. The *Comus*, too, has arrived, but there is no news of the *Cilurnum*. The fate of the crew of this unfortunate ship apparently abandoned to their own devices, has become

mere matter of conjecture. Notwithstanding the many vessels that have arrived during the last twenty-two days (the date when the *Eme* parted company with the *Cilurnum*) nothing has been seen or heard of her. It should be recollected that there are thirty-five persons on board this dismantled ship which—if above water—is drifting about at the mercy of the elements, their only means of escape being a small boat left with them by the *Eme*, and calculated to hold twelve persons at a pinch. It is true, no doubt, that the *Fly* sailed yesterday afternoon for Tientsin with instructions to look out for the *Cilurnum*, but that kind of perfunctory search will not satisfy the public.

The New York *Nautical Gazette* says that "the United States Hydrographic office has just issued a chart of Coronel, Lota and Colcura anchorages, in Avance Bay, coast of Chili, also one of Saigo Harbour, Oki Island, Sea of Japan, both of which are well executed, and add two more valuable charts to the splendid list published by that office."

A case was heard recently in the Sheffield County Court, in the course of which some extraordinary revelations were made respecting the conduct of a very perricious and wealthy old man named Buxton toward his bride, whom he married a short time before his death. The action was brought against Buxton's executors by a Scotch draper named Kevan, to recover £37. 5s. for goods supplied. Up to the time of his death, Buxton lived in the neighborhood of Sheffield, and died worth £40,000, beside a quantity of freehold property. His wife was formerly his housekeeper, at which time she was receiving from him only £10 per annum. When he made her an offer of marriage he was sixty-six years of age, and she only thirty. On their wedding-day the husband provided a dinner of beans and bacon. On the marriage-day Mrs. Buxton gave her husband between £20 and £30, this being money which she had saved. She subsequently discovered that he went to the savings bank and drew out what money she had there. He only allowed her 1s. 6d. a week for pin-money, and she was consequently obliged to get articles of clothing for herself and her husband upon credit. His Honor, in giving judgment in favor of the claim, said the case was one which ought never to have been defended. The executors should have paid the money instead of allowing the testator's name to be held up to infamy, as would now be the case. Here was a man who had died worth £40,000, and yet he had taken £20 from his housekeeper when he married her, and afterward put into his own pockets her savings which she had placed in the bank. He gave judgment for the plaintiff with costs.

We notice in an English paper a paragraph stating that a Conservative M. P. wishing to conciliate a voter sent him a splendid pineapple from his hothouse. "I hope you liked it," he said to the old man, when he met him a few days afterwards. "Well, yes, thank you, pretty well. But I suppose we sort of people are not used to them fine things, and don't know how to eat 'em." "How did you eat it, then?" asked the M. P. "Well," said the man, "we boiled 'em." "Boiled it?" sighed the M. P., in horror, thinking of his pineapple. "Yes, we boiled 'em with a leg of mutton."

An amusing story is told by the Paris *Galignani*. The scene is laid at a leading restaurant on the Boulevards. The proprietor was suddenly heard exclaiming, in a dolorous tones, "What a misfortune! What a loss!" and some of the frequenters naturally turned to ask what was the matter. "Ah! gentlemen," replied the mournful-looking restaurateur, "four individuals have just left without paying for an expensive dinner they have had." "Disagreeable enough, no doubt, but I don't see why you should be in such depths of despair about the loss," observed one of his customers. "You see it is not on my own account that I am sorry about the affair, because I am rich enough, so to say, to bear the loss," responded mine host. "But the fact is that it will fall on my cashier, a father of a family with no other means of existence but his berth here. And, unfortunately, he will be obliged to repay me."

A writing table which the Queen commanded to be made out of the timbers of the *Resolute* has been finished, and will shortly be presented to the President of the United States "as a memorial of the courtesy and loving-kindness which dictated the offer of the *Resolute*." The table will form part

of the permanent furniture of the White House. Every well-wisher of either country will join in the hope that this "loving-kindness" may always continue.

The Paris *Journal Amusant* of the 4th of September last has the following:—A city sportsman had a day's outing, and on his return triumphantly displayed a capital "bag" before the eyes of his wondering wife. She remarked:—"Really, it is most extraordinary! How did you manage to get all this game?"

He:—"Why, of course, with my gun."

She:—"Yes? darling, you left it behind in the study."

He:—"By Jove, that's exactly what it was! the whole day long I've been saying that I knew I had forgotten something or other."

Self-preservation is said to be the first law of nature, yet there are circumstances in which this law should be infringed, and the safety of others take precedence of the longing to preserve one's own life from the danger which threatens it. No one for instance, can read without a feeling of indignation, the subjoined incident related by a Russian contemporary. A peasant, residing near Moscow, was travelling through a deserted part of the country in a conveyance containing himself, his wife, and four children, when the party was pursued by a flock of howling, famishing wolves. The peasant urged the horses along at full speed, but in spite of all, the wolves gained every minute on the travellers. A horrible death seemed imminent, when the father devised a plan for personally escaping from the danger. He took his youngest child in his arms and deliberately throw it to the pursuers. This averted the danger for a brief time, but soon after the wolves were again following the carriage in search of fresh prey. Successively the other three children were thrown to them and devoured, which enabled the man and his wife to reach a neighboring village in safety. The poor mother, who had in vain implored her husband not to sacrifice in this barbarous fashion the lives of her little ones, denounced the unnatural parent to the authorities. The case has just been heard, and the father acquitted, on the theory that he had the right to sacrifice his children since his own life was at stake. The law of his country may absolve him but every parent will condemn him.

For many months the recently restored parish church at Thirsk has been infested in its interior with bats, which not only made fearful work of the new oak stalling, but at evening service might be seen flitting to and fro in the vicinity of the rafters of the nave roof. For a length of time they have been a source of great trouble to the church officials and the vicar, and various means have been adopted to rid the edifice of the pests. The church has had cayenne pepper burned in it, but with no beneficial effect, and ultimately an owl was placed in the church. The officials then paid regular visits to St. Mary's for the purpose of ascertaining what effect the new inhabitant had on them, and although they waited each evening well into the darkness, not a bat was seen: where, but shortly before, some scores were visible. If the owl has not destroyed them, he has had the effect of compelling them to keep very close quarters during his visit to the sacred edifice. A few months ago the bats caused considerable damage to the trombone pipes of the new organ by entering at the wide end of the pipes, and these being narrow at the bottom, they found themselves unable to get back. As many as seven and eight dead bats were found in a single pipe. Since then the whole of the trombone pipes have received a covering of wire, so as to prevent the recurrence of such a mischance.

#### REUTER'S TELEGRAMS.

LONDON, 25th October, 1880.

The Basutos invested Mafeteng but the place has since been relieved by General Clarke after severe fighting.

LONDON, 28th October, 1880.

The Sultan has ordered the surrender of Duleigno in five days.

The British Government will prosecute the officers of the Irish Land League for conspiracy.

#### ECCLESIASTIC AND MISSIONARY NOTES.

THE MISSION OF THE PRESBYTERIAN CHURCH OF THE U.S.A. was commenced in this country by the arrival on the 18th of October 1859, of J. C. Hepburn, M.D., who had previously been a medical Missionary to the Chinese, first in Singapore in 1841-43, and afterwards on the conclusion of the so-called "opium war" at Amoy from 1843-46. Dr. Hepburn was followed by the arrival of the Rev. D. Thompson in 1863; the Rev. Mr. Cornes and Mrs. Cornes in 1868; the Rev. Mr. Carrothers and Mrs. Carrothers in 1869; the Rev. Mr. Loomis and Mrs. Loomis in 1872; the Rev. O. M. Green in 1873; the Rev. W. Imbrie and Mrs. Imbrie, and Mr. J. C. Ballagh and Mrs. Ballagh in 1875; and the Rev. Mr. Knox and Mrs. Knox, the Rev. Mr. Winn and Mrs. Winn, the Rev. Mr. Alexander and Mrs. Alexander, and the Rev. Mr. Macauley and Mrs. Macauley in 1880. Besides these, there are four ladies, some of whom have been connected with the Mission for a number of years. Mr. Carrothers resigned from the Mission in 1876, and Mr. and Mrs. Cornes and one of their children were killed in the boiler explosion on board the steamer *City of Yedo* in 1870. Mr. Loomis and his family returned to the United States in 1875 on account of ill-health. Dr. Hepburn opened a dispensary and hospital in a Buddhist Temple—Sokoji—in Kanagawa in the spring of 1861. For some three months he was allowed by the Government to continue his work unmolested. His hospital was full, and his out-door patients had increased to 150 daily; but for some reason, never stated, and which can only be surmised, a guard was stationed at the gate of the temple, and the sick forbidden to enter, so that the dispensary had to be discontinued while the doctor resided in Kanagawa. It was re-opened soon after his removal to Yokohama in December 1862, and was continued until 1878 when ill-health compelled him to discontinue it. During this time from 5,000 to 11,000 patients were yearly prescribed for, and many surgical operations of various kinds performed. Tracts and portions of the Scriptures were distributed, and the Gospel daily preached during the last five years of its existence. A number of medical students, varying from three to ten persons, were daily in attendance to learn what they could of medicine. The number of these from first to last is not known, but they are now scattered all over the country. The first years of a Missionary's life must necessarily be devoted to the study of the language. From this cause, as well as obstructions on the part of the Government, it was not until 1873 that the first Church was organized in connection with this Mission, by Mr. Thompson in Tokio. Another Church was organized the same year by Mr. Carrothers, also one in Yokohama by Mr. Loomis. Since then through the labors of Mr. Thompson and Mr. O. M. Green, but more especially through those of the native Evangelists the work has been greatly extended. At present there are in connection with this Mission, thirteen Churches with a membership of 760 persons, five ordained ministers, ten licentiates, and twenty out-stations where the Gospel is preached. Seven of these Churches are in Tokio, one in Yokohama, three in Shimosa, one in Kiriu and one in Yanagawa. Connected with the Mission there are two boarding schools for girls, with 75 pupils under the care of three foreign ladies, assisted by several native teachers, and one for boys with 70 pupils. This last school is one of high order, having a very full curriculum of study with a course of four years, and is under the care of five foreign teachers, with the best native assistance for the Japanese departments. Besides these, there are six boys' and one girls' day-schools, having 230 pupils; all under the care of the ladies connected with the Mission. The number of persons added to the Church during the last year was 141, and 1,200 yen were contributed to benevolent and Church purposes. The three Presbyterian Missions in this country, viz.:—The Presbyterian Church of Scotland, the United Presbyterian Church of Scotland, and the Reformed Church of America, have united in erecting and conducting a Theological Seminary, in which there are now some 25 or 30 young men studying for the Ministry.

OPPRESSION OF CHRISTIANS IN ARMENIA:—An Armenian Christian pastor and his wife have travelled to London for the purpose of arousing the attention of the British public to the sufferings of their Christian fellow-countrymen under the oppression and cruelties of the Mohammedan Government, and to seek assistance and relief for the thousands now perishing in consequence of the famine. The Armenians look to the British Government to restrain the abuses which they now suffer from the Turks, and to secure for them the same civil and religious liberty as are enjoyed by the Mohammedan residents. The Moslems more and more ill-treat the Christians. It is believed that the Turkish Government are employing the Kurds to annihilate the Armenian element by death or emigration. The village of Godiuz has been pillaged by the Kurds,

who murdered several Armenians. They also attacked the village of Dzog, armed with hatchets, and cut to pieces several Armenians. The Kurds have also killed some Christians at Shegchan, at Lim and at Dreglik, and pillaged the district of Abagha, including the churches. Many of the survivors are seeking safety in emigration, which in Turkish eyes has the advantage of helping to reduce the Armenians to a minority. The Turkish Government does not allow them to establish printing-offices or to publish newspapers in Armenia. The Armenian Committee of Constantinople have sent an aggregate of more than £20,000 to the famishing inhabitants. This money has been distributed not only among the Armenians of all creeds, but also among the Greeks and the Syrians, and even the Turks and the Kurds. The Moslems were astonished at seeing the Armenians exhibit so much active benevolence while the Sultan remained indifferent to their sufferings.

**PLURALITY OF CHRISTIAN NAMES:**—The *National Church* says that in forty-nine church registers out of fifty throughout England, there will not be found a single instance of a double Christian name previous to the year 1700.

**RELIGIOUS CEREMONIES:**—Last year there were 587 marriages celebrated in the churches throughout England, against 531 in 1878; 3,208 baptisms administered, against 3,277 in 1878; and 778 deaths recorded, against 702 in the previous year.

**THE THEOLOGICAL COLLEGE AT LINCOLN:**—The Bishop of Lincoln, who has already given largely to the Scholastic Cancellarii at Lincoln, has just purchased the premises of the old county hospital there, which are being adapted for the college which, successfully started under Chancellor Benson (now Bishop of Truro), continues to flourish under Chancellor Leeke. The new Bishop's hostel comprises rooms for thirty-two students, a refectory, and library, and stands on the hill in the immediate neighbourhood of the palace and the lecture rooms at the old palace. The buildings will be opened on October the 1st, when the Bishop of Truro will preach in the cathedral.

**VETERAN BIBLICAL TRANSLATOR:**—News has been received of the death in Calcutta of the Rev. Dr. Wenger, which took place on the 20th August. Dr. Wenger was one of the oldest and most prominent Missionaries in Calcutta, and he had given his special attention to the work of Biblical translation into the Sanscrit and Bengali languages. He was an accomplished Sanscrit scholar, and completed the work commenced by the late Dr. Yates. He translated the historical and prophetic books of the Old Testament and the Gospels and Acts into Sanscrit, putting the poetical parts of the Old Testament into Sanscrit verse. His labours in this department received high praise from such scholars as Dr. Rajendralala Mitra and the late Professor E. H. Wilson. In Bengali he executed one or two revisions of the translation of the Bible, and parts of it he translated afresh. His version is used by all denominations of Christians in Bengal. Dr. Wenger was a Swiss by birth. He went out to India in 1839, and, with the exception of about three years spent in two visits to Europe, he passed the whole of the intervening period in India. He belonged to the Baptist Missionary Society. Dr. Wenger was in his sixty-ninth year at the time of his decease.

**CONSECRATED GROUND:**—Sir George Bowyer explains in a letter to the *Times* the distinction between consecrated ground and churchyards. Churchyards are not, he says, consecrated ground, and never were consecrated ground. By the Canon Law, which in this matter is the law of England, there are two distinct classes of things—i.e. (1) sacred things; (2) religious things. Sacred things are those which are consecrated, and religious things are used for a religious purpose, but are of a lower degree and nature, and are not consecrated, but only blessed. Such are burial-places, and accordingly we find in the Pontifical "*De Cimiterii Benedictione*," but not "*Consecratione*." This distinction has a material bearing on the argument that if the Dissenters are allowed to bury in churchyards, the logical inference must necessarily be that they must be admitted to the churches. The answer is that churches belong in ecclesiastical law to a class and category of things totally distinct from that which includes churchyards.

**COST OF COLOGNE CATHEDRAL:**—The sums which between 1821 and the present time have been contributed to the cathedral building fund, both from public and private sources, amount to 18 million of marks (£900,000). This amount has been pretty evenly expended on the erection of the towers and the additions to the church. If to this we add the moneys contributed during past centuries, and notably what has been sunk in the colossal foundations and spent in purchasing various necessary parcels of ground, it will appear that the cathedral as it now stands represents about 40 millions of marks (£2,000,000).—*Wochenblatt für Architekten und Ingenieure*.

**THE CATHEDRAL OF TRENT:**—The architect of the Austrian Department of Public works has officially reported that the Cathedral of Trent, the place where the celebrated Council was held in the middle of the sixteenth century, is in a dangerous state and will need very extensive repairs.

## NIPPON RACE CLUB.

### THE AUTUMN MEETING.

#### FIRST DAY.—WEDNESDAY, 27TH OCTOBER.
